The vessel was built by Archd. McMillan and Son, Ltd., at Dumbarton, Scotland, and is one of the most up-to-date of her type which has been constructed. On her trial trip she steamed at 12½ miles an hour over the measured mile at Skelmoilie. During construction the owners were represented at Dumbarton by Capt. Jordan and Mr. Sylvestre.

St. John, N.B., Shipping Statistics.

The exports from St. John, N.B., by transatlantic vessels, for the winter season, from Nov., 1909, to May, 1910, amounted to $24,030,007, classified as follows:—

		Value.
Wheat, bush	6,962,651	$9,156,681
Barley, bush	240,912	
Oats, bush	257,141	
Buckwheat, bush	58,317	
Hay, tons	8,523	125,272
Flour and meal, pkgs.	988,407	3,075,585
Cheese, pkgs.	77,353	761,876
Butter, pkgs.	2,518	19,034
Lard, pkgs.	121,009	1,026,423
Meats, pkgs.	67,598	2,973,707
Apples, brls.	65,992	209,089
Cattle, head	6,534	392,800
Horses, head	22	4,150
Lumber, stds.	23,271	678,774
Other lumber, tons	1,031,320	380,447
Manufactures, pkgs.	444,951	2,847,331
Miscellaneous, pkgs.	176,028	1,378,808
Fur and silver		1,000,000

The Government returns for the fiscal year ended Mar. 31, show the exports as

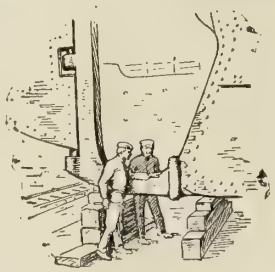
GOLDSCHMIDT THERMIT CO.



THE THERMIT WELDING PROCESS

Repairs broken sternposts of steamships, locomotive frames, and all other wrought iron and steel sections in the shortest possible space of time and at less expense than by any other welding process. We make the welds without removing the broken sections from their position. Marine repairs may usually be made in 48 hours or less, while locomotive frames are welded in 12 hours or less.

Write for Pamphlet No. 20N.

$24,988,519, an increase of $4,320,002 over those for 1908-09. The number of vessels, transatlantic only, arriving and departing was 114, an increase of six over the previous year, and an increase of 56 over 1898, since when the value of the shipments has increased nearly 600%. The registered tonnage of the vessels during the past season, was 504,260, and for 1898, 102,316, so that, not only has there been an increase of nearly 100% in the number of vessels using the port, but the average registered tonnage is greater by about 150%.

Dominion Government Quarantine Steamboat.

The steamboat for quarantine service, to meet all incoming ocean liners at Grosse Isle, Que., for which the Dominion Government has recently given a contract will be 113 ft. 3 ins. long over all and 23 ft. beam, and will have lower, main, and hurricane decks. She will be of steel construction throughout and a steel deck house will be built on the main deck, in which will be located two hospitals for landing the sick, the doctor's staterooms, officer's mess room, etc. The captain's and first mate's quarters are to be arranged in the texas abaft the wheel house on the hurricane deck, and accommodation has been made below the main deck for the rest of the officers. The hospitals, staterooms, etc., will be handsomely finished and the equipment throughout will be of the most up-to-date kind.

The boiler will be of the Scotch marine return tubular type, 13½ ft. diameter by 11 ft., built for a working pressure of 130 lbs. The propelling engine will be compound surface condensing with cylinders 18 and 36 ins. diameter by 24 ins. stroke indicating 400 h.p., and it is expected that the boat will have a speed of over 11 knots an hour.

The contract has been given to the Kingston Shipbuilding Co., Ltd.

Navigation from Winnipeg to the Rockies.

The Dominion Government is said to have decided on establishing a water route from Winnipeg to the Rocky Mountains within five years. In an interview at Winnipeg recently, Minister of Public Works Pugsley, said:—"The completion of the St. Andrews locks connects Winnipeg city with the north end of Lake Winnipeg, 300 miles of waterway. At about 250 miles north of Winnipeg the Saskatchewan River from the Rockies enters the lake at Grand Rapids. It is a big river at this point. The project under consideration is to build locks at the rapids so as to enable the ascent of the Saskatchewan River. We believe that by an expenditure not greater than warranted by the importance of the undertaking, such as building locks at Grand Rapids, possibly two other locks on the Saskatchewan River, constructing a number of wing dams, and doing some dredging, it will be possible to make the river navigable for moderate-draught vessels. The result will be a system of navigation from 100 miles west of Edmonton, close to the foothills of the Rockies, right down to Winnipeg, 1,500 miles. The building of the locks will result in the development of between 80,000 and 100,000 horsepower at Grand Rapids, which would be of great importance either for transmission to Winnipeg or to operate the industries likely to be established at Grand Rapids. When the Hudson Bay Railway is completed it will be the most convenient point for the manufacture of lumber, pulp, paper and flour for shipment to the markets of the old world. Our department has now in the field five parties surveying the Saskatchewan River, determining the best mode and cost of the necessary improvements. We conducted the preliminary survey last year, and much valuable information was derived."

Department of Railways and Canals.

QUEBEC BRIDGE.

Tenders for Superstructure.

Notice to Contractors.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Quebec Bridge Superstructure." will be received at this office until 12 o'clock noon, not later than September 1st, 1910, for the superstructure of a bridge across the St. Lawrence River near the City of Quebec.

Plans and specifications may be seen and forms of Tender obtained on and after July 1st 1910 at th office of the Quebec Bridge Board of Engineers, Canadian Express Building, Montreal, and at the Department of Railways and Canals, Ottawa.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the sontract.

Contractors are requested to bear in mind that tenders wil not be considered. unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $500,000.00 made payable to the order of the Minister of Railways and Canals of Canada must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted and in accordance with the terms stated in the form of Contract accompanying the Specifications.

Cheques thus sent in will be returned to the respective contractors whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

L. K. JONES,
Secretary.

Department of Railways and Canals,
Ottawa, 17th June, 1910.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

The name of the steam dredge Triton has been changed by Order-in-Council to Prince Ito.

Press reports state that A. H. Treen has been appointed Agent for the Northern Steamship Company at Victoria, B.C.

The Anglican mission ship, Columbia II., which was recently launched at New Westminster, was duly consecrated, July 7. She was announced to take her first trip to northern waters at the end of July.

Judging from past events, one would scarcely imagine that the position of a wreck commissioner was a bed of roses. However, the Montreal Gazette, recently in referring to the Cassandra-Advance enquiry, said, "As the matter is still sub rosa, it is impossible to make any comment thereon at present." Perhaps it is just as well.

An order-in-council has been passed, amending the one of Apr. 1. respecting the exemption of steamboats holding certificates of inspection of Lloyds' Register, British Corporation, or Bureau Veritas. from the annual steamboat inspecting imposed by the Canada Shipping Act, by adding also, certificates of the Norwegian Veritas.

The Mackenzie Steamship Co.'s s.s. Rupert City, it is reported, has been taken out of the passenger trade, and is being remodelled. to accommodate her for the coal carrying trade, between Nanaimo, B.C., and Alaska, under charter to the Pacific Coast Steamship Co. She was formerly known as Powhatan, and was built at Barrow-in-Furness, Eng., in 1886.

The Steamship C. A. Jaques.

A vessel bearing this name and which has been built for C. A. Jaques, of Montreal, has arrived in Canada and gone into the Great Lakes trade, running in the Merchants Mutual Line. Her dimensions are, length 249 ft., width 42¾ ft., depth 25 ft. She is built to Lloyds' highest class, 100 A.1. for trading on the Great Lakes and for coasting. She is arranged for package freight traffic, having 'tween decks with large cargo doors through vessel's sides and an installation of line shafting with separate engine for working the cargo. She is strongly built, her scantlings where necessary to meet the exigencies of her special trade being increased over rule requirements. Cellular double bottom and fore and after peaks are arranged for water ballast, and her hatches and deck fittings are arranged in accordance with the latest requirements for vessels of this type. She has a steam windlass forward, steam capstan aft, two steam winches on deck, and steam steering gear with engine geared direct on to the quadrant. Accommodation for mates, wheelmen, watchman and seamen, with baths and lavatories, is arranged in forecastle forward, while on top of same is a texas house, with bedroom, office, chart room and bath, etc., for captain. A wheelhouse is fitted on top of this house, with steering standard, engine and docking telegraphs, and whistle pulls. The engineers' accommodation, also rooms for firemen, oilers, etc., is arranged aft, where are also situated the dining-room, firemen's mess-room, galley, pantry and ice house. The accommodation is steam heated throughout, and a complete sanitary system is fitted. The life boats are of seamless steel, and the vessel is completed in a thoroughly up-to-date manner. Triple expansion engines with cylinders 18, 30 and 48 x 36 in. stroke are fitted, and these are supplied with steam at a pressure of 185 lbs. from two boilers 12½ ft. diameter by 11 ft. long, fitted with forced draught. The auxiliary machinery is complete in every respect, and includes a large water ballast pump, independent feed and circulating pumps, feed heater, ash ejector, steam and hydraulic starting and reversing gear, etc.

On her trial trip on the measured course on the Clyde the vessel attained a speed of about 12 miles an hour in her loaded condition, and she sailed immediately thereafter for Canada. The maiden trip from the Clyde to Montreal was accomplished in the rapid time for this type of vessel, of 12 days 18 hours. The vessel was built by Archd. McMillan & Son, Ltd., at Dumbarton, Scotland. The owner was represented during the building, by J. H. Hall, of Ottawa.

Notices to Mariners.

The Department of Marine has issued the following:

51. June 17, 136. Ontario, list of lights and fog signals, new edition. 137. Ontaro, Lake Ontaro, Bay of Quinte, Telegraph narrows, dredging, caution. 138. Ontario, Lake Erie, Pelee passage, southeast shoal, new lightship.

52. June 21., 139.—New Brunswick, Bay of Fundy, Old Proprietor gas and whistling buoy, light in operation. 140. New Brunswick, Chaleur bay, Petit Rocher, position of lighthouse. 141. Nova Scotia, south coast, off Charles point, Bull rock, bell buoy established. 142. Nova Scotia, Cape Breton island, east coast, Neil harbor, hand fog horn at light station. 143. Newfoundland, southeast coast. Cape Race characteristic of light.

53. June 22. 144. British Columbia, Canadian list of lights and fog signals, new edition. 145. British Columbia, Trincomali channel, Portlock point, light improved. 146. British Columbia, strait of Georgia, Active Pass, Mayne island, Georgina point, light improved. 147. Alaska, Wrangell strait, Turn point, shoal reported, caution.

54. June 24. 148. Ontario, Lake Ontario, Bay of Quinte, Telegraph narrows and Nigger narrows, low water, caution. 149. Ontario, Lake Ontario, Cobourg, fog alarm on east pier. 150. United States of America, St. Clair river, Russell island, middle light, new structure. 151. United States of America, Lake Huron, Detour passage, change in position of Watson reef gas buoy.

55. June 27. 152. Quebec, Gulf of St. Lawrence, May islets, lighthouse established. 153. Quebec, Saguenay river, Cape East, new lighthouse.

56. June 28. 154. Nova Scotia, west coast, Cape St. Mary, character of light. 155. Nova Scotia, south coast, Fisherman harbor approach, off Cape Mocodome, Bull rock, bell buoy established. 156. Prince Edward Island, north coast, off entrance to Cascumpecque harbor, bell buoy established.

57. June 29. 157. Quebec, Gulf of St. Lawrence, Moisie river, range lights established. 158. Quebec, River St. Lawrence, Godboat, range lights established.

58. June 30. 159. Quebec, Ottawa river, Grenville, lighted buoy established. 160. Ontario, list of buoys, beacons and daymarks on Lake Huron and connecting waters, first edition. 161. Ontario, Sault Ste. Marie, dredging, buoy placed.

59. June 30. 162. New Brunswick, east coast, Miramichi bay, Grandoon flats, dredging. 163. New Brunswick. Miramichi river, dredging. 164. New Brunswick, east coast, Tabusintac gully, dredging. 165. New Brunswick, Chaleur bay, Caraquet harbor, dredging. 166. New Brunswick, Chaleur bay, Bathurst, dredging, hydrographic notes. 167. New Brunswick, Chaleur bay, Restigouche river, Dalhousie, dredging, hydrographic notes. 168. New Brunswick, Restigouche river, Campbellton, dredging, hydrographic notes.

60. July 7.—169. Ontario, Lake Superior, lighthouse established on island west of Shaganash island.

61. July 8.—170. Nova Scotia, Bay of Fundy, Port Lorne, upper light improved, lower light discontinued. 171. Prince Edward Island, south coast. Charlottetown, light established on Marine Department's wharf. 172. New Brunswick, east coast, Miramichi bay, Hay island, back range light improved.

62. July 9.—173. British Columbia, Burrard inlet. Second narrows, beacons established. 174. United States of America, Washington, Strait of Georgia, Roberts point, light established. 175. Alaska, Revillagigedo channel, Hog rocks light, characteristic and intensity changed.

63. July 12.—176. Quebec, River St. Lawrence, Lark reef, gas buoy established. 177. Quebec, River St. Lawrence, Saguenay river entrance, Pointe Noire, hand fog horn at light station. 178. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, below Cap Charles, Grande Point shoal, dredging, buoy to be moved westward.

64. July 13.—179. Quebec, Gulf of St. Lawrence, rock southeastward of Stevenson island, rocks in Aylmer sound. 180. Newfoundland, east coast, Notre Dame bay, Great Dunier island, light discontinued. 181. Newfoundland, east coast, Peckford island, lighthouse established. 182. Newfoundland, east coast, Trinity bay, entrance to Smith sound. Ragged island, lighthouse established. 183. Labrador, Battle Harbor approach, Double island light, change in color.

65. July 16.—184. New Brunswick, east coast, Shippigan gully, change in position of back range light on wharf. 186. Quebec, Gulf of St. Lawrence, Moisie river, range lights not in operation.

66. July 18.—187. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Ste. Croix bar, gas buoy established.

67. July 20.—188. British Columbia, Vancouver island, east coast, Sidney channel. Sidney, position of buoys, hydrographic notes. 189. British Columbia, Kootenay lake, west arm, Procter, change in light, range lights established.

68. July 21.—190. Quebec, River St. Lawrence, chart of the approaches to Saguenay river issued. 191. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Cap a la Roche, gas buoy established.

Mariners and the Criminal Code.

"The Attorney General for Ontario desires to call the attention of all masters of vessels, and all vessel men generally, to the fact that if they show negligence in the management of their vessels, they may be prosecuted under sec. 284 of the Criminal Code, which reads as follows: 'Every one is guilty of an indictable offence and is liable to two years imprisonment, who, by any unlawful act, or by doing negligently, or omitting to do, any act, which it is his duty to do, causes grievous bodily harm to any other person."

It is also stated in the circular that a conviction may be obtained under this section, even though the negligence charged has not been the subject of an investigation by the Department of Marine.

Vessels Removed from the Register.—The following vessels were removed from the register during June for the reasons assigned: Steam—Sovereign, Peterboro, Ont., 37 tons, broken up; Sailing—Blomidon, Windsor, N.S., 271 tons, stranded; Calabria, Windsor, N.S., 451 tons, transferred to Newfoundland; Empress, Charlottetown, P.E.I., 26 tons, wrecked; J. D. Everett, Windsor, N.S., 1,957 tons, sold to foreigners; Osprey, Shelburne, N.S., 69 tons, transferred to Barbadoes; Valkyrie, Yarmouth, N.S., 11 tons, broken up.

Lake Grain Shipments

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped from the various elevators in Fort William and Port Arthur, including vessels loaded for winter storage, from the opening of navigation, Apr. 13, to June 30, inclusive, with the ports of destination. The two figures shown in each column after the period represent lbs.

Atlantic and Pacific Ocean Marine.

Lieut. P. C. W. Howe, R.N., has been appointed to take charge of the Canadian Navy dockyards branch, by special arrangement with the British naval authorities.

The Canada Line's s.s. Prinz Oskar, which was recently damaged by grounding in the St. Lawrence, reached Quebec, July 8, under her own steam, and was drydocked for inspection.

An attempt is being made to float the s.s. Heimdal which ran ashore recently, on Sable island. Some difficulty is anticipated, as it is said no vessel has ever been refloated after going ashore there.

The Osaka Shosen Kaisha, operating a line of freight vessels, with third class accommodation, between the Orient and Puget Sound ports, has announced that it will make regular calls at Victoria, B.C.

Scott Griffin, heretofore Manager Canadian Northern Express and Telegraph Cos., Toronto, has been appointed Manager Canadian Northern Steamships, Ltd., with office at Bond Court House, Walbrook St., London, E.C., Eng.

The C.P.R. s.s. Empress of Ireland, in arriving at Rimouski, Que., July 7, created a new mail record between Liverpool, Eng., and Montreal, the time between the two latter points being a little over six days.

The Allan Line s.s. Grampian, which was recently damaged by striking some hidden obstruction near Cap a la Roche, has been examined and the necessary repairs completed in Great Britain. She was again placed in service July 23, the White Star-Dominion Line's s.s. Southwark having been chartered to take her place while she was in dock.

An order-in-council has been passed directing that passenger certificates issued to passenger steamers by the New Zealand authorities be accepted in Canada, as of the same force and to the same extent, as if they had been issued by the British Board of Trade, such certificates having been given such privileges in Great Britain in 1886, the British certificates having been permitted in Canada since 1904.

The Imperial Merchant Service Guild is conferring with the British Board of Trade, regarding the hardship imposed on captains and officers of merchant vessels, who are frequently compelled to give up their positions on account of being detained, in connection with enquiries into casualties, on the ground that their evidence may be material. It is stated that a scheme is being propounded, whereby such officers may insure against loss due to any such detention.

The Canadian New Zealand Line's s.s Aeota, on her first trip from Montreal to New Zealand, June 29, ran aground at Martin River, about 250 miles below Quebec, and was released, with some difficulty, by the C.P.R. tug Cruiser and the Sincennes-Macnaughton Line's tug Sin-Mac, after which she was taken to Quebec, where her cargo and coal was removed, prior to examination. She is reported to have sustained considerable damage. Her place has been taken by the s.s. Wakanui.

Montreal press reports of July 11, stated that the White Star-Dominion Line, was about to acquire a controlling interest in 12 additional steamships, aggregating 51,361 tons, for the Australian and New Zealand service, and that arrangements were being made with the Canadian Northern Ry., and Grand Trunk Pacific Ry., for the operation of their railways in connection with the service. W. Mackenzie, President, is reported to have stated, that so far as the Canadian Northern Ry. was concerned, there was no truth in the rumor.

Maritime Provinces and Newfoundland.

The Newfoundland Governor-in-Council has approved the pilotage rates for the port of Botwood.

An enquiry into the cause of the collision between the Government s.s. Minto and the s.s Rosalind, resulted in finding that the captain of the s.s. Minto was to blame, and he was cautioned for running too close to the Rosalind's propellor.

The s.s. Evangeline, which has been lying idle at Hantsport, N.S., for over a year, has been sold to W. McFatridge, Halifax, for use as a tender in the harbor. She was built at Windsor, N.S., in 1882, her dimensions being, length 81 ft. 2 ins., breadth 16 ft. 8 ins., depth 7 ft. 5 ins.; tonnage, 69 gross, 28 register, and she is equipped with engine of 50 n.h.p., driving a screw.

The Newcastle Steamboat Co., Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $20,000, and office at Newcastle, to build, purchase or otherwise acquire, and operate steam and other vessels, and to carry on a general carrying business on the Miramichi River and its branches. The provisional directors are, P. Henessy, D. Morrison, J. Fergusson, G. Stables, and E. A. McCurdy, Newcastle.

Province of Quebec Marine.

The Montreal Harbor Commissioners received tenders, July 27, for the supply of timber and railway ties.

G. Tanguay has been appointed a member of the Quebec Harbor Commission, in place of D. Arcand, resigned.

Capt. Bernier sailed from Quebec, July 9, on the Government s.s. Arctic, with sealed orders, for a cruise in Arctic waters.

The Department of Public Works has awarded the contract for the construction of a deep water wharf at Levis, as described in our last issue, to H. Dussault of Levis.

The Quebec Harbor Commission announces that it has come to an arrangement, which enables the C.P.R. to remove the discriminating freight rates existing on goods on their Empress steamships, consigned to Quebec, as compared with Montreal.

The s.s. King Edward, which stranded at Anticosti Island last fall, and was eventually salved after being abandoned by the owners, has been thoroughly overhauled and repaired at Quebec. It has not been decided as to what is to be done with her.

The Montreal Harbor revenue for June was $58,871, against $51,329 for June, 1909. There was considerable increase in the local traffic. The total revenue from the opening of navigation was $112,840, against $88,095 for the same period 1909.

The Richelieu and Ontario Navigation Co.'s steamboat Three Rivers has been practically rebuilt, with the exception of her hull, and she will be utilized in the excursion business. The superstructure was removed down to the main deck, and renewed in more modern style.

The permanent board of conciliation, which has been appointed to deal with any complaints of the longshoremen against their employers at Montreal, considered a number of such, July 7, and settled one or two points, which were not considered sufficiently clear in the recent award of the board which dealt with the dispute in the early part of the year.

The Canadian General Development Co.'s steam tug Sogenada, arrived in

Montreal, July 8, from Great Britain. She is said to be the smallest steam vessel which has come to Canada across the Atlantic under her own steam. The voyage, which occupied about six weeks, was made by way of the Azores. The vessel is about 65 ft. long, with bunker capacity for 30 tons of coal.

A. Vickers, of Vickers, Son & Maxim of England, was in Montreal recently, in connection with the construction of a dry dock and ship repairing plant there. A site of about 30 acres is said to have been selected, situated about four miles east of the city, for a floating dry dock. It is stated that work will be commenced on what is estimated to be a $5,000,000 plant, this fall, and that the whole will include dry dock, ship building and repairing plant, and the manufacture of car wheels.

The Dominion Government steamboat Montmagny, which has recently been completed at the Sorel yards, is built of steel throughout, and is of the flush deck type with two pole masts. Her dimensions are: Length over all, 222 ft.; beam, 34 ft. 8 ins.; draught, 15 ft., with 2,064 tons displacement. She has three decks, with all up to date accommodation and equipment, including a Marconi wireless telegraph installation. The machinery consists of twin screw triple expansion engines with cylinders 15, 24 and 39 ins. diar., by 24 ins. stroke, supplied with steam by two marine return tube boilers, 14 ft. diar., by 10 ft. long, at a pressure of 170 lbs.

In the litigation going on between the Quebec and Levis Ferry Co., and the Levis Ferry, Ltd., the Superior Court recently gave judgment to the effect that the first named had not the right of ferrying passengers between Quebec and Levis, and ordered it to cease carrying on such business. This order not being complied with, the Levis Ferry, Ltd., applied, July 7, in chambers, for an order to restrain the Q. & L. F. Co. from conducting a ferry service, and asking that the company be fined, and the manager committed for contempt of court in not carrying out the previous order. The Q. & L. F. Co. has issued a writ against A. Bernier, President Levis Ferry Ltd., asking that he be condemned for not carrying out the contract, as to the ferry service, and has also written to the Quebec Ferry Committee, offering to take over the contract and continue the service. The hearings of the latter actions have been deferred, pending the decision of the Superior Court in the action and appeal.

Ontario and the Great Lakes.

The contract for the widening of the Welland Canal at Welland has been let to J. W. Russell, Toronto.

The name of the steamboat Salaberry, No. 111665, registered at Kingston, has been changed by order in council to Quinte Queen.

The Inland Lines steamboat Glenellah, which ran aground at Presqu'ile, early in July, was released July 7, without damage.

Hamilton press reports state that the Hamilton Ferry Co. will purchase a large ferry steamboat for operation between Hamilton and Oaklands.

An order in council has been passed approving regulations for the governance of a ferry across the St. Clair River, between Sarnia and Port Huron.

The Western Steamship Co.'s steamboat J. A. McKee ran aground at Grecian shoal, near Colchester, July 12, and was subsequently released without apparent damage.

The Dominion Government is reported to have decided to erect a lighthouse on the shoal lying a little to the south of Chimney island, in the St. Lawrence River.

In speaking at Morden, Man., recently, Minister of Railways Graham said that a new Welland canal would probably be built instead of enlarging the present one.

The Chicago and St. Lawrence Steamboat Co.'s steamboat G. R. Crowe, which ran on a shoal in Lake Erie, near Amherstburg, July 19, was released without damage, July 20.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat Lakeside, which has been thoroughly overhauled and repaired, was placed in service for the first time this season, July 4.

The ferry steamboat Fortune, which has been operated for some time between Sault Ste. Marie, Mich., and Sault Ste. Marie, Ont., will, it is reported, be rebuilt and strengthened for ice breaking purposes.

The Montreal Transportation Co.'s steamboat Bothnia, which was beached at Lily Bay, near Brockville, July 18, was, after being lightered, temporarily repaired, and proceeded to Montreal under her own steam, July 20.

The ratepayers of Owen Sound, will vote, during August, on the granting of a bonus of $50,000 to a British syndicate, for the construction of a dry dock, ship building and repairing plant there, at a cost of $1,000,000.

The Toronto Ferry Co.'s steamboat Trillium, a description of which was given in our last issue, was placed in service July 1. The vessel, which was built by Polson Iron Works, Toronto, was only launched June 18.

The Department of Marine has issued a list of buoys, beacons and day marks on Lake Huron and its connecting waters, corrected to June 15. It has been compiled by Lt. Col. W. P. Anderson, Chief Engineer of the Department, and covers the aids to navigation on the Canadian shore of the lake, the Georgian Bay, North Channel, and River St. Mary, below the falls.

The U.S. Lake Survey reports the levels of the Great Lakes for June, in feet above tidewater, as follows:—Superior, 601.86; Michigan and Huron, 580.56; Erie, 572.68; Ontario, 246.46. Compared with the average levels for the past 10 years, Superior was 0.72 ft. below; Michigan and Huron, 0.52 ft. below; Erie, 0.16 below, and Ontario, 0.32 ft. below.

Sir John Murray, who was one of the members of the Challenger expedition, which was organized in 1872, to examine the physical and biological condition of the great ocean beds, was in Ottawa recently, when, it is stated, that he made representations to the Government, with a view to the undertaking of similar work on the Great Lakes.

The construction of the Western Dry Dock and Shipbuilding Co.'s plant at Port Arthur, is being rushed, and the President is reported to have said, July 5, that the keel of the first vessel to be built by the company, would be laid in September. He also announced that tenders would shortly be called for, for the construction of the north end breakwater, plans for which were with the Public Works Department.

The traffic through the Canadian canals, from the opening of navigation to May 31, is reported to have been considerably heavier than for the similar period last year; the total being 8,276,270 tons, against 2,552,560 for May 1909. The increases are, Sault Ste. Marie, 5,502,110; Welland, 69,617; St. Lawrence, 79,105; Chambly, 32,611; Ottawa, 17,644; Murray, 15,403; Rideau, 7,408. St. Peters canal is the only one showing a decrease.

Manitoba, Saskatchewan and Alberta.

In our July issue, in referring to the appointment of H. J. Truscott as Contracting Agent Inland Lines, Ltd., at Winnipeg, we stated, in parentheses, "which was taken over by the Inland Navigation Co." This should have read, "which has taken over the Inland Navigation Co."

In an interview at Winnipeg, July 14, the Minister of Public Works, promised a deputation representing the city parks board, that engineers would be engaged at once to conduct a survey of the Assiniboine River, as far as the park, and to prepare an estimate for the clearing of the bed, so as to admit of navigation to that point by small craft. He also stated that the Department might favorably consider the granting of assistance to the city for the construction of a central wharf, in connection with the parks, if a site were agreed upon.

Two parties of Government engineers started from Edmonton, recently, on a survey of the Saskatchewan River to Winnipeg. Each party will cover about 200 miles, carrying a line of levels along the banks, and taking water levels. Two parties will also work along the river from Prince Albert, meeting L. R. Voligny, in charge of another party half way between Prince Albert and Edmonton. It is expected to complete the survey between Winnipeg and Edmonton before the winter sets in, and if no serious obstacles are encountered, the scheme of making the waterway navigable between these two points will be pushed forward with all possible speed.

B.C. and Pacific Coast Marine.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George arrived at Victoria, July 12, from Great Britain, having taken 66 days on the voyage. She was placed on her route July 22.

The C.P.R. s.s. Princess Adelaide was launched at Glasgow, Scotland, July 7. She is intended for the Vancouver-Seattle service, and has capacity for 240 first class and 960 second class passengers.

Press reports state that the Dominion Department of Marine has decided to establish a marine depot at Prince Rupert for vessel repairs and for the light and buoy service. The initial cost is stated as $100.000.

Arrangements are reported to have been made for the carrying of mails by the G.T.P. Steamship Co.'s steamships Prince Rupert and Prince George, in addition to the mail service by the C.P.R. Pacific coast steamships.

The Gulf Steamship and Trading Co., has communicated with the New Westminster board of trade, offering to put on a semi-weekly service with Victoria, in response to the board's efforts to improve the freight service between the two cities.

Press reports from Victoria, state that A. H. Treen, who has had a long service with the G.T.R., C.P.R. and the Union Steamship Co., has been appointed agent for the Northern Steamship Co. there.

The Victoria Shipping Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $150,000, to own, operate and trade with steam and other vessels of all descriptions, and to carry on the business of shipowner in all its branches.

The G.T.P.R. has applied for a subsidy for a floating dock at Prince Rupert, which will be constructed at a cost of $1,500,000. The dock, plans for which have been filed with the Depart-

The Richelieu and Ontario Navigation Co.'s steamboat Rochester, which runs between Youngstown and Ogdensburg, N.Y., from photo by W. I. Serrell.

THE CANADIAN RAILWAY ACCIDENT INSURANCE COMPANY OTTAWA, CANADA

A PURELY CANADIAN COMPANY

JOHN EMO, General Manager H. W. PEARSON, Secretary-Treasurer D. MURPHY, President

AUTHORIZED CAPITAL - $500,000. SUBSCRIBED CAPITAL - $200,000.

Issues all classes of Accident and Sickness Insurance at lowest rates as is consistent with safety. Agents wanted in unrepresented districts. Railroad Employees and Collective Insurance a specialty.

ment of Public Works, will have a capacity of 20,000 tons.

The Dominion Government has renewed the subsidy to the Pacific Coast Steamship Co., for a service between Victoria and San Francisco, Cal., for three years, expiring Mar. 31, 1913; and has also renewed the subsidies to the C.P.R. for services to Northern British Columbia, Skagway and other coast points.

C. B. Foster, Assistant General Passenger Agent C.P.R., Vancouver, is reported to have stated, July 4, that the two steamships, which are under construction in Scotland for the Pacific Coast steamship service, and which are to be named Princess May and Princess Adelaide, will be placed on their routes in the fall, and that they will replace the steamships Charmer and City of Nanaimo, which will be transferred to other routes.

The Coast Steamship Co.'s s.s. British Columbia, which recently arrived at Victoria, from Glasgow, Scotland, is being operated between Vancouver, Prince Rupert, Stewart and way ports. Her dimensions are, length, between perpendiculars, 170 ft.; breadth 27.1 ft.; depth of hold 10.5 ft.; depth, molded, 12.9 ft.; cargo capacity 29,736 ft., (40 cu. ft. to one ton); and she is equipped with triple expansion engines, with cylinders 14, 22½ and 37 ins. diar., by 27 ins. stroke supplied with steam at a pressure of 160 lbs.

The s.s. Cheslakee, built for the Union Steamship Co. of British Columbia, at Belfast, Ireland, on her recent test runs made 12-15 knots an hour. Her dimensions are, length, 132 ft.; breadth, 28 ft.; depth, molded, 17¾ ft. She is intended chiefly for the passenger traffic, and she has been equipped with all the most modern appliances. The machinery consists of triple expansion engines, with cylinders 13½, 22 and 36 ins. diar., by 20 ins. stroke, supplied with steam by a multitubular Scotch boiler, at a pressure of 185 lbs.

The Grand Trunk Pacific Coast Steamship Co., the incorporation of which we announced in our last issue, will take over and operate the steamships Prince Rupert and Prince George, now running between Prince Rupert, Stewart, Vancouver, Victoria and Seattle; and the Prince Albert (formerly Bruno), running between Prince Rupert and Queen Charlotte islands. The officers of the company are, President, C. M. Hays, Montreal; Vice President, E. J. Chamberlin, Winnipeg; Manager, C. H. Nicholson, Vancouver; Secretary, H. Phillips, Montreal; Treasurer, F. Scott, Montreal; Auditor, W. H. Ardley, Montreal.

Should the Brake Power on Freight Cars be Increased.

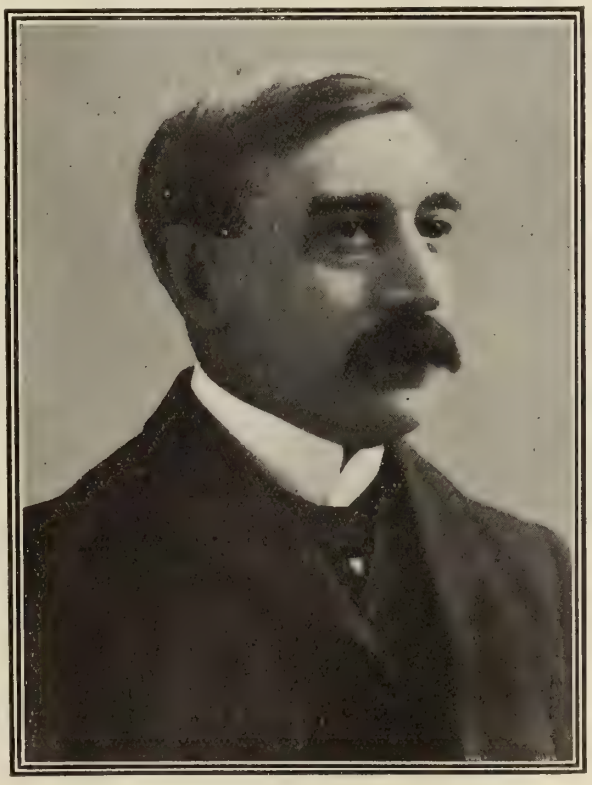
By T. Clegg, Assistant Air-Brake Instructor C. P. R., Winnipeg.

Ever since air brakes came into general use on railways, the average well-informed air brakeman has ever had before him the question, "What is the proper percentage of brake power for a freight car." This question is not so easily answered as may at first appear, for, if we enquire deeply into the subject we find there are many things to consider before we can arrive at a decisive answer and then the answer is not always unanimous.

During the past few years there have been tests made of practically everything that could be tested in regard to braking power for railway rolling stock, yet we find on most railways a braking power on the average freight car that falls below that efficiency which the service demands. This is not the fault of the air brake apparatus, for this has been brought to such a state of efficiency that, if properly maintained, it would seem almost impossible to improve it, but it is in the distribution of the power this brake is capable of developing, that the most serious inefficiency occurs. It is a remarkable fact that we do not stop the average freight train in any less distance today than we did 20 years ago. That the brake power on the average freight car today is too low cannot very well be disputed but we have got so accustomed to it that we manage to get along fairly well, but if it can be improved, even in a small degree, we need every bit of it.

Very often the engineer's mode of procedure in stopping a long loaded freight train is to shut off steam a considerable distance from the expected stopping place and let the momentum of the train decrease to some extent, then make practically a full set service brake and wait for the eventual stopping of the train, which may or may not be at the intended place, this depending on conditions and the judgment he has used in making the stop, and after making this application the engineer is left without any margin of brake power, therefore it is very apparent that if a freight train of 2,000 tons is travelling 30 miles an hour it will take considerable time and distance to bring it to a successful service stop, and we cannot regard this as an ideal method of stopping the train. It is possible to improve these conditions to some extent, and it is the purpose of this paper to provide some data in regard to freight car brakes, and to show to some extent what use we are making of our air brakes, and what use it is possible to make of them.

The average freight car is braked to 70% of its light weight, based on the emergency application of the brakes with a train-pipe pressure of 70 lbs. per sq. in. and a brake piston travel of 8 ins. There has been a tendency recently on some roads to increase this brake power to some extent and this is most assuredly a step in the right direction. There is no doubt it is a mistake to base the brake power on the emergency application, because emergency applications are only properly made in a case of absolute necessity to prevent as far as possible, damage to life and property by stopping as quickly as possible a moving train. Ordinarily the brake is used in service applications and for that reason alone the correct base of the brake power should be the full set service brake. On cars that are based on the 70% in emergency plan the brake power falls below what is the general supposition. In actual practice it means as a rule that the brake power is not 50% when the brake is set in full service on a light car, because of the many losses that occur between the pressure per square inch in the brake cylinder and the pressure of the brake shoe on the wheel and often we find if a car is loaded to its capacity that the brake power with a full set service brake falls below 10%, which fact in itself is sufficient to justify some enquiry into the problem with the object in view of increasing the brake power if at all possible. In order to show the theoretical and actual brake power on freight cars, the table on the next page has been arranged, which though not elaborate, will help to show approximately the relation that exists between the different brake power bases and the striking difference between the theoretical and actual brake power with various applications.



Alfred Price
General Superintendent Alberta Division Canadian Pacific Railway.

Having now shown approximately, the theoretical and actual brake power, I will proceed to find the cause of the difference. Elaborate tests made by W. H. Marshall, M.E., and issued by the Westinghouse Air Brake Co., in bulletin 6015, show that the friction of the brake piston packing-leather causes a loss of 9.5% of the total cylinder value when that cylinder contains a pressure of 40 lbs. per sq. in., also that the brake piston release spring causes a loss of 8% of the cylinder valve when the piston travel is 8 inches. This seems that 17.5 of the cylinder value is lost right in the brake cylinder, which on the car we are considering, would mean a total loss of 12.5 of the total brake power, which basis of loss has been used in compiling the table. The effect of this in road service is as follows: Suppose we have a train of 50 loaded cars and we make a full service application of the brakes to stop the train, what is the percentage of brake power? This application would brake the cars to (theoretically) 58.3% of their light weight. The load will reduce the percentage to 21.5, subtract from that the 12.5% lost by reason of cylinder value and behold the brake power is only 9%.

If this train was braked on the 80% in service plan the braking power would be 17% under the same application. We must now take into consideration other losses that may further reduce the above 9%. These losses might be insufficient train-pipe and auxiliary reservoir pressure, leaky brake cyinders or piston packing leather, excessive piston travel, too light reductions in making applications on long trains, friction of foundation gear, occasional brakes cut out, and so on, all of which, if present, will do their share to diminish the actual brake power.

Suppose the train consist of light cars then under the 70% in emergency plan the brake power would be about 45.8, and under the 80% in service plan, the brake power would be about 67.5% not taking into consideration the minor losses. This will show that if we braked the 80% in full service plan, we appear to be well within the limits for the reasonable prevention of slid flat

wheels, but since cars are used mostly under load it is to that phase of the subject that our attention should chiefly be directed.

With a train braked on the 70% in emergency plan, at a certain speed the train could be stopped in 300 ft. with a full service application, whereas if the train was braked on the 80% in full service plan it would be stopped in approximately 160 ft. therefore it is very evident this plan of braking would effect a considerable difference to the stopping power of a freight train.

The above statements are not intended to suggest that we would make full service applications all the time, but to show what it is possible to do when desired. There is no doubt that higher braking power offered some difficulty on long trains with the old style (F 36) triple valves, because they took too long to apply at the rear of the train, and if the brakes were applied heavily at the head end before they applied to any appreciable extent at the rear, a severe run-in was liable to be the result, which of course, is liable to damage draft gear and lading, but since the advent of the type K triple valve this defect has been practically overcome, so that we now have no reasonable excuse to offer for continuing to use as low brake power as has been in general use in the past.

Something should be said in regard to the possibility of slid flat wheels with increased brake power, but this phase of the subject is so extensive that it would require a separate paper to deal with it adequately. Suffice it to say that it is not the increased brake power that is the immediate cause of skidded wheels. The most prolific cause of skid flat wheels is the inequality of braking power coupled with various conditions and variations in manipulation of the brake, as an instance, supposing there is a car on the train with the brake cut out and the one ahead of it has the brake operating, when the brake is applied the tendency is for the unbraked car to bump into the braked car and in this action temporarily relieves the adhesion between the wheel and the rail, the shoe grabs the wheel, and there is a skidded wheel, but the cause of it was not the braked car, the fault being the unbraked car. There are a great many other causes of slid flat wheels, but they are too extensive for this paper, still it may be interesting to mention that a car would have to be braked to about 500% of its light weight to skid the wheels if that car was travelling at the rate of 60 miles an hour where 20% might, under certain conditions skid a wheel at say four miles an hour, therefore it is very plain that speed is a very important factor in skidded wheel consideration. Where the increased braking power has been used in any class of service it has usually shown a tendency to reduce the number of slid flat wheels. But just so long as the weight of freight cars is varied without corresponding variation of the brake power, just so long will we have the skidded wheel trouble and although it is necessary to keep the brake power within reasonable limits there does not seem any valid reason why the brake power should not be materially increased, as the benefits to be derived far exceed the detriments to be encountered.

It is possible that freight car wheels, will require more attention in regard to being kept in line and perfectly round; for if any wheel becomes wobbly, it has a greater tendency to skid than one running true. In further consideration of increased brake power it is necessary to ascertain how this can be accomplished. On the car we have used as our example we could not brake it at 80% in full service with an 8 in. brake cylinder, because this would mean that we would have to multiply the brake cylinder value over 11 times, and with a piston travel of 8 ins. the shoe clearance would be only .7 in. and to overcome this we should use a 10 in. brake cylinder, which would mean a multiplication of the brake cylinder value of 7 times, which is within the recommended practice, and would give a shoe clearance of 1.14 ins. The increase cannot be had by increasing the train-line pressure, as no matter how much it is increased, a 10 or 15 lbs. reduction of the train-pipe pressure would only result in the same brake cylinder pressure as from 70 lbs. and it would be only at such times that the brake neared the equalizing point, that an increased brake power would occur. Also this method would be detrimental, because it would increase the liability of hose bursting, increased train-pipe leakage, set a higher pressure for the pump to work against, increase the liability of triple valves working undesired quick action, all these without any beneficial results, other than we can obtain from the brake cylinder and foundation gear. If we consider for a moment how much the increased brake power is going to facilitate the handling of our freight trains, it will leave no doubt in our minds that we can materially increase the earning power of our freight car brakes without inconvenience.

We would not purchase a locomotive with a tractive power of 30,000 lbs. and then use it all the time hauling trains of 400 or 500 tons on level divisions without some reasonable excuse for so doing, yet railway companies often buy the very best of air brake apparatus but fail to get all out of it they reasonably can. The next part to consider is, whether we should jump from the old style of brake power to the top notch of the new increased brake power (whatever we decide that top notch is going to be) in one jump, for some reasons it would perhaps be advisable to do this in stages, but if we look back at our past and present practice we find that it is quite common to run trains, with occasional brakes cut out, and that without very serious results, then this being the case there does not seem any valid reason why we cannot go to the decided top notch in one operation, because the percentage of difference would not be so great.

It is necessary for everyone who has anything to do with freight car brakes, to give some thought to the plea for a higher braking power, so that our engineers can handle our loaded freight trains with more assured confidence. We all know that the hole made in railway dividends by liability damages is very considerable and more efficient braking power will do a great deal to curtail this expense.

After what has been explained in this paper, it would appear incomplete without containing some recommendation, therefore, after considering the various powers and their effects, and road conditions, and all other forces bearing on the subject I would recommend that the braking power for freight cars be based on the full service application of the brake, with a train-pipe pressure of 70 lbs. per sq. in., and a brake travel of 8 ins., and that the theoretical brake power be not less than 75% of the light weight of the car, and that the increased brake power be obtained by proper cylindering of car so that the cylinder value will not be in any case multiplied more than 9 times. Furthermore, I will say that it is essential that all interested in the application of brake power to railway stock should regard the air brake as a most important factor in the earning of railroad dividends, and not simply a safety device for the protection of life and property.

The foregoing paper was written for presentation before the Western Canada Railway Club.

A Construction Manager's Opinion.

Chas. R. Scoles, General Manager of the New Canadian Co., Ltd., which is building the Atlantic, Quebec & Western Ry., writes from New Carlisle, Que.:—

"I find the Railway and Marine World very interesting and reliable in all matters both for construction and transportation information, and I would be very glad at any time if I could do anything to further the interests of your valuable paper."

As a result of the large amount of construction information which it contains the Railway and Marine World is subscribed for by construction managers and engineers, railway and canal contractors, etc., in every province of the Dominion.

L. H. Wheaton, Division Engineer National Transcontinental Ry., Moncton, N.B., in writing recently says:—"I have been so busy since coming here over a year ago, that I must have overlooked renewing my subscription to the Railway and Marine World. I now wish to get in touch again with railway matters generally and am dropping some United States periodicals to take yours, which is the best."

Labour-Saving Machine Tools

MANUFACTURED BY **ALFRED HERBERT, LTD.,** COVENTRY ENG.

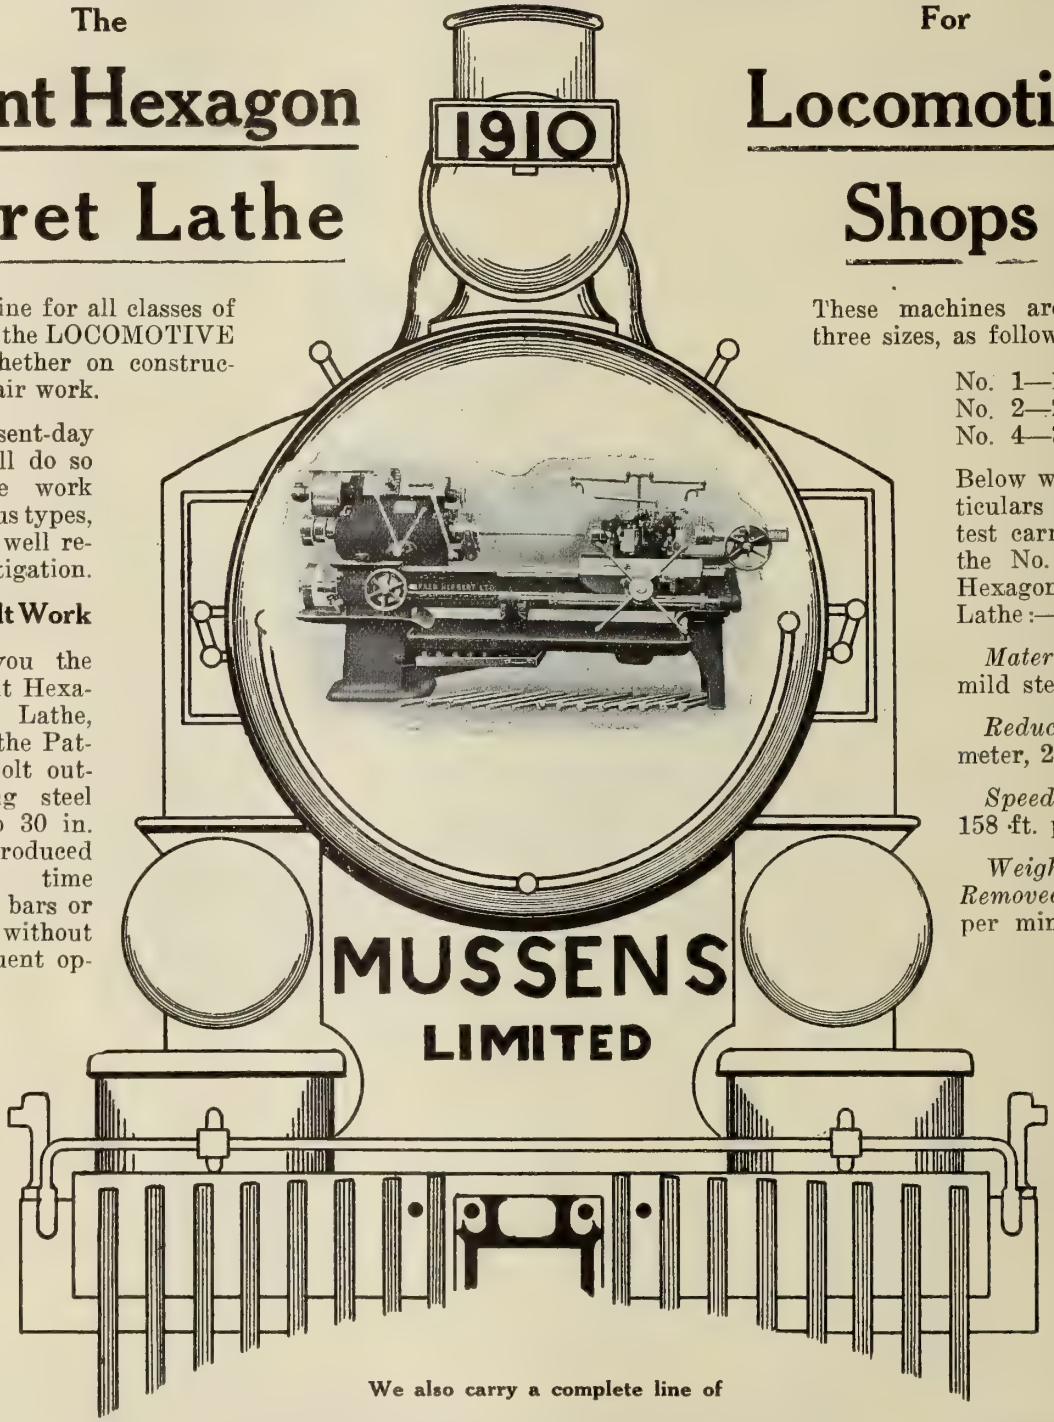
The **Patent Hexagon Turret Lathe**

is the machine for all classes of bar work in the LOCOMOTIVE SHOPS, whether on construction or repair work.

The present-day machine will do so much more work than previous types, that it will well repay investigation.

On Stay Bolt Work

we offer you the No. 2 Patent Hexagon Turret Lathe, fitted with the Patent Stay Bolt outfit, enabling steel stays up to 30 in. long to be produced in record time either from bars or forgings without any subsequent operations.



For **Locomotive Shops**

These machines are built in three sizes, as follows:

No. 1—1½" x 21"
No. 2—2¼" x 30"
No. 4—3½" x 42"

Below we give particulars of a recent test carried out on the No. 2 Patent Hexagon Turret Lathe:—

Material—30-ton mild steel.

Reduction in diameter, 2" to ¾".

Speed of Work—158 ft. per minute.

Weight of Metal Removed—7¾ lbs. per minute.

FULL PARTICULARS FREE ON REQUEST

We will be pleased to give a guarantee of output on receipt of samples or sketches

We also carry a complete line of

Machine Tools and High-Speed Steel

Improvements in Locomotive Boilers.

By H. H. Vaughan, Assistant to the Vice President Canadian Pacific Railway.

(CONTINUED FROM AUGUST ISSUE.)

BOILER STAYING is either of the gusset plate type in figs. 1 and 5, or the rod type indicated in figs. 3 and 4, detail of the usual design of rod staying being shown in fig. 12. Administrations replying, indicate on the whole, a preference for rod staying, and those having experience with both styles, prefer the rod stays to the gusset plates. The rods are both cheaper to instal and easier to repair, the strain on the stay can be more accurately adjusted, and any defects which may occur more easily detected. The gusset plates have been found in some cases to loosen and crack with age, and should such cracks occur through the rivet holes in the gusset plates they are hidden, and can only be detected by a most careful inspection. These defects are probably caused by the gusset plates not being applied in such a way as to ensure the rivets being strained to an equal amount, but as this is difficult in practice, there seems to be no doubt that the rod staying is actually preferable. both on account of its being possible to cause it to bear its proper portion of strain and the greater ease with which it can be inspected and maintained.

FIRE-BOX STAYING.—The administrations using the round top fire-box construction employ almost universally the direct radial stay for fire-box crown stays, with the exception of the first few rows, which are usually sling stays of various types. A number of rows of sling stays varies with different administrations, but, while some use two or three rows, usually the first four front rows are of this construction. The majority of administrations use button headed stays screwed into the fire-box sheet from the inside of the fire-box for the six or eight centre rows of radial stays. This general arrangement is shown in fig. 13, which shows eight rows of button headed stays in the centre, and ordinary radial stays for the rows on either side. Fig. 14 shows the form of buttonhead usually used on the central rows of stays, the part next the fire-box sheet being recessed near the centre, so as to force the head of the stay to bear tightly against the sheet on its outer edges, in order to allow of it being more easily caulked and kept tight. This construction has largely superseded the rivetted head stay, and the type common in Belpaire boilers in which a nut is used underneath the fire-box crown sheet in order to provide greater strength than is given by the ordinary rivet head.

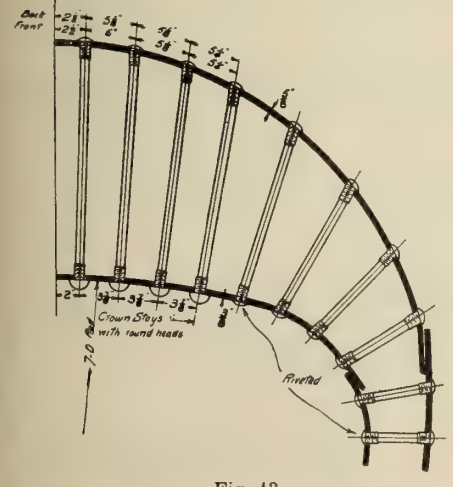

Fig 13

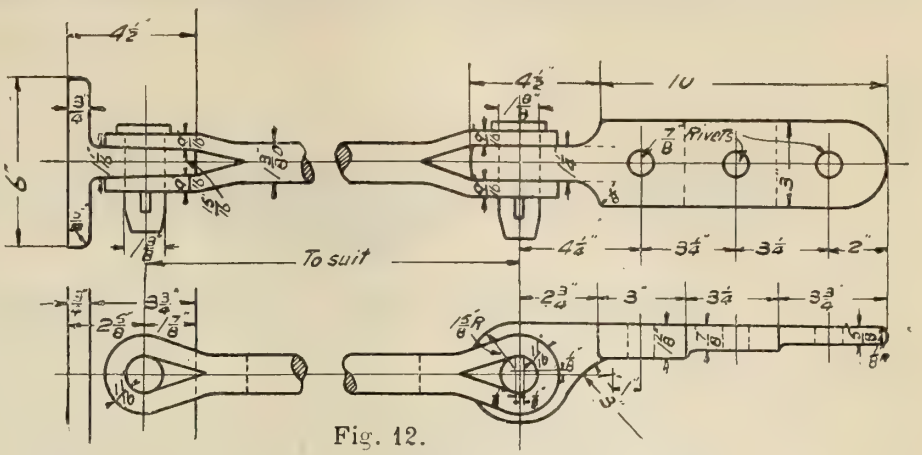

Fig. 12.

The form of sling or expansion stays in use for the front rows of staybolts are shown in figs. 15, 16 and 17. Fig. 15 shows a T-iron sling stay which is in very general use. Figs. 16 and 17 show sling stays employing an eye bolt on the portions rivetted into the fire-box crown sheet and outside fire-box sheet, which are respectively connected by two bars or welded rods forming a link between the top and bottom bolts. A type of expansion stay has also recently been introduced which simply consists of a flexible staybolt rivetted into the fire-box crown sheet. In some cases these designs are modified to permit the use of a button head on the side underneath the fire-box crown sheet, or nuts are used in order to furnish additional strength. The button head construction has about twice the strength of the ordinary rivet head stay when heated to a dull red heat and it has been found that when the crown sheet becomes overheated through an absence of water, that, if the centre rows of stays are of the button head or nut construction throughout, they do not give way until the crown sheet is heated to such a high temperature, that, when failure finally occurs, the sheet is liable to be forced down from end to end. Such an explosion is serious and has torn the boiler apart from the frames and caused serious damage. By using rivetted heads for the front four rows, which are in modern boilers, with sloping top fire-boxes, the highest part of the fire-box and in a location which is overheated before the remainder of the crown sheet is uncovered, these rows will give way before the button heads or nutted stays supporting the remainder of the sheet are overheated sufficiently to seriously affect their strength. They thus act to a certain extent in the same way as a fusible plug and by allowing the steam and water to escape into the fire-box and put out the fire, prevent serious damage occurring.

The universal use of sling or expansion stays for the front rows is largely due to their having been found to reduce the tendency of the flue sheet to crack along the root of the upper flange. Considerable upward movement has been found to occur in the crown sheet of the fire-box with reference to the outer fire-box sheet as the boiler is being heated. No upward movement could of course occur when the crown sheet is exposed to the boiler pressure, as it is not of sufficient strength to sustain this pressure without the load being taken by the stays, but while the water in the boiler is being heated, the pressure on the crown sheet is comparatively small, while the inside fire-box and the outer sheets of the boiler may not be of the same temperature, and if the connections are rigid and relative movement is not permitted, the crown sheet and flue sheet may be forced to bend.

The ordinary crown bar construction supported from the sides or ends of the fire-box is practically obsolete on new construction. A modification of this arrangement is shown in fig. 2 and in detail in fig. 18. This arrangement is used on the Union Pacific Rd. boilers, and is standard on the Harriman lines. It will be noticed that the front crown stay angle irons are connected to the sides of the boilers by links which provide the necessary staying to prevent the sides of the outer fire-box moving outwards under boiler pressure. Behind these horizontal stay rods are provided for the same purpose, and this arrangement thus closely resembles the Belpaire method of staying, with the exception that flat surfaces are not used, and crown bar construction is used in place of the staying of the Belpaire type. In fig. 18 the construction of the crown sheet stays is shown, from which it will be seen that the stays have a taper fit in the crown sheet, while the head of the stay is pressed tight against the sheet, a collar being used between the crown bar and the sheet in order to keep it in place. This construction is not a usual one in the U. S., although the administrations using it control a large number of locomotives. The administrations using radial stays combined with various designs of expansion stays for the front rows, report that their use is satisfactory and that they are preferable to crown stays which have of course been in extensive use on boilers of an older type. The Buenos Ayres and Rosario Ry. reports that it has both in use, but prefers the crown staying construction as with radial stays, cracking occurs along the top flange of the flue sheet, whereas with crown stays it does not. The general preference for radial stays in the U.S. must be ascribed to its being possible to keep the crown sheet free from scale with this form of staying whereas with the crown bar arrangement it is practically impossible to do so unless the water used is exceedingly good.

INSIDE FIRE-BOXES in the U.S. are universally of steel, and with very few exceptions the crown sheet, side sheet and back sheet are ⅝ inch in thickness. A few of the administrations use 7-16 or

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

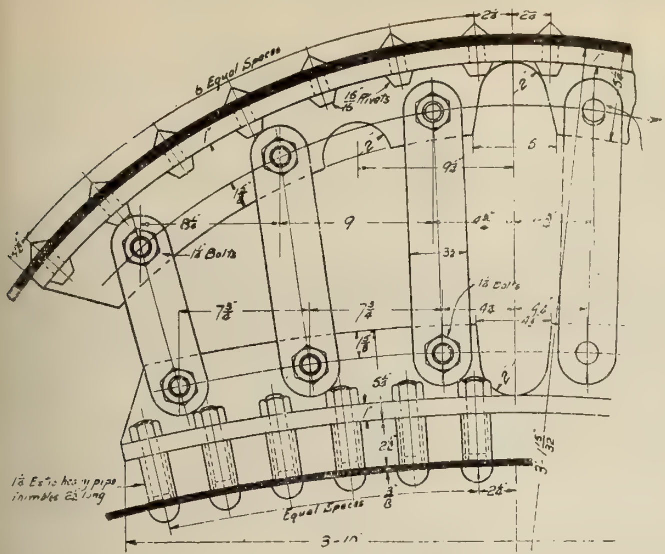
Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT



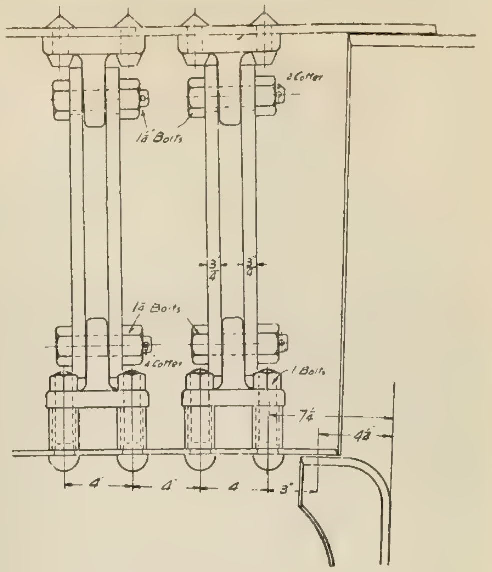


Fig. 15.

½ inch crown sheets, but their number is small, and the use of ⅜ inch for these sheets may be stated to be almost universal. Side sheets are occasionally 5-16 inch in thickness, and some of the administrations using this thickness prefer it to ⅜ inch, and state that less trouble is experienced with the thinner sheet. The same remarks apply to the back sheet of fire-box, but in both cases it may be stated that the use of ⅜ inch plate is almost universal. The tube sheets are almost universally ½ inch in thickness, although in some cases ⅝ inch sheets are used for pressures above 180 pounds. The majority of administrations replying have made no increase in the thickness of their fire-box sheets for pressures of from 180 to 200 lbs., and report that no change is necessary. The Buenos Ayres and Rosario Ry. using a copper fire-box reports the use of ½ inch copper sheets for the crown, back and side sheets, and ⅞ inch or 1 inch for flue sheets, but they have made no difference in the case of boilers carrying higher pressures. The design of inside fire-box is shown in the various illustrations and calls for no special reference. The seams are invariably single rivetted lap seams, rivets being usually ¾ inch in diameter and 1⅞ in. to 2 in. pitch. The lap of the seam is made as small as possible and is usually 2 in., although in some cases 2¼ in. is used. This seam is shown in fig. 19. While not universal, the practice of reducing the thickness of the flue sheet at the seam is adopted by a number of administrations. In some cases the thickness of the back sheet at the seam is similarly reduced. This arrangement is shown in fig. 20 and it will be seen that the rivets are countersunk in the seam and the thickness of the metal exposed to the fire is reduced as much as possible. Some administrations reduce the seam in this manner from the bottom of the fire-box for from 12 to 24 ins., while others do so for the entire length of the seam. The administrations using this practice report that it has considerably reduced the difficulty previously experienced with plates cracking from the rivet holes to the outer edge of the seam and it may be regarded as good practice. Its necessity is evidently affected by the quality of the water used. Where good water is used cone head rivets and full thickness plates are found to give but little trouble, but where the water is bad and there is a tendency for the edges of the seam to become overheated, the reduction in the thickness of the plate appears to prevent to a large extent this deterioration and formation of cracks. Reference has been made to cracking of flue sheet along the corner of the upper flange. Fig. 21 illustrates the design that has been commonly used for the last few years, in which the radius of the flange is about 2 ins. at the upper portion of the tube sheet, and is gradually reduced to about ¾ in. at the sides where little trouble is experienced. The increase of this radius to 2 ins. from ¾ in. which was previously used is stated by many administrations to have given good results. Two administrations, however, which have used it report that it gives more trouble from cracking than the smaller radius. Opinion is divided on this question, but it is stated that on the whole the increase in the size of this radius has not overcome the difficulty, which is quite a serious one, as a number of sheets crack around the root of the upper flange. The use of a larger radius at this point has necessitated a slight reduction in the number of tubes which can be placed in any boiler, and if it is not found to be advantageous its use will be abandoned. There is not, however, sufficient experience at present to state definitely whether or not this detail of design should be followed.

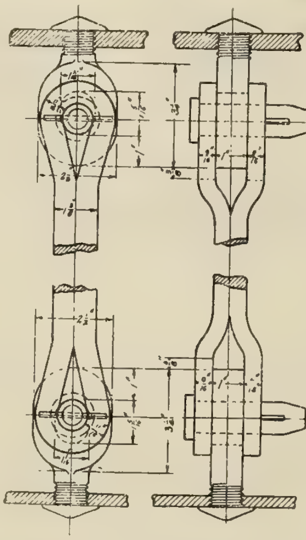

Fig. 17.

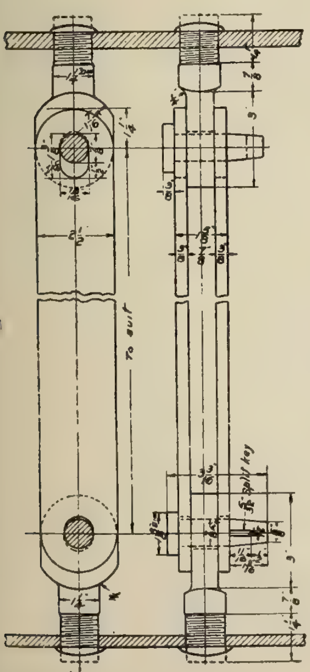

Fig. 16.

Fire-box Door.—Fire door openings are usually oval in form, 13 by 18 ins. to 16 by 20 ins. in size. Some administrations use two doors on wide fireboxes using bituminous coal. The most common form of connection between the back sheet of the fire-box and the outside back sheet of the boiler is shown in figs. 1, 2 and 3. The inside fire-box sheet is flanged outwardly, the outside sheet being flanged inwardly to meet it, forming a single rivetted lap joint. Another form in common use is shown in fig. 22, in which both sheets are flanged outwardly, and a collar is used to connect the inner and outer sheets. This type of joint is somewhat easier to construct than the other, and is reported to give very good satisfaction. A modification is shown in fig. 23, in which the construction shown in fig. 22, is modified by using a solid ring between the

PITTSBURG AND NEW YORK

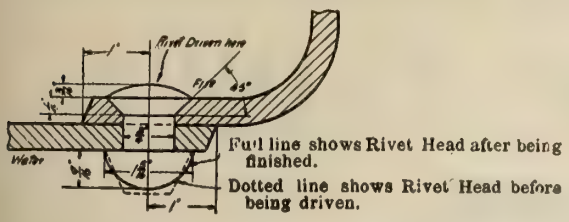

Fig. 19.

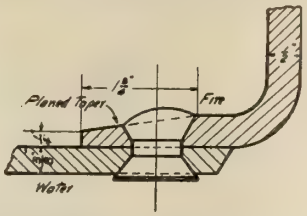

Fig. 20.

collar and outside sheet. This type of door is only reported by one administration, and is not in general use. A patented connection is used by several administrations and is illustrated in fig. 24. The form in which the sheets are flanged is stated to give greater flexibility and avoid the cracking of the sheets in the corners of the flanges. The same result is obtained by spacing the staybolts between the back sheets of the inner and outer fire-box at a rather greater distance from the door opening than usual. On the Buenos Ayres and Rosario Ry. the inner and outer sheets are connected up by a solid ring of the type common in European practice. This method is not, however, used in the U.S. where the arrangement shown in figs. 1, 2 and 3, is the most general, and that used in fig. 22 the usual alternative arrangement.

FIRE-BOX BARREL STAYS.—Stays from the fire-box tube sheet to the barrel of the boiler are commonly of the type shown in figs. 25. 26 and 27, the former being the most common. In fig. 25 a threaded stay is used which is rivetted over in the fire-box sheets. Fig. 26, shows a design in which bolts are used in place of threaded staybolts to connect the brace and the fire-box sheet. In fig. 27 the bolt threaded in to the fire-box sheet is flexibly connected to the bracket. The Pennsylvania Rd. does not use this type of stay, but by referring to fig. 3, it will be seen that the fire-box tube sheet and the throat sheet of the fire-box are formed in such a way that stays of this description are not required. By an ingenious design the tube sheet is flanged to a curved surface and the throat sheet formed to correspond. While this arrangement is evidently satisfactory it is not as easy to construct from a builder's standpoint, as the ordinary design of throat sheet with flat surfaces and is therefore not generally adopted.

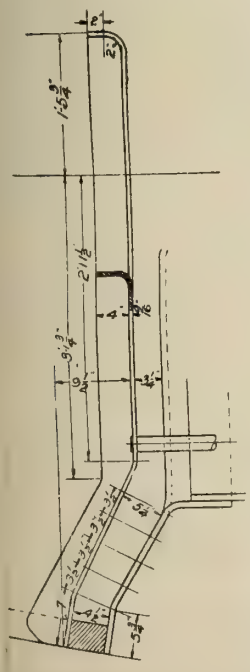

Fig. 21.

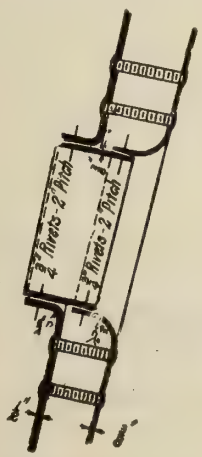

Fig. 22.

THE WATER SPACES between the inner and outer fire-boxes have been considerably increased during the past few years. Instead of water spaces at mud ring of 3½ to 4 ins., at the front of the fire-box and 3 to 3½ ins. at the side and back a number of administrations now use 5 in. water spaces at front, sides and back, while the use of

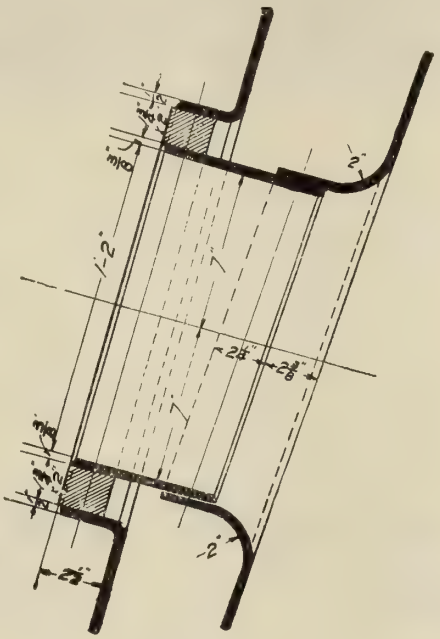

Fig. 23.

5 ins. at the front and 4½ ins. at the sides is common. The water space at the top of the fire-box has also been increased, many administrations using a minimum of 6 ins. while in others this figure is made as large as 6½ to 7½ and even 8 ins. There is no definite information obtainable as to the advantage gained by this increased spacing, but there is a very general opinion that better circulation is obtained and that a decided improvement is obtained in the life of staybolts and fire-box sheets. South American administrations replying, report water spaces of 2½ to 3 ins., but this evidently refers to boilers of a smaller capacity than is common in the U.S. While the larger water spacing increases to a certain extent the weight of the boiler, as previously mentioned where large spaces are used, the barrel of the boiler is tapered so as to reduce the increase of weight to as great an extent as possible. The

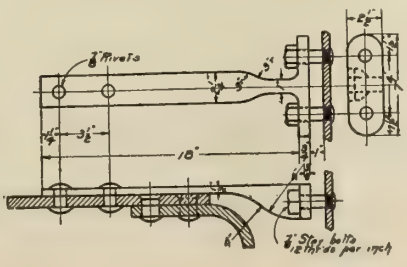

Fig. 26.

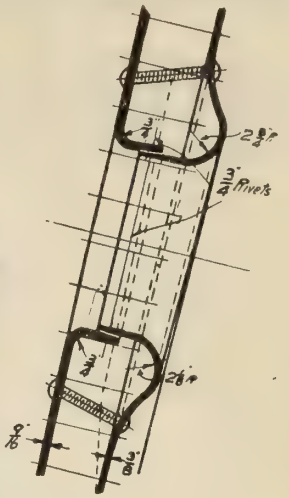

Fig. 24.

spaces between the tubes and the sides and bottom of barrel show a considerable variation in the different designs. This also is a dimension that affects the weight of the boiler but replies received from the various administrations would indicate that it is not generally regarded as important; with the exception of

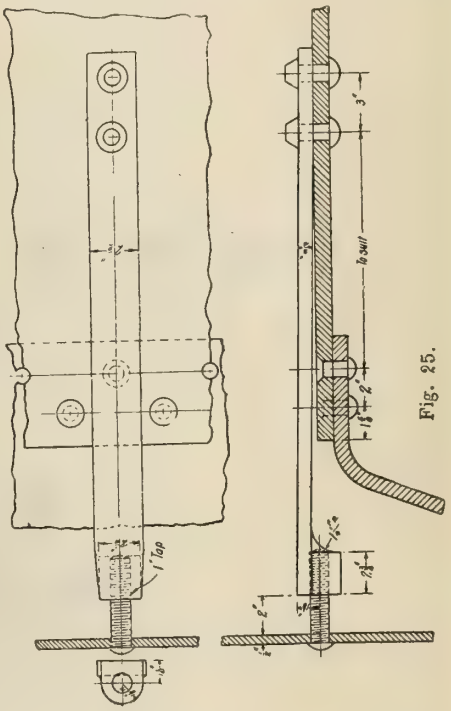

Fig. 25.

a few isolated cases the minimum dimension between the tubes and the side of the boiler which has been permitted is 2 ins., between the tubes and the bottom of the boiler 2½ to 3 ins. These would appear to be satisfactory minimum dimensions, but some administrations indicate a preference for a space

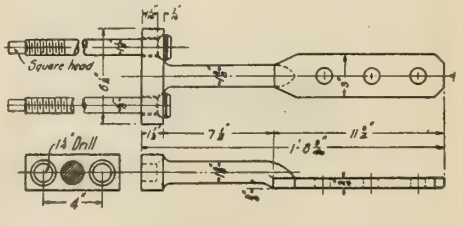

Fig. 27.

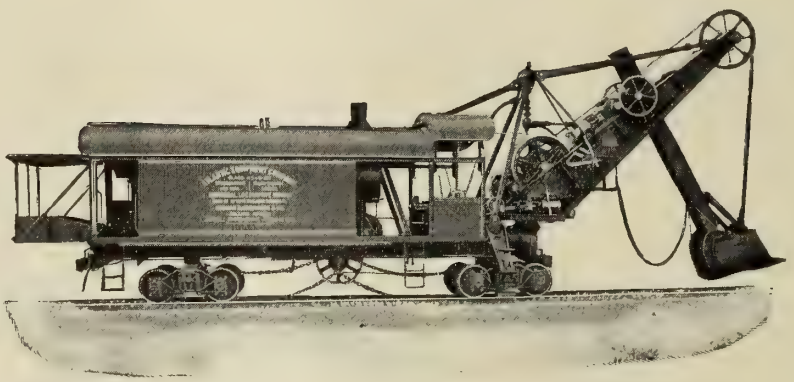
ROTARY SNOW PLOWS

Rotary Snow Plows have been in successful operation under the most trying conditions for over twenty-five years.
They keep the road open.
Work with certainty and regularity.
Do not spread the rails.
Do not derail.

Heavy snowstorms and deep drifts increase operating expenses.
No snow too heavy or too hard for the Rotary.
No drift too deep.

THE NEW ATLANTIC STEAM SHOVEL

SIMPLE - STURDY



For heavy or light digging.
No chain troubles.

Saves fuel.

MONTREAL LOCOMOTIVE WORKS, LTD.

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

of 4 to 5 ins. The distance from the top of the fire-box crown to the under side of the outer fire-box sheet of the boiler also varies considerably on different engines, 18 ins. being about the minimum figure allowed, while 24 ins. is about the maximum. Replies received would indicate that 20 to 22 ins. is a satisfactory figure at this point.

A further instalment of this valuable and interesting paper, which was written by Mr. Vaughan, for presentation at the International Railway Congress Association's meeting at Berne, Switzerland, in July, will be published in our next issue.

Tools and Formers.

By Arthur Stockall, Foreman Blacksmith, Intercolonial Railway Shops, Moncton, N. B.

So much has been said on this subject that it seems hard to say anything more, but every year calls for new efforts in this direction and I suppose it will be so always, as there is continually a demand for more economy in tools and speed in manufacturing, and this requires that tools and formers be constantly changed in shape so as to reduce breakage in material, cost of tools and time in making a given piece of work. Therefore, in the designing of tools there are three things that should be borne in mind: to be easy on material, easy on tools and easy to handle. In the carrying out of these things lies the true success in handling our work; for I think that it is better to have two simple tools to make one piece of work, than one complicated and expensive tool, with the danger of breaking the material in the end.

The formers for the bulldozer, I think, can be made cheaper and more conveniently with cast iron, reinforced with hardened steel at the places where friction will take place, so that instead of wearing out the casting, the steel will take the strain and when this is worn out it can be removed and a new piece put in. In other formers, or in fact wherever possible, the roller tool should be used as the best means to save material and power.

Then there is a tool that can be used to make a lot of work, such as freight car steps, carrier irons for passenger cars, glands and all such work where a double bend is required, or a good square corner is needed. I mean a tool with a hinge made so that it will move back far enough to allow the iron to be put in and far enough apart to let the ram come down to square up the crown or middle of the work, thus making a good clean square job that no one need be ashamed of.

As I said before, these tools may be made out of good clean castings reinforced with steel at wearing points and machined where necessary and by a little foresight they may be made so that one former, with a liner put in, can be used for different articles of almost the same shape, but of a different size; this will save cost of tools and cheapen production. In all cases where cutting or punching hot material is required high speed self hardening steel is the stuff. It costs more to put it in, but does its work splendidly and it is a relief to the burdened foreman and a joy to the worker, with no more running water, no more burning and peeling of die, or punch, or cutter, and consequent bending and breaking of tools with the machine on the hog half the time, with the toolmaker swearing and workman grumbling. I well remember my own experience of four years ago in this line. I was punching a lot of steel follower plates. They were pretty hard and of course the usual trouble was intensified by this. If we used water to cool the tools, they split and broke, and the man wading in mud, grumbling and doing very little. I was about to give it up and fall back on the drill; but high speed steel came into my head, and off I started for the toolmaker and stated my case. "I won't do it," he said; "it is only a waste of time and material." "Let's try it, anyway," I said. "I won't" he replied, and he would not, until I went to the Master Mechanic and got his doubtful consent, and at last the tools were made and put in, and the difficulty was gone. High speed steel is undoubtedly the stuff for this kind of work and pays 100% every time.

I used to think that mild steel was good enough for bolt headings, etc., and I tried it thoroughly, but it was not satisfactory. It would burn up in spite of all I could do. "Caseharden it," said my bolt maker. This I did, with the result that almost always the block would warp or bulge out in the middle and in grinding this out the casehardening would be all gone and my labor went for nothing. Then I heard a man say cast iron chills are fine, and cheap. I tried this and found that the blocks would chip and split in two. Chilled tools in my opinion are a waste of time; but I consider good clean cast iron tools superior to any of the other above mentioned for durability and economy. They can be put in and used with a little grinding and when used up can be sold for scrap for more than scrap soft steel. But, I think, from my experience, that self hardening or a good water tempering steel is best for this work. It costs more, but lasts longer and does better work while it does last, and for machine forgings of all sorts a good hard, tough cast steel is best.

For steam hammer tools nothing is too good. You can make an endless variety of things under them and a good material for these tools is the question. A dense grained cast steel top and bottom of about .30 carbon; for wedges a good hard soft steel is the best; for forming blocks, cast iron with a wrought iron band around it to keep it from spliting, gives a tool that will make almost anything.

The foregoing paper was read before the Master Blacksmiths' Association in Chicago recently.

September Birthdays.

Many happy returns of the day to:—

G. W. Alexander, Local Treasurer G.T.R. Western Lines, Detroit, Mich., born at Lightcliff, Yorks, Eng.. Sept. 10, 1859.

W. B. Bamford, General Freight Agent Atlantic Division, C.P.R., St. John, N.B., born at Belleville, Ont., Sept. 10, 1863.

W. D. Barclay, General Manager Canadian Northern Quebebc Ry., Quebec and Lake St. John Ry., Halifax and Southwestern Ry., and Inverness Ry. and Coal Co., Quebec, Que., born at Campbellton, N.B., Sept. 23, 1852.

G. T. Bell, Assistant Passenger Traffic Manager G.T.R. and G.T.P.R., Montreal, born there, Sept. 7, 1861.

W. H. Biggar, K.C., General Counsel G.T.R. and G.T.P.R., Montreal, born at the Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. R. Bremner, ex-Division Freight Agent G.T.R., Ottawa Division, Ottawa, born at Toronto, Sept. 9, 1875.

M. H. Brown, General Freight Agent Ontario Division C.P.R., Toronto, born at Victoria Square, Ont., Sept. 2, 1866.

W. G. Brownlee, General Transportation Manager G.T.R., Montreal, born at Lawrenceville, Ill., Sept. 9, 1858.

J. R. Bruce, ex-Traffic Auditor Intercolonial Ry., Moncton, N.B., born at Portsoy, Banffshire, Scotland, Sept. 23, 1848.

W. B. Bulling, Assistant Freight Traffic Manager C.P.R. Eastern Lines, Montreal, born there, Sept. 16, 1858.

C. F. Burns, Auditor of Disbursements Intercolonial Ry., Moncton, N.B., born at Clements Port, N.S.. Sept. 10, 1854.

A. D. Cartwright, Secretary Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 20, 1864.

W. F. Egg, ex-City Passenger Agent C.P.R., Montreal, born at Plymouth, Eng., Sept. 7, 1859.

W. H. Estano, Traffic Auditor Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Sept. 29, 1874.

C. B. Foster, Assistant General Passenger Agent C.P.R., Vancouver, B.C., born at Kingston, N.B., Sept. 30, 1871.

J. P. Ferguson, representing Galena Signal Oil Co., Ottawa, Ont., born at Drummondville, Que.., Sept. 12, 1856.

L. A. Hamilton, ex-Land Commissioner C.P.R., born at Penetanguishene, Ont., Sept. 30, 1852.

D. W. Hatch, Travelling Agent Atcheson, Topeka and Santa Fe Ry., Montreal, born at Bedford, Que., Sept. 1, 1841.

J. E. Hutcheson, Superintendent and Purchasing Agent Ottawa Electric Ry., born at Brockville, Ont., Sept. 15, 1858.

J. F. Kane, ex-Fuel Agent C.P.R. Western Division, Calgary, Alta., born at Toronto, Sept. 8, 1884.

W. H. Kelson, ex-General Storekeeper C.P.R., Montreal, born at Bath, Eng., Sept. 5, 1850.

C. B. King, Manager London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

V. Kistler, District Freight and Passenger Agent Great Northern Ry., Grand Forks, B.C., born at Clyde, Ohio, Sept. 4, 1881.

R. E. Larmour, General Freight Agent C.P.R., Winnipeg, born at Brantford, Ont., Sept. 26, 1868.

Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending the skidding sheaves. They are hung from a vertically hinged jib or triangle the outer end of which is guyed by two lines, one on each side, which are power tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading.

The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from the tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines with stiff or swinging boom. Constructed entirely of steel, except loading boom.

IS WITHOUT QUESTION THE STRONGEST AND FASTEST MACHINE OF THE DAY

LOGGING CARS AND DUMP CARS

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

The Quebec Bridge.

The design for the bridge over the St. Lawrence river at Quebec, shown on pg. 189 of our March issue, and reproduced on this page, will illustrate the details given below, which are taken from the specifications upon which the firms tendering will base their prices The design shows the bridge without approach spans, in regard to which no particular problems had to be solved. The plans for the piers have already been described, and it is now sufficient to say that the bridge, independent of the approaches, will be carried on two main piers and two anchor piers. The main piers will be 1,758 ft. centre to centre, and will rise to 128 ft. The cantilever arms will extend 586 ft. on either side of each main pier, being anchored at the shore ends to the anchor piers. The ends of the two cantilevers extending over the navigable channel will be connected by straight work of 14 panels 586 ft. long. Each arm of the cantilevers will also consist of 14 panels 41 ft. 10 9-32 in. each. The bridge is to be 88 ft. wide, arranged with sidewalk, highway and electric railway, double track steam railway, highway and electric railway, sidewalk.

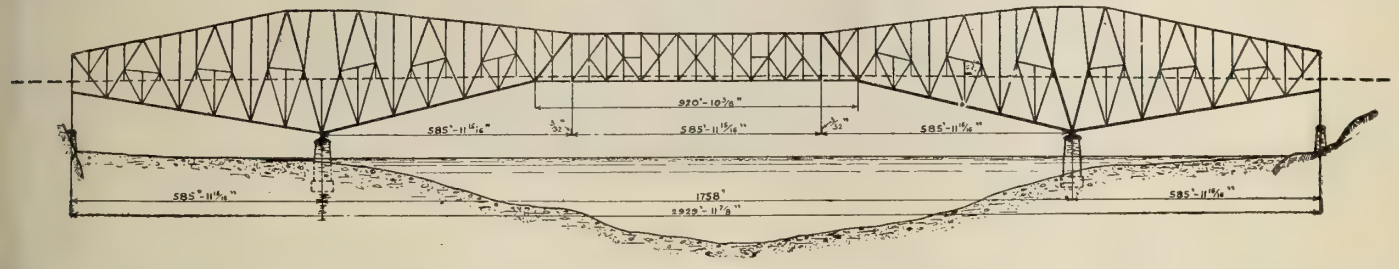
THE SPECIFICATIONS.

The superstructure is to consist of six spans, starting from the north shore as follows:—one deck span 91 ft.; one deck span 96 ft.; one shore arm 586 ft.; one main span 1,758 ft.; one shore arm 586 ft.; one deck span 115 ft. The board submits a plan for the superstructure, but in addition to tendering on this, contractors will be allowed to submit tenders on plans of their own or on modifications of the board's plans, but all tenders are to be subject to the general specifications and to the following conditions:— (1) The superstructure shall be erected on the two main piers shown in the plan. (2) The main span shall be 1,758 ft. long, centre to centre, of piers, with trusses 88 ft., centre to centre, and a maximum depth of 290 ft.; (3) A clear head room for vessels must extend for 600 ft. at the centre of the main span and no part of the steel work, for that length, shall be under elevation 251.30, with the maximum loading specified, leaving 150 ft. clear above high water; (4) A clear head-room must extend 23 ft. above base of rail for a width of 29 ft. over the railway tracks, 14 ft. clear for a width of 18½ ft. over the roadway on each side of the railway tracks, and 7 ft. clear for a width of 5 ft. over the sidewalks; (5) The plan (no. 1) shows the position of the two main piers and of the two existing abutments with elevations. The position and elevation of the two main piers are fixed; the position and elevation of the other piers and abutments may be varied. The grade on any part of the bridge must not be more than 1% under all conditions of loading and temperature. The 600 ft. at the centre of the main span shall be level under dead load except for the camber.

The contractor must satisfy himself as to the efficiency and stability of the design, plans and specifications upon which the bridge is to be built, as the contractor will be required to guarantee the satisfactory erection and completion of the bridge and it is to be expressly understood that he undertakes the entire responsibility not only for the materials and construction, but also for the design, calculations, plans and specifications, and for the sufficiency of the bridge for the loads therein specified. The enforcement of any, or all parts of the specifications shall not in any way relieve the contractor from such responsibility. The tender must be strictly in accordance with the printed form, signed by every member of the firm, if sent in by a partnership; and setting out the place or places where the material is to be manufactured. It is also specified that all Canadian and foreign customs duties on material and plant shall be paid by the contractor. The tenders must state a price per lb. for the steel in the superstructure erected and painted complete, the suspended span being erected on the cantilever principle, the price to be based upon the use of basic open hearth steel, except for cables, which shall be made of acid open hearth steel; an alternate price per lb. for material and work using acid instead of basic open hearth steel; a lump sum in addition if the suspended span is floated into position; a lump sum for concrete, concrete slabs with reinforcing bars, and other material used for the roadway floors, the laying and banding of electric railway rails, and the furnishing of guard angles, with screws and bolts for the railway floor according to the plans. In the event of the contractor offering to modify the board's plans by changing the length and depth of the cantilever or shore arms or the length and design of the suspended span, or if the mode of erection he uses decreases the quantities of materials as shown on the plans exhibited, his tender must show the amount of weight saved, and a proof of such statement must be submitted. The contractor will be paid for the number of pounds of steel remaining in the bridge after all erection material has been removed, but in case such weight exceeds the calculated weight based on the dimensions of material shown on the shop plans plus 2%, he shall be paid for the calculated weight plus 2%, the weight of paint not being included in such calculated weights.

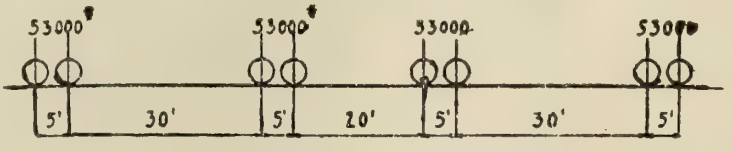
If the contractor tenders on plans prepared by himself the tenders must state prices as above, and in the case of cantilever design also a price per lb. for any additional nickel steel, or carbon steel ordered by the Chief Engineer; and, in the case of a suspension bridge, a price per lb. for any additional material in the anchorage, in the towers, the side spans or other stiffening trusses, or the cables that may be ordered by the Chief Engineer. The contractor is also to state the total weight of steel for each design and each mode of erection tendered on, and shall be paid at schedule prices for lowest of the following weights:—the finished weight of steel, the weight of steel calculated from the dimensions of material shown in the shop plans, or the weight stated in the tender, plus any increases in quantities of material not provided for in the specifications as interpreted by the Chief Engineer and ordered by him. The Government will provide and lay all rails and material for railway tracks above stringers except the expansion joints and guard angles with the screws and bolts. Each tenderer must send with his tender an accepted cheque for $500,000, and the firm whose tender is accepted must deposit an additional cheque for an amount sufficient to make up 15% of the total cost of the works as estimated by the Chief Engineer. The total deposit made shall be held as security until the delivery to and acceptance of the work by the Minister of Railways.

The erection is to be proceeded with on each side of the river as soon as the main pier is ready, and shall be proceeded with as rapidly as possible so as to secure its completion at the earliest date. It is assumed that the north main pier shall be completed by Nov. 1, 1910, and all other masonry work by Nov. 1, 1911, and while the contractor has to guarantee the completion of the bridge by a date which he will fix on this assumption, the Department on the recommendation of the Chief Engineer may grant an extension of time if the piers are not completed as assumed, or otherwise. Before the completed works are delivered to and accepted by the Minister, the bridge is to be tested under live load. If a suspension design is accepted suitable supplementary specifications will be provided.



LOADS AND STRESSES.

The loads and stresses for which the bridge or some of its parts will be calculated, are as follows:—(a) Train load, Cooper's class E 50, on one or two tracks; (b) Train load, Cooper's class E 75, on one or two tracks; (c) A highway and sidewalk load one or two roadways of 40 lbs. per sq. ft., or 920 lbs. per lin. ft. of each roadway; (d) A highway and sidewalk load of 100 lbs. per sq. ft. or 4,600 lbs. per lin. ft. of bridge; (e) Street car load; two 53 ton cars each 60 ft. long and 12 ft. wide on each track;



(f) On roadway a concentrated load of 24,000 lbs. on two axles, 10 ft. centres; (g) On highway and sidewalks, a snow load of 30 lbs. per sq. ft., or 1,500 lbs. per lin. ft. of bridge; (h) On highway; dead load above I-beams of 23,000 lbs. per lin. ft. for each roadway; (i) Track-load; ties, guard rails weighing 670 lbs. per lin. ft. of railway track; (j) Weight of steel floor (floorbeams, stringers and I-beams—distributed load); (k) Weight of steel-work as erected not included in h, i and j, but including travellers and false work, etc., during erection; (l) A wind load normal to the bridge of 30 lbs. per sq. ft. on the exposed surface of two trusses, floor and fence (fixed load) and also on travellers and false work, etc., during erection; (m) A wind load of 30

THE JOHN INGLIS COMPANY, LIMITED

ENGINEERS AND BOILERMAKERS

14 Strachan Ave., - Toronto, Canada

lbs. per sq. ft. on part above fence of a train 14 ft. high (moving load); (n) A wind load equal to ½ (l + m); (o) A wind load nearly parallel to bridge of 30 lbs. per sq. ft. on the projected area of the steel-work and of two trains 14 ft. high on a vertical plane normal to wind, or on travellers, false work, etc., during erection; (p) Stresses due to a traction load of 750 lbs. per lin. ft. on one track; (q) Stresses due to a variation of temperature of 150 deg. Fahr.; (r) Stresses due to a difference of temperature of 50 deg. between steel work and masonry; (s) Stresses due to a difference of temperature of 25 deg. between the bottom chords of trusses when free motion is not allowed; (t) Stresses due to a difference of temperature of 25 deg. between the outer web exposed to the sun and the other webs of compression members. The trains on the two tracks shall be assumed to have engines headed in the same direction, and whenever two separate loads give the maximum strains in any member, two trains shall be assumed on each track with length of train and position of engines giving the maximum. All the co-existing loads and stresses and the deformation shall determine the section of the different members with the following restrictions: Load b will be used to determine the dimension of the masonry and anchorage and also of the connection of suspended span to cantilever arms and of any members subject to reversal of stresses under live load; and will also be used to establish the outline of the bridge so that the deflection due to the load will always leave the clear height as specified. Load c will be used for trusses, main cables and anchorages only. Loads d, e and f will be used for floorbeams and stringers, and members receiving their maximum strain from a length of moving load covering two panels or less. Loads l, m and o will be used with railway tracks loaded and no highway load. Load n will be used with railway tracks and roadways loaded. Strains produced by t will be considered as secondary strains, and loads s and t will not be assumed to co-exist with wind loads l, m and o. Loads h and i will be used for all designs, plan 2 of floor being standard.

UNIT STRAINS AND PROPORTION OF PARTS.

All parts of the structure shall be proportioned so that the sum of the maximum strains produced by the loads specified shall not exceed the following amounts in lbs. per sq. in. for carbon steel, when a=Live load strains for loads as specified; b=Dead load strains (including snow); c=All co-existing maximum strains together, except secondary strains; d=All co-existing maximum strains, including secondary strains.

Tension members in main trusses—

a	b	c	d
10,000	20,000	20,000	22,000

Suspenders or any members liable to sudden loading—

a	b	c	d
7,000	14,000	14,000	15,400

Wire suspenders—

a	b	c	d
22,500	45,000	45,000	49,500

Railway stringers—

a	b	c	d
8,000	16,000	16,000	17,600

Floorbeams and highway stringers—

a	b	c	d
9,000	18,000	18,000	19,800

Compression members in main trusses—

a	b
10,000—40 l-r	20,000—80 l-r
c	d
20,000—80 l-r	22,000—88 l-r

No compression member built of carbon steel shall, however, be strained more than 15,200 lbs. per sq. in., not including secondary strains.

Laterals and sway bracing. Take both systems in calculation of strains, disregarding reversal of strains.

For compression .....16,000—70 l-r

Rivets—

	Bearing.	Shear.
Floorbeams and stringers	12,000 lbs.	6,000 lbs.
Truss members; live+dead	15,000 "	7,500 "
Truss members; all co-existing maximum strains	20,000 "	10,000 "
Laterals and sway bracing	20,000 "	10,000 "

For field rivets reduce above by 10%.

Pins. For values of a=10,000 in tension or over, or 10,000—40 l-r in compression, and corresponding values of b, c and d, used in calculating the connected member

Bearing.	Fibre Stress.
20,000 lbs.	24,000 lbs.

For smaller values of a, reduce in proportion.

Nickel steel. Increase units given for carbon steel as follows:

Tension 40%
Compression and Pins 25%

No compression member built of nickel steel shall, however, be strained to more than 19,000 lbs. per sq. in., not including secondary strains.

Units for determining sections. The units giving the maximum section shall be used for proportioning the different members.

Unit strains in suspension bridges—

Cables ..... 55,000 lbs.
Carbon steel, tension ..... 16,000 "
Carbon steel, compression ..... 16,000—70 l-r

Increase units by 10% where secondary strains are included.

Pressure on masonry—

Maximum pressure on bed plates per sq. in. ..... 800 lbs.
Maximum pressure on concrete per sq. ft. .....33,000 lbs.

Anchorage masonry. For cantilever designs, anchor piers shall show a co-efficient of safety of two.

For anchorages of suspension bridges a co-efficient of safety is to be assumed of 1½ against both uplift and sliding.

The co-efficient of friction of masonry on rock is to be taken at 50%, but no part of the rock shall be taken as resisting the anchorage strain, as the mass of masonry only will be taken into account.

In case of dispute before and after the contract is awarded, the assumptions to be made and modes of calculation to be used, shall be the ones made and used in the preparing of the plans exhibited, and the results of which are shown in the strain sheets and plans exhibited. The decision of the Chief Engineer on any such question shall be final. The strains in statically indeterminate structures shall be calculated from their elastic deformations and all assumptions made and formulae used for the calculations must be given in strain sheets submitted with tenders. All bending strains produced by the weight of the member itself and by loads applied on the member shall be considered as primary strains. All members shall be proportioned so that the greatest fibre strain due to this bending and axial strain together will not exceed the allowed units for the axial tension or compression in that member. All strains produced owing to the deformation of the steel work under any and all loads, either by the absence of pins at the joints or by the friction on pins opposing the turning of members shall be considered as secondary strains. Members subject to alternate tension and compression shall be proportioned for either stresses. Rivets in connections and splices in all cases shall be proportioned for the sum of both stresses. Material in connections and splices shall be proportioned to resist the larger stress plus 25% of the smaller stress. In no case shall the section be less than the section of the member. In calculating the net area of tension members, the rivet holes shall be taken ⅛ in. larger than the nominal diameter of rivets before driving. Pin-connected riveted tension members shall have a net section through the end pin hole at least 33% in excess of the net section of the body of the member and the net section back of the pin hole parallel with the axis of the member, shall not be less than 80% of the net section of the body of the member. The section through the intermediate pin holes shall be increased over that of the member by the section cut out by the pin hole. The latticing for compression members shall be calculated by assuming the value of K l-r in the column formula Uk=U—K l-r to be the maximum bending strain in the column produced by its compression. It shall also be assumed that the column will bend in a parabola. If the weight of the member produces additional shear, this must be added. The same column formula used in proportioning the section of the member shall be used for its lattice bars. When the value of l-r for the parts of struts connected by lattice bars is more than the value of l-r for the whole strut, the former value shall be used in the calculation of the value of the strut. Plate girders shall be proportioned by their moment of inertia. The gross section of the compression flange shall not be less than the gross section of the tension flange, and the width of the flange shall not be less than 1-12 of the distance between its side supports. The flanges of plate girders shall be connected to the web with a sufficient number of rivets to transfer the total shear at any point in a distance equal to the depth of the girder at that point, and in addition any load applied directly on the flange. The wheel loads where the ties rest on the flanges shall be assumed to be distributed over three ties. Stiffeners shall be riveted to the web as shown in the plans exhibited. Minimum radius of gyration of compression members shall be 1-100 of the length of member for trusses, and 1-120 for lateral and sway bracing struts. Approach spans, floorbeams, stringers, buckle plates, hand railings, stairways and all rivets shall be made of carbon steel. In case the main part of any member of the trusses is made of nickel steel, all the details and connections of such member shall also be nickel steel. In case the main part of any other member of the bridge is made of nickel steel, the details and connections may be made of carbon steel. All material in suspension designs shall be carbon steel.

The next section of the specifications deals with details of design, and provides that all parts of the structure be accessible for inspection, cleaning, painting and repairs; that drain holes be provided for all parts which will hold water; that the main members be so designed that the neutral axis will be as near as practicable in the centre of the section, and the neutral axes of intersecting main members of trusses shall meet at a common point, and for other details necessary for a work of this magnitude. Provision is to be made for the expansion produced by a variation of temperature of 150 deg. Fahr. Provision is also to be made for the inspection and handling of the material to be used in the bridge at all stages of its manufacture; for its shipment from the manufacturing plant to the place of erection, and for the false work to be used in the erection.

MATERIALS.

It is specified that all structural steel shall be made in an open hearth furnace. During the reduction of the steel in the furnace, decarbonization below 0.12% of carbon will not be allowed, and no stock used in the furnace shall contain more than 0.10% of phoshorus nor more than 0.07% of sulphur. The ladle tests of steel as usually taken shall not contain more than the following proportions of the elements named:—

	Acid.	Basic.
Phosphorus	0.06%	0.04%
Sulphur	0.04%	0.04%
Manganese	0.60%	0.60%
Silicon	0.10%	0.10%

The ladle test of the carbon rivet steel shall not contain more than 0.35% of

phosphorus, nor more than 0.03% of sulphur. Specimens cut from the finished material shall show the following physical properties:—

Material.	Ult. strength lbs. per sq. in.	Minimum yield point lbs. per sq. in.	Minimum Elongation % in 8 in.	Minimum reduction % of area.
Shapes and plates.....	62,000 to 70,000	35,000	1,500,000 / ultimate	44 %
Rivets	48,000, to 56,000	28,000	1,500,000 / ultimate	50 %

Specimens cut from plates, bars, and shapes 2 in. wide shall bend cold 180 deg. round a rod of a diameter equal to the thickness of the specimen, when at or above a red heat, 180 deg. flat. Specimens cut from rivet rods shall bend 180 deg. flat when cold or, at or above red heat. A test piece 2 in. long when heated to a bright cherry red shall flatten longitudinally under the hammer to ¼ in. thick, without cracking on the edges. Full sized sections of I bar material as rolled without annealing shall bend cold about a rod of diameter equal to twice the thickness of the bar.

All nickel steel shall be made in an open hearth furnace and shall be rolled in the same manner as specified for rolled carbon steel with the addition of nickel. The ladle test shall contain not less than 3.25% of pure nickel, and not more than the same proportion of phosphorus, sulphur, manganese and silicon as mentioned in the tests for carbon steel. The physical requirements for plates and shapes in the finished material must meet the following physical requirements:—

Ultimate strength, 83,000 to 95,000 lbs. per sq. in.
Yield point, 55,000 lbs. per sq. in., minimum.
Elongation % in 8 in., $\frac{1,600,00}{\text{ultimate}}$ minimum.
Reduction in area, 40% minimum.

Nickel steel for pins in the finished material must meet the following physical requirements:—

Ultimate strength, 90,000 to 100,000 lbs. per sq in.
Yield point, 55,000 lbs. per sq. in minimum.
Elongation % in 8 in., $\frac{1,500,000}{\text{ultimate}}$ minimum.
Reduction of area, 35% minimum.

Specimens of nickel steel not less than 2 in. wide shall bend cold 180 deg. around a rod of diameter equal to twice the thickness of the specimen without sign of fracture.

Steel for castings shall be made in an open hearth furnace; at least one-third of all stock used for steel castings shall be pig iron, and where scrap is used, it shall be of a kind and quality satisfactory to the Chief Engineer. During the reduction of the steel in the furnace, it shall not be decarbonized below 0.10%. The ladle test for castings shall not contain more than 0.04% of phosphorus for basic steel, and 0.06% of phosphorus, 0.05% of sulphur, 0.75% of manganese and 0.35% of silicon for acid steel. The physical tests taken on coupons on the annealed castings shall show an ultimate strength of not less than 65,000 lbs. per sq. in., an elastic limit of at least 35,000 lbs. per sq. in., and an elongation of not less than 20% in 2 in. They shall bend without cracking 120 deg. around a rod twice the thickness of the test piece.

All steel for wire for the cables, suspenders and hand ropes shall be made throughout in an open hearth furnace lined with silica. The wire for serving the cables shall be made of Norway iron of a quality to be approved by the Chief Engineer. The melting stock used for wire steel shall consist of pig iron to the extent of not less than 45% of the total charge, together with other suitable melting stock. None of the pig iron and none of the other melting stock shall contain more than 0.03% of phosphorus or 0.03% of sulphur. The recarburization of steel is essential and the addition of manganese and carbon shall be accomplished by the use of ferro-manganese or spiegeleisen only, and shall be performed carefully, in a manner most likely, in the opinion of the Engineer, to give good results. During the reduction of the steel in the open-hearth furnace, it shall not be decarburized below 0.20%. The ladle tests of the steel shall conform to the following chemical requirements:—Carbon, not not to exceed 0.85%; Manganese, not to exceed 0.55%; Silicon, not to exceed 0.20% Phosphorus, not to exceed 0.04%; Sulphur, not to exceed 0.35%; Copper, not to exceed 0.02%.

The wire for cables, hand ropes and suspenders shall have an ultimate strength of not less than 215,000 lbs. per sq. in. before galvanizing, and an elongation of not less than 2% in 12 in. of observed length, the stretch to be measured while the specimen is in the testing machine. The bright wire shall be capable of coiling cold around a rod 1½ times its own diameter without sign of fracture. The cable wire before galvanizing shall not vary in guage more than 3-1000 of an inch. It shall be drawn on large-sized blocks, and finished in single lengths of not less than 3,000 ft., and shall be drawn as straight as possible without any kinks or sharp bends. After galvanizing, the steel wire shall have an ultimate strength of not less than 200,000 lbs. per sq. in. of gross section.

The other provisions of the specifications govern the making of the tests of the material, and of the parts of the bridge as manufactured, and before being erected; the painting, and the concrete and asphalt to be used in the flooring of the highways.

Tell Tales for Bridges, Tunnels, Etc.

The Board of Railway Commissioners passed the following order 11267, July 19: Re accident on Jan. 15, 1910, on the C.P.R. at snow shed 18, 1¾ miles west of Rogers Pass station, B.C. Upon an investigation by an Inspector of the Board into the cause of the accident and upon the report and recommendation of the Board's Chief Operating Officer, it is ordered that wherever a line of steam railway or any branch or portion of such railway, operated by a railway company subject to the legislative authority of the Parliament of Canada, passes through, or under, any tunnel, snowshed, bridge, or other structure, in which the perpendicular height between the base of rail and the lowest portion of the tunnel, snowshed, bridge or other structure, is less than 22½ ft., as required by the provisions of the Railway Act, the railway company shall, prior to Jan. 1, 1911, erect a suitable tell tale at each side of, and not less than 100 ft. distant from every such tunnel, snowshed, bridge or other structure. Order 10591, May 9, is rescinded.

The Acme Construction Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000, and office at Berlin, to construct and equip railways and all other works, and to deal in railway and builders' supplies. The provisional directors are F. J. Todd, J. H. Wood, and W. J. Moody, Berlin.

Quebec Public Utilities Commission.

In the case of Mercier vs. The Quebec & Lake St. John Co., the Commission has given the following judgment:—The applicant states that he has been a wood merchant at Quebec, for a number of years, that he is in the habit of shipping large quantities of wood over the Q. & L.S.J. Ry.; that the railway only carries the wood twice a week, thereby causing car congestion; that as a consequence the applicant is unable to unload his cars in the 48 hours allowed for such purpose; that the railway obliges him to pay $1 per car, per day, after the said delay of 48 hours; that this charge is onerous and as a consequence the applicant has been obliged to curtail his business. The applicant asks for an order granting him 72 hours free time after delivery to discharge his cars. It appears that the relations between the applicant and the railway in respect of the matters complained of are governed by the Car Service Association's rules which have been adopted with the Railway Commission's approval after conference with both carriers and shippers, and should not be interfered with without grave cause therefor. Considering that these rules do not appear to have been fairly applied to the applicant's case, and that upon the suggestion of this Commission the railway has agreed to refund the demurrage of $10 paid by applicant, and to give him fair and liberal treatment under the rules in the future, in which the President of the Association, present concurred. Considering that the applicant has recourse to the Commission at any time should the foregoing arrangement not be fully observed, the arrangement is approved and no extension of time is presently granted.

The Railway Library, 1909.—Under this title S. Thompson, Manager of the Bureau of Railway News and Statistics, Chicago, has brought together a collection of noteworthy chapters, addresses, and papers relating to railways, which have been written or delivered by prominent railway men during the year. There are 17 papers and addresses, or chapters from books, covering such subjects as the pre-railway era in America, the railway situation of today, railways and the Pacific north west, the diminished purchasing power of railway earnings, railroads and the public, railroad problems of today, railway nationalization, and concerning advances in railway rates. The editor contributes an introduction and the statistics of American railways for 1909. The summary of railway mileage in the U.S. contained in the statistics shows 221,132 miles, against 216,460 in 1908, and included are 1,343 miles of lines in Canada operated by U.S. lines in 1909, against 1,273 operated in 1908. The volume is issued by the Gunthorpe Warren Printing Co., Chicago, Ill.

Transportation Building, Montreal.—With respect to the press reports that a transportation building is to be erected in Montreal, and that the principal railway and steamship companies had already taken space in it, we are advised that, so far as the G.T.R. and its affiliated lines and companies are concerned the report is incorrect. A building company has made a proposition to the G.T.R. Passenger Department for the establishment of a ticket office on the ground floor of the proposed building, to be occupied by the City Ticket Agent and his staff, such occupancy to be, in all probability, jointly with other railways entering Montreal.

J. McCraw, General Agent, Central Vermont Ry., New London, Conn., writes:—"I take pleasure in enclosing renewal subscription to your valuable and interesting magazine, the Railway and Marine World."

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Acadia Coal Co.—The Nova Scotia Legislature has amended this company's act of incorporation, passed in 1865, by authorizing the issue of $2,000,000 first and second preference stock, the latter to be exchanged for ordinary stock. The company has power to construct railways in connection with its collieries. (April, 1908, pg. 275.)

Alberta and Great Waterways Ry.—B. R. Clarke, brother of the President, is reported to have stated recently that the company had not made default in the payment of interest on the $7,500,000 of bonds. The money was in hand but the company was prevented from paying it over by the political situation in the province. The interest due July 1 was paid by the province. which held the funds produced by the sale of the bonds, and the company was ready to reimburse the Government the moment it was permitted to do so.

Some further litigation is likely to arise out of the formation of the company, G. H. Henwood having been given permission to issue a writ against W. R. Clarke, the President. Henwood is solicitor for A. Hawes, of Toronto, who also has an action against the company. (Aug., pg. 627.)

Alberta Central Ry.—The company has entered an objection with the Department of Railways, to the approval of the Canadian Northern Ry.'s plans for the line from south of Stettler, Alta., to Rocky Mountain House, on the ground that it parallels the line which the A. C. Ry. has entered into a contract to build under the act granting aid to certain railways, from Red Deer to Rocky Mountain House.

A recent press report states that a number of men with 25 teams were set to work recently, between the bend of the Red Deer River, and Red Deer, and that it was proposed to add to the construction forces as fast as possible. J. T. Moore, Red Deer, Alta., is principally interested in the line. (June, pg. 447.)

During the visit of the Dominion Premier and the Minister of Railways, to Red Deer, Aug. 11, the first rails were laid, the visitors driving the first spikes. Local reports state that the line has been surveyed for 200 miles to the south-east, and for 25 miles west of Rocky Mountain House.

Atlantic and Lake Superior Ry.—See Atlantic, Quebec and Western Ry.

Atlantic, Quebec and Western Ry.—Construction is being proceeded with and during July the steel work has been placed across the Big and Little Pabos Rivers, and track is laid and ballasted as far as Grand River, Que. From that point to Gaspe, work is being actively pushed and it is expected that the grading and trestle work and most, if not all, of the bridge work will be completed by the end of the season.

When we were advised, July 30, the Atlantic and Lake Superior Ry. was still being operated as a separate line, but trains were being run through from Matapeda to Newport on the Atlantic, Quebec and Western Ry., the officials in charge of the line are, Atlantic and Lake Superior Ry.: General Manager, C. R. Scoles; Roadmaster, B. Robinson. Atlantic, Quebec and Western Ry.: General Manager, A. Lemieux, Montreal; Superintendent, F. C. Bouvier; Auditor, J. S. Gordon; Chief Engineer, W. L. Browne. New Canadian Co., (operating the A., Q. and W. Ry., until completion): Managing Director, C. B. K. Carpenter, Montreal; General Manager in charge of construction, C. R. Scoles; Accountant, W. H. Giroux. Except where otherwise stated, the headquarters of these officials are at New Carlisle, Que.

The A. and L. S. Ry. has, since the above was written, been transferred to the Quebec Oriental Ry., which is a provincial company, the charter of which is held by the Atlantic, Quebec and Westery Ry. (June, pg. 447.)

Behring Strait Tunnel.—Cable dispatches from Paris, France, Aug. 9, state that a corporation is being formed for the construction of a tunnel under Behring Strait. The plans are said to provide for utilizing two small islands in the straits as ventilating towers, thus dividing the tunnel into three sections of about 10 miles each. F. Deloncle, formerly of the French diplomatic service, and J. Delobel, a capitalist, are mentioned as being interested, along with an unnamed retired president of a U. S. railway.

British Columbia and Alaska Ry.—J. Walkenstein, President, had an interview recently with the B.C. Premier, in which the question of the immediate construction of the line was discussed. The line which it is proposed to build will extend from Vancouver, via Lytton and Fort George to the northern boundary of the province. It is also proposed to build a line under other charters from Telegraph Creek to Skagway, Alaska, connecting with the north and south line. The right of way of this east and west line has been located and it is expected that construction will be started this year. A reconnaissance survey of the Vancouver-Fort George section of the north and south line has been completed by L. M. Rice of Seattle. In a subsequent interview the president said arrangements had been completed in London, Eng., for the financing of construction, the estimated cost of which was $25,000 a mile. H. Villard, Jr., son of H. Villard, who was prominent in the building of the Northern Pacific Ry, is also interested in the company. (Aug. pg. 627.)

Burrard Inlet Tunnel and Bridge Co.—The municipality of North Vancouver District, B.C., passed a by-law July 25, to purchase $250,000 of shares in the company, and to pay for the stock by debentures. The agreement with the corporation provides that the company shall erect a bridge across the second narrows of Burrard Inlet from the Burnaby municipality and North Hastings to North Vancouver and suitable railway works to give connection with railways on the south shore, for the opening up and development of the north shore of Burrard Inlet. The company agrees that the erection of the bridge shall be proceeded with within 10 months after the bylaw has been assented to by the Lieut.-Governor, and to have it and at least four miles of connecting railways completed within three years. The reeve of the municipality for the time being is to be a director of the company. The ratepayers of North Vancouver voted on similar bylaws Aug. 13, the amount of shares to be taken being $100,000. (June pg. 447.)

Detroit River Tunnel.—While the first train went through the tunnel under the Detroit River, between Detroit, Mich., and Windsor, Ont., July 22, the first passenger train, drawn by an electric locomotive went through July 27. The train carried U. S. and Canadian officials of the Michigan Central Rd., which owns the tunnel.

Dominion Atlantic Ry.—The Nova Scotia Legislature has guaranteed the principal and interest on the second debenture stock not exceeding £190,000. Money raised by the sale of the stock shall be applied subject to an agreement with the Government and it is understood that it will be used for the construction of a line to be known as the North Mountain Division. The Legislature also passed an act providing means for the payment by the Kent county municipality of the amount expended, or to be expended, on the purchase of land for track and station purposes and terminals. The lands to be taken shall not exceed ten acres for terminal purposes, and for station purposes, 1,000 ft. in length by 200 ft. wide. The line is to be built by June 1, 1912. (June, pg. 447.)

Graham Island.—Under instructions from the B. C. Government, C. L. McCammon, C.E., has made an examination of Graham Island, the principal island of the Queen Charlotte Island group, for the purpose of reporting upon certain proposals which have been made to the Government for the construction of railways there.

J. G. Johnson has paid fees on three areas of coal land totalling 43,520 acres for a Vancouver syndicate, in the vicinity of Sandstone Point, Masset Inlet and Naden Harbor; the Western Steel Co. is reported to have purchased 25,800 acres of coal lands in the vicinity of Naden Harbor and Parry Passage, and a Seattle, Wash., syndicate has also holdings on the island. (See Queen Charlotte Island Ry., May, pg. 353; Graham Island Ry., May, pg. 351, and Island Valley Ry., May, pg. 351.)

Great Northern Mining and Ry. Co.—This is the title by which the Great Northern Mining Co., a company incorporated under the Nova Scotia Companies Act will in future be known. The act passed last session of the Nova Scotia Legislature also provides that the company may build a railway from the Great Northern Plaster Works, Belle Marche, Cheticamp, northwesterly for about three miles to Eastern Harbor, with such spur lines as may be necessary for its works, and to connect with lines already built or to be built. (June, pg. 449.)

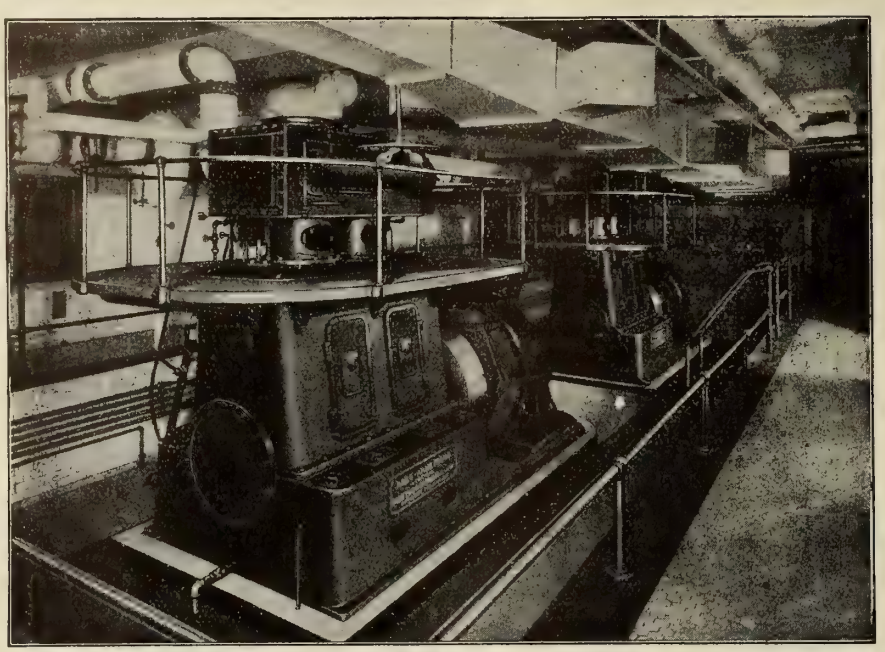
Halifax and Eastern Ry.—We are advised that Griffiths & Co., London, Eng., have the general contract for building the line. This firm has just completed building the Chilean-Andean Ry., in South America, and N. Griffiths, on completing an inspection of that line, which he was reported to be making July 30, will come to Halifax to take charge of the construction. Tenders for sub-contracts will, it is expected, be asked for shortly. It is quite possible, we are advised, that considerable construction will be done before the winter sets in. The company's securities have all been underwritten in England.

The company is reported to have leased the property at the corner of Portland and Water Sts., Dartmouth, as headquarters for its engineering staff. The engineers are working from Dartmouth over the route as laid down in the route maps filed with the Department of Railways at Ottawa, and it is expected they will have completed their work early in Sept. A. W. Kirkpatrick, of Kingston, Ont., went to Halifax, July 29, as consulting engineer to finally pass upon the plans as they are prepared by the staff. An application has been made to the Department of Railways for a contract under the act granting aid to certain railways, which provides for subsidies for the routes adopted. (Aug. pg. 627.)

Application has been made to the Department of Marine by the company's representatives for permission to purchase the naval property at Tufts Cove, about three miles from the Dartmouth ferry. A survey has been made at this point for a bridge across the narrows to give direct connection with Halifax. The town council has passed a bylaw granting the $50,000 bonus and other privileges asked for by the company, and this was submitted for approval to the ratepayers, Aug. 22.

A. K. Kirkpatrick, professor of Engineering, Queen's College, Kingston, Ont., consulting engineer, stated Aug. 12, that plans were being prepared and other work was being done in the of-

HAS COST NOTHING FOR REPAIRS



A Customer says

'We have used one of your vertical high speed engines, English type, forced lubrication, since 1907. The engine runs at 425 revolutions per minute almost constantly night and day. It has given us every satisfaction and so far has cost us nothing for repairs.".

OFFICE AND WORK

ESPLANADE STREET EAST, TORONTO

fices at Dartmouth, in order that local contractors would be able to submit tenders for portions of the work. A beginning, he added, would undoubtedly be made by Sept. 1. W. A. Hendry is Chief Engineer in charge of surveys.

Halifax and South Western Ry.—In a recent interview at Halifax, W. Mackenzie said there was nothing new in regard to the line. Ore trains were being run almost daily over the Victoria Beach section from the iron ore mines at Torbrook to the shipping pier at Port Wade. He had just returned from an inspection over the line, including the branch to the Torbrook mines. (June, pg. 449.)

Hudson Bay and Pacific Ry.—The Chief Engineer received a letter from the Managing Director of the H. B. and P. Development Co., London Eng., Aug. 2, confirming a cable to the effect that the board authorized the statement that construction would be started on the line from Prince Albert, Sask., toward Hudson Bay during August. The letter added that the line would be built from Prince Albert to Fort Churchill, and the work completed with the least possible delay. A press dispatch, Aug. 2, says the route is laid out ready for the construction gangs for 85 miles from Prince Albert, and that further mileage is being located. A later dispatch said the General Manager, H. Spicer, was expected in Prince Albert by the end of August to initate construction work, and that all arrangements had been completed for the grading for a considerable mileage, and for the laying of about 20 miles of steel this year. (Aug. pg. 627.)

Intercolonial Ry.—The Nova Scotia Legislature has amended Chap. 98, of 1909, respecting the cost incurred by North Sydney for the extension of the Intercolonial Ry., to that town, by extending the time in which the town may borrow the money for such purpose, from 1½ to 2½ years.

Tenders are under consideration for the erection of a lumber store at Moncton, N. B.

We are advised that work has been started by Morrison & Clark, on the Chatham-Nelson cut off in New Brunswick. —. Torrance is engineer in charge.

Tenders have been called for the rebuilding of the roundhouse, repair shops and station recently destroyed by fire at Campbellton, N. B. The Government has set aside $250,000 for the work. (Aug. pg. 629.)

International Ry. of New Brunswick.—A contract has been entered into under the act granting aid to certain railways, respecting the building of 3.50 miles of the line which the subsidy voted by the Dominion Parliament in 1908 did not cover.

The Van Buren-St. Leonard's International Bridge Commission will receive tenders to Sept. 9 for the building of a highway bridge over the St. John River between St. Leonard's, N.B., and Van Buren, Me. The bridge will be 762 ft. long between back walls and about 2,200 cubic yards of masonry will be required for the substructure, which has to be completed by Dec. 1, and is to be sufficient to carry a superstructure intended for carrying the tracks of a steam railway, as provided for in the terms of the subsidies voted by the Dominion Parliament and by the State of Maine. At present it is only designed to put up a superstructure to carry ordinary highway traffic, and this is to be completed by April 1, 1911. This is the bridge which it is expected will be used by the International Ry. of New Brunswick, now being completed between Campbellton and St. Leonard's, to make connection with U. S. railway systems at Van Buren, Me. (June, pg. 449.)

Inverness Ry. and Coal Co.—The Nova Scotia Legislature has authorized Inverness county to extend the time within which the railway, for which the country voted a subsidy, may be constructed. (June, pg. 449.)

Joliette and Lake Manuan Colonization Ry.—Route maps have been approved by the Department of Railways, for the projected railway for 108 miles from Joliette to Lake Manuan, Que. A plan was also filed with the Board of Railway Commissioners Aug. 3, showing a line from Joliette to Weymontachene, on the National Transcontinental Ry. The route as far as Lake Manuan has been approved by the company's engineers, and the location surveys for the first 10 miles completed. (Aug. pg. 631).

Kettle Valley Lines.—Work was started towards the end of July at Merritt, B.C., on the extension of the line up the Coldwater Valley, the contract for the building of which has been let to Macdonnell, Gzowski & Co., Vancouver. Chief Engineer McCullouch and —. Coley have charge of the survey which is reported to be well forward. The line follows the east bank of the river as far as possible, but in order to secure the lowest possible gradient, several bridges will be necessary. The section under construction will be about 30 miles long. A sub-contract is reported let for the first 10 miles to A. V. McDonald, and P. Gorman, and Jas Macdonnell says the rest of the line will be put in hand as fast as possible. President J. J. Warren and Chief Engineer McCullouch met the Penticton council recently. The President stated the company desired to obtain the right to cross certain streets in the town, a grant of foreshore from Winnipeg St. to Penticton Creek, and a flat rate for taxation for 20 years. It was proposed to make Penticton a divisional point, and 15 acres would be purchased for a roundhouse and machine shops. The plans laid before the council by the Chief Engineer showed that the line would follow the lake and come to Trout Creek, where probably a spur would be built to the lake. From West Point the line would begin to climb westward. After some discussion it was decided that a by-law would be submitted to the ratepayers fixing the taxation at $250 a year. The line between Midway and Merritt, President Warren stated, in an interview at Merritt, July 29, would be completed and in operation within 18 months. (Aug. pg. 629.)

Little Nation Ry.—The Quebec Legislature has approved the change of location of the projected line from that mentioned in sec. 7, chap. 86, Ed. VII., o:—From between Thurso and Montebello on the Ottawa River to Cheneville, and northerly to Lake Nominingue, near the C.P.R.; from near Cheneville to Arundel, connecting with the Canadian Northern Ry., and northerly crossing Kiamika tp. and along the du Lievre basin to the G.T.P.R. It is provided that in the basin of the Lievre River that the line shall not be built more than a mile from the present Roman Catholic churches in Kiamika, Campbell and Pope tps. The company is also given an extension of time within which it may construct its railway. (June, pg. 451.)

Mabou Coal and Ry. Co.—The names of W. M. Fraser, Halifax. and R. P. Fraser, Pictou, N. S., have been substituted for those of W. P. Deppe and C. P. Garvie as provisional directors by the Nova Scotia Legislature. The company was also granted an extension of time within which it may build its authorized lines. (June, pg. 451).

Manitoba and Keewatin Ry.—An agreement dated June 15, between the company and the Trust and Guarantee Co., has been deposited in the office of the Secretary of State at Ottawa.

Manitoulin and North Shore Ry.—We are advised that the extension from Gertrude Mines to Crean Hill, Ont., was opened for traffic July 20. (Aug., pg. 629.)

Maritime Coal and Ry. Co.—The Nova Scotia Legislature has repealed sub-sec. G of section 2, chap. 153 of 1903-04, and substituted another which authorizes the company to build a line from Chignecto Mines to Maccan River on the headwaters of the Bay of Fundy, and from Chignecto Mines to the Maccan River, to Cold Spring Head or other point on the Northumberland Strait, to be operated by electricity or steam. (June, pg. 451).

Michigan Central Rd.—Work has been started upon the erection of a bridge at the crossing of the Welland Canal. The bridge will be 350 ft. long and will leave a clear width of 150 ft. over the canal. The piers upon which the bridge will be built will be 55 ft. deep, which will allow the canal to be deepened to 35 ft. The swing span of the bridge will be operated by electricity. (July, pg. 549.)

Montreal and Toronto Underground Lines and Terminals.—Representatives of the International Bond and Share Co. of New York have submitted offers to the city councils of Toronto and Montreal for the construction of underground railways and terminals in those cities. A. P. Gillies, C.E., who was engaged on the construction of the terminals at Tacoma, Wash., and Cincinnati, Ohio, stated in Montreal recently that all the company wanted was franchises from the cities, and it would provide all the terminal facilities required in either city.

Northern New Brunswick and Seaboard Ry.—In a recent interview, J. J. Drummond of the Canada Iron Corporation, stated that he expected the line from the Nipisiguit iron ore mines to the Intercolonial Ry. would be opened for traffic by the end of August, and that shipments of ore would be made immediately thereafter from the company's ore handling plant at Newcastle, N. B. (Aug. pg. 629.)

Pincher Creek, Cardston and Montana Ry.—Press reports from Pincher Creek, Alta., Aug. 1, stated that J. A. Taylor of New York, and others interested in this projected railway have opened an office in the town, and that a survey party is engaged locating a line to the International boundary. A contract is reported let for certain construction work to J. A. McGuire, which is to be started forthwith.

A later press dispatch states that two additional survey parties have been placed in the field, and that the whole of the survey work is being supervised by —. Fine, of Philadelphia, Pa. (Aug., pg. 629, and Aug., 1909, pg. 575.)

Port Moody, Indian River and Northern Ry.—See C.P.R. Betterments, Construction, etc. (Aug., pg. 631.)

Portland Canal Short Line Ry.—At a public dinner at Stewart, B.C., July 25, D. D. Mann said he had often been asked why he was building this railway. It was because there was an ocean port at one end of it, and a mining country at the other—an ideal transportation proposition. In addition to that, over in the Naas River Valley, there was a good farming country, with an abundant supply of coal, which it was hoped to reach with this railway in the near future. Whether the line would go through the Bear River pass or not he was not prepared to say, but the reports with regard to the pass were very favorable, and on his return he intended to send engineers to investigate the pass. He hoped to be able to build through it, and on the east to connect with all the great railway lines that reached the Atlantic coast, and also those north to Yukon and to Alaska. In conclusion he said:—"I have spent the last 30 years of my life in pushing back the fringe of civilization west and north. During that time I have been a pioneer in near-

ly every sense of the word. When I reached Winnipeg at Christmas, 1879, it was in advance of railway construction. With my own hands I prepared the railway ties which carried the first locomotive over the C.P.R., into that city. Now I have come to the Pacific Coast to help you pioneers to push the fringe of civilization eastward, and I assure you that we hope to do it." (Aug., pg. 629.)

Quebec Oriental Ry.—See Atlantic, Quebec and Western Ry.

Queen's Central Ry.—The provisional directors of this company, incorporated by the Nova Scotia Legislature are: J. G. Morton, F. S. L. Ford, Milton, N. S.; R. Barthing, Liverpool, N. S. It is authorized to build a line from Brooklyn, in Queen's County, along Liverpool harbor and river to Milton, and thence in a northerly direction to the Halifax and South Western Ry., between Pleasant River and Caledonia, to be operated either by steam or electricity. (June, pg. 451.)

Reid Newfoundland Co.—There were 2,100 men engaged in building the Bonavista Branch when W. D. Reid, President, recently made a trip of inspection over it. He was able to travel in his private car over the first 20 miles of the branch, and he inspected the rest of the route. There is a good deal of heavy rock work to be done, but it is expected to have it fully completed by the end of the year. (Aug. pg. 631.)

Temiskaming and Northern Ontario Ry.—Col. Matheson, Ontario Treasurer, on his recent return to Toronto, after an inspection of the T. and N. O. Ry., expressed his satisfaction with the line and its operation. The location was being changed in one or two places, and a bad curve at mileage 61 is to be cut out altogether at an early date. The question of the opening of the Kerr Lake branch is under consideration.

The commissioners having decided not to build a line into the Porcupine district at present, the local people have taken the matter up, and after some negotiations with the Ontario Government, a special charter for the operation of a line is to be given to A. Ferland, C. A. Richardson, W. C. Chambers, A. J. Burdette and W. A. Gordon. The branch is to start from Matheson westward to the Timagami country, and will be constructed as a standard gauge line, steam being employed as a motive power, unless electricity should be available. Survey parties were sent out to locate a route Aug. 1.

The line will be about 35 miles long, and, according to present reports, will have easy gradients. Construction is to be completed by Jan. 1911. It is to be built as a feeder to the T. and N. O. Ry., and no traffic is to be diverted to the G. T. P. R.. (Aug. pg. 631.)

Toronto, Hamilton and Buffalo Ry.—We are advised that Hamilton officials are not aware of any project for the construction of a passenger station in that city in which the T. H. and B. Ry. is interested. This statement has reference to recent press reports that a project was under consideration for the erection of a large joint terminal in the city. (Aug., pg. 631).

Toronto Industrial Spurs.—Tenders will be received by the Toronto board of control to Sept. 6, for the supply of 20,800 ft. of relaying rails, 400 oak and 4,800 cedar ties, for the spur line which the city proposes to build to the Ashbridges Bay district of Toronto.

Vancouver, Westminster and Yukon Ry.—The company has been notified by the B.C. Government that when it is ready to proceed with construction, and has sufficient funds to complete its undertaking, the Government will deal with the proposal to grant it the assurance of facilities of approach to the proposed bridge over the second narrows in Vancouver harbor. (May, pg. 355.)

The Value of Accuracy as defined by a General Manager.

G. J. Bury, General Manager of the 6,443 miles of lines which comprise the Canadian Pacific Railway's vast system from Fort William on the east to Vancouver Island on the west, has risen to his present position by sheer force of ability and hard work. Starting his railway career as a stenographer for that master mind of Canadian railways, Wm. C. Van Horne, in the eighties, and traveling with him over the whole system as it rapidly grew, he received an initial training such as falls to the lot of few young men, and with his powers of absorption, he took full advantage of it. In his first titled position, acting Superintendent of Dining, Sleeping and Parlor Car Service, he "made good," and rapidly earned promotion which placed him as Assistant Superintendent at Chalk River. In succession, he became Superintendent, first at North Bay, then at Fort William, and afterwards at Cranbrook, B.C. Returning east, he was appointed Assistant General Superintendent of the Lake Superior Division, then General Superintendent of the same division. The next move took him back west to Winnipeg, as General Superintendent of the Central Division. Then he was appointed Assistant General Manager of the Western Lines, and later General Manager of the same. Mr. Bury has been a subscriber to the Railway and Marine World since its inception, and is therefore in a position to speak authoritatively of it. Following is a letter he addressed to our Managing Director recently:—

Winnipeg, Aug. 3, 1910.

Dear Mr. Burrows,—The curse of our age is inaccuracy, or rather superficiality. In the business world, nine men who come before you have only skimmed the surface of their subject. They are like the busy little bee which flits from flower to flower, sucking the fragrance from each, never taking any thought of the roots. The tenth man has his case prepared, and he does not insult your intelligence by half truths and much verbiage; he charms it by sound argument deduced from well verified premises. Because the Railway and Marine World, like the tenth man, is always accurate, always concise, and always decisive, I esteem it.

I trust every young railway officer will learn from it the example of thoroughness and practicability and to be succinct.

Yours faithfully,

G. J. BURY.

The accuracy of the Railway and Marine World's information, attained by the expenditure of much time and money in organizing a thorough system of gathering official railway news and data, is its most valuable asset. The testimony to the value of this feature, which comes to us almost daily from subscribers among every class of railway officials from Newfoundland, from every Province of the Dominion, and right through to the Yukon, is ample compensation for the cost which such accuracy entails. During the years that passed before such a system could be perfected, we said little in these columns about it, recognizing the advisability of not going duck shooting with a brass band. Now that the system has been perfectly established, we feel we may dwell on it a little without being accused of egotism.

Mr. Bury expresses the hope that young railway officers will learn from our columns the lesson of thoroughness and practicability, and it is doubtless owing to such a desire on the part of very many of them, that our circulation is not confined to railway officials, but embraces a large number of clerks and other young men, who, in order to merit promotion, wish to keep thoroughly posted on every phase of Canadian railway work, to study the problems with which the various departments have to cope and who know that they can only do so through the columns of Canada's only railway paper.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Canadian Westinghouse Co. has recently issued circulars 1017, describing the Westinghouse Potential Regulators, and 1155, relating to the series arc lighting system with Cooper-Hewitt rectifier.

The Commercial Acetylene Co.'s booklet H, describes in detail, the company's Standard locomotive headlight equipment, with illustrations of the various types. The car lighting equipment is fully described in booklet C. Both pamphlets will be supplied on application.

The Brown Hoisting Machinery Co., Cleveland, O., has issued a catalogue of its modern ore and coal handling machinery, consisting of a series of fine illustrations of recent installations. The designs of the machinery and the methods adopted, are brought into strong relief, when compared with the means utilized about 20 years ago, of which a number of illustrations are also given. The catalogue contains no detailed description of the machinery, which will be given, by the company, to those interested.

The Montreal Steel Works, Ltd., which some time ago purchased property at Longue Pointe, east of Montreal, to be used for an extension of its plant, has decided, owing to the increased demand for its products being now beyond its capacity, to build a new plant, which, when completed, will have a capacity of 20,000 tons a year. It is proposed to provide $1,000,000 by the issue of bonds in this connection, and the company estimates that when the new works are completed and organized it will be able to increase its total net profit to not less than $300,000 a year. To defray the cost of land, buildings, etc., in the immediate future, $750,000 will be required, and it is proposed to issue bonds for that amount as soon as possible, and for a further $250,000 later on.

Railway Subsidy Contract.—The Department of Railways has entered into a contract with the International Ry. of New Brunswick under the act granting aid to certain railways for the building of 3.50 miles of line not covered by the subsidy voted by the Dominion Parliament in 1908.

A survey party is working from St. John, N.B., in connection with the geodetic survey of Canada. Two other parties are in the field, one in northern Ontario and the third in Manitoba.

WIRE ROPE

Why experiment continually with wire rope you know is not up to "**Dominion**" quality—quality that means better material, better construction and better service?

Material—All our ropes are made from the best quality of wire, specially drawn to our rigid specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

Construction—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years' experience in manufacturing wire ropes enables us to offer the best to be had anywhere.

Service—Every length of "Dominion" Rope gives satisfaction, because it is serviceable and dependable.

All Lengths and Sizes Carried in Stock for Immediate Shipment

G. W. VAUX, Gen. Passenger Agent, MONTREAL

C.P.R. Betterments, Construction, Etc.

St. Andrews, N.B., Hotel.—It is reported that arrangements are being made for the addition of another large concrete wing to the Algonquin Hotel, St. Andrews, N.B.

Brownville, Me.—In the course of a fire in Brownville, Me., July 28, the company's repair shops were destroyed.

St. Maurice Valley Ry.—The extension of the St. M. V. Ry. from Shawinigan to Grand Mere, Que., about seven miles, has been completed. The line was turned over to the operating department Aug. 14, and a regular train service run through from Three Rivers. This gives Grand Mere a direct connection over the C.P.R. with Montreal and Quebec, in addition to the service over the Canadian Northern Quebec Ry.

Place Viger Station and Hotel.—A property known as lot 105 in St. James ward, Montreal, just east of Place Viger station was reported Aug. 5, as having been sold to the C.P.R. for $20,000.

Windsor St. Station, Montreal.—Contracts have been let to the Dominion Bridge Co. for the steel work, and to the C. E. Deakin for the masonry and general work on the annex to the Windsor St. station, Montreal. The work is to be completed by Nov., 1911. The estimated cost covered by these contracts is about $1,250,000. The contract let to the Bishop Construction Co. for certain other work in connection with the building has been completed.

Ottawa Entrance.—In connection with the company's project for rearranging its lines in Ottawa, including the construction of a tunnel on a section of the Rideau Canal, which is now under consideration, a suggestion has been made somewhat modifying the proposal, as originally submitted, but making it possible to run the Toronto-Montreal trains through the city instead of as now making Smiths Falls the point at which Ottawa passengers leave and join the Toronto-Montreal trains.

The company has secured options on certain properties adjoining its Sussex St. yards, the purchase price being fixed at $125,000. It is understood that these properties are being acquired for yard extension.

Georgian Bay and Seaboard Ry.—The question of the entrance of this C.P.R. line from Victoria Harbor into Peterboro, Ont., is being discussed between the company's officials and the council. The company's plans show that four streets will be closed and a subway constructed. As the result of a conference it was decided to amend the plans so that only Chamberlin St. would be closed, and the subway built at the corner of Romaine St. and Monaghan road. The company also agreed to give the city a right of way to the river, but an agreement could not be reached as to the price to be paid by the company for the water front land west of the present C.P.R. spur line. The committee of the council asks $15,000, and the company offers $6,000, which would represent the cost of filling it in.

Toronto Viaduct-Yonge St. Bridge.—The Imperial Privy Council has granted special leave to the C.P.R. to appeal against the orders of the Board of Railway Commissioners as to the building of a viaduct along the water front in Toronto, and a bridge to carry Yonge St. over the tracks at the foot of Yonge St.

Toronto Westerly Second Track.—Some gangs of men have been started grading westerly from Lambton station to the Humber River, south of the existing track, and an engineering party is at work taking levels and putting in stakes for a second track from the west bank of the river to Islington, where the newly completed line to Mimico starts. The existing second track from Toronto ends east of Lambton station.

Islington-Mimico Line. — Tracklaying has been completed on this short branch line connecting the Toronto-Windsor line with the G.T.R. at Mimico.

St. Thomas to Port Stanley, Ont.—A suggestion has been made that the city council of St. Thomas, which has a charter to build an electric railway to Port Stanley, make an arrangement with the C.P.R. for building the line. The idea is that the city will run a passenger service over it in connection with the street railway, the C.P.R. operating the freight trains.

A London, Ont., report states that the C.P.R. has been making enquiries with a view of obtaining running rights over the London and Port Stanley Ry., owned by the city of London, and operated under lease by the Pere Marquette Rd. The reason for this move is said to be that Port Burwell harbor is not easy of navigation owing to quicksands, and that constant dredging is necessary to keep it open. The C.P.R. operates a car ferry service between Conneaut, Ohio, and Port Burwell, for the coal traffic, which, if the proposal is carried out, would be transferred to Port Stanley.

Lake Superior Division.—Considerable work is being done this season in the way of general improvements upon this division. New rails are being put in, the track reballasted, trestle bridges are being filled in, and other bridges are being rebuilt.

Winnipeg-Brandon Second Track.—We are advised that it has been arranged that the contractor for the second track work between Winnipeg and Portage la Prairie, Man., is to continue the building beyond the latter point towards Brandon. No limit has been fixed as to the point he will reach this season. It is not the intention to lay any steel beyond Portage la Prairie this year.

Brandon Southeasterly.—The Department of Railways has approved a route map showing a line from Brandon, Man., southeasterly to tp. 6, range 10, w.p.m., 83 miles.

Osborne, Southwesterly.—The route map has been approved by the Department of Railways for a line from Osborne, Man., southwesterly to tp. 6., range 6, w.p.m., 41.9 miles.

Weyburn-Lethbridge Line.—Replying to a request from the Lethbridge board of trade that grading on this line be started from the Lethbridge end to meet the gang working westerly, Vice President Whyte stated recently that he was not favorable to the idea. It was stated in the request that farmers in the district were willing to give a free right of way if the line were completed this year. The owners of 67 quarter-sections along the line had signed the offer to give this right of way through their land.

Branch to Aldersyde.—Vice President Whyte recently wrote the Lethbridge board of trade stating that it had been decided to complete the grading of the line from Carmangay to Aldersyde, Alta., this season. A contract was subsequently let to Foley, Welch and Stewart for the work on the 26 miles between the two points. A station is being built at Carmangay.

Strathcona-Edmonton Bridge. — The contract for the erection of the substructure of and the approaches to the bridge to be built across the Saskatchewan River between Strathcona and Edmonton, Alta., has been let to J Gunn & Co., Winnipeg. Work is to be started at once.

Crow's Nest Pass Line.—The 70 lb. steel rails on this line between Fernie and Galloway, the starting point of the Kootenay Central Ry., are being replaced by 85 lb. ones. In connection with this work the sharp curves are being cut out, and the gradients are being reduced.

Revelstoke-Big Bend, etc.—In connection with press reports that the company is having a survey made in the Beavermouth district for a line along the Columbia River around the Big Bend to Revelstoke, B.C., we are advised that it has men looking over the country in the vicinity of its lines studying settlements and the necessity for providing railway service.

Kamloops, B.C.—The company has acquired about a mile of water front property in Kamloops, at a reported cost of $100,000. It is stated that the object of the purchase is to provide a new right of way, the company's line at present running along the principal business street. A considerable amount of work is being done in the way of enlarging and improving the yard facilities.

Port Moody, B.C.—We are advised that the line under construction at Port Moody, B.C., is a spur for the C.P.R., about 3.50 miles long, from the main line to the north arm of Burrard Inlet. The contractors are Macdonnell, Gzowski & Co., Vancouver, and P. M. Smith is engineer in charge of construction. The Port Moody, Indian River and Northern Ry., which was at first reported to be interested, has nothing to do with the line. That company is owned locally, C. T. Dunbar and associates, who are large land owners in the vicinity, being in control. Nothing has been done, nor will be done, we are advised, with this charter, the C.P.R. having secured a prior location.

Hotel Construction.—A large amount of building work is being done on the C.P.R. hotels in Western Canada during the current season. A new wing to the Empress Hotel at Victoria, B.C., is expected to be completed by Oct. 1. At the Vancouver Hotel, a wing containing 60 bedrooms, with 50 bathrooms, a banquetting hall and ballroom, is expected to be completed about Sept. 1. At Lake House an addition of 100 rooms will be started as soon as the hotel is closed for the tourist season. At Banff work has been started on an extension to contain 50 rooms, and a large swimming pool will be constructed. At Sicamous Jct., an extension of 40 bedrooms, with 20 bathrooms, has been completed, and a new hotel of 50 rooms, with 30 bathrooms, is under construction at Proctor.

Esquimalt and Naniamo Ry.—We are advised that nothing has yet been done in connection with the proposed Cowichan Lake Branch.

The Canadian Coal Corporation of New Brunswick, Ltd., has been incorporated under the N.B. Companies Act, with a capital of $299,000, and head office at Salmon Harbor, to take over the property and assets of the Canadian Coal Corporation, incorporated in the State of Maine; to develop coal and other properties, and in connection therewith to construct and operate railways, by steam, electricity or other motive power; to erect telegraph and telephone lines, and to own and operate steam and other vessels for the conveyance of passengers and freight. The provisional directors are F. P. Shaw, St. John; T. Beckwith, Providence, R.I.; C. Rosenthal, Boston, Mass.; W. G. Lotze, New Haven, Conn.; T. T. Hazlewood, New York City.

T. McHattie, Superintendent Motive Power and Car Department, Central Vermont Ry., St. Albans, Vt., in sending in his renewal subscription writes: —"As is the usual experience, I find the Railway and Marine World very interesting. I wish you continued success."

GREENLEE BROS. & CO.

CHICAGO and ROCKFORD, ILL., U.S.A.

Canadian Northern Ry. Construction, Etc.

In the course of a recent interview in Montreal, President Mackenzie said that during four and a half years the company had done nothing on its main line, but in that time it had built 1,200 miles of branch lines. This policy of keeping the branch lines well along, he said, caused the success of the C.N.R. as a freight carrier on the plains and from Lake Superior westward. There had been already laid this year about 260 miles of track in Alberta and Saskatchewan. In addition to the 60 mile contract on the Pacific section of the line, the company had also let a contract for the construction of 140 miles from Edmonton, and the work would be pushed vigorously from both ends, till the tracklayers met somewhere in the Rocky Mountains in about three years time. It might be possible also about the same time to complete the connection between the head waters of Lake Superior and the St. Lawrence River.

Canadian Northern Quebec Ry.—The question of the location of the company's shops in the city will again come up for consideration at the Sept. meeting of the Quebec council.

The branch line from near L'Epiphaine to Rawdon, 5.7 miles, has been completed and will be opened for traffic shortly. It is over 50 years ago that a railway connection was first projected at Rawdon, by the Rawdon and Industry Ry., but until the C.N.Q. Ry. built this branch line nothing was ever accomplished in the way of giving Rawdon railway connection with the outside world.

W. Mackenzie, President, left Montreal Aug. 12, after spending four days there. On Aug. 10 he had a lengthened conference with Sir Thos. G. Shaughnessy, President C.P.R., but what the subject of the conference was has not been made public. Press reports state that it had to do with an arrangement for joint terminal facilities in Montreal and Toronto, and for the settlement of a number of matters upon which the officials of the two companies in different places are not in harmony.

Canadian Northern Ontario Ry.—Work on the first section of the line from Toronto to Ottawa is well advanced as far as Trenton, Ont., to which point the first contract let carries the work. The first bridge in the Don valley, at Leslie St., Toronto, has been completed, and the rails were expected to be laid across it and through the ravine as far as Woodbine Avenue by Aug. 20. About a mile east of Leslie St., is a big cut which will take about a month of steam shovel work to get through. From this point track can be laid on the Dawes road, where the abutments for the superstructure of the overhead bridge have been completed. From there to Scarboro the work is nearly completed, and a good deal of track has been laid easterly from Scarboro. It is expected that the bridge work in York and Scarboro townships will be completed and the track laid early in Oct. The grading has been completed to the town limits of Trenton, and track has been laid along portions of the 100 mile section. The connecting up of these different sections is being proceeded with. The station and other buildings are also in course of erection.

A resolution has been passed by the Peterboro council authorizing Alderman Phalen to act with the Industrial Committee for the purpose of endeavoring to secure the entrance of the C.N.O. Ry. into the city.

H. K. Wicksteed, who has charge of locating the line between Sellwood and Port Arthur, Ont., stated recently that the route was almost all surveyed, and it was altogether likely that construction would be started in the spring. A Port Arthur dispatch of Aug. 12 stated that three parties of engineers are engaged in the work of completing the location of the line, one having its quarters near Long Lake, the second west of that point, and the third near Sellwood. The question of the entrance to Port Arthur from the east is under consideration by the city council, the plans filed showing a route along the shore of the bay on the lake side of the C.P.R. from the C.N.R. station, through to Bare Point, not being altogether approved of.

The plan, profile and book of reference of the location of the James Bay Ry., now the C.N.O. Ry., through the county of Laval, Que., mileage 38 to 40, Hawkesbury east, has been deposited in the Registry office at Ste. Rose, Que. This is a section of the proposed new short line from Hawkesbury, Ont., to Montreal.

Duluth, Winnipeg and Pacific Ry.—The tenants of the property which the company has acquired in West Duluth were given 10 days notice to vacate June 26. H. T. Hazen, the company's Chief Engineer, said, Aug. 12, that work on the 500 ft. tunnel was to be started at once. Construction camps have been established every four miles along the line between Duluth and Virginia, Minn., and work is being proceeded with rapidly.

Canadian Northern Ry.—A contract for the first section of the new roundhouse at Port Arthur has been let to S. Brown, Winnipeg, who has started work. The foundations will be of piles and concrete, the superstructure of bricks. The capacity of the section to be built will be 10 locomotives, and it is to be completed by Oct. 31.

The excavation for the Pembina St. subway at Winnipeg has been completed, and the cement work is being rapidly gone ahead with. It is expected that the work will be completed by Sept. 30. Application is being made for authority to extend an industrial spur line now terminating between Rosser Ave. and Mulvey Ave., in block 10, D.G.S., 32, St. Boniface, plan 208, across Mulvey Ave. and Fleet Ave., and to extend to the lane between Garwood and Fleet Avenues, Winnipeg. A permit has been granted by the Winnipeg city council for the building of coach shops in the west yard to cost $42,000, the contractor for the work being the Carter-Halls-Aldinger Co.

The Winnipeg city council, Aug. 6, referred the company's application respecting an elevated line at the north end of Norwood bridge to the City Engineer and City Solicitor for a report. The plans show an elevated structure from where the line leaves the Assiniboine River to an eighth of a mile south easterly. The structure would cross Main St. and Bell Ave., 14½ ft. above the street level, thus permitting street cars to pass underneath.

A Winnipeg dispatch of Aug. 18 says: —"The Canadian Northern Railway was reported today to have completed arrangements with the St. Boniface city council for extensive improvements there within the next two years, including a large roundhouse, storehouses, coal warehouses, freight sheds, the union station to be shared with the G.T.P.R., and a new traffic bridge to be built across the Red River from Winnipeg. The total improvements will cost over $1,000,000, and the company has signed a bond guaranteeing the completion of the work within two years."

A contract has been let for the erection of a station and hotel building in Brandon, Man., to Thos. Kelly & Sons, Winnipeg. A full description of the building is given on another page.

In reference to the work in progress on the company's Oakland extension, we are advised that the line is being extended to mileage 445, Jas. McRae having the contract for the grading. It has not been decided whether the line will be extended northerly to meet the Ochre River branch.

Application has been made by the C.N. Ry. to the Regina, Sask., city council for permission to build joint passenger terminals there with the G.T. Pacific Ry.

R. J. Mackenzie recently completed an inspection of the Shellbrook extension as far as Crooked Lake, Sask. The line right to the lake was expected to be completed Aug. 30.

Work on the line from Vegreville to Calgary, Alta., is being gone on with rapidly. Ballasting is being proceeded with southerly from Camrose, while northerly the station buildings, etc., are being put up. The interlocking plant at the crossing of the C.P.R. at Camrose has been installed. In connection with the entrance of the line into Calgary, M. H. McLeod, General Manager and Chief Engineer, stated July 28, that the company's line would probably be used by the G.T. Pacific Ry., and that there would be a joint station. Negotiations are being carried on with the Calgary city council on the proposal. A Calgary dispatch states that track has been laid for about 50 miles south of Stettler and that the grading on the line should reach that city by the end of Sept. Another dispatch states that contractors are being asked if they will begin work at once on the construction of a line from north of Gleichen or Strathmore, southerly to Lethbridge and Coutts. This is one of the lines for which the Alberta Government has guaranteed the company's bonds.

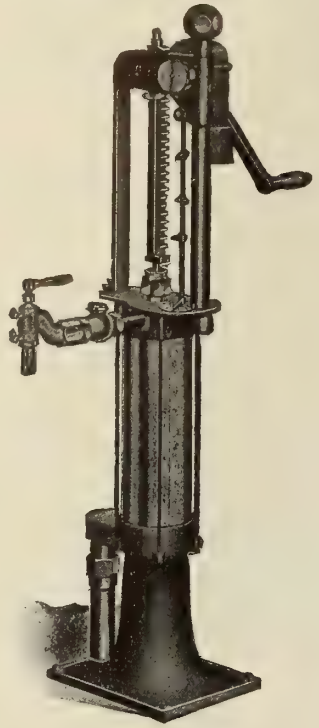
The Department of Railways has approved of a route map showing a line for about 14 miles through tps. 25 and 24, ranges 25 and 27, west of the fourth meridian.

D. D. Mann, Vice President, recently wrote to the Athabasca Landing board of trade to the effect that if it were at all possible the company's line from Edmonton, now terminating at Morinville, 23 miles out, would be completed to the Landing this year. A copy of the letter has been sent to the Edmonton board of trade.

We are advised that the contractors for building the line westerly from St. Albert, north west of Edmonton, to the Pembina River, are McMillan Bros. and Kenny. This contract covers about 140 miles, and is the line referred to by the President in the interview quoted in the first paragraph under this heading.

We are advised that the contract for the grading of the line from near Stettler westerly to the Brazeau coal fields, Alta., has been let to the Northern Construction Co., Winnipeg. The line starts from the Vegreville-Calgary line about six miles south of Stettler and runs westerly to Rocky Mountain House. It is expected to have about 30 miles graded this season. The contractors are reported to have begun work July 25. The plans shows that the line will run westerly through Alix, paralleling the C.P.R. crossing the C.P.R. Calgary-Edmonton line, across part of the experimental farm and Senator Talbot's farm south of the town, then northwesterly to the Brazeau coal fields. The route plans of the line came before the Department of Railways at Ottawa, Aug. 11. A portion of the line was approved, and the company was asked to make enquiries as to the feasibility of locating a route north of Lacombe to Rocky Mountain House, instead of the one for which approval was asked, which parallels the Alberta Central Ry., now under construction from Red Deer. The A.C. Ry. Co. objected to the route asked for being approved.

Canadian Northern Pacific Ry. — Speaking at Kamloops, B.C., Aug. 4, the Provincial Premier said the C.N.P. Ry. had made overtures to the Government



BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. ABOUT ONE HUNDRED AND FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

Makers of Base Supported Rail Joints for Standard and Special Rail Sections, also Girder, Step or Compromise, Frog and Switch, and Insulating Rail Joints, protected by Patents.

for aid in building several hundred miles of branch lines in the province. The lines mentioned included branches into the Okanagan and Kootenay countries, and an extension on Vancouver Island to Quatsino Sound. It was essential that branch lines should be built as feeders to the main line. In all probability the question of the building of such lines would be taken up and dealt with at the next session of the Legislature.

A preliminary survey is reported to have been made from near Kamloops into the Okanagan country. The surveyed route follows the old stage route between Kamloops and Okanagan, traversing the Grand Prairie district, Campbell Creek and the Upper Salmon River Valley.

The plans for the main line show that it will pass by Kamloops, some four miles up the North Thompson River Valley. The Kamloops council and other public bodies, having discussed the matter, waited upon the Provincial Premier Aug. 4, to urge him to bring pressure to bear on the company to put the main line on the other side of the river, so that it could be taken into Kamloops. It was suggested that the Government pay two-thirds of the cost of the two bridges necessary, but the Premier said he could not promise that anything in the way suggested would be done.

The C.P.R. has entered an objection to the approval by the Government of the C.N.P.R. plans for seven miles of its line along the Thompson River, and seven miles along the Fraser River, in close proximity to the C.P.R. tracks. G. A. Mountain, Chief Engineer of the Board of Railway Commissioners, met the officials of both companies in Vancouver Aug. 11 to discuss the matter, prior to making an inspection of the two sections of the route. Mr. Mountain will report on the matter to the Board at a meeting to be held in Vancouver Sept. 5.

A New Westminster report, Aug. 8, says that beyond the cutting of the timber and the slashing of the brush no construction work had been done. The clearing work already done extends from almost directly opposite the Western Canada Lumber Mills Co. to west of Bon Accord. Gangs of men were then engaged clearing away the cut brush and getting ready for the grading which was expected to be started in the following week. The right of way has also been slashed from near Liverpool for a considerable distance, and from the Great Northern Ry. right of way to the water's edge. The exact site of the waterfront terminals has not been determined, but it is expected that they will be between Liverpool and Port Kells. D. D. Mann, Vice President, was in New Westminster Aug. 5, and is quoted as having said in an interview that Port Mann would have the largest railway yards on the coast. The townsite will embrace an area of about 2,000 acres. He was just looking over the ground, but Mr. Holt, one of the firm's engineers, would be sent out at once to make the location surveys for the line into New Westminster.

Subcontracts have been let by the Northern Construction Co., which has the general contract for the first 60 miles easterly from New Westminster, as follows:—C. J. Johnson, Seattle, Wash., 20 miles; W. P. Tierney, Nelson, B.C., from Mission east 10 miles; McDonald Bros., Vancouver, B.C., 30 miles. The last two named contractors have had their outfits on the job since July 25, and C. J. Johnson got his out Aug. 8. The engineer in charge of construction is —. Swan, at Langley, B.C., with assistants at Mount Lehman, and Port Kells.

In connection with the lines on Vancouver Island Vice President Mann had a lengthened interview with the Provincial Premier at Victoria, Aug. 2, at which the company's proposals were discussed. The route of the lines to be built under the charter of the Victoria and Barclay Sound Ry. are being laid out, and the question of additional lines, it is expected, will be arranged in time for the meeting of the Legislature. (Aug., pg. 649.)

Toronto Viaduct and Yonge St. Bridge.

The Judicial Committee of the Privy Council has granted the C.P.R. special leave to appeal from the judgments of the Ontario Court of Appeal and the Supreme Court of Canada, in the matters of the orders: (1) To construct a bridge to carry Yonge St., Toronto, over its tracks, and (2) To construct a viaduct to carry its tracks along the Toronto water front, with suitable openings for streets running north and south. The circumstances of the case were described as follows:—Both the C.P.R. and G.T.R. pass through Toronto. The G.T.R. runs along the southerly part of the Esplanade—a highway 100 ft. in width extending from east to west—which was originally constructed parallel to the shore in the waters of the harbor. The C.P.R. was constructed at a later date immediately to the south of the Esplanade on an embankment contiguous and parallel thereto. In 1904 the two railways were ordered by the Railway Committee of the Privy Council of Canada to construct a bridge carrying Yonge St. over both railways, so as to connect it with the wharves which abut on the lake. The estimated cost was about $500,000. The companies brought actions against the city of Toronto to quash that order, on the ground of want of jurisdiction. The Ontario High Court dismissed those actions, and on appeal the Ontario Court of Appeal affirmed the High Court's decision. The C.P.R. did not appeal against those judgments because the city of Toronto announced its intention of not enforcing the order, but of applying for the adoption of some other scheme. Later on the city applied to the Board of Railway Commissioners (the successors of the Railway Committee) for the elevation of all the railways along the Toronto water front upon a viaduct, with suitable openings for access to the streets running north and south. On June 9, 1909, the Board ordered that the railways should be elevated on that viaduct. The cost was estimated to exceed $6,000,000. The Supreme Court of Canada in a second suit decided that the Board had jurisdiction to make that order. From these judgments the petitioner applied for special leave to appeal.

For the petitioner, it was stated that not only was there an enormous sum involved, but there were several important questions of law, one being whether special statutes of the Dominion and Provincial Legislatures, which ratified an agreement made in 1892 between Toronto and the C.P.R. and G.T.R., did not operate to oust the jurisdiction of the Board of Railway Commissioners. In granting the petition, Lord Macnaghten said that having regard to the important interests at stake, the committee would do all it could to expedite the hearing.

Railway Lands Patented.—The following railway lands, situated in Manitoba, Saskatchewan, Alberta and British Columbia, were patented, during June:—

	Acres.
Calgary and Edmonton Ry.	4,161.42
Canadian Northern Ry.	20,524.38
Canadian Pacific Ry	1,793.445
Canadian Pacific Ry. roadbed and station grounds	517.625
Grand Trunk Pacific Ry.	55.16
Manitoba and Northwestern Ry.	162.77
Manitoba and Southeastern Ry.	1,932.12
Qu Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	642.00
Total	29,788.920

Great Northern Ry. Lines in Canada.

Virginia, Minn., to Winnipeg, Man.—Reports are current in Duluth, Minn., that surveys are about to be made for the location of lines to connect up the G.N.R. near Virginia, Minn., with Winnipeg.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—It is expected that a contract will be let shortly for a line from Oroville on the International boundary to Penticton, B.C. The grading of the 18 mile section between Princeton and the Tulameen River, at the approach to the Hope Mountains, is expected to be completed in Oct. Just west of Princeton is a tunnel having a length of 1063 ft. Instructions have been received from St. Paul, Minn., that the gradients across the Hope Mountains must be still further reduced before any further contracts for construction will be given out. The gradient going east from Coquehalla summit and from the same summit west down to Hope, according to last year's surveys are 1% and 2½% respectively. From Princeton to Hope the distance by the route surveyed is 92 miles. The alternative to this long mileage and heavy gradient was an eight mile tunnel, but it does not seem likely that the tunnel will be adopted, as a revision survey is now in progress under J. E. Floyd. This survey party was sent out on the return of A. H. Hogeland, Chief Engineer G.N.R., and J. H. Kennedy, Chief Engineer V., V. & E. Ry. and N. Co., from a trip between Hope and Abbotsford.

Construction is in progress along a stretch of 13 miles from Abbotsford and Sumas River. There are six construction camps with a force of about 350 men. In addition to ordinary equipment the contractors are using three steam shovels and six dinkeys. Tenders for bridge construction were closed recently. The located lines of the V., V. & E. Ry. and the Canadian Northern Ry. from Sumas to Hope, 36 miles, are on the same right of way. In some instances for miles they are less than 15 ft. apart.

The amended plan, profile and book of reference for a line from the east line of section 15, township 16, to the west line of township 26, New Westminster district, a distance of 18.3 miles, certified by the Board of Railway Commissioners for Canada, has been deposited in the Registry office at New Westminster.

Work is in progress in Vancouver on five new tracks in the yards there. (Aug., pg. 623.)

Western Canada Power Co.—The company, as the successor of the Stave Lake Power Co., has secured from the B. C. government some amendments to its charter under the Water Act of 1909. This, however, does not affect its railway construction powers which are derived from a special act of the Dominion Parliament. Two gangs of men are engaged in grading the right of way from Ruskin, B. C., along the Stave River valley, to the power development site about seven miles. The line will be operated by steam until the company is ready to deliver power, when it will be electrified. The construction of the pole line from Ruskin to New Westminster, about 40 miles, is being proceeded with. In New Westminster, the company has leased 100 ft. of water frontage for storage purposes. (Aug. pg. 631.)

Liverpool and Milton Tramway Co.—The Nova Scotia Legislature has fixed the capital of the company at $250,000, and authorizes it to build a line from Milton via Greenfield and Caledonia to Bear River or other terminal point in Digby or Annapolis county. (May, pg. 351.)

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

11161. July 14.—Authorizing Petrolea Electric Light, Heat, Power and Gas Co., to lay pipe under M.C.R. at Centre St.. Petrolea, Ont.

11162. June 27.—Amending order 9726, Feb. 25, authorizing city of Brantford, Ont., to construct bridge on South Market St., by substituting Niagara, St. Catharines and Toronto for Toronto, Niagara and Western in recital and operative parts.

11163. July 13.—Amending order 10169, Dec. 8, 1909, by striking out words, "or in connection with any obligation on the part of the C.P.R. Co. to contribute to the cost of the work," in the preamble.

11164. July 14.—Extending time for construction of overhead bridge by G.T.R. between cons. 1 and 2, King tp., Ont., until Sept. 1.

11165. July 14.—Ordering G.T.R. to establish farm crossing at farm of T. Desilets, St. Celestin parish, Que.

11166. July 14.—Authorizing Orillia tp., Ont., to construct highway crossing over G.T.R. at Severn Bridge station.

11167. July 14.—Dismissing application of L. Lamontagne, St. Malachie, Que., for farm crossing over National Transcontinental Ry.

11168. July 14.—Dismissing application of residents of Norval, Ont., for order directing G.T.R., to stop train No. 9, leaving Toronto at 7 p.m.

11169. July 14.—Extending time for construction of bridge to carry Toronto Ry. and highway over G.T.R., C.P.R., and C.N.R., at Queen St. East, Toronto, until July 1, 1911.

11170. July 16.—Approving Crows Nest Southern Ry., Manitoba Great Northern Ry., and Bedlington and Nelson Ry. Standard Freight Tariffs.

11171. July 15.—Amending order 10419, May 2, by deleting all words after the word "approved" and inserting the following: "Subject, however, to the conditions (a) that if the construction of the said railway involves the crossing of Stave River Road, application to the Board for permission to make such crossing shall first be made and leave obtained; and (b) that wherever the applicant's track or right of way encroaches on said road, the road shall be put in as good condition as before construction commenced, to the Road Superintendent's satisfaction.

11172. July 13.—Authorizing C.N.O.R. to cross G.T.R. near Ottawa.

11173. June 27.—Authorizing C.N.O.R. to cross Victoria St., Colborne, by overhead bridge, the village to close that part of Queen St. east of the right of way.

11174. June 27.—Relieving M.C.R. from maintaining watchman at crossing 0.71 mile east of Woodslee station, Ont.

11175. July 15.—Authorizing city of Toronto to construct two sewers under G.T.R. at Keele St. and Indian Road.

11176. July 15.—Authorizing city of Port Arthur, Ont., to lay sewer under C.P.R. at Clarke St.

11177. July 20.—Authorizing Sherwin-Williams Paint Co., to lay pipe under C.P.R. at Atwater Ave., and St. Patrick St., Montreal.

11178. July 19.—Authorizing Queen City Oil Co., to lay pipe across G.T.R., at Muskoka Wharf, Ont.

11179. July 20.—Authorizing Petrolea Electric Light, Heat, Power and Gas Co., to lay pipe under G.T.R. between lots 12 and 13, Enniskillen tp., Ont.

11180. July 21.—Authorizing town of Maisonneuve, Que., to erect wires across Montreal Terminal Ry. at Bennett Ave.

11181, 11182. July 19.—Authorizing city of London Water Commissioners to erect wires across London and Port Stanley Ry. at Simcoe and Grey Sts.

11183 to 11192. July 19.—Authorizing city of St. Thomas, Ont., to erect wires across G.T.R. at Alma St., across M.C.R. at Metcalf and Railway Sts., across G.N.W. Telegraph Co.'s wires at Alma, Palm, Wellington and Elm Sts., and across London and Port Stanley Ry. at Elm, Wellington and Palm Sts.

11193 to 11197. July 20.—Authorizing city of London Water Commissioners to erect wires across C.P.R. at Adelaide St., across London and Lake Erie Ry. and Transportation Co., at Grand Ave. and Grey St., and across M.C.R. at Bathurst St. at two points. points.

11199. July 21.—Authorizing Saraguay Electric and Water Co., to erect wires across C.P.R. on Ontario St. East, Montreal.

National Transcontinental Railway.

An Ottawa dispatch of Aug. 12 says, according to reports received at the offices of the Commissioners, the line from Levis, Que., to Moncton, N.B., will be opened for traffic in the spring of 1911. Arrangements, it is said, have already been made in a preliminary way for a car ferry across the St. Lawrence, pending the building of the Quebec Bridge. From the south shore of the St. Lawrence, opposite Quebec, grading has been practically completed all the way to Moncton, and only about 40 miles of track has to be laid to complete the line between these two points. The contractors are busy completing the bridge work, and in ballasting. A temporary trestle is being erected across River Blue, but this will be replaced by a steel bridge next year. The work of providing stations and other buildings will be gone on with during the winter. The principal stations will be St. Hillare, Edmundston, St. Leonards, Grand Falls, Plaster Rock, Nopandogan, McGronev's Jct., Chipman; there will also be a number of way stations and section houses, the division point being at Nopandogan.

We have reason to believe that it will be impossible to open the Moncton-Quebec section in the spring of 1911. From reliable information we have received, we consider it hardly probable that the work in New Brunswick will be entirely completed before the end of 1911, and our information leads us to believe that the work from the New Brunswick boundary to the St. Lawrence River will not be completed before 1912.

The Minister of Railways has extended the time for receiving tenders for building the superstructure of the Quebec Bridge to Oct. 1.

The documents transferring the Champlain market property, Quebec, to the N.T.R. Commissioners were signed Aug. 12, and the tenants have to vacate by Oct. 1. The agreement, which calls for the payment of $100,000 for the property, and the expenditure of $2,000,000 for buildings, etc., has to be ratified by the Dominion Government.

The line is practically completed from Quebec for 195 miles westerly. The next construction centre is at Cochrane, Ont., and from there track has been laid east to Mistonga, 27 miles. Work is being proceeded with at different points between Mistonga and the end of track west of the St. Maurice River, but the difficulty of getting in supplies has rendered the progress made somewhat slow. Track has been laid from Cochrane westerly for 60 miles. and a construction train service is being operated as far as the Groundling River. The steel bridge over the Frederickhouse River is being completed. The work north of Lake Superior has been concentrated in the hands of O'Brien, Fowler and McDougall Co., who have taken over the interests of other contractors, and are now building a total of 490 miles. Supplies for the work are being taken in over the Sturgeon Lake route. The Ottawa dispatch, already quoted, states that the reports received justify the estimate that the mileage between Quebec and Lake Superior Jct., Ont., will be completed sufficiently to allow trains to be run through by the end of 1912.

An announcement was made at Montreal Aug. 17 that all arrangements had been completed for inaugurating a regular train service over the section of the line from Winnipeg to Lake Superior Jct., Sept. 1, when it was expected that that portion of the line would be handed over by the Dominion Government to the G.T. Pacific Ry. for operation.

GRAND TRUNK PACIFIC RY.

The question of the entrance of the company's lines into St. Boniface, Man., is under consideration, some opposition having developed to the proposal that the G.T.P.R. should come in over the Canadian Northern Ry. right of way. The plans were referred to the City Engineer for consideration and report.

In an interview at Winnipeg, Aug. 14, President Hays said representatives of Ross and MacFarlane, Architects, Montreal, were in the city preparing plans for an hotel which the company proposed to erect there. The building would be about 200 ft. square; it would contain about 500 rooms, and cost, when completed, about $2,000,000. It was expected that work would be started on the building as soon as the frost was out of the ground in the spring. The location secured is the corner of Broadway and Fort St., just west of the Manitoba Club.

A bi-weekly train service was inaugurated Aug. 1 to Edson, the first divisional point, 124 miles west from Edmonton, Alta. A site for terminal yards and divisional buildings was approved by Vice President Chamberlin on his visit of inspection July 28. The present plans provide for the laying of about five miles of siding, which will be about one-fifth of the mileage ultimately to be laid. Edson is situated about eight miles west of the crossing of the McLeod River. The next river crossing is at Prairie Creek, about 75 miles west of Edson, and tracklaying is now being proceeded with, and it is expected that it will be completed Oct. 1. The concrete substructure at Prairie Creek has been completed, and everything is ready for the erection of the superstructure, which will be gone on with as soon as the steel can be brought in. Beyond this the next point to be reached is the Athabasca River, at the entrance to the Yellowhead Pass, and it is expected that steel will be laid there by Dec. 1. This will give a completed line for 223 miles west of Edmonton.

From the Prince Rupert end of the line it was reported that 100 miles east would be ready by Aug. 22, so as to enable the Dominion Premier and the Minister of Railways to take a trip over it. At the end of July trains were running to the Grand Rapids, nine miles out, and the bridge over the river there was then nearly completed. From the end of the first 100 miles grading on an additional 140 miles had been nearly completed, and tracklaying is being proceeded with. The line is expected to be completed from Prince Rupert easterly to mileage 240, in the spring of 1911.

The regular through train service from Edmonton, Alta., via the G.T.P.R. to Winnipeg, the National Transcontinental Ry. from Winnipeg to Lake Superior Jct., and thence to Fort William over the G.T.P.R. Fort William branch, was announced to be started Sept. 1.

The question of the entrance of the line into Port Arthur, Ont., was discussed with President Hays Aug. 12, but all he would say was:—"The company made an agreement with Port Arthur, which seems to have ended in a muddle, and this complication has not been cleared up as yet."

The first branch line under construction west of Winnipeg is northerly and southerly from Melville, Sask. Northerly it is in operation to Yorkton, and grading has been completed to Canora, on the Canadian Northern Ry. Southerly the line has been completed and is in operation to Balcarres, on the C.P.R. Kirkella branch, and grading is well forward on the extension to Regina.

The Department of Railways has approved route maps for an extension of the Melville-Regina branch through Regina, Sask., for a distance of about five miles. It is expected to let a contract for this mileage at an early date, and from Regina to the International boundary. The company is negotiating with the city council for an agreement in regard to the location of divisional terminals in the city. A site of over 15 acres has been secured for this purpose by the company.

The next branch starts from Tofield, and was completed in 1909 to Camrose, Alta. This year work has been carried on southerly in the direction of Calgary. The bridge across the Battle River, about seven miles south of Claresholm, has been completed. It is of trestle construction 3,100 ft. long and 115 ft. above high water mark. Track is being laid as far south as Farintosh, where the company has opened up large gravel pits for ballasting. G. H. Webster, the contractor, in an interview at Calgary Aug. 12, said there were over 500 teams on the line, and construction gangs were stretched along the line for nearly 100 miles south of Alix, and to within 50 miles of Calgary; that a big effort would be made to reach Calgary this winter, and that it was intended to build a branch from this line into the C.P.R. irrigation lands, for which plans had been filed.

The third branch line under construction is from Edson, Alta., south easterly into the Brazeau River coal fields. This branch line Vice President Chamberlin said in Winnipeg, Aug. 3, would be about 70 miles, and it was expected would be completed during the winter. The subcontractors reported to be working on the line are Phalen and Shirley, and D. Baker, the general contractors being Foley, Welch and Stewart.

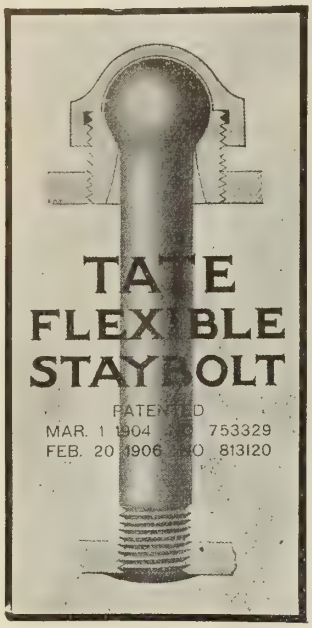
Two survey parties were sent out Aug. 1 from Kamloops, to do some further work easterly and westerly on the location of the G.T. Pacific branch line to Vancouver. (Aug., pg. 661.)

The Newfoundland Telegraph Dispute.

Judgment was recently delivered by the Judicial Committee of the Privy Council in the appeal of the Reid Newfoundland Co. from the judgment of the Newfoundland Supreme Court, in its case against the Anglo-American Telegraph Co., as follows:—The Supreme Court restrained the appellant from erecting, maintaining or operating a telegraph line upon its own land for the purposes of the efficient working of its own railway. The result depended on the construction of an agreement dated Aug. 11, 1888, made between the Newfoundland Ry. Co. of the first part; Mr. Evans, receiver and manager of that company, of the second part; and the respondents of the third part. The argument on behalf of the telegraph company (an argument which was accepted by the Colonial Court) was largely based upon the use of the words "exclusive right" in the clause cited. It was not an "exclusive right" of entry, for the railway company remained in possession, and must do so in order to work its railway, which it was under an obligation to do. The exclusive right granted was to enter for the purpose of erecting, maintaining and operating telegraph lines for the business of the telegraph company. In the committee's opinion that exclusive privilege of erecting and working telegraph lines for the business of the telegraph company did not exclude the right of the railway company to erect and work telegraph lines on its own property for the purposes of its railway business. The committee was unable to agree with the view taken by the judges in the Colony, and was of opinion that the railway company was not shown to have exceeded its rights. The judgment and decree of the Colonial Court should be set aside, and the suit dismissed with costs in the Court below. The respondents would pay the costs of this appeal. —Canadian Gazette.

D. A. McLean, a sub-contractor on the G.T.P.R. branch to Regina, Sask., was found dead near Cedoux, Sask., Aug. 3.

TATE FLEXIBLE STAYBOLTS



Allow for and Accommodate the Forces of Expansion and Contraction along the lines of Least Resistance

The Tate Bolt can be longitudinally adjusted to compensate for the difference of expansion of Outer Boiler Shell over Fire Box

THE "ROYAL" LINE

TO EUROPE

Sailing fortnightly from

MONTREAL and QUEBEC to BRISTOL

Triple Turbine Express Steamships

"ROYAL EDWARD"

and

"ROYAL GEORGE"

Triple Screws, 12,000 tons, Marconi Wireless, Deep Sea Telephones, Passenger Elevators, 6 Passenger Decks.

The twin ships, the "Royal Edward" and the "Royal George," are the fastest triple screw turbine boats in the Canadian service. The British port is Bristol (two hours nearer London than Liverpool). Special Royal Line Trains within 110 minutes of London. The steamers are driven by the newest type of turbine engines, insuring a maximum of speed and minimum of vibration. Their equipment is the finest ever seen in the St. Lawrence—large state-rooms, spacious social apartments, sheltered promenade decks, artistic furnishings, perfect service, and ventilation by thermo-tank system, the fresh air being warmed or cooled, as required.

Railway Rolling Stock Notes.

The Ha Ha Bay Ry. has received one Columbia locomotive from the Montreal Locomotive Works.

The Canadian Northern Ry. has ordered 25 cabooses from the Crossen Car Mfg. Co., Cobourg, Ont.

The C.P.R. has ordered one 3½ yd. Atlantic type steam shovel

The Quebec Central Ry. has received two 10-wheel locomotives from the Canadian Locomotive Co., Kingston, Ont.

The G.T.R. has ordered 500 steel underframe box cars, of 60,000 lbs. capacity, from the Silliker Car Co., Halifax, N.S.

The Canadian General Development Co., and the Nova Scotia Construction Co., have each received one steam shovel from the Montreal Locomotive Works.

Kennedy and McDonald, contractors on the National Transcontinental Ry., have purchased three 1910 40-ton Hart convertible ballast cars from the Hart-Otis Car Co., Montreal.

Cavicchi and Pagano, contractors on the National Transcontinental Ry., have ordered 10 flat cars, G.T.P.R. standard, 36 ft. long, 30 tons capacity, from the Canadian Car and Foundry Co., Montreal, through the Canadian Railway and Contractors' Supply Co.

Haney, Quinlan and Robertson, railway contractors, have received two 4-wheeled locomotives; the Belmina Mining Co., and the Maritime Gypsum Co., one 4-wheeled locomotive each, and the Dominion Nickel Copper Co., one mogul locomotive, from the Montreal Locomotive Works.

The Board of Railway Commissioners having authorized the C.P.R. to use natural gas for illuminating its cars, subject to the same regulations which govern the use of Pintsch gas, we are officially advised that the gas will be used in the same way as the Pintsch gas on cars running out of places where there is a supply of natural gas to draw from.

The Canadian Northern Ry., between July 15 and Aug. 15, received the following additions to rolling stock:—250 Hart-Otis cars from the Hart-Otis Car Co., Montreal; 80 flat cars and 14 stock cars from the Crossen Car Mfg. Co., Cobourg, Ont.; 15 box cars and three first class cars, from the Silliker Car Co., Halifax, N.S.; one dining car, 10 box cars, and 50 automobile cars from the Canadian Car and Foundry Co., Montreal.

The C.P.R., between July 13 and Aug. 17, received the following additions to rolling stock: nine wooden box cars, one second class car, three dining cars, 14 refrigerator cars, six first class and smoking cars, two first class suburban cars, two baggage cars, two vans and two D.10 locomotives from its Angus shops, Montreal; 268 steel frame box cars from the Canadian Car and Foundry Co., Montreal, and 12 N.3 locomotives from the Montreal Locomotive Works.

The Maritime Gypsum Co. has ordered one four-wheeled locomotive from the Montreal Locomotive Works, of which the following are the chief details:

Weight in working order	41,000 lbs.
Wheel base	4' 9"
Cylinders	11" by 16"
Driving wheels, diameter	33"
Boiler, type	Straight top
Boiler pressure	165 lbs.
Tubes, number and diameter	85; 2"
Tubes, length	8' 3¾"
Brakes	Steam
Capacity, water	750 gals.

The Belmina Consolidated Asbestos Co. has ordered one four-wheeled locomotive from the Montreal Locomotive Works, of which the following are the chief details:

Weight in working order	24,400 lbs.
Wheel base	4' 6"
Cylinders	9" by 14"
Driving wheels, diameter	29"
Boiler, type	Straight top
Boiler pressure	150 lbs.
Tubes, number and diameter	56; 1¾"
Tubes, length	7' 5 11-16"
Brakes	Hand
Capacity, water	325 gals.

Haney, Quinlan and Robertson have ordered four four-wheeled locomotives from the Montreal Locomotive Works, of which the following are the chief details:

Weight in working order	56,000 lbs.
Wheel base	6' 3"
Cylinders	13" by 18"
Driving wheels, diameter	36"
Boiler, type	Straight top
Boiler, diameter	41 11-16"
Boiler pressure	165 lbs.
Tubes, number and diameter	100; 2"
Tubes, length	10 ft.
Brakes	Steam
Capacity, water	1,000 gals.

We are officially advised that the five Mallet articulated compound locomotives which the C.P.R. is building at its Angus shops, as mentioned in our last issue, will be slightly different from the one which was fully described and illustrated in our April issue. On the tests then described, it was found that an improvement could be made in the boiler and connection between the two engines. The boiler, therefore, is being made larger in diameter in front, and shorter. The superheater will also be different, and instead of being located in the centre of the boiler barrel, will be in the smokebox, as with the standard type.

Following are the chief details of the four wheel saddle tank locomotive which the Canadian General Development Co., has purchased from the Montreal Locomotive Works:—

Gauge	36"
Cylinders	11" x 16"
Driving wheel diar.	33"
Boiler, diar	37¼"
Boiler pressure	165 lbs.
Firebox	40½" x 33"
Tubes, no. and diar.	85 — 2"
Tubes, length	8' 3½"
Wheel base	4' 9"
Weight in working order	39,000 lbs.
Heating surface, tubes	367 sq. ft.
Grate area	9.3 sq. ft.
Maximum tractive power	8,228 lbs.
Factor of adhesion	4.74
Capacity, water	750 gals.
Capacity, coal	600 lbs.

Following are the chief details of the four Pacific type locomotives which the Temiskaming and Northern Ontario Ry., has ordered from the Canadian Locomotive Co., Kingston, Ont., as mentioned in our July issue:—

Weight on drivers	135,500 lbs.
Weight, total	202.500 lbs.
Cylinders	21" x 28"
Driving wheels, diar.	69"
Boiler, type	Extended wagon top.
Boiler pressure	200 lbs.
Heating surface, tubes	2,705 sq.ft.
Heating surface, firebox	162 sq. ft.
Tubes, no. and diar.	272 — 2"
Tubes, length	19' 0"
Grate area	46 sq. ft.
Capacity, water	5,500 gals.
Capacity, coal	10 tons.
Axles	Nova Scotia S. & Co.'s open hearth steel.
Air brakes	Westinghouse E.T. 6.
Brake beams	Simplex.
Brake shoes	Steel back.
Couplers	Tower.
Headlight	Pyle National Electric.
Journal bearings	Canadian Bronze Co.
Springs	Montreal Steel Works.
Steam heat equipment	Gold system.

The Quebec Central Ry. has ordered two mogul locomotives from the Canadian Locomotive Co., Kingston, Ont., of which the following are the chief details:—

Weight on drivers	122.000 lbs.
Weight, total	141.000 lbs.
Wheel base of engine, rigid	15' 0"
Wheel base of engine, total	23' 0"
Wheel base of engine and tender	49' 10½"
Height	14' 4½"
Heating surface, firebox	153 sq. ft.
Heating surface, tubes	1,741 sq. ft.
Heating surface, total	1,894 sq. ft.
Driving wheels, diar.	56"
Driving wheel centres	Main, cast steel others cast iron
Driving journals	9" by 12"
Cylinders	20" by 26"
Boiler, type	Radial stayed
Boiler pressure	200 lbs.
Tubes, no. and diar.	280 2"
Tubes, length	12' 6"
Safety valves	Locomotive type, muffled
Brakes	Westinghouse
Weight of tender, loaded	104,000 lbs.
Capacity, water	43,000 lbs.
Capacity, coal	9½ tons
Tank style	U-shaped, with sloping back
Truck	4-wheel with steel bolster
Wheels, diar.	33"
Journals	5" by 9"
Wheels	Centres, w.i.; steel tires
Brake beams	Steel

In our last issue we mentioned that the C.P.R. had ordered 100 automobile cars from the Canadian Car and Foundry Co., Montreal. They will be, generally, the same as the standard 40-ton box car, except that they will be built with the new type of low truck, thus securing increased inside height. They will be equipped with security automobile side doors, giving a clear opening, when both doors are open, of 10 ft. One end of the cars will also be equipped with the C.C. & F. Co.'s design of swinging doors, in such a way that when the doors are open, vehicles of any kind can be unloaded through the end of the car. These doors will give a clear opening of practically the whole width of the car. Following are the chief dimensions, etc.:

Capacity	40 tons
Length inside	36' 0"
Width inside	8' 6"
Height inside, top of floor to under side of carlin	8' 4¾"
Centre to centre of trucks	26' 10"
Wheels	C.P.R. standard
Axles	Steel
Journal boxes	McCord
Journal bearings	Canadian Bronze Co.
Brake shoes	Steel back
Brake beams and bolsters	Simplex
Couplers	Simplex

Following are the chief details of the four Pacific type locomotives, which the Temiskaming and Northern Ontario Ry. is having built by the Canadian Locomotive Co., Kingston, Ont.:

Weight on drivers	135,500 lbs.
Weight on trailing wheels	34,300 lbs.
Weight on engine truck	32,700 lbs.
Total weight of engine	202.500 lbs
Cylinders	21" by 28"
Driving wheels, diameter	69"
Trailing wheels, diameter	45"
Engine truck wheels, diameter	33"
Tender wheels, diameter	36"
Driving wheel base	12' 7"
Wheel base of engine	31' 6"
Boiler, type	Extended wagon top
Boiler pressure	200 lbs
Boiler diameter at waist sheet	63½"
Boiler diameter at dome course	72⅜"
Firebox	95¼" by 69¼"
Grate area	46 sq. ft.
Tubes, number and diameter	272; 2"
Tubes, length	19' 0"
Heating surface, tubes	2,705 sq. ft.
Heating surface, firebox	162 sq. ft.
Heating surface, total	2,867 sq. ft.
Capacity, water	5,500 gals.
Capacity, coal	10 tons
Valve gear	Walschaert
Valves	Piston type
Axles	Nova Scotia Steel & Coal Co.'s
Springs	Steel, Peech & Tozer's steel; Montreal Steel Works make.
Journal bearings	Canadian Bronze Co.
Steam heating	Gold system
Headlight	Pyle National Electric
Air brakes	Westinghouse E.T. 6

The Michigan Central Rd. has ordered eight consolidation, eight Pacific and five six-coupled locomotives from the Montreal Locomotive Works. Following are the chief details in each case::

CONSOLIDATION.

Weight in working order	239,000 lbs.
Weight on drivers	214,000 lbs.
Weight on engine truck	25,000 lbs.
Wheel base, driving	17' 6"
Wheel base, engine	26' 5"
Wheel base, engine and tender	60' 11"
Valve gear	Walschaert
Cylinders	23" by 32"
Driving wheels, diameter	63"
Boiler, type	Straight top
Boiler, diameter at first ring	81⅝"
Boiler, pressure	200 lbs.
Tubes, number and diameter	446; 2"
Tubes, length	15' 0½"
Air brakes	Westinghouse American
Capacity, water	7,500 gals.
Capacity, coal	12 tons

PACIFIC TYPE.

Weight in working order	246,000 lbs.

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

MONADNOCK, CHICAGO

Weight on drivers	151,500 lbs.
Weight on trailer	46,500 lbs.
Weight on engine truck	48,000 lbs.
Wheel base, driving	13' 0"
Wheel base, engine	33' 7½"
Wheel base, engine and tender	63' 11"
Valve gear	Walschaert
Cylinders	22" by 26"
Driving wheels, diameter	75"
Boiler, type	Straight top
Boiler, diameter at first ring	72"
Boiler, pressure	200 lbs.

Boiler, type	Straight top
Boiler, diameter at first ring	67⅜"
Boiler, pressure	180 lbs.
Tubes, number and diameter	308; 2"
Tubes, length	16' 0"
Brakes	Westinghouse American
Capacity, water	5,100 gals.
Capacity, coal	7½ tons

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

MONTREAL CARTAGE CHARGE.

11270. July 21.—On the application of T. J. Stewart, of Hamilton, Ont., the Assistant Chief Commissioner gave the following judgment:—The complainant purchased a marble slab from B. & S. H. Thompson & Co., Ltd., Montreal, which was shipped to him at Hamilton by C.P.R. freight. The carting for the C.P.R. in Montreal is done by the Dominion Transport Co. under a contract by which the railway company gives the transport company the sole and exclusive right to cart outward freight to the freight sheds of the company, in Montreal, at certain rates therein enumerated, all goods which are to be shipped over the lines of the railway included in classes 1 to 5 inclusive in the Canadian classification, with certain exceptions, with which we are not now concerned. The consignors notified the transport company, whom they knew to be the cartage agents for the C.P.R. The transport company carted the marble slab to the C.P.R. freight shed and charged $1.50 for the service, which was included in the C.P.R. freight bill and paid by the consignee at Hamilton. The consignee then complained to the board that the charge for cartage was excessive. The Dominion Transport Co. is not under the Board's jurisdiction, and were it not for its contract with the C.P.R. Co. we would have nothing to say in this matter. Subsec. 5 of sec. 314 of the Railway Act, as amended by sec. 11, chap. 61, of the statutes of 1908, is as follows:—No tolls shall be charged by the company or by any person in respect of a railway or any traffic thereon until a bylaw authorizing the preparation and issue of tariffs of such tolls has been approved by the Board, nor, unless otherwise authorized by this Act, until a tariff of such tolls has been filed with and, where such approval is required under this act, approved by, the Board; nor shall any tolls be charged under any tariff or portion thereof disallowed by the Board; nor shall the company charge, levy or collect any toll or money for any service as a common carrier except under the provisions of this act.

And subsec. 30 of sec. 2 of the act as amended by sec. 9 of chap 61 of the statutes of 1908 provides that "toll or rate means and includes any toll, rate, charge or allowance charged or made either by the company or by any person on behalf or under authority or consent of the company, in connection with the carriage, shipment, transportation, care, handling or delivery of goods, and includes also any toll, rate, charge or allowance so charged or made for the collection or cartage in respect of goods transported or to be transported." In this case the $1.50 charged for cartage was under the authority or consent of the company, and therefore was a toll within the meaning of the section of the act just referred to. The company's cartage tariff E 3807, C.R.C. No. E 1305, does not contain any item covering a charge for carting marble slabs in Montreal. In fact the tariff especially excludes marble slabs. Nevertheless the company has in fact collected a toll, within the meaning of the Railway Act, which does not appear in its tariff. This is prohibited by subsec. 5 of sec. 314. I am, therefore, of the opinion that, the railway company had no legal right to collect the $1.50 toll, and that an order should go declaring that the toll charged was illegal.

GRAIN RATES FROM MANITOBA.

11316. July 29.—Re application of Birtle Agricultural Society, Manitoba, complaining against rate of 16 c. per 100 lbs. charged by C.P.R. on grain and grain products from Birtle and Foxwarren, Man., to Fort William and Port Arthur, Ont., as shown in tariff C.R.C. no. W. 1318, and applying for order directing the railway company to restore the rate of 15 c. per 100 lbs., as formerly charged on such shipments. It is ordered that the said rate of 16 c. per 100 lbs. on grain and grain products shipped from Birtle, Foxwarren, Binscarth, Millwood and Harrowby, Man., to Fort William and Port Arthur, as shown in the said tariff, be disallowed; and the railway company is directed to restore the rate of 15 c. per 100 lbs. on the said shipments from Birtle, Foxwarren, Binscarth, Millwood, and Harrowby, to Fort William and Port Arthur, the said rate to take effect not later than Sept. 1.

RATES ON RUBBER GOODS, ETC.

11326. Re application of Transportation Bureau of Montreal Board of Trade under sec. 315 of the Railway Act, on behalf of Eastern Canadian manufacturers of rubber goods, supported by the Canadian Manufacturers Association, complaining of the Canadian classification and asking for the official classification of less-than-carload ratings on rubber hose, rubber packing and rubber tires. It is ordered that the application be not granted, but that, in Canadian classification 14, the restriction of 1st class to "carriage and wagon" solid tires, be removed, and that in the forthcoming supplement no. 3 to the said classification, this item be changed so as to read: "Tires, solid, in packages, 1st class."

G.T.R. and G. T. Pacific Ry. Inspected.—A. W. Smithers, Chairman of the Board G.T.R., arrived in New York from London, Eng., Aug. 5, where he was met by C. M. Hays, President G.T.R. and G.T.Pacific Ry. Accompanied by E. H. Fitzhugh, First Vice President, the Chairman and President left Montreal, Aug. 9, on the annual trip of inspection over the G.T.R. Having completed this, Mr. Fitzhugh returned to Montreal and the Chairman and the President left Sarnia on the Northern Navigation Co.'s s.s. Hamonic, arriving in Fort William, Aug. 12, from which place accompanied by a party of British visitors, they travelled on a special train over the completed portions of the G. T. Pacific Ry., and inspected the progress of work at other points. The party went on to Vancouver, thence by G.T.P. steamship to Prince Rupert, to inspect the work in progress there.

A decision has been given in the Saskatchewan courts to the effect that the Canadian Northern Ry. must pay taxes on land in Prince Albert, Sask., valued at $70,000 which it owns, but is not now using for railway purposes.

A Railway to Hudson's Bay.

The contract for the substructure of the bridge to be built over the Saskatchewan River at the Pas Mission, Sask., in connection with the proposed railway to Hudson Bay, has been let by the Department of Railways to Mackenzie, Mann & Co., Winnipeg. The estimated cost of the work is $100,000. As a result of the letting of this contract there has arisen considerable speculation as to the building of the railway itself, and the report which gains most credence is that the line will be built by Mackenzie, Mann & Co. and operated by the Canadian Northern Ry., under an agreement similar to that under which the G.T. Pacific Ry. will operate the National Transcontinental Ry. from Winnipeg to Moncton.

Speaking at Saskatoon, Sask., July 23, the Minister of Railways said:—"Whether the Government or a private company operate the line, the Government will maintain absolute control of the rates. We intend that whoever builds that railway will have to provide not only for carrying trade by rail to Pas Mission and Hudson's Bay, but also for a transatlantic steamship service to the markets of the old world."

D. D. Mann, Vice President, Canadian Northern Ry., met the Minister of Railways at Lloydminster, Sask., Aug. 8, and on Aug. 13 he stated that the question of the railway to Hudson Bay had not been discussed between them on that occasion, and that there was no arrangement between his firm and the Government about the construction or operation of the railway. The Minister of Railways has also issued a denial of the story that there is any agreement with Mackenzie, Mann & Co. as to the line, his denial being based on a telegraphic account of an interview in Toronto with W. Mackenzie, President, in which the latter is quoted as saying:—"The Hudson Bay line must be built at once, but the point of its operation remains to be settled by Parliament." Pressed for further particulars Mr. Mackenzie would say nothing more than that it was "probable" the new Government line would be leased to the C.N.R.

The Manitoba Free Press of July 19, contained under the heading of "Twenty Years Ago":—"Hugh Sutherland leaves this morning via the Northern Pacific for Europe on Hudson's Bay railway business. Stewart Tupper will accompany him from Montreal." (Aug., pg. 617.)

Windsor St. Station, Montreal.—Contracts have been let to the Dominion Bridge Co., for the steel work, and to C. E. Deakin for the masonry and general work on the annex to the Windsor St. station, Montreal. The work is to be completed by Nov. 1911. The estimated cost covered by these contracts is about $1,250,000.

The Interstate Commerce Commission has decided in the matter of jurisdiction over rail and water carriers operating in Alaska, that the district of Alaska is not a territory of the United States in the sense in which that phrase is used in the act to regulate commerce as amended, and the Commission has therefore no authority or jurisdiction over carriers engaged in transportation of passengers or property within the district of Alaska. The general rule that a special tribunal ought not to enlarge its jurisdiction by intendment but ought to exercise only the powers clearly conferred by statute applies with special if not controlling force to the exercise by the Commission of jurisdiction in Alaska in view of the fact that under the act of May 14, 1898, power to regulate railway rates in Alaska was conferred upon another branch of the Government.

MONTREAL ST. JOHN, N.B. TORONTO WINNIPEG CALGARY VANCOUVER

Handling Locomotives.

By H. H. Vaughan, Assistant to the Vice President Canadian Pacific Railway.

The desirability of pooling engines in place of operating them by regularly assigned crews depends, in the writer's opinion, on whether the engines are engaged in passenger or freight service, and in the latter case, on the conditions which exist.

PASSENGER SERVICE.—Where traffic conditions admit of the engine making greater mileage than can properly be run by one crew two crews assigned to one engine, or three crews to two engines, will enable the engine to make as great a mileage as is desirable. On account of the comparatively short time occupied from terminal to terminal, the crews can usually make a round trip without holding the engine longer than is required to handle it and prepare it for the return trip or to await its train. By using more than one crew to the engine, it is theoretically available on its return just as soon as though it were pooled. In practice, unless pooling is carried to the extent of sending out any engine on any train, certain engines are regularly used on certain trains or groups of trains, and it is comparatively easy to arrange the crews and engines so that a reasonable time may be allowed for repairs and yet ample service be obtained from the engine. When working with assigned crews it is of course usual to employ some extra passenger men to take the place of the regular men, who are also available in case an extra trip is required from an engine on account of specials or extra sections of regular trains. Where regular scheduled trains have to be provided for, this system is as flexible and convenient as pooling and has the additional advantage in passenger service that the men run certain trains regularly, and will consequently give better service than when handling a number of trains indiscriminately. Pooling in passenger service probably does not require much discussion. The system is not in extensive use and will presumably have few advocates. The writer would, however, state as a result of his experience with both pooled and assigned engines in passenger service, that he is most strongly opposed to pooling in this service and considers that far better results can be obtained from assigned crews.

FREIGHT SERVICE. — Here conditions are very different. The time is slow and a long time is occupied from terminal to terminal, so that crews may require a full allowance of rest on arrival, or may even have to be relieved on the road. Few, if any, of the trains run at regular hours, and in place of following a defined schedule, the demand for engines varies with the traffic. When business is heavy, engines are wanted as soon as they are repaired and ready for service, making it difficult, if not impossible, to select the engines in any particular order. By pooling, such difficulties may be more easily met, especially at large terminals. When engines are assigned the practice usually required by the agreement with the men is that engines shall be prepared and dispatched in the order in which they arrive, but if the engine is ready its use may be retarded by the time required by the crew for rest. In pooling, both these objectionable conditions vanish. An engine may be turned at once if fit for service and thus rendered immediately available, and the movement of the men being entirely independent of that of the engines, the detention of engines at a terminal can be regulated by simply increasing or decreasing the number in the pool.

Under such conditions, if pooling is not carried on in name, it will be in fact, simply because business cannot be handled unless engines are used without reference to the order of their arrival. Granted therefore that pooling is advantageous under these conditions, it should be done properly. All the features necessary to a successful pooling system must be employed, such as thorough terminal inspection independent of the engine crews, and arrangements for handling tools and engine supplies, and caring for headlights, oil cups, etc. If pooling is resorted to when business is especially heavy, or when traffic is disturbed by storms or by other causes, without proper arrangements being made, the results are most objectionable. Under these circumstances the condition of the power will depreciate rapidly and the service rendered will be exceedingly inefficient. The maxim is frequently stated: "If you pool, pool," and its wisdom has been demonstrated by experience. The real question about pooling is therefore whether there are conditions under which it is preferable to adopt the alternative practice, that of running engines with assigned crews. This depends on the results obtained from the two systems which are in the writer's experience as follows:

MILEAGE.—It is possible to obtain somewhat greater average mileage per engine under the pooling system, but the increase does not exceed ten per cent when traffic is being handled smoothly and without excessive congestion and delays.

REPAIRS.—When running successfully under the assigned engine system repairs are less than when similar conditions exist with pooled engines. A man running an engine regularly keeps up the smaller details and knows what work is required at once and what must be looked after in due time. His inspection reports are more reliable than those of a man who has had an engine for one trip only. As he has to run the engine next trip as well he will handle it with greater care and avoid any action that will cause him trouble in the future. Men who have been accustomed to running pooled engines will not do all this at once but they most certainly will if assigned to an engine for any length of time and the difference is noticeable in engine houses where some engines are assigned and some are pooled.

Engines are sometimes taken care of by the headquarters station system the work required to maintain the engine in proper condition being done at the terminal designated as the home station, while at the other terminal the only work done is that necessary for the return trip. With this arrangement, even with pooled engines, the same crew will, if possible, make the round trip; but when they are changed, practically as much work is required at the away station as at the home station. The result is a considerable increase in the cost of repairs, for there is not as a rule very much difference in the cost at the home station.

When the assigned engine system proves inadequate for traffic demands, the results change. Men will endeavor to book enough work against the engine to hold it until they have rested, and on the other hand engines are liable to be wanted before repairs that are actually required are completed. Under these conditions engines may be better and more cheaply maintained when pooled; but under normal conditions the writer's experience would show that with assigned crews the cost of running repairs may be reduced five to ten per cent, and better mileage obtained from the engines between shoppings.

FUEL.—It is almost impossible to determine the fuel consumed by an engine on an individual trip and consequently difficult when pooling to keep any record of the amount of coal used by different men. A record may be kept by engines, but it is then impossible to locate the responsibility for any excessive consumption. The practical result is that on pooled engines, individual fuel records are of comparatively little use. With assigned engines, while trip records may not be individually accurate, the average of several consecutive trips soon becomes so, as the variation of the amount of coal left on the tender, while important on one, is of comparatively small importance on a number of trips. There is no doubt in the writer's mind that individual coal records, whether by trip or by period, are an important factor in obtaining economical results in fuel consumption, both from men and from engines, and he ascribes the good results that have been obtained on the C.P.R. largely to the careful way in which the records have been watched.

Apart from the records, the familiarity of the men with the engines has an important bearing on fuel consumption. Most engines vary slightly in the way they burn the coal, in the nature and intensity of the draft, and in the best position for the throttle and reversing lever. Crews knowing an engine thoroughly learn about these peculiarities, while they do not when running a different engine each trip. One crew will obtain from an engine results that are impossible for another crew, and thus the result with assigned crews is a tendency to higher efficiency than when every engine has to be drafted and adapted to do the work with the poorest crew on the division. It is only necessary to watch the difference in the way an engine is handled by a regular crew and by a pooled crew, to realize the advantage of the former, and important results have been clearly shown with the same men and engines, on divisions where the two systems have been in effect.

SERVICE.—The remarks that have been made in connection with repairs and fuel apply with almost equal force to the class of service obtained from the engines, with reference to failures, breakdowns and ability to make the time required. A crew that knows the engine will get more out of it than one that does not. They will notice any difference in its working and will take more interest in getting any defect rectified. They will keep their equipment in better condition and will pay more attention to bearings which show signs of heating, etc. All these conditions lead to better and more efficient service.

ENGINE HOUSE EXPENSES.—Inspection, the care of tools, the filling of lubricators, headlights and cab lamps, are commonly looked after on assigned engines by the crews. When engines are pooled this work has to be done by the engine house force. At a large terminal this expense is not large, but when the number of engines handled is small, it is difficult to arrange the duties of the men doing this work to prevent its becoming a serious item. Conditions vary on different roads in this respect, but the fact remains that this work is not in any way burdensome to men having a regular engine, while it is burdensome if they are required to prepare a different engine each trip, and consequently they object to it very strongly. In the majority of cases this work constitutes an additional charge on engines that are pooled.

CONCLUSIONS.—The writer considers that in passenger service pooling is objectionable under any conditions and should be avoided if possible.

In freight service, pooling is advisable if conditions are such that engines cannot be run with assigned crews, and probably on divisions where business is so heavy that 60 engines per day or over are dispatched from the terminal;

REMEMBER

When you require any new equipment in the line of Iron or Woodworking tools, —Williams & Wilson can furnish the Right Tools at the Right Price. Here are a few of our Agencies:

but the writer's experience is that where assigned crews can be used on engines, the cost of repairs, the amount of fuel consumed, and the class of service obtained, will all be more satisfactory.

He therefore regards pooling as a practice that may be necessary under certain conditions, but that is certainly not desirable if the alternative system can be satisfactorily carried out.

The preceding paper was read before the American Society of Mechanical Engineers and the Institution of Mechanical Engineers at Birmingham, Eng., recently.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 843,500	$613,900	$229,600	$ 26,700+
Aug.	807,100	602,700	204,400	18,300+

Inc.	$18,676,169.37	$7,791,786.40	$10,884,382.97	.....

The net result of the company's operations for the year ended June 30, are as follows:—

Gross earnings	$94,989,490
Working expenses	61,149,534
Net earnings	$33,839,856
Net earnings of steamships in excess of amount included in monthly returns	909.236
Income from other sources	2,425,477
Total net income	$37,175,669
Deduct fixed charges	9,916,941
Surplus	$27,258,728
Deduct amount transferred to steamship replacement account	$900,000
Contribution to pension fund	80,000
	980,000
Net revenue available for dividend	$26,278,728
Surplus for year carried forward, after payment of all dividends	$13,896,000

Approximate gross earnings for July, $8,660,000, and for two weeks ended Aug. 14, $4,064,000, against $7,004,000 and $3.213,000 for same periods 1909.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for June, $302,980.55; expenses $203,629.17; net operating revenue $99,-351.38, against $269,483.81 operating revenue; $204,868.41 expenses; $64,615.40 net operating revenue for June, 1909. Aggregate operating revenue for 12 months ended June 30, $3,302,-147.03; expenses $2,269,247.84; net operating revenue $1,032,899.19 , against $2,719,337.86 aggregate operating revenue; $1,979,518.07 expenses; $739.819.79 net operating revenue for same period 1908-09. Approximate gross earnings for July, $313,502, against $297,564 for same period 1909.

MINERAL RANGE RD.—Operating revenue for June, $62,737.46; expenses $57,695.53; net operating revenue $5,041.93, against $70,569 operating revenue; $65,124.13 expenses; $5,-444.87 net operating revenue for June 1909. Aggregate operating revenue for 12 months ended June 30, $826,499.55; expenses $738,669.21; net operating revenue $87,830.34, against $826,-375.46 aggregate operating revenue; $701,033.34 expenses; $125,342.12 net operating revenue for same period 1908-09. Approximate gross earnings for July, $56,651, against $73,257 for same period 1909.

..MINNEAPOLIS, ST. PAUL AND SAULT STE. Marie Ry.—Operating revenue for June, $1,338,-367.22; expenses and taxes, $851,129.19; operating income, $487,238.03, against $1,072,626.47 operating revenue; $669,699.53 expenses and taxes; $402,926.94 operating income for June, 1909. Aggregate operating revenue for 12 months ended June 30, $15,407,179.40; expenses and taxes, $9,026,601.21; operating income, $6,-380,578.19, against $12,609,299.17, aggregate operating revenue; $7,970,810.13 expenses and taxes; $4,638,489.04 operating income for same period 1908-09. Approximate gross earnings for July, $1,903,208, against $1,711,948 for same period 1909.

CHICAGO DIVISION.—Operating revenue for June, $795,561.74; expenses and taxes, $581,659,-93; operating income, $213,901.81, against $654,-211.38 operating revenue; $489,865.68 expenses and taxes; $164,345.70 operating income for June 1909. Aggregate operating revenue for 12 months ended June 30, $8,928,224.58; expenses and taxes $6,262,495.86; operating income $2,-665,728.72, against $7,556,603.11 aggregate operating revenue; $5,502,270.18 expenses and taxes; $2,054,332.93 operating income for same period 1908-09.

Grand Trunk Ry. Earnings, Expenses, Etc.

Subject to audit, the accounts for the half year ended June 30, show the following results:

Gross receipts		£3,321,600
Working expenses, including £120,000 in reduction of the engine and car renewal suspense account	2,456,000	
Net receipts		£ 865,600
Income from rentals, outside operations and car mileage balance	58,100	
Total net revenue		£ 923,700
Net revenue charges for the half year, less credits	507,000	
Balance		£ 416,700
Deduct Canada Atlantic Ry. deficit for the half year	£34,900	
Deduct Detroit, Grand Haven and Milwaukee deficit for the half year	34,600	
	69,500	
Surplus		£ 347,200

This surplus, added to the balance of £11,800 from Dec., 1909, makes a total of £359,000 available for dividend, which will admit of the payment of the full dividend for the half year on the 4% guaranteed stock and first and second preference stocks, leaving a balance of about £12,600 to be carried forward.

The accounts of the Grand Trunk Western Ry. for the year ended June 30, including the balance brought forward from the previous year, show a surplus sufficient to provide for the interest on the first mortgage bonds, and leave a balance of about £17,200.

Approximate earnings for July, $3,179,896, and for two weeks ended Aug. 14, $1,603,660, against $3,491,184 and $1,700,877 for same periods 1909.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to July 31:

	1910	1909	Decrease
Grand Trunk	£521,589	£559,037	£37,448
Canada Atlantic	25,887	30,672	4,785
G. T. Western	81,032	96,760	15,728
D. G. H. & M.	24,895	30,898	6,003
Totals	£653,403	£717,367	£63,964

J. A. Seguin, a Montreal barber, was fined $20, Aug. 12, for scalping C.P.R. commutation tickets.

A new wage scale has been adopted and has gone into effect on the Intercolonial Ry., as affecting freight handlers, parlor and sleeping-car conductors; dining-car conductors, cooks, etc.; stationare boiler men, machinists, and other employes having to do with the operation of trains.

J. P. Mabee, representing the Board of Railway Commissioners and M. A. Knapp, representing the Interstate Commerce Commission, met in New York, Aug. 11, for a preliminary discussion on matters connected with an agreement for the regulation of international commerce between Canada and the U.S.

Too Late for Classification.

Arnprior and Pontiac Ry.—A United States railway paper published the following recently: "The A. & P. Ry. Co. advises that it will begin construction this season on its projected 75-mile electric railway which is to connect Ottawa, Fitzroy Harbor, Arnprior and Campbells Bay. The line will connect with the C.P.R. at Campbells Bay and Arnprior and with the G.T.R. at Graham's Bay. Power station and repair shops will be located at Fitzroy Harbor. Arthur Price 75 Somerset St., Ottawa, is Chief Engineer."

We are officially advised that it is not likely than any construction will be done on this projected line this year. The proposal is to build the railway in connection with the development of the Chats Falls in Fitzroy township. The scheme is not fully developed as yet, but our informant says that it has good prospects. The chief engineer is A.H.N. Bruce, of Ottawa, not Arthur Price, as stated in our contemporary.

Canadian Northern Ry.—It was announced Aug. 19 that arrangements had been completed with the St. Boniface, Man., city council, for extensive improvements within the next two years, to include a roundhouse, store house, coal warehouses, and freight sheds, and that the station at St. Boniface would be a joint one with the G.T.P.R., also that a new bridge would be built across the Red River, between Winnipeg and St. Boniface.

C.P.R. Guelph Station.—The Secretary of the Guelph Junction Ry. has received a letter from General Superintendent Oborne stating that the C.P.R. was only awaiting the settlement of the level crossing question before proceeding with the erection of the new passenger station at Guelph.

G.T.R. Port Huron Shops.—E.H. Fitzhugh, First Vice President, on a visit of inspection to Port Huron, Mich., Aug. 11, is reported to have stated that the addition to Block 1 of the shops there would be started as soon as material and workmen could be secured; that the new building would include a wood mill with 10,000 ft. of floor space, a blacksmith shop with 8,000 ft. of floor space, a lumber shed and dry kiln, and that it was estimated to cost about $120,000.

Hudson Bay and Pacific Ry.—A London, Eng.. cable, Aug. 19, says the directors have authorized the statement that the Hudson Bay and Pacific Development Co.'s circular in which it was said that the railway company's bonds had been guaranteed by the Dominion Government was unauthorized by the railway company.

Intercolonial Ry.—The buildings to be erected to replace those burned at Campbellton, N.B., include a two-storey passenger station with covered platforms; a freight shed, 20-stall locomotive house with annex for a repair shop, rest house for trainmen, ice house, track scale and other necessary buildings for a divisional point. The coal chute was the only building not destroyed in the recent fire, and it will remain as at present.

Midland Ry. of Manitoba.—An engineering party is making a survey from the G.N.R. track in St. Vincent, Minn., to the Northern Pacific Rd. station at Pembina, N.D., over which it is said the G.N.R. will run its trains to a more direct connection with the Canadian Northern Ry. than at present.

The Board of Railway Commissioners, at its operating sittings at Ottawa, Oct. 4, will consider the matter of a regulation, requiring each and every passenger car of railways subject to its jurisdiction, to be equipped with a tool box, containing saw, sledge and axe, and located in a convenient place in each car.

THE CONTINENTAL IRON WORKS, WEST AND GALYER STS. BOROUGH OF BROOKLYN. Near 10th and 23rd St. Ferries. **NEW YORK**

G.T.R. Betterments, Construction, Etc.

Belleville Roundhouse.—Work was started Aug. 10 on the new roundhouse at Belleville. It is located close to the junction of the main and the Midland Ry. lines, just out the city limits, and will contain 42 stalls. When the new building is completed the present roundhouse will be torn down, and the tracks east of the station removed.

Allandale Buildings.—We were recently advised that it was intended to rebuild the transfer shed and weigh scales which were recently destroyed by fire at Allandale, Ont., on the old site. Plans had not then been prepared, but the intention was to practically duplicate the former buildings.

Toronto Station Building and Viaduct.—When in Toronto Aug. 9, in company with A. W. Smithers, Chairman of the Board, President Hays said there was nothing new to report as to the building of the Union station and the viaduct along the water front, but when he came back from his tour of the G.T. Pacific Ry. he would probably have a good deal to say.

In connection with the viaduct question, we are advised that it is the second main part of the work of grade separation in Toronto, the first of which is referred to below. This viaduct part of the work extends from Bathurst St. on the west to Logan Ave. on the east, but owing to the C.P.R. appeal from the Board of Railway Commissioners' order this part of the work is yet undetermined.

Grade Separation, Toronto.—The preparatory work for the separation of the grades on the G.T.R. from Bathurst St., Toronto, as far west as Sunnyside, on the Toronto-Hamilton line, has been in progress for some time, and it is reported that all the property necessary for the work has been acquired. The work is being done under the terms of an order of the Board of Railway Commissioners, the cost being apportioned between the company, the city of Toronto and the township of York. The first part of the grade separation work in Toronto extends from Bathurst St. on the east to Mimico on the west, six miles. The depression commences at the C.P.R. crossing just west of Bathurst St. and continues to a point east of Queen St. (Sunnyside) crossing, the new grade of the railway passing under Dufferin St., Dunn, Jamieson and Dowling avenues, without altering the grades of these streets. From the point east of Sunnyside crossing the new grade will cross the following streets overhead: Queen St., Indian Rd., Howard Ave., Ellis Ave., Windermere and Jane streets, and the public highway known as Queen St. West. The bridges carrying streets over the railway track will be of steel and concrete, and will provide a vertical clearance of 22½ ft. above the base of rail. The subways carrying the railway tracks over the various streets will be of steel and concrete, and will provide 14 ft. vertical clearance for the highways. The work will consist principally of open cutting and embankment, except where it passes the exhibition grounds, where a concrete retaining wall will be used. Walls will also be used at Parkdale and other points where local conditions require it. There will be four through main tracks for the entire distance, and such other additional tracks as may be required for serving industries. The gradients will be 0.40% in each direction. J. R. W. Ambrose, Engineer of Grade Separation, is in charge of the work for the G.T.R. and E. L. Cousins, formerly District Engineer G.T.R., Toronto, represents the city council.

Chatham to Windsor, Ont.—Work is in progress between Windsor and Chatham, Ont., preparing for the replacing of the present 80-lb. steel with 90-lb. rails. (Aug., pg. 639.)

Brandon Hotel and Station C. N. R.

The Canadian Northern Ry. has let a contract for building a hotel in Brandon, Man., with a frontage on Princess St. of 120 ft., by 100 ft. on Ninth Ave. South of the hotel and adjoining will be a new station, two stories and basement, 190 by 36 ft. The station will be built of stone and brick in classical style. It will have a large general waiting room, ladies' waiting room, ticket lobby, express office, telegraph office and express and baggage room on the ground floor, and staff offices on the first floor. These will be reached from a separate entrance on Ninth Ave. Passing through the station the concourse will be reached with three stub end tracks for passenger service. The concourse will extend to the rear of the hotel, with an entrance into the main rotunda.

The hotel will be 90 ft. high, seven stories and basement. In the basement will be located the billiard room, barber shop, and public baths, lavatories, store rooms and machinery room, and provision will also be made for a future grill room and cafe. On the ground floor, adjoining the station, will be the bar-room, which will be finished in fumed oak with red tile floors. The rotunda will occupy all of the corner of the hotel and front on the two streets. It will be 76 by 62 ft., and in it will be located the office, manager's office, check room and news stand. To the west of it will be the dining room, 39 by 63 ft., which will be panelled in mahogany. This room will be free from columns, so as to give an unobstructed floor for assemblies. To the rear of the dining room will be the kitchen, about 35 by 39 ft., pantries, etc. The drawing room on the first floor will be 32 by 48 ft., and off it a writing room. The bedrooms will be ranged both single and en suite, about half of them being the latter way and supplied with bathrooms. On the top floor will be the servants' quarters and 10 large sample rooms. The latter will be well lighted and ventilated. Two elevators will be provided in the building for passenger service, and one of them arranged to handle trunks to the sample rooms and other floors.

The building will be heated by steam from the Brandon Electric Light Co.'s plant. A ventilating system will be installed, also a refrigerating system for the kitchen, larders and bar-room. The building will be lighted throughout with electricity, and will have an independent pump for fire protection purposes. The building will be of steel cage construction, with re-inforced concrete floors. The exterior walls will be of stone and brick. The floors of waiting rooms and ticket lobby, and of the rotunda, billiard room, etc., in the hotel will be of tile. The plans were prepared by Pratt & Ross, architects and engineers, under the direction of M. H. McLeod, General Manager C.N.R.

A Montreal press report states that the C.P.R. has recently completed a census of its employes in Montreal. The number given is 11,092, and the average earnings per head is given as $3 a day making an annual distribution of about $12,000,000.

An order in council has been passed relaxing the immigration regulations, in respect of cash qualification on entry, so far as they concern men who are fit, and willing to work on railway construction, and who are guaranteed work by railway companies or railway contractors.

WATER SUPPLY FOR RAILWAYS.

By H. B. Lake, Chemist C. P. R. Western Lines.

Although a railway is anxious primarily to secure water which will produce steam for its locomotives with as little trouble and expense as possible, yet in its capacity as a great public servant its interests lie in obtaining, early in its inception, supplies of water, not only good for steam production; plentiful for future developments, and harmless to live stock, but at certain points free from suspicion of pollution, clear and brilliant for the consumption of its patrons. Years ago when the richness of the west was discovered, and the earliest moment at which a train could be run was all important, anything liquid was commandeered, but as development and competition ensue, the economy of applying special study to the water supplies from the time of location, becomes an ever increasingly economical factor. Proper selection of water supplies involves immediately the costs of operation of the whole system, and indirectly the the speed of the trains; the safeguard of the health of the traveling public, of the company's employes, and of the live stock shipped; and finally it gives a new argument to the freight and passenger salesmen, as to the superiority of the railway's water supplies. Therefore, when selection or improvement of water supplies is being made, the problem does not conform to selecting the supply which will involve the least initial capital expenditure or maintenance. The advantages just recited must be considered, and properly weighed in with the debit and credit of the financial considerations and the water supply becomes an efficient part of an economic system.

As soon as a new line is projected it will be economical to make a survey of the available water supplies, noting the observations coincidently with a profile of the topography, and geology. If possible analyses should be made, and the results tabulated opposite a reduced profile, giving the mileage graphically. The method of tabulating this work is shown in fig. 1, the relative distances between supplies is seen at a glance, the main summits on the profile are pronounced, and complete mineral analyses are given. This information, if prepared and collated at the time of constructing new lines, would be valuable in selecting terminals; and considering the eventual necessity for drinking and live stock supplies. When it is revealed that some supplies are 2, 4, 6,

8 and 10 times better in quality than others available, then the advantages become more apparent. The chart of columns in fig. 2 gives some idea of the variations in the scale forming ingredients of a few supplies. This chart also shows the enormous advantages of intelligent prospection, by which far superior supplies were discovered.

Whereas, on a projected line, especially through a region limited in water supply, quantity would rank first; yet, on a developed line, whereon traffic has increased and competition entered, then quality takes precedence. Hence, knowledge of quality and range of seasonal variation, not only of the supplies in use, but of all supplies available, becomes essential to economy. Fig. 3 shows the average cycle of seasonal variation. During the fall all surface waters gradually increase in concentration of salts, and after freezing over in the middle of November they are largely shut off from surface tributaries. Not only so, but any subsequent precipitation is in the solid form of snow, which thaws inappreciably. The body of water being thus approximately gas tight, bubbles of gases, such as oxygen liberated by the vegetation and carbonic acid by the aquatic life, are confined, and during this period I think the increased solvency of the waters enables them to attack and dissolve the shells of the millions of crustacea, and larger quantities of limestone. About the middle of March this concentration is suddenly arrested by the breaking up of the ice, dissolved gases escape and the supply is enormously diluted by snow water, and soon after by rains, which keep the supply relatively low in mineral contents, and is assisted to no small extent by the new swarms of crustacea, and revivifying of all vegetation and life which absorb chalky matter from the water, and, moreover, any carbonic acid is largely free to escape. During this period of less matter in solution there are, in some cases, enormous quantities carried by the streams in suspension. After this the gradual process of concentration again proceeds, and the cycle is repeated. These changes should be known for every large and important supply, as each supply has its own peculiar periods and variations, but the curve illustrates the general character of the seasonal cyclic variation. Therefore, analyses of supplies along main lines should be made constantly and tabulated, together with profile, mileages, and available quantities, as already referred to in fig. 1. Where visible supplies are lacking, or low in quality or quantity, prospection should be conducted by boring and drilling, and careful notes kept of all formations and waters encountered for immediate and future guidance, as shown in fig. 1. Such systematic investigation results in the abolition of the worst supplies, and the introduction of better

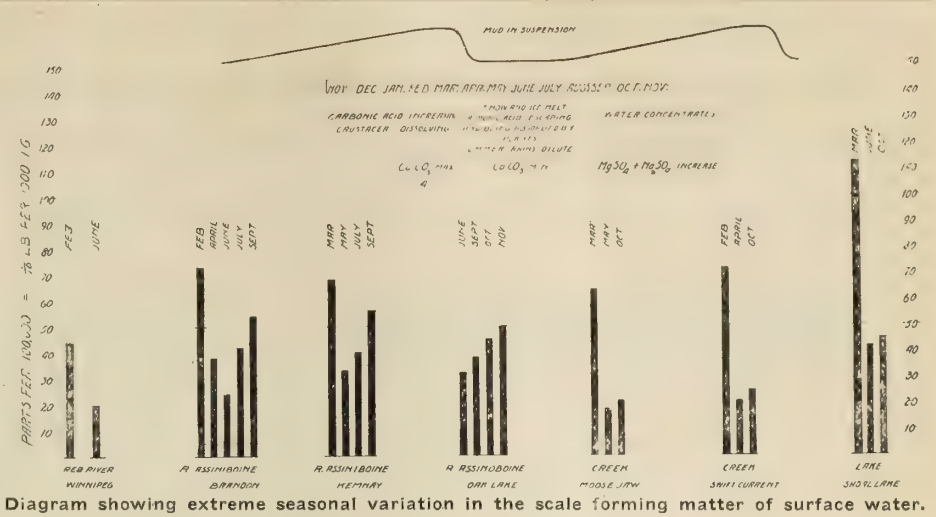

Diagram showing extreme seasonal variation in the scale forming matter of surface water.

supplies. Numerous cases could be given where the improvement has been effected at small expense, compared with the advantages gained, as shown in fig. 2.

Only after the systematic prospection outlined above has failed to reveal supplies of sufficient quality and quantity should special treatment be considered. The economical point is reached when the financial and other advantages accruing would show a good interest on the capital, plus any extra cost of operation necessary to effect the improvement. When large quantities of good water are required at a point where the present supply is bad or inadequate, then considerations of improvement may be so great as to overwhelm the immediate financial considerations, and make the selection of a supply involving special treatment essential. Such a conclusion would be reached when the existing supply was inadequate, with the alternative of hauling water, or attempting to use a supply of such quality that engine failures would be imminent; when the possible new supply would, without treatment, fill the firebox legs with mud or form heavy scale rapidly. If supply for the coaches or hotels, or the watering of live stock were involved, the advantages of treatment would be manifestly increased.

Fig. 4 shows graphically the difference in the amount of scale forming matter in a number of cases before and after softening in a simple form of plant in use on the C.P.R. Western Lines. Also the relation of soap destroying powder to the scale forming matter, showing that it is not a constant, as sometimes stated. It is evident therefrom that the amount of possible scale taken at terminals many times outweighs a small quantity of much harder water at less

important points. The amount of scale contained in the original water in several cases would have exceeded 10 tons a month. By assuming the scale as equal in density to limestone, the number of engines at 10 per day, and the average heating surface at 2,300 sq. ft., then the deposit would have equalled 1-16 in. thick in one month. And if we assume 50% removed as mud by washing out, then it would be 1-16 in. in two months, which is generally admitted to be equal to an increase of 10% of fuel required to produce the same evaporation, to say nothing of overheated plates and tubes, and pitting consequent on decomposition of scale.

The different temperature of portions of the heating surface, and the fact that some salts in water are deposited at different temperatures, accounts partly for the fact that analyses shown in fig. 5 of scale removed from various parts of the boiler, vary in composition. The other influencing condition is the overheating of already deposited scale resulting in decarbonation, and there is no doubt that the CO_2 thus liberated accelerates pitting and corrosion of any clean metallic surfaces, or those which occasionally become suddenly exposed by expulsion of scale by overheating and other causes. Therefore, we can formulate three general rules:—Firstly—The supply. Waters may be muddy constantly or periodically, yet suitable otherwise. In such cases treatment must be directed to the removal of the matter in suspension. If only for boiler use some form of sedimentation, with or without coagulent, may be sufficient. But if for drinking purposes as well, then filtration in addition will be necessary, and it is quite possible to adopt these processes in the wrong order. If the water is not only muddy at inter-

Diagram showing some instances of improvement effected by prospection. Columns represent proportion of scale forming matter.

Analysis of the Waters is the Basis for the Success of Dearborn Water Treatment

The foundation for our operations is a thorough knowledge of the conditions. Scale formation, corrosion, foaming, leaks and other troubles affecting locomotive boiler tubes and sheets are caused directly by the presence of salts in the boiler waters. By the analysis we obtain knowledge of the nature of each supply, and the treatment is made up of reagents that will handle the conditions over the entire district.

The treating of locomotive boilers by the Dearborn process requires no outlay of capital for installation of equipment; the manner of applying the treatment is simple; the cost per thousand gallons of water is less than by any other method; and the desired results are assured if the treatment is correctly used. Gallon samples of the waters required for analysis.

vals, but also possesses considerable scale forming matter in solution, then the removal of the scale forming matter would be paramount, since the proper kind of softening plant would not only remove the scale forming matter, but incidentally, without any additional expense the mud also. Whether filtration were also necessary, or an especial part of the softening plant, would depend upon whether the water was also required for drinking purposes.

If the water is sufficiently hard to come within the economic and conditional limits already outlined, then it will pay to treat it, and a suitable softening plant will be a good investment. There are many kinds of softening plants, and, like other devices, they vary in efficiency. Some types are more suitable than others for a given water and conditions. Generally if mud has to be removed as well as hardness, or the water is especially high in permanent hardness, then a plant in which the water intermittently stands for considerable periods is the better. But in cases where water is already purchased or supplied at a pressure, then a plant through which the water can pass continuously, and be treated en route, will possess great advantages. There are other considerations, such as the kind of salts to be removed, some take much longer than others. Temperature also affects results, and the form in which the re-agents are added. Highly important is the location and kind of plant, as a properly designed plant may enable the existing pumpman to attend to the treating plant, which is very desirable, since plants attended to by persons whose second duty it is to charge and care for them may sound ecomonical, but they will prove inefficient.

That some of the waters derived from sloughy sources are more or less corrosive in nature is well known by their pitting action in the boilers. This property is, however, possessed by some of such waters in their cold natural condition, and they attack and eventually destroy the pipe lines or distributing system. Generally this ability to dissolve metals is possessed by the softest waters, and it has been established by careful experiment that pure soft water boiled free from air, and carbonic acid gas, will dissolve iron, and more readily steel. Where such waters are derived from peaty sources they appear to carry in solution certain vegetable compounds, which increase their slightly acid reactions. In such cases it is necessary to treat the water with a sufficient quantity of lime to neutralize the acid tendencies, and also, what is equally important, to remove any free carbon dioxide, as this gas always present in waters accelerates, although not essential to, corrosion.

By alkaline I mean waters which contain an excess of carbonate of soda, and by saline those which contain a predominance of soluble salts, not immediately precipitated by boiling, namely, sulphates of magnesium and sodium, and chlorides of sodium, and occasionally of magnesium and calcium. On the prairie there are supplies which contain varying quantities of these salts, probable combinations of chlorine ions with calcium and magnesium cation, are fortunately rare, and can usually be avoided. In the laboratory a small experimental boiler is kept wherein we can test the action of these waters, and pure boiled water containing 5 parts of $MgCl_2$ per 100,000, equal to only ½ lb. per 1,000 I.G., was capable of depositing a thick coating of copper on a piece of steel cut from the crown of a locomotive firebox, immersed therein for an hour at 200 lbs. steam pressure per sq. inch. Carbonate of sodium is a far more common constituent of natural waters than is generally shown by the conventional methods of reporting the analyses, but its presence can be proven, and, moreover, in the presence of calcium sulphate, although some text books and authors state that this is impossible. When sodium carbonate and sulphate of sodium predominate, then the water tends to foam in a boiler, especially, unfortunately, when the boiler is being most heavily drawn upon, as on a long or steep grade. The exact physical causes underlying this foaming or lifting of the water have not as yet been fully discovered. Matter in suspension, such as vegetable matter or mud, seems to accelerate the foaming action, hence one reason why boiler compounds are unsound in principle. However, that solutions of sodium carbonate boil with irregular ebulition and tendency to "bump" over is well known, so that there must be another reason in the physical condition of a sodium carbonate solution. Therefore, we can formulate three general rules regarding special treatment of supplies: 1st—The supply should be amenable to successful treatment, and afford a resultant water better in quality than any available of sufficient quantity. 2nd—It should be adequate in quantity for present consumption with a reserve for future development. 3rd—Every supply involves special study as to the kind of treatment and type of plant to obtain good results economically.

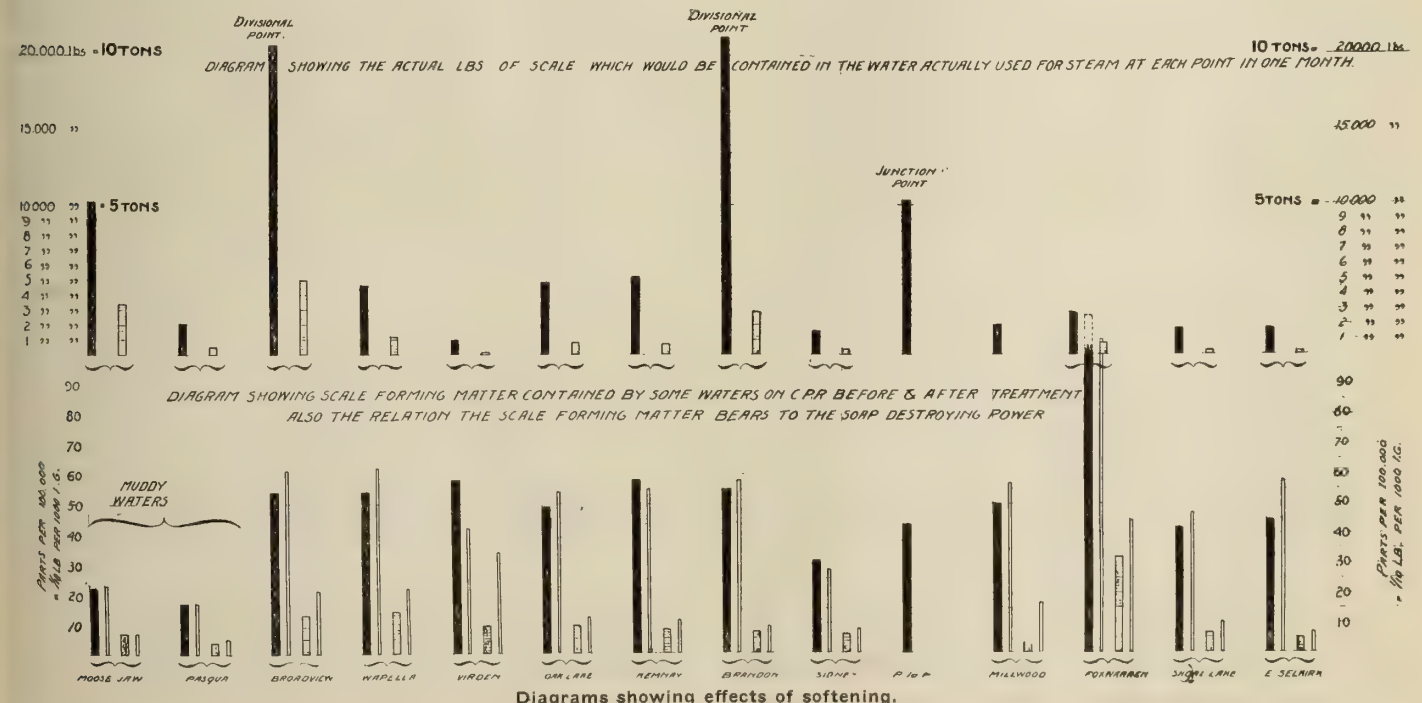
The provision of supplies free from pollution, perfectly clear, and of good color at certain points for watering coaches, is highly important, and has not been given the special attention which it is necessary to bestow to ensure water on the tables of the dining cars, and in the coach reservoirs, of clear appearance and undoubted purity. Periodically the reservoirs and filters on the coaches and dining cars should be sent to the laboratory to test their cleanliness and freedom from disease germs. A systematic control of the water supplies as outlined herein would result in increased efficiency, and eventually in water supplies of such quality that they would be an advertising asset of the railway system.

The foregoing paper was read before the Western Canada Railway Club recently.



Diagrams showing effects of softening.

Steam Turbine Electric Locomotive.

In our issues of Jan. and Feb. we gave some particulars of the Reid Company's steam turbine locomotive, which was under construction, and was described by Hugh Reid in his presidential address to the Glasgow University Engineering Society. The locomotive has made its preliminary trial on the main lines of the Caledonian and the North British railways, with a saloon carriage attached, and the following additional particulars are now available:—

Steam is generated in a boiler of the ordinary locomotive type, which is fitted with a superheater, and the coal and water supplies are carried in the side bunkers and side water tanks at both sides of the boiler. The steam from the boiler passes into a turbine of the impulse type running at a speed of 3,000 revolutions a minute, to which is directly coupled a continuous-current, variable-voltage dynamo. The dynamo supplies current up to 600 volts to four series-wound traction motors, the armatures of which are built on the four driving axles of the locomotive. The exhaust steam from the turbine passes into an ejector condenser, and is, together with the circulating condensing water, delivered eventually to the hot well. As the steam turbine, unlike the reciprocating steam engine, requires no internal lubrication, the condensation water is free from oil, and consequently is returned from the hot well direct to the boiler by a feed pump. The water evaporated by the boiler is therefore returned to the boiler again and again, and the supply of water carried in the tanks is actually circulating water for condensation purposes. This condensing water is circulated within a closed cycle by small centrifugal pumps driven by auxiliary steam turbines placed alongside the main turbine and dynamo. The cycle of condensing water is from the tanks through the first pump, then through the condenser, where it becomes heated in condensing the exhaust steam, and then to the hot well. From the hot well it passes through the second pump to the cooler, situated in front of the locomotive, where the full benefit of the blast of air caused by the movement of the locomotive, aided by a fan, is utilized for cooling the hot circulating water. After passing through the cooler, the water is returned to the supply tanks ready for further condensation duties.

It is obvious that the condensation of the exhaust steam deprives the locomotive boiler of the usual exhaust blast which induces the draft through the firebox and boiler tubes. In the experimental locomotive, the induced draft is

replaced by forced draft provided by a small turbine-driven fan. The fan is placed within the cooler, so that it will deliver hot air to the boiler fire and at the same time assist the current of air through the cooler. The small switchboard and the instruments required, the controller for grouping the four motors in series—series parallel and parallel, according to the draw-bar pull to be exerted—and the regulator for controlling the voltage in the electrical circuit, and consequently the speed of the train, are all within easy reach of the engineman.

The foregoing comprises the main and auxiliary machinery of this experimental locomotive. The whole is mounted on a strong underframe, which is carried on two eight-wheel articulated trucks, that will easily negotiate curves. Each truck carries two of the four driving motors already referred to. As the engine is intended for express passenger main line work, it is hoped to obtain comparisons from its actual working with the performances of the reciprocating steam locomotives, especially as regards the relative consumption of fuel and water, the efficiency of transforming the energy of steam into drawbar pull, and the relative rapidity of acceleration. Most of the component parts of this locomotive have already proved themselves effective and efficient in other applications; the novelty lies in the combination of the different elements.—Railway Age Gazette.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Pacific Ry.—N. R. DesBrisay has been appointed Travelling Passenger Agent, St. John, N.B.

The St. Maurice Valley extension from Shawinigan Falls to Grand Mere, Que., was taken over by the Operating Department, Aug. 14, and the service placed under the direction of G. Hodge, Superintendent District 3, Eastern Division, Montreal.

C. W. P. Ramsey has been appointed Division Engineer of Construction, Montreal, vice A. McCulloch, resigned to enter the Kettle Valley Ry. Co.'s service.

A. McArthur, heretofore Locomotive Foreman at Brandon, Man., has been appointed Locomotive Foreman at Fort William, Ont., vice G. Pratt, transferred to Souris, Man.

With further reference to the recent re-organization of the three grand divisions of the Western Lines into four for operating purposes, we are advised that the Freight Department is not affected thereby. The Western Lines are divided as follows for freight traffic purposes—

CENTRAL DIVISION.—Comprising main line and branches, Port Arthur to Swift Current and Rossyth, inclusive. Agents report to R. E. Larmour, General Freight Agent, Winnipeg.

WESTERN DIVISION.—Comprising main line and branches, Beverley to Laggan and Burmis, inclusive, also Wetaskiwin section, including Hardisty. Agents report to J. Halstead, General Freight Agent, Calgary, Alta.

KOOTENAY AND BOUNDARY DIVISIONS.—Comprising Crow's Nest line and branches, Passburg to Kootenay Landing, inclusive, also rail and water lines, Kootenay Landing to Midway, inclusive, and south of Arrowhead, B.C. Agents report to W. R. Haldane, General Freight Agent, Nelson, B.C.

PACIFIC DIVISION.—Comprising main line and branches, Stephen to Vancouver, inclusive, and Okanagan Lake. Agents report to W. C. Bowles, General Freight Agent, Vancouver, B.C.

F. A. Wilkin has been appointed Assistant Engineer, Winnipeg, vice H. Rindal, appointed Division Engineer Pacific Division.

R. H. Hart has been appointed Electrical Foreman, Winnipeg shops.

G. Pratt, heretofore Locomotive Foreman at Fort William, Ont., has been appointed Locomotive Foreman at Souris, Man., vice A. Peers, transferred to Brandon.

A. Peers, heretofore Locomotive Foreman at Souris, Man., has been appointed Locomotive Foreman at Brandon, Man., vice A. McArthur, transferred to Fort William, Ont.

T. F. Patterson, heretofore District Master Mechanic, Moose Jaw, Sask., has been appointed District Master Mechanic, Saskatoon, Sask., vice J. Scott transferred.

J. Scott, heretofore District Master Mechanic, Saskatoon, Sask., has been appointed Trainmaster District 2, Saskatchewan Division, Saskatoon.

W. E. Lovelock has been appointed city ticket agent, Saskatoon, Sask.

J. V. McNab has been appointed Resident Engineer, Moose Jaw, Sask., vice H. B. Sims transferred.

Jas. Black, heretofore chief clerk to Freight Claims Agent, Central Division, Winnipeg, has been appointed Freight Claims Agent Saskatchewan Division. Office, Moose Jaw.

G. Whitely has been appointed District Master Mechanic, Moose Jaw, Sask., vice T. F. Patterson transferred.

A. Halkett, heretofore Assistant Trainmaster District 2, British Columbia Division, Kamloops and W. R. Boucher, have been appointed Trainmasters District 1, Saskatchewan Division, Moose Jaw.

E. G. Ranney and A. B. Burke have been appointed Travelling Passenger Agents for New England Territory, vice W. H. Snell and J. Burden. Headquarters, 362 Washington St., Boston, Mass.

Jas. Burden, heretofore Travelling Passenger Agent, has been appointed city ticket agent, Boston, Mass.

Grand Trunk Pacific Ry.—R. Johnston has been appointed acting Roadmaster between Punnichy and Kinley, Sask., vice P. Desmond, on leave of absence.

N. B. Walton has been appointed Trainmaster Districts 4, 5 and 6, including Tofield-Calgary branch, vice H. McCall, transferred to Edmonton. Office, Wainwright, Alta.

H. McCall, heretofore Trainmaster at Wainwright, Alta., has been appointed Trainmaster District 7. Office, Edmonton, Alta.

The following agents have been appointed:—Lazare, Man., S. C. McDonald; Fenwood, Sask., J. O. Deshaye; Punnichy, Sask., W. House; Semans, Sask., G. M. McGuire; Venn, Sask., A. Donnelly; Allan, Sask., J. A. Hamelin; South Saskatoon, Sask., E. H. Harkness; Viking, Alta., J. L. Dodds; Holden, Alta., W. C. Stedman.

Grand Trunk Ry.—G. E. Gogo, heretofore operator, has been appointed General Yardmaster at Brockville, Ont., vice J. Hatton, Yardmaster, appointed General Yardmaster at Belleville, Ont.

J. Hatton, heretofore Yardmaster at Brockville, Ont., has been appointed General Yardmaster at Belleville, Ont.

D. J. Quinlan has been appointed Chief Dispatcher. Districts 11, 12, 13 and 14, Allandale, Ont., vice W. J. Piggott, appointed Trainmaster.

O. F. Clark, heretofore Trainmaster at Durand, Mich., has been appointed Trainmaster P.O. & N. Rd., and District 29 (Michigan Air Line), Western Division. Office, Pontiac, Mich.

F. G. Bement, heretofore Trainmaster at Battle Creek, Mich., has been appointed Trainmaster, Districts 25 (C.S. & M.), 27, 28 and 29 (Detroit Division), Western Division. vice O. F. Clark, transferred. Office, Durand, Mich.

T. G. Akers has been appointed Trainmaster Districts 25 and 26, Western Division, H. W. Matthews, Trainmaster District 26, having been assigned to other duties. Office, Battle Creek, Mich.

The following agents have been appointed:—Hamilton, King St. (Pass.), F. W. Wilkinson; Dunnville, R. E. Elgie; Otterville, A. J. Madgett; Aubrey, H. A. Switzer; Sault Ste. Marie, Mich. (outside), F. R. Price; Cornwall Jct., H. C. Bouck; South River, J. J. Carey; Callender, D. H. Thompson; Nipissing Jct., G. Jardine; Mimico, M. J. O'Donnell; Vineland, C. L. Painter; London (Pass.), H. M. Hayes; Belle River, F. H. Burthwick; Simcoe, F. C. Faskin; Burgessville, R. W. Loftus; Wingham, G. Lamont; Whitechurch, G. E. Smith; Hawkesbury, H. B. Partridge; Barry's Bay, P. J. Lawlor; Madawaska, S. N. Milligan; London (outside), R. E. Ruse; Port Carling (outside), W. J. Bradley; Hemmingford, Que. (outside), R. W. Blair. Except where otherwise stated, the places mentioned are in Ontario.

Intercolonial Ry.—By the omission of this sub-heading in the transportation appointments published in our August issue, the appointments of H. H. Melanson and G. A. Fernley appeared as though they were to the Halifax and South Western Ry. The context, however, showed that this was not so.

Kettle Valley Ry.—A. McCulloch, heretofore Division Engineer of Construction C.P.R., Montreal, is reported to have been appointed Chief Engineer K.V.R., with office at Merritt, B.C.

New York Central and Hudson River Rd.—C. H. Hogan has been appointed Assistant Superintendent of Motive Power. Office, Albany, N.Y.

Prince Edward Island Ry.—The position of car foreman is vacant, owing to the death of F. Dammerell, on Aug. 5. T. Aitken, who was appointed acting car foreman some months ago, when Mr. Dammerell was taken ill, is still discharging the duties of the position.

Reid Newfoundland Co.—A. Hartery, heretofore Locomotive Foreman at Bay of Islands, has been appointed Travelling Engineer, vice J. Pitt, deceased.

J. Pumphrey has been appointed Locomotive Foreman at Bay of Islands, vice A. Hartery, appointed Travelling Engineer.

Toronto, Hamilton and Buffalo Ry.—E. A. Wigren, Auditor of Disbursements Michigan Central Rd., has also been appointed Auditor of Disbursements T.H. & B.R. Office, Detroit, Mich.

T. Eedson, Auditor of Freight Accounts, Michigan Central Rd., and heretofore Freight Accountant and Freight Claim Agent T.H. & B.R., has been also appointed Auditor of Freight Accounts and Freight Claim Agent T. H. & B.R. Office, Detroit, Mich.

H. J. Broderick, Auditor Passenger Accounts, Michigan Central Rd., and heretofore Ticket Accountant, T.H. & B.R., has been also appointed Auditor of Passenger Accounts, T.H. & B.R. Office, Detroit, Mich.

The Intercolonial Ry. has received three consolidation locomotives from the Canadian Locomotive Co., Kingston, Ont.

The assessment on the G.T.R. yards between Bathurst St. and Dovercourt Rd., Toronto, has been decreased from $8,500 to $7,500 an acre. The area covered is about 25 acres.

The G.T.R. has issued passenger and freight tariffs covering the rates to be charged on the 11 miles of the Chicago, Kalamazoo and Saginaw Ry., over which it has acquired running rights. The G.T.R. has its own terminals in Kalamazoo, Mich.

when he has been, to Feb., 1884, clerk G.T.R. freight office, Toronto; Feb., 1884, to Apr. 1, 1898, chief clerk in charge of freight station, G.T.R., Yonge St., Toronto; Apr. 1, 1898, to July 15, 1910, Canadian Agent National Despatch-Great Eastern Line, Toronto, which position he still holds, in addition to that of Assistant Foreign Freight Agent G.T.R.

R. C. Vaughan, who was recently appointed Assistant to Third Vice President Canadian Northern Ry., and to Second Vice President Canadian Northern Steamships, Ltd., Toronto, was born in Toronto, Dec. 1, 1883, and entered railway service Oct. 3, 1898, since when he has been, to Mar., 1902, office boy, clerk and stenographer, General Freight Agent's office, C.P.R., Toronto; July to Dec., 1902, in Freight Department G.T.R., Toronto; Jan., 1903, to July 1, 1910, clerk, secretary to Third Vice President and General Manager, and chief clerk to Third Vice President, Canadian Northern Ry., Toronto.

A. B. Spencer, who has been appointed Chief Dispatcher Reid Newfoundland Ry., St. John's, Nfld., was born at Harbor Grace, Nfld., Oct. 21, 1882, and entered Reid Newfoundland Co.'s service Oct., 1900, since when he has been, to June, 1901, operator at Harbor Grace; June, 1901, to Feb., 1902, operator at Ouinette, now Notre Dame Jct.; Feb., 1902, to Jan., 1903, agent at various points; Jan., 1903, to Apr., 1905, third trick dispatcher: Apr., 1905, to May, 1907, second trick dispatcher; May, 1907, to Jan., 1910, first trick dispatcher; Jan. to July 15, acting Chief Dispatcher.

A. R. Holtby, whose appointment as Master of Bridges and Buildings, Mountain Division, G.T.P.R., Prince Rupert, B.C., was announced in our last issue, was born at Rawdon, Que., Mar. 23, 1859, and entered railway service in Sept., 1881, since when he has been, to Oct., 1904, engaged in construction, bridges and buildings and wrecking departments, and also as General Car Foreman, Canada Atlantic Ry., and remained in that position, on the taking over of the Canada Atlantic Ry. by the G.T.R., to Dec., 1907; Dec., 1907, to Feb., 1909, General Car Foreman Canadian Northern Quebec Ry., Shawinigan Jct., Que.; Feb., 1909, to July, 1910, General Car Foreman, Canadian Northern Quebec and Quebec and Lake St. John Rys., Quebec.

Wm. Sargeant Poole, Mechanical Superintendent, Prince Edward Island Ry., whose portrait appeared in our July issue, was born at Burslem, North Staffordshire, Eng., July 20, 1844. He entered railway service in 1857 as apprentice in the Earl Granville's works at Hanley, Staffordshire, and served in other capacities until 1866, when he came to Canada. After spending a short time at other work he entered the service of Schreiber & Burpee, contractors for the construction of the P.E.I.R., and on the completion of the line from Charlottetown to Tignish, in 1875, he entered its service as a mechanic, becoming successively round house foreman, foreman of erecting shop and locomotive foreman. On Aug. 31, 1901, he was appointed Mechanical Superintendent.

Alfred Price, General Superintendent Alberta Division C.P.R., Calgary, whose portrait appears on the first page of this issue, was born in Toronto, Dec. 6, 1861, and entered railway service Sept., 1879, since when he has been, to 1881, operator, messenger and clerk Credit Valley Ry.; 1881 to 1882, car accountant same road, Toronto; 1882 to 1884, operator and relief dispatcher C.P.R., Toronto; 1884 to July, 1888, train dispatcher same road, Toronto; July, 1888, to May, 1896, car distributor same road, Toronto; May, 1896, to Aug., 1898, car distributor and Chief Train Dispatcher same road, Toronto; Aug., 1898, to May, 1901, Superintendent same road, Toronto; May, 1901, to Sept., 1902, Superintendent Districts 8 and 9, same road, Toronto; Sept., 1902, to May, 1903, Superintendent Districts 10 and 11 same road, Toronto; May, 1903, to 1905, Superintendent same road, Fort William, Ont.; 1905 to Feb., 1907, Superintendent of Transportation Western Lines, same road, Winnipeg; Feb. to Dec., 1907, General Superintendent Central Division same road, Winnipeg; Dec., 1907, appointed General Superintendent Western Division same road, Calgary, Alta., which division, with some slight alterations of territory, has now been re-named the Alberta Division.

A Railway Club President's Appreciation.

A. E. Cox, Storekeeper Canadian Northern Ry., who has entire charge of the stores of that large system from its eastern terminus at Port Arthur west, took an active part in the establishment last year of the Western Canada Railway Club, which has its headquarters at Winnipeg. He was its first Vice President and this year was unanimously elected President. Following is an extract from an unsolicited letter received from him recently:

"I would like to take this opportunity of offering you sincere congratulations on your publication, it is certainly up to date and contains a fund of useful and desirable information. I was particularly pleased to see that you were able to find room to print some of the papers given by members of the Western Canada Railway Club. It is very gratifying to us the good showing we have been able to make, our membership now being over the 400 mark. You have my best wishes for the continued success of the Railway and Marine World."

Owing to the comprehensiveness of its matter, every department of railway work being dealt with, the Railway and Marine World's circulation includes the officials of all railway departments. As an evidence of this it may be mentioned of the Canadian Northern Railway, in whose service Mr. Cox is, that every official, without a solitary exception, in the executive, engineering, purchasing, construction, maintenance, operating, mechanical and traffic departments is on our subscription list.

British Investments in Canada.

R. M. Horne-Payne, speaking at the annual meeting of the British Empire Trust Co., of which he is President, in London, Eng., recently, said in part:—Our efforts in the past have been and still mainly are connected with Canada. It is now no longer lack of knowledge, but rather too much knowledge, confusion of information, or misinformation, which is now holding back the British investor. The work of this company is to seek out and put forward in convenient form, with all possible safeguards, investments in the colonial dominions, offering smaller or greater profits with small or greater risks. The securities with which we are at present associated give a yield varying from 3 to 6%, and offer other advantages. It may take a longer or it may take a shorter period for our companies to attain their full success, but so far they are one and all progressing rapidly, and we have every reason to be proud of their record.

Having referred in detail to the recent issue of securities of the Duluth, Winnipeg and Pacific Ry., of the Canadian Western Lumber Co., and the Canadian Northern Ry. 5% convertible debenture stock, which were fully noticed in our July issue, Mr. Horne-Payne went on to say that he had bought C.P.R. ordinary shares at 42⅝. Referring to the Canadian Northern Ry., he said within five years' time it will be a transcontinental system, or, rather, a world-wide system, as fully equipped by land and water as the C.P.R. is today. The younger system will, for some years to come, have many disadvantages compared with the older system, and it will also have several advantages over the older system. They will not interfere with each other to any great extent. Canada is a big country, and I prophesy, confidently, that in two or three years after the completion of the transcontinental line, the C.N.R. shares will have gone a long way towards catching up the price of C.P.R. shares.

From time to time we read warnings, even strong protests in the press against what the writers call the enormous amount of money which is being poured into Canadian investments. No more misleading nor more unpatriotic cry could be raised, and I suspect that it is not an altogether disinterested cry. The fact is that out of £212,000,000 of British capital raised by public subscription in this country during our financial year, only £34,500,000 went to Canada—an exceedingly moderate sum when we come to think that in the United States, three railway systems alone have recently raised or are raising £30,000,000 without adverse comment. During our financial year only £71,000,000 of our money went into colonial investments altogether, whilst £94,000,000 went to foreign countries, and of this £35,000,000 were invested in South America and £23,000,000 in the United States. It is safe to say that a very great deal more than £23,000,000 was invested by Americans in Canada at 6 to 10%, so that what we have done in effect is to lend the Americans £23,000,000, probably at under 5%, and they have re-invested our money in Canada at a profit to themselves.

Montreal East Boulevard Co.—The Quebec Legislature has incorporated a company with this title. Among the powers asked for was the right to build and operate an electric railway along the boulevard, but the act as passed does not give it this power. The municipalities, however, may acquire rights over the road to be laid out, so that existing street railways may obtain franchises from them.. (May, pg. 399.)

Montreal Street Ry.—The Quebec Legislature has authorized the company, in addition to its present charter rights, to build an underground railway throughout the city, subject to obtaining the necessary permission of the city, to be embodied in a bylaw and approved by the ratepayers. The work is to be started and $2,000,000 expended thereon within four years. (Aug., pg. 683.)

Dominion Ry. and Plaster Co.—A small block of the stock of this company, which was authorized to build an electric railway in the vicinity of Sydney, N.S., is being offered for public subscription. (June, pg. 495.)

Maritime Coal and Ry. Co.—The Nova Scotia Legislature has authorized the company to build, in addition to its steam railways, an electric street tramway in Amherst, Springhill, Parrsboro and Oxford, and between any or all of these places, subject to the Government's approval.

Nova Scotia Hydraulic Co.—The Nova Scotia Legislature has incorporated a company with this title to develope water powers on any rivers in the province and to distribute electric power. The company may also build, buy, lease and operate electric tramways or railways. The provisional directors are:—J. A. Clark, W. T. Allan, Halifax; A. M. Covert, Canning, N.S.

Railway Finance, Meetings, Etc.

Acadia Coal Co.—Following are the officers and directors for the current year:—President, Sir H. Montagu Allan; Vice President, E. Francqui, Brussels, Belgium; other directors, C. R. Hosmer, Hon. R. Dandurand, A. A. Allan, C. Campbell, B. J. Allan, Montreal; M. Chevaller, H. Siemans, L. Jadot, Brussels, Belgium. The company owns 16 square miles of coal area in Pictou county, N.S., and has power to construct railways. Negotiations were at one time entered into with the N.S. Government for the construction of the Dartmouth-Guysboro-Country Harbor line in connection with the development of the colliery areas.

Ainslie Mining and Ry. Co.—A winding up order has been made by the N.S. Supreme Court with the Eastern Trust Co., Halifax, as liquidator. All claims were ordered to be filed by Aug. 19. The company was incorporated by the N.S. Legislature in Mar., 1904, with power to build a railway from Whycocomagh, to Scottsville, and from Scottsville to Margaree Forks and Eastern Harbor, in Inverness county. The provisional directors were:—H. R. and H. H. Harrison, A. W. Redden, Halifax; M. J. Doucet, Grand Etang, N.S.; J. K. McDonald, Whycocomagh. No work has been done.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for June, $32,166, against $16,263 for June, 1909. Cumulative net profits, as above, for 12 months ended June 30, $465,824. Railway traffic receipts for July, $27,982, against $27,041 for July, 1909.

Atlantic and Lake Superior Ry.—The Dominion Government, Aug. 5, sanctioned the sale by the Royal Trust Co. to the Quebec Oriental Ry., of the line between Matapedia and Paspebiac, Que., operated as the Atlantic and Lake Superior Ry. The line was originally constructed as the Baie des Chaleurs Ry., then it was transferred to the Atlantic and Lake Superior Ry., and when the bondholders took possession it was extended. The Quebec Oriental Ry., is the Quebec charter under which the Atlantic, Quebec and Western Ry., will operate the line, and the extension from Paspebiac to Gaspe, now under construction. The old titles which are associated with the C. N. Armstrong enterprises now pass out of existence.

The trust deeds deposited, Aug. 13, with the Secretary of State at Ottawa in connection with the transfer of the lines to the Quebec Oriental Ry., secure an issue of 5% first mortgage bonds for $974,000, and 5% second mortgage bonds for a similar amount as part of the purchase price of the railway.

Crows Nest Coal Co.—A dividend of 1%, was paid Aug. 10, the first for two years. The company owns the Morrissey, Fernie and Michel Ry.

Cuba Rd.—The gross earnings for the year ended June 30, were $2,559,335; net profits $1,107,299 and surplus $672,089. There were gains of $402,170 in gross receipts, $157,210 in net profits, and $121,290 in surplus, as against the previous year. The fixed charges were increased by $35,920.

Dominion Atlantic Ry.—Gross earnings for June, $108,300, against $112,-854 for June, 1909. Aggregate gross earnings for 12 months ended June 30, $1,184,850, against $1,159,459 for same period, 1908-09.

Grand Trunk Pacific Branch Lines Co.—The London, Eng., Stock Exchange appointed Aug. 5, a special settling day for a further issue of £1,270,500 of 4% first mortgage sterling bonds, repayable in 1939, and guaranteed by Saskatchewan. These bonds are quoted on the Stock Exchange official list.

Grand Trunk Pacific Ry.—Application has been made to the London, Eng., Stock Exchange to list £2,000,000 of 3% stock; £21,600 of 4% stock; and £105,100 of 4½% stock.

The issue of £2,000,000 of 3% first mortgage sterling bonds, the principal and interest guaranteed by the Dominion Government, placed on the London, Eng., market, by the Bank of Montreal, recently, at 82½ was taken up as to 26% by the public, and the balance by the underwriters. The bonds form part of an amount, of which £5,200,000 has already been issued, created to provide funds for construction, and is redeemable at par Jan. 1, 1962.

Grand Trunk Ry.—G.T.R. officials in the U.S. are reported to have made formal announcement that an agreement has been entered into between the company's U.S. corporation and the Chicago, Kalamazoo and Saginaw Rd., whereby the G.T. Western Ry. secures an entrance into Kalamazoo, Mich., over the C., K. and S. Rd., from Pavillion to Kalamazoo, 11 miles. The agreement provides that the G.T.R. and the New York Central and Hudson River Rd., which controls the C., K. and S. Rd., are to form a closer alliance in the future.

We are officially advised that the G.T. Western Ry. has leased the portion of the C., K. and S. Rd. extending from Pavillion to Kalamazoo, Mich. The G.T. Western Ry. has acquired its own terminals in Kalamazoo, which were in the first place under the name of the Kalamazoo Terminal Ry.

Lake Superior Corporation.—At a meeting of directors at Sault Ste. Marie, Ont., Aug. 16, it was decided to pay on Oct. 1 a dividend of 2½% on the $3,000,000 of outstanding income bonds. This is one-half of the annual rate of interest, and is the first dividend paid since Oct., 1906.

New Brunswick Coal and Ry. Co.—Central Ry. of N.B.—Judgment has been reserved by the N.B. courts in the case of Hon. W. Pugsley against the company for an accounting. There were a number of dealings of the two companies as separate concerns, and after the C. Ry. of N.B., had been absorbed by the N.B.C. and Ry. Co., and the N.B. Government, Hon. W. Pugsley being Premier, and also acting in his private capacity as a lawyer, a Royal Commission made an investigation into the affairs of the company and reported. Mr. Pugsley now desires to have a judicial accounting.

New Brunswick Ry.—Following are the directors for the current year:—Lord Strathcona, Sir Thos. G. Shaughnessy, R. J. Meighen, J. Turnbull, W. T. Whitehead, F. S. Meighen, Col. H. H. McLean, G. S. Cantlie, R. W. Reford. The new directors are Sir Thos. G. Shaughnessy and R. W. Reford, who take the places of the late J. S. Kennedy, and S. Thorne, New York. Subsequently R. Meighen was re-elected President, and W. T. Whitehead, Vice President. The railway is part of the C.P.R., but the company owns 1,600,000 acres of land in New Brunswick, part of its land grants. The income for the year enabled the company to increase its dividend from 3 to 4%.

Phillipsburg Ry.-Missisquoi Marble Co.—Following are the officers and directors for the current year:—President, H. W. Richardson, Kingston, Ont.; Vice President, R. J. Dale, Montreal; Manager, H. Timmis; other directors:—W. J. Morrice, S. H. Ewing, W. Mann, J. W. McConnell, Montreal; Jas. Playfair, Midland, Ont.; G. R. Crowe, Winnipeg.

Port Hood-Richmond Ry.—The Nova Scotia Legislature has ratified an agreement made Sept. 13, 1909, readjusting the company's bond issue, and authorizing the carrying of it into effect. The agreement specifies that the $350,000 prior lien bonds shall constitute a first lien on the property, and provision is made for the issue of 1,540 bonds of $500 each, at 4% upon a second mortgage, repayable Aug., 1926.

Quebec Central Ry.—Gross earnings for June, $119,899.98; expenses $81,-220.87; net earnings $38,679.11, against $92,127.20 gross earnings; $66,687.84 expenses; $25,439.36 net earnings for June, 1909. Aggregate gross earnings for 12 months ended June 30, $1,104,919.92; expenses $758,664.01; net earnings $346,-255.91, against $1,021,682.40 aggregate gross earnings; $724,918.25 expenses; $296,764.15 net earnings for same period 1908-09.

Subject to audit, the accounts for the year ended June 30, show gross receipts, including interest earned, $1,110,520; working expenses, $758,664; net receipts $351,856; interest on first and second debenture stock $165,873, leaving a balance of $185,983. From this is deducted the full interest on the 7% income bonds, payable Oct. 1, leaving a surplus of $70,838. This surplus added to the $46,232 brought forward from the previous year, shows $117,070 available for dividend, from which is recommended a dividend of 2% on the share capital. This is the first distribution on this issue since the company was formed.

Quebec & Lake St. John Ry.—After prolonged and tedious negotiations between the committees representing respectively the prior lien bondholders and the first mortgage and income bondholders on the one hand, and the Canadian Northern Ry. Co. on the other, a settlement has been arrived at which received the ratification of the three classes of bondholders present at meetings in London, Eng., on Aug. 8. The difficulties which presaged considerable loss to the several interests involved arose out of the inability of the Q. & L. St. J. Ry. Co. to meet its fixed charges, and the consequent failure of the company to pay the interest due on the first mortgage bonds on Jan. 1 last, and subsequently the interest due on the prior lien bonds on April 1. Committees were appointed by the prior lien and first mortgage and income bondholders to safeguard their interests, and a new scheme has been evolved, the rejection of which would, it was claimed, after due consideration of the fullest information obtained from private, public and official sources concerning the past, present, and future of the company, involve in serious loss not only the income and first mortgage bondholders, but the prior lien bondholders as well. Under this scheme a new 4% debenture stock of the Q. & L. St. J. Ry. Co. is to be created and guaranteed unconditionally, both as to principal and interest, by the Canadian Northern Ry. Co. The prior lien bondholders will receive in exchange for each £100 bond, with the Oct. 1, 1910, and all succeeding coupons attached, an equal amount, or £100, of the 4% guaranteed debenture stock, the first mortgage bondholders for each £100, with all unredeemed coupons attached, £70 of the new stock, and the income bondholders £13 of such stock, interest accruing in all cases as from Jan. 1, 1911. This is the agreed result of discussion and mutual concessions, and of a supreme effort to arrive at an amicable and satisfactory solution of a knotty problem. When it is remembered that the original offer of the C.N.R. Co. was to pay to the first mortgage bondholders £60, and the income bondholders £12, the substantial advantages secured by the committees for their different interests will be apparent.—Canada.

Reid Newfoundland Co.—The issue of £800,000 of 3% stock of the Newfoundland Government, placed on the London, Eng., market, July 14, through Glynn, Mills, Currie & Co., and Coates, Son &

Co., at 97½, has been taken up. The arrangements with the underwriters, the Premier states are such that the Government will receive 96% of each £100 certificate. The proceeds of the issue are to be used to subsidize the building of 30 miles of branch lines, under the terms of an act passed last session.

St. Maurice Valley Ry.—A meeting of the shareholders has been called to be held in Montreal Sept. 17 to consider a proposal to lease the company's line to the C.P.R., by which it has been operated since construction, and pass resolutions respecting the issue of bonds and the form of mortgage to be given to secure the issue of such bonds. C. C. Pangman, of the C.P.R. Secretary's office, is Secretary of the company.

White Pass and Yukon Ry.—Gross earnings for July, $214,337, against $223,657 for July 1909.

I. C. R. Gas Plant at Moncton.

We are officially advised that arrangements have been completed for the installation of one more unit for the generation of producer and water gas at the Intercolonial Ry. shops at Moncton, N.B. The new outfit will be a duplicate of the one which has been in operation during the last two years, and which supplies producer gas to the gas engines in the power house and water gas to the furnaces in the shops. The new outfit will supplement the older one when more gas for power and heat is required, and it can also be used as a reserve unit in the event of repairs to the older unit being carried out. Each unit has capacity for gasifying 1,500 lbs. of bituminous coal per hour, and from this amount of coal 82,500 cu. ft. of producer gas and 24,000 cu. ft. of water gas are hourly produced. It is generally agreed about the shops that there is no more coal consumed in the new gas house than there was in the old style shop furnaces, and, that the producer gas for the engines and the power obtained from the latter, represent the gain that has been secured by burning the coal in the gas generators, instead of the old style boilers and furnaces.

It is said that Moncton is to be supplied with natural gas within a reasonable time, and if this desirable commodity becomes available for use at the I.C.R. shops—and the selling price is right—it is altogether likely that the gas generating plant above referred to will simply be held as a very valuable auxiliary plant.

Canadian Ticket Agents' Association.—Secretary de la Hooke has issued one of his characteristic circulars to members, giving full particulars of the annual outing which will be held at Quebec on Oct. 5 to 7. The headquarters will be at the Chateau Frontenac, where the business meeting will open on Oct. 5 at 10 a.m., when the mayor will welcome the visitors. G. A. Cullen, G.P.A., Delaware, Lackawanna and Western Rd., and N. Mooney, G.A., New York Central Lines, will also speak, the former as representative of the American Association of General Passenger Ticket Agents. At 8.30 p.m. there will be a smoker for the men and another entertainment for the ladies. Oct. 6 and 7 will be devoted to pleasure trips and sightseeing, including probably, trips to the Plains of Abraham, Montmorency Falls and Ste. Anne de Beaupre, and a reception on the C.P.R. s.s. Empress of Ireland. The White Star-Dominion s.s. Megantic is expected to leave Quebec for Montreal on the morning of Oct. 8, and members have been invited to make the trip on her.

J. H. Bacon, G.T.P.R. harbor engineer at Prince Rupert, B.C., was married recently in Philadelphia, Pa., to Miss B. Tysen.

2 GRAND PRIZES AND 5 GOLD MEDALS

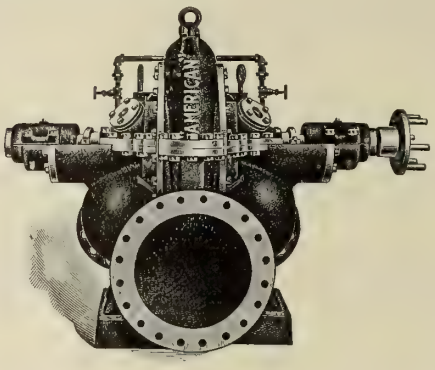
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

C. L. Hacket, 605 Eastern Townships Bank, Montreal

The Hudson's Bay and Pacific Railway.

We have received the following letter from the Secretary of the Hudson's Bay and Pacific Ry. Development Co., Ltd., dated London, Eng., Aug. 17:—

"I am instructed to write you that at a meeting of the board of this company, held yesterday, the attention of the directors was called to an article in your issue for August, referring to the recent circulation of a printed offer of shares in this company, based upon certain statements as to the position and prospects of the company, and followed by a list of the names of directors. I am further requested by the board to say that the circular in question is absolutely unauthorized, and was published without their knowledge and consent. We trust that in fairness and justice to this company, you will give this the same publicity as you have given to the statements contained in your issue."

The prospectus referred to in our August issue, which purported to be issued from the company's office, 56 Moorgate St., London, and to be signed by the directors, stated among other things that the H.B. & P. Ry. Co. was authorized to issue 4% gold bonds, guaranteed by the Dominion, both as to principal and interest, to the amount of $20,000 a mile; that it was entitled to a land grant of 5,000 acres of land per mile and to subsidies estimated at $6,000 a mile. We pointed out that the Dominion Parliament had not authorized the Government to guarantee the bonds, that it had not granted any cash subsidy, and that no grant of land had been authorized to the H.B. & P.R. Co.

There is no doubt whatever that the prospectus referred to was issued, and we would suggest to the H.B. & P.R.D. Co. directors that it would be well for them to definitely state who issued it. Surely they must have seen or heard of it, even if it was issued without their knowledge or consent. If so, did they take prompt steps to repudiate it, or did they wait until we had exposed its unreliability, and this had been followed by Sir Wilfrid Laurier's public denial of some of its statements?

Portland Canal Short Line Railway.

We are officially advised that the line has been located from the wharf site on the tidal flats at Stewart, B.C., to the Red Cliff mine near the junction of Bear River and American Creek, 13.45 miles, and surveys are about to be made up Bear River over the divide into the Nass Valley, and up American Creek. On Aug. 12 there were 10 miles under construction, and it was expected that the balance of the distance will be covered early in September. Tracklaying should commence about Sept. 10. All the necessary track material is on hand at Stewart. The entire mileage should be completed this year. The maximum curvature is 10°; the maximum gradient going north is 1.40% for three-quarters of a mile; the balance of the line being an average of 0.8%. There is no adverse gradient going south. With the exception of one and a half miles of fairly heavy rock work and a short tunnel of 100 ft., the grading consists of a light embankment of alluvial gravel.

The wharf approach at Stewart is 5,960 ft. long and is a pile trestle constructed for heavy loading. The wharf, with deck elevation of 4 ft. above extreme high tide, is located so as to provide 22 ft. of water at extreme low tide at face of wharf. It is very strongly constructed, and will carry a safe loading of 600 lbs. per sq. ft. The dimensions of the wharf as built are 160 by 60 ft., to be extended later. All timber of Douglas fir, with hemlock piles. The wharf and approach should be completed Sept. 10, and tracklaying should commence about that date, all the necessary track material being now at Stewart. In addition to the wharf approach above mentioned, there will be about 1,300 ft. of pile trestling. A freight shed has been built at Stewart and a station is being built. It is also intended to build a locomotive shed, turntable, water tank and coaling plant at Stewart. Stations will also be built at Glacier, mileage 5.5, Bitter Creek, mileage 9.5, and Red Cliff, mileage 13.45.

W. H. Grant is Manager of construction. The sub-contractors under the Cassiar Construction Co. are the Westholme Lumber Co., Ltd., Stewart, and Gillett & McDonald, Stewart.

Weeds on Railway Right-Of-Way.

The Secretary of the Board of Railway Commissioners has issued the following circular:—

The Railway Act provides as follows:

"Sec. 296.—Every Company shall cause thistles and all noxious weeds growing on the right of way and upon land of the company adjoining the railway, to be cut down or to be rooted out and destroyed each year, before such thistles or weeds have sufficiently matured to seed.

"Sec. 297.—The company shall at all times maintain and keep its right of way free from dead or dry grass, weeds and other unnecessary combustible matter."

Complaints continually come to the Board that these sections are not observed by some of the companies. Casual observation in some parts of the country shows that sec. 297 is being entirely overlooked. It is clear that many fires are communicated to adjacent lands by reason of companies not complying with these provisions of the law, entailing enormous loss. The Board deems it to be its duty to see that these sections are enforced, and to that end has given instructions that all railway lands shall be periodically inspected and full reports made of the conditions found to exist. This is a matter of vast moment in the preservation of timber lands, as well as the protection of property of all kinds along railway lines, and steps will be taken to enforce the law, unless voluntarily complied with.

Telegraph and Cable Matters.

W. G. Barber has been appointed Inspector G.N.W. Telegraph Co., at Toronto.

E. Paterson has been appointed Manager C.P.R. Telegraphs at Vancouver, B.C., vice M. T. Quigley, deceased.

The Dominion Government is reported to have decided to erect a wireless telegraph station at Lawn Hill, Queen Charlotte Islands.

The Canadian Northern Telegraph Co., has opened offices at Totogan, Man., and Laird, Sask., and has closed its office at Erwood, Sask.

J. Beauchamp has been appointed Chief Inspector G.N.W. Telegraph Co. at Quebec, and R. G. Morean has been appointed Assistant Inspector.

J. Fletcher, heretofore chief operator, has been appointed Superintendent C. P.R. Telegraphs at Vancouver, B.C., and has been succeeded by F. Swift.

R. H. Hathaway, chief clerk of the press and commercial news department, G.N.W. Telegraph Co., Toronto, has been appointed superintendent of that department, vice R. F. Easson retired.

C. E. Lillie has been appointed Manager G.N.W. Telegraph Co.'s office at Quebec, vice E. Pope, Superintendent. retired. The position of Superintendent has been abolished.

The C.P.R. has issued a notice to the effect that business messages of newspapers between points in Canada, heretofore charged at half day rates, will, from Sept. 1., be charged at regular message rates.

J. F. Fraser, who was recently appointed Superintendent Direct United States Cable Co., at Halifax, N.S., was born in Scotland, in 1854, and has been connected with the telegraph and cable service in Great Britain and the U.S. since 1870.

J. Wilson, who recently resigned the position of Superintendent C.P.R. Telegraphs at Vancouver, B.C., will spend some time in California for reasons of health. He held the position named for about 10 years, and was in C.P.R. telegraph service for 25 years.

The Maritime Telegraph and Telephone Co., Ltd.., has been incorporated by the Nova Scotia Legislature, with a capital of $500,000, which may be increased from time to time, to $5,000,000, and office at Halifax, to erect telegraph and telephone lines throughout the province, and to enter into agreements with other companies. The provisional directors are: S. M. Brookfield, W. H. Covert, Halifax, N. S.; A. E. Ings, Charlottetown, P. E. I.

The C.P.R. has opened telegraph offices at Cedar Cottage, B.C.; Acme, Alderside, Banff Springs Hotel, Bittern Lake Hughenden, Irricana, Namaka, Redcliffe, and Whitla, (night only), Alta.; Kelloe, Ludiatt, Pettapiece, and Winnipeg Beach, Man.; St. Andrews, N. B.; Beamsville, Burwash, Erindale, Lakeside, Petewawa, Pickerel and Silverdale, Ont.; Abbotsford, Acton, Bedford, Brome, Chelsea, Drummondville, Kingsbury, Kipawa, Knowlton, Knowlton station, L'Ange Gardien East, Lawrenceville, Mansonville, Racine, Routhier, Roxton Falls, St. Guillaume, St. Hugues, St. Simon, St. Pie, South Bolton, South Roxton, Stanbridge, Valcourt, Val Morin, Warden, Wickham, and Windsor Mills, Que.; Biggar, Bridgeford, Colonsay, Forward, Glenside, Markinch, Rokeby, Senlac, Strongfield, Swinbourne, Traynor and Webb, Sask.

Among the Express Companies.

The Canadian Northern Ex. Co., has opened offices at Ste. Ursule, Que., Totogan, Man,, and Brock, Sask.

The Dominion Ex. Co., having closed its offices at Shubenacadie and Stewiacke, N.S., these places are now exclusive offices of the Canadian Ex. Co.

H. S. Whisler, who was sentenced to three years in the Kingston penitentiary, last fall, for complicity in the robbery of the Canadian Ex. Co., at Niagara Falls, Ont., has been released.

W. C. Muir, heretofore Superintendent Canadian Northern Express and Telegraph Companies, has been appointed General Superintendent Canadian Northern Express and Telegraph Company, with office at Winnipeg, Scott Griffin, heretofore Manager at Toronto having been appointed Manager Canadian Northern Steamships Ltd., London, Eng.

In a recent case against the American Ex. Co., in the U.S., it was decided that the title to an article shipped c.o.d., passed from the seller to the buyer, immediately the shipment was delivered to the company, and that if the goods are ordered to be shipped from one point to a buyer at another point, c.o.d., by a common carrier, the sale is complete at the point of shipment. In contradistinction to this decision, under Canadian law, it is held that in the case of express companies carrying liquor into local option areas, c.o.d., the sale shall be deemed to be complete at the point of delivery.

Grain Elevator Notes.

The British North American Elevator Co. is arranging to erect an elevator at Wadena, Sask.

J. G. King, owner and operator of King's elevator at Port Arthur, Ont., died there recently, aged 67.

The name of the Andrews Gage Grain Co., Ltd., registered under the Dominion Companies Act, has been changed to the International Elevator Co., Ltd.

The Imperial Elevator Co.'s elevator at Crossfield, Alta., was burnt recently. with about 10,000 bush. of grain. The fire is locally supposed to have been the work of an incendiary.

The B.C. and Prairie Milling and Elevator Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $500,000, to conduct business in any part of the world.

The Swift Current Farmers' Milling and Elevator Co., Ltd., has been incorporated under the North West Territories Companies Ordinance, with a capital of $50,000, and office at Swift Current, Sask.

The Manitoba Grain Growers Association, at its recent annual meeting, discussed the question of the public ownership of terminal elevators, and later sent a delegation to meet the Dominion Premier at Brandon, when representations were made on the subject.

The St. Lawrence Flour Mills Co., of Montreal, is reported to have decided to erect an elevator there, with capacity for about 500,000 bush. It is also stated to be considering the question of erecting flour mills and elevators in the prairie provinces.

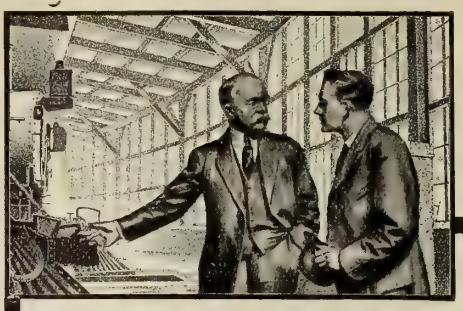
The Fox Bros. Cereal, Milling and Feed Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $500,000, to take over the business carried on at Vancouver by Fox Bros. and Co., and in connection therewith, among other things, to build, own and operate grain elevators, warehouses. etc.

Press dispatches from Calgary state that an understanding has been arrived at among the elevator companies operating in southern Alberta, by which, at many points, only one elevator will be opened, and where a company has about 35 or 40 elevators, only about 10 will be opened for business this year.

G. W. Stephens, Chairman Montreal Harbor Commissioners, in dealing with the grain situation at Montreal recently, stated that even with the additional elevator capacity at present under construction there, he believed, that within a few years they would fall short of the requirements of the port. He advocated the building of a number of storage elevators in Montreal.

The Alberta Pacific Elevator Co. is at present building elevators at Bow Island, Winifred, Seven Persons, Barnwell, Purple Springs, Olive, Tees, Halkirk, Burdett and Castor, Alta., and is reported to have secured sites for further erections at Lougheed, Hardisty, Prevost, Brandt. Acme, Cluny and Bassano. Facilities for handling grain will also be provided at Crowfoot, Brooks, Carlstadt and Irricana.

The Manitoba Elevator Commission is reported to have taken over 14 elevators from private owners at Gretna, Hartney, Souris, Hamiota, Swan Lake, Somerset, Shoal Lake, Strathclair, Dominion City, McGregor, Roland, Snow Flake and Lauder. The elevator which it is erecting at Dufresne will have capacity for 30,000 bush., and it is expected that it will be completed in time for this year's crop. It has been stated that the commission will have about 75 elevators under its control this year.



"Here's The Job—Now PRODUCE"!

"The last man at this job was a fine chap, but he couldn't 'make good,' so we had to let him go. As I said before, the position calls for a TRAINED man.

Now It's 'UP TO YOU.'"

Suppose it were up to you—could you "make good?" What is the difference between you and the fellow able to "produce" as a foreman or superintendent or manager? Training—that's all. A thousand jobs await the man able to "produce." Employers want him—are always eager to secure his services. The world has no pity for failures; it says to every man, "get ready to 'produce.'"

Every month there are received at the I. C. S. upwards of 300 voluntary letters from men that spare time study has qualified to "produce." Those letters prove conclusively that there is a way for every man—for you—to get ready to "produce." The I. C. S. can help you. Are you willing to help yourself?

To find out all about how you can learn to "produce," mark and mail the coupon. Doing so will cost you only postage and will place you under absolutely no obligation.

SEND THE COUPON NOW.

Repairs and Testing of Motor-Driven Compressors.

By A. M. Lindsay, Assistant to Superintendent of Rolling Stock, Montreal Street Railway.

The task of describing the methods of repairing, overhauling and testing motor driven air compressors on the Montreal St. Ry. system is a comparatively easy one owing to the simplicity of the straight air system, and the apparatus required for it.

The construction of the motor driven compressor is doubtless familiar to all your readers, consisting as it does of a small high speed d.c. motor, which takes power direct from trolley without the use of a starting resistance of any kind, and which is geared through helical or herringbone gears with a duplex compressor. The pistons are driven through connecting rods from a crank shaft with cranks at 180° to each other, gears and crank shaft running in oil. The motors, with the exception of one type, are completely enclosed and are dust and water proof, and can be placed underneath the car without any additional protection.

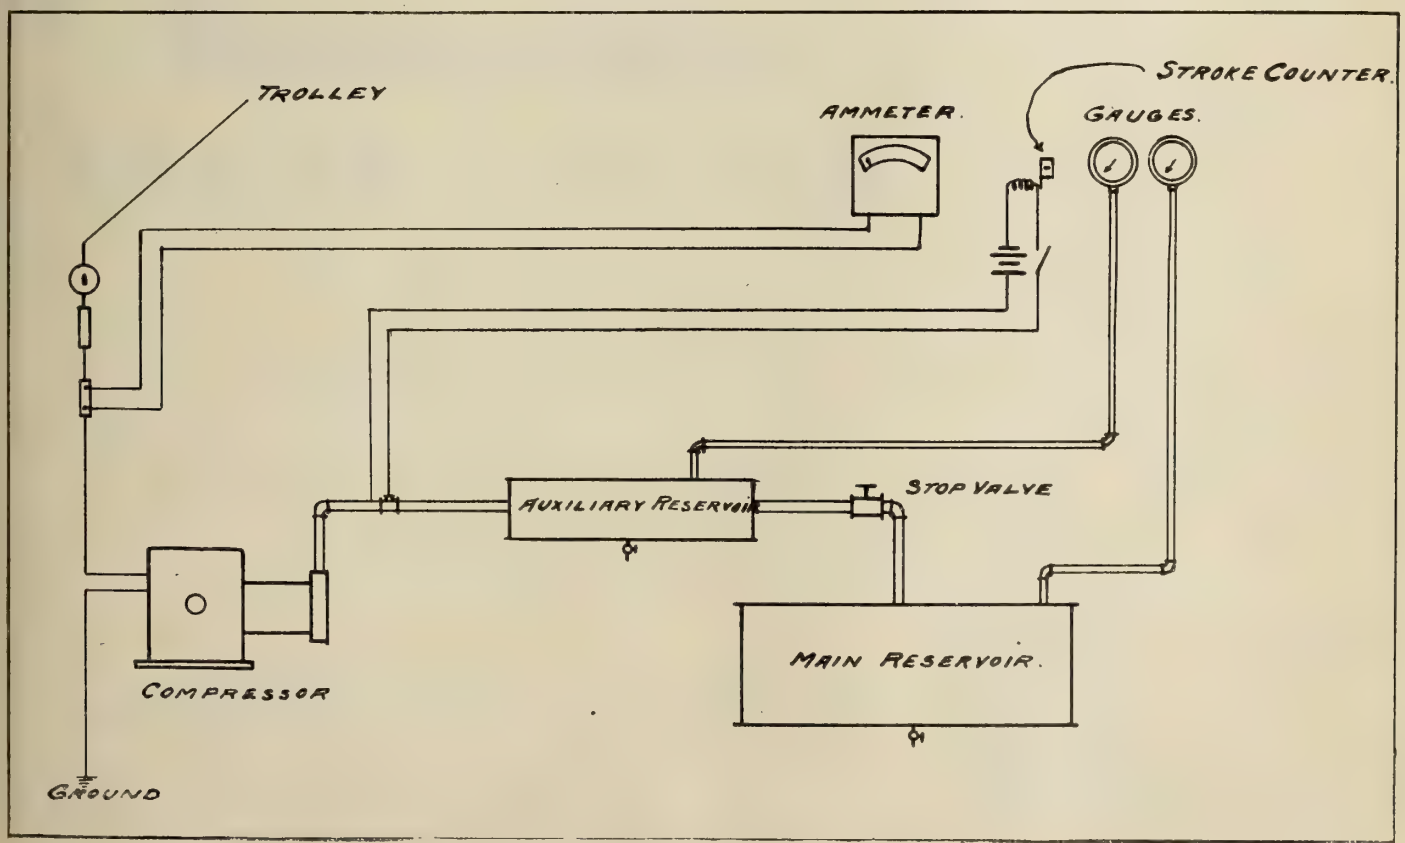
Most of this company's compressors are placed in the front vestibules of the car, a position which has some advantages as regards inspection and accessibility, but which has some disadvantages in regard to the air supply, which is taken from inside the car. In winter the air inside the cars is considerably moister than the outside air, and as a result there is considerable condensation in pipes and reservoirs which often results in pipes becoming frozen solid, necessitating a pull into the car barn.

In ordinary service compressors are inspected every two weeks. This inspection consists of testing the motor for electrical troubles, wiping off the commutator, and renewing the brushes when necessary, seeing that the oil supply for armature, bearings, gears and cranks is at the proper level in each case, adjusting the governor, and seeing that the pressure holds up to the standard required. A drop of 2 lbs. in the pressure in five minutes is the most allowed. If the drop is greater than this, the source of loss has to be located and the necessary repairs made.

The whole air brake equipment on the cars is given a complete overhaul once a year. This work is done in the summer time, as far as possible. Overhauling once a year means on a mileage basis about 35,000-45,000 car miles. An old car is fitted up as a workshop and all overhauling is done in this car by the air brake crew, the car being moved about from barn to barn as the work demands. The car is fitted with a traveller running from end to end along one side and the compressor is picked up at the doors at either end of the car and moved into position on the overhauling trestles. There is also a portable traveller which is used to pick up the compressor from the oil pans in the car vestibules and carry them to the door of the overhauling car. On the other side of the car are the work bench, armature rack, testing reservoirs and the fixings for mounting governors and engineers valves upon, in order to test them. No machine work, such as trueing commutators, boring out connecting rod ends, etc., is done on the car, but all such work is sent down to the machine shop. A small emery wheel is the only machine tool in the car.

The overhauling and testing is carried out as follows:—There is a spare compressor of each type on the air brake car, and the compressor which is to be overhauled is taken off its car and immediately replaced by the spare compressor of the same type, which has previously been overhauled and put in good shape. In this way it is not necessary to hold a car out of service for more than an hour or two. As a matter of fact, there are almost always cars held in the shop for repairs to some part of their equipments, and the change-over of the compressor is made at the same time, so that it is quite unusual to have to pull in a car off the road to keep the air brake crew working.

When a compressor is taken off a car it is placed on the overhauling bench and tested by the method described a little later, to see whether there are any very noticeable defects, either electrical or mechanical. It is then dismantled, any parts requiring machine work done are sent to the machine shops, and the rest of the machine is thoroughly cleaned and put together again, particular attention being paid to tightening of bolts, proper adjustment of bearings, connecting rod ends, and gearing. Care is also taken to have the direction of rotation of the armature correct. It frequently happens that an armature when repaired in the winding room is connected up so that for the same brush position the armature will rotate in the opposite direction to that in which it turned before repair. Rotation in the wrong direction is hard on the gears and also reduces the efficiency of the compressor, because the centre line of the crankshaft is, in most types of compressors, below the centre line of the cylinder, in order that the push on the connecting rod on the compression stroke may be as straight as possible,



Arragement of apparatus for testing motor compressors.

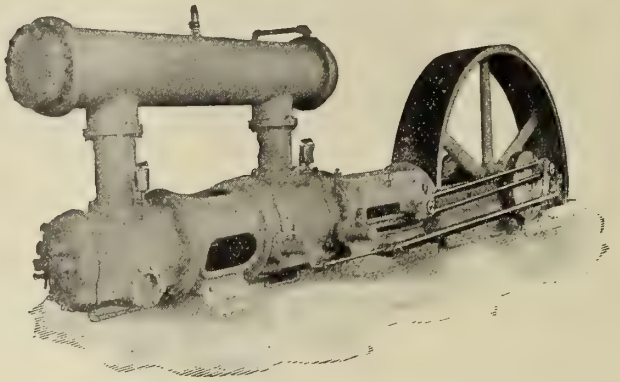
and if the direction of rotation is wrong then the connecting rod is at an increased angle to the horizontal on the compression stroke. The oil taken from the crank case and gear case of the compressor is cleaned by being passed through a centrifugal cleaner, and is then ready for use again. A note is taken of all faults found by the preliminary test, and during the dismantling of the machine, and these are embodied in a report sent in to the Superintendent of Rolling Stock. The changing of armatures which may have developed faults between the overhauling periods is done by the not very skilled class of labor, usually employed in car barns, and a very large percentage of the defects found at the overhauling period is due to improper handling by the car barn employes.

When the machine is reassembled it is connected up for testing, as shown by the accompanying diagram. The compressor is connected by a flexible hose to a small freight auxiliary reservoir, and this again is connected through a globe stop valve with the main reservoir. Both reservoirs are provided with pressure gauges. The compressor is raised to 75 lbs. per sq. in., the maximum pressure used on the system. The tester then closes the switch, which sets the stroke counter in operation, and at the same time opens the stop valve just enough to keep the pressure in the auxiliary reservoir constant at 75 lbs. sq. in. till the main reservoir pressure is raised to 75 lbs. per sq. in. The operation of the stroke counter is as follows:—The rush of air through the discharge pipe with each stroke of the pistons presses the flexible vane A, which is made of light sheet brass, against the insulated contact point B, thus closing the circuit through the magnet coil when the switch C is closed. The plunger D is pulled down against the action of the spring E, and by its movement actuates the counter, which thus records the actual number of strokes of the compressor. This automatic stroke recorder was designed by the mechanic in charge of the air-brake car and works very satisfactorily.

Standards of the average number of strokes for each type of compressor required to fill the tank with valves and pistons in good order have been established, and if a machine fails to come up to the particular standard for its type it is subjected to a further examination, and the defects are remedied till the machine comes up to standard. This method of testing has been in operation for a short time only, and it has been found to be a very severe test. The method previously used was to take the time required to fill the tank from 0 to 75 lbs. pressure, no account being taken of variable voltage, which is very usual around a car barn, or any electrical effects which might influence the speed of the motor considerably. This new method of testing determines accurately the condition of the pistons and valves to perform their functions properly, and is practically independent of variations in the motor end of the compressor. An ammeter in the motor circuit shows the current taken by the motor while under test. Standards of current drawn from the line have also been set for each type, and if a machine takes much more than the normal current when under test, electrical or mechanical faults, such as short circuited coils, tight bearings, etc., are looked for.

In addition to this complete test the valves are tested separately by applying pressure as in actual work and noticing whether there are any leaks which are sufficient to require grinding of the valves. In this connection it has been the experience of this company that the spherical valve seat gives much better results than the coned valve seat. The

RAND Compound Straight Line Power Driven Air Compressors



Modern, high-speed self-contained designs of unusually rugged construction with large, well proportioned bearings and efficient lubrication.

Sustained high efficiency through the reduction of clearance losses.

experiment is being tried of putting a sort of propeller on the under side of some of the valves, so that the air being forced past the under side of the valve causes it to be kept turning on its seat.

When the machine has been tested and passed it is ready to be put into a car. When installed the governor is adjusted, gauge tested, engineers' valve overhauled, and all leaks located and stopped, so that pressure does not drop by more than 2 lbs. in 5 minutes.

The following figures give some idea of the average cost of (1) overhauling alone, (2) overhauling and changing:—

Type	Average Mileage between Overhauls.	Average Overhauling Time.	Average Cost Material for Overhauling.	Average Total Cost Overhauling.	Average Overhauling and Changing Time.	Average Total Cost Overhauling & Changing.
No. 1	38610	13.3 hrs.	21c.	$2.60	20.3	$3.86
No. 2	38943	15.9 hrs.	32c.	$3.15	23.5	$4.23

Types	Compressors	Average Mileage	Average Overhauling Time Only.	Average Material Cost.	Average Total Cost Overhauling and Changing.
1, 2 & 3	52	.....	17.3 hrs.	27c.	$3.25

In connection with the last set of figures it should be said that the compressors had been in service for over two years, and the average mileage would be about 90,000 miles. From these figures it will be seen that the average cost of overhauling is small, and works out at about .007 of a cent per car mile. The average cost of material is very low, which is due to the fact that a large percentage of the compressors have not been in service long enough to require the renewal of very many parts. With proper inspection and maintenance the cost of material per compressor should not be greatly increased for some years to come.

The foregoing paper was read before the Montreal Air Brake Club recently.

Training the New Man on Both Ends of the Car.

By A. J. McDonald, Superintendent Quebec Ry., Light and Power Co.

To be in position to expeditiously handle the pleasure travel of the summer months, by having a sufficiently large number of spare men to run the extra cars required, as well as to be able to replace regular men, who for one reason or another are unable to attend to their duties, and at the same time keep as low as possible the expenses of a guaranteed minimum wage that is found necessary in many places, to obtain the services of suitable men, appears to me to be a subject worthy of consideration on the part of the operating department of the smaller companies.

To afford sufficient employment to the new man that he may be enabled to earn somewhat more than living expenses during the period of his probation on the waiting list, makes it essential that he should be competent to accept whatever work offered, either as motorman or conductor, to attain this end it would therefore, seem necessary that in the employment of new men, only such should be employed as appear capable of filling the requirements of either end of the car. Such a man should be trained as motorman from 10 days to two weeks at his own expense and upon the expiration of that time should be trained as conductor at the company's expense, allowing him during such training the minimum wage paid to extra men who report at roll call and fail to obtain employment. After passing the final examination he should be placed on the spare list and employed on either end of the car as required. By this means the division superintendent would be in a position to observe more fully the capabilities of each man, so that when the time arrived for him to be assigned to a regular run he could be appointed permanently to the end of the car to which he proved to be best suited.

It frequently happens that where a number of men is engaged at about the same time there may be a greater call for the services of conductors than of motormen, with the result that the new conductor is enabled to earn fair wages and the new motorman who started at the same time, and often long before, remains idle the greater part of the time. This is a condition of affairs that causes dissatisfaction among the men and should be corrected if possible, so that each new employe would receive his share of employment according to priority in the service.

The Limitation of Weight in Rolling Stock.

By D. E. Blair, Superintendent of Rolling Stock, Montreal Street Railway.

The advent of the pay-as-you-enter cars, a few years ago, either caused, or coincided with, a marked impulse toward new and improved designs of car bodies. As is quite natural, the development has been guided largely by the requirements of the transportation departments whose chief aim in life is to increase gross earnings while keeping down the ratio of platform expense to fare receipts. This ratio, taken alone, is not a true gauge of transportation efficiency, but is only one of the many factors that affect the cost of carrying a passenger.

The tendency of many car builders, guided by popular demands, has been to produce a car unit that will take fuller advantage of the improved methods of fare collection and handling of passengers, while all have been striving towards an easement of the traffic congestion, and slow schedules, brought about by the steady increase in the number of small car units operated over a given track during rush hours. Longer hauls, high rates of acceleration and braking, and competition with trunk lines have created a demand for cross seats while the increasing capacity of the car unit necessitated larger platforms to accelerate the entry and exit of passengers. These and other influences have resulted in increased dimensions. At the same time, it has been considered proper that a car should be substantially built so as to ensure long life and low depreciation. So far so good, but the question that I wish to bring out is this:—Have we not ignored an important feature of car design that affects the gross cost of car operation very closely, viz.: the limitation of weight in rolling stock.

Careful investigation would seem to indicate that the cost of maintenance of car equipment is in direct proportion to the total weight of the car and there is every reason to believe that the wear and tear of track and roadway increases to an equal ratio. This is especially so if the car weights have increased to a point beyond the capacity of the older roadbeds and rails and it has been deemed advisable to replace a soft and resilient rail foundation with a hard unyielding bed of concrete in direct contact with the rail. The first indication of the evil effects of heavy cars on the standard roadbeds of a few years ago were seen in the hammering down of joints and a general depression of the subsoil under the track foundation.

To meet the first difficulty, our track engineers devised the continuance joint, the basic idea of which is to provide a bending resistance at the joint equal to, but not greater than, the stiffness of a continuous rail. To overcome the second difficulty they provided the very logical expedient of laying down a solid foundation of concrete in order to extend the bearing surface of the track structure on the soft subsoil. Both these ideas were sound engineering practice, but, in the opinion of many engineers, these practices have been carried to an illogical conclusion.

It is a well known principle of mechanics that the energy of the impact of a hammer blow is measured by two factors, viz.:—a resisting force multiplied by the distance through which the resisting medium is forced to retreat from the blow. If we limit the backward movement of the rail to an infinitesimal amount by laying the rail in direct contact with a solid bed of concrete, the other factor of the equation increases enormously and the surface fibres of the rail are unable to withstand the abnormal bearing pressures between wheel and rail. The result is seen immediately in the high rate of metal flow and rail wear in the vicinity of the slightest unevenness in the track. A change in level of one hundreth of an inch will soon grow to serious proportions. Granted an absolutely perfect rail surface, and the effect is not appreciable, but this is an impossible condition.

The damaging effects of the vibrations set up by impact are not limited to the rail, but are quickly felt in largely increased wear of moving parts of truck and motor equipment and in the crystalization of car axles. It is not unlikely that the abnormal chipping of cast iron flanges of car wheels on hard roadbeds is a direct result of disintegration of the granular structure of the chilled iron. The results of actual experience in this regard have been such that we may expect an early return to the more scientific methods of our forefathers. Very few observant persons will now deny the absolute necessity of some resilient medium between rail and foundation. Meanwhile, the opinion is growing rapidly that the average cost of all maintenance accounts are very nearly in proportion to the weight of rolling stock or in other words that the ton mile unit is a better basis for comparison than the car mile. There are many who are not yet ready to concede the truth of these arguments because of the inherent difficulties in the way of supplying convincing proofs, therefore we may set the maintenance question aside for the present and take up an argument based upon facts so well known and easy of proof as to be almost beyond the criticism of the unbeliever, viz.;—the cost of power for the operation of cars.

Several very interesting articles have appeared in the railway journals during the last two years dealing with the relation of car weights to operating costs. These have been indexed for the convenience of those who may wish to read as they run. Of especial interest are those from the pen of Mr. Ayres of the Boston & Worcester system. He has given the subject a great deal of attention and his arguments are well worth a careful study. Among his deductions we find:—"While as above stated the cost of carrying around weight will vary in each case, it is believed that the figure of 7.5 per pound per year is a fair average value and by no means an extreme case. An effort has been made to get data from various operating companies as to their estimate of this cost. Very little data have been forthcoming but what have been secured show a general tendency in several large city systems to estimate it at 5c. per lb. per year. Even at 5c. per lb. per year, we can afford to pay $1,000 a ton for a reduction of car weight."

Mr. Ayres further calls attention to the fact that we cannot figure the possible savings in this direction on the assumption that the capital cost of the car is a permanent investment at 5%. However, it is fair to assume that a saving of 5c. per year for 15 years is equivalent to the present value of a 15 year annuity of 5c. per year, or in other words that we can afford to spend 52c. to eliminate one pound of deadweight or about $1,000 to reduce the weight by one ton.

The Boston and Northern Co. has lately given evidence of its belief in light weights by building 44 cars of the same size and capacity as a former standard type but which weigh 6,610 lbs. less and have greater inherent strength nevertheless. The new cars weigh 42,090 lbs. against 48,700 of the older car. They have been tested in service and it has been shown, that, basing the cost of power at the extremely low figure of 6-10 of a cent per k.w. hour, and with the number of service stops at only five per mile, there will be a definite saving of not less than 73c. per day per car or $11,765 a year for 44 cars. These figures are based on costs that are far below the average of any Canadian road, and yet they look formidable. They have taken into account only the reduction of coal consumption and perhaps the cost of operating labor, but have not paid any heed to the heavy fixed charges on power plants and distributing copper, these items being of equal importance in gauging the cost of power delivered to cars.

Ordinary common sense will not allow the supposition that extra power costs nothing, even if we are blessed with a perfect water power. That point of view is too narrow to be accepted outside of the village smithy. An examination of power costs will show at once

Montreal Street Railway Steel Car.

THE CANADIAN PACIFIC RAILWAY CO.

Dividends for the half-year ended June 30th, 1910, have been declared as follows:—

On the Preference Stock, two per cent.

On the Common Stock, three and one-half per cent.

A further sum equal to one-half of one per cent. on the Common Stock will be paid thereon at the same time out of interest on the proceeds of land sales.

Warrants for the Common Stock Dividend will be mailed on the 30th September next to Shareholders of record at the closing of the books in Montreal, New York and London respectively.

The Preference Stock Dividend will be paid on Saturday, October 1st next, to Shareholders of record at the closing of the books at the Company's London office, No. 62 Charing Cross, London, S.W.

The Common Stock Transfer Books will close in Montreal, New York and London, at 3 p.m., on Friday, September 2nd. The Preference Stock Books will also close at 3 p.m., on Friday, September 2nd.

All books will be re-opened on Thursday, October 6th next.

By order of the Board.

W. R. BAKER,
Secretary.

Montreal, 8th August, 1910.

TIES AND RAILS FOR CONSTRUCTION OF INDUSTRIAL TRACKS ON EAST BANK OF THE DON.

TENDERS will be received by registered post only, addressed to the Chairman of the Board of Control, City Hall, Toronto, up to noon on Tuesday, September 6th, 1910, for the following materials:—20,800 feet of partly worn or re-laying rail, 400 oak ties and 4,800 cedar ties.

Envelopes containing tenders must be plainly marked on the outside as to contents.

Specifications may be seen at the office of the City Engineer, Toronto.

The tenderers shall submit with their tender the names of two personal sureties (approved by the City Treasurer), not members of the Council or officers of the Corporation of the City of Toronto, or, in lieu of said sureties, the bond of a Guarantee Company approved of as aforesaid.

The usual conditions relating to tendering as prescribed by City by-law must be strictly complied with.

The lowest or any tender not necessarily accepted.

G. R. GEARY (Mayor)
Chairman Board of Control.

City Hall, Toronto, August 6th, 1910.

J. R. Wilson and K. W. Blackwell, Montreal, have been elected directors of the Nova Scotia Steel Co., succeeding R. Reford and R. E. Chambers.

The Sheddon Forwarding Co. has moved its Montreal office to the corner of St. James St. and Victoria Square, pending the alterations to its own building, 36 Victoria Square.

The Dominion Government, in order to aid in providing men for the railway construction camps, has granted permission for the bringing in of railway laborers under contract. Asiatics are not admitted under this regulation.

that it costs pretty much the same to produce one k.w. hour of energy, whether the total consumption is at a rate of 5,000 or 10,000 kilowatts, provided of course that the load factor and plant efficiency are comparable in each case.

One might just as well argue that an uncollected fare did not represent a loss because the car had to run anyway and the expenses were normal. To those who may say that their plant has plenty of reserve capacity and that they can stand a certain amount of extra weight without increasing fixed charges, we might answer that, so long as you have reserve capacity, you are paying fixed charges on future development and that every pound added to your rolling stock brings so much nearer the day when you will have to add another underloaded unit to your plant in order to take care of your immediate requirements. At the same time, you will likely have to add another one, two or more feeders because one feeder will take care of the extra load in only one direction.

The fixed charges on plant and distributing lines should be taken together because the increased mechanical efficiency of a larger plant is offset by the extra cost of distributing lines and increased transmission losses over greater distances. Furthermore, for a given plant, the true maintenance and depreciation charges will increase in proportion to the load carried, especially if the additional power subjects the plant to overloads. Going somewhat further into details, it is a simple matter to develope an argument that may be applied to your own exact conditions. Experience has shown that cars cannot be operated in city streets under perfect conditions at schedule speeds of 8 m.p.h. with a power consumption less than 100 watts per ton mile at the car. This figure is altogether too low for average conditions, but is commonly used as a very conservative and handy basis for rough engineering calculations. Our power consumption in Montreal, for traction only, varies from 110 to 200 watts per ton mile. A fair all year round average might be struck at 160 watts at the power house. The total power used, including power brakes, heating and lighting, runs over 200 watts per ton mile on a 12 months basis. Let us assume that 120 watts per ton mile at power house is possible. This is equivalent to about 1 k.w. hour per car mile for a light single truck car of 8 tons, 2c. per car mile for a 16 ton car and 3c. for a 24 ton car. Assume further that a car doing duty on a given run will average 150 miles a day for 365 days a year or 54,750 miles a year. The holding of car for repairs or other reasons does not affect the issue since the crippled car must be replaced by an equivalent unit.

The cost of power varies so widely that a definite cost per year cannot be fixed but we may arrive at a conclusion in this way:—To move 1 ton 1 mile your d.c. power plant must produce 120 watt hours; to move 1 ton 54,750 miles your d.c. power plant must produce 6,570 k.w. hours; multiply this figure by your own power cost. When power costs 1c. per k.w. hour each ton costs $65.70 a year; when power costs 1.5c. per k.w. hour each ton costs $98.55 a year. $100 per ton per year, or 5c. per pound per year is a convenient figure to use and is much below the average cost of operation on all large American systems. Some competent engineers insist that double this amount is a fair average, but we must move cautiously where the lights are dim.

Let us imagine the construction of a new lot of cars to see what this item of $100 a year really means to us. We propose to build one or more cars of certain outside dimensions and seating capacity to suit our own ideas and conditions. Our specifications call for a certain general style of construction and inside finish. The seating arrangements are outlined and the length and width are fixed. All this to be delivered for a certain price. The car builder adheres more or less closely to our ideas and specifications and turns out a car that in outward appearance is a credit to him and a joy to the purchaser. There has been no limit set to the weight of car and the builder finds it more convenient, perhaps on account of limited shop facilities and perhaps because it is cheaper, to use standard commercial shapes and dimensions where a lighter shape of better design would have done as well. A ⅛ inch side plate would be strong enough as a girder but is not strong enough to hold certain rivetted connections or it may be subject to buckling. Properly designed braces and reinforcements would be lighter, but both brains and labor are expensive, so in goes a ¼ or ⅜ inch plate the whole length of car. Furthermore, why should the builder trouble himself to give what the purchaser has not asked for. The purchaser's inspector calls around to view the car from time to time, objects to the color of paint used and to the fit of doors and windows. He may even authorize a little bill for extras and the car body is completed to everybody's satisfaction, but its weight is say 23,000 lbs. The addition of body equipment will bring the total weight up to 25,000 lbs., on the centre plates. Suitable trucks are then purchased. They must be able to carry all this weight indefinitely, weight no object, say 15,000 lbs. a pair. A four motor equipment of reasonable capacity weighs 12,000 lbs., and the car makes its trial trip weighing 52,000 lbs., or 26 tons. The seating capacity is 45, so that each passenger might have the satisfaction of knowing that the grasping company is moving 1,150 lbs., as well as his own weight, for several miles, all for 3c. and a transfer thrown in. This is not an exceptional case but is standard practice almost everywhere to-day. One cannot help thinking of the days when his 30 lbs. bicycle carried him safely over many a mile of rough road.

Now there is no doubt that if a certain amount of intelligent effort had been applied to the original design, with a view eliminating all unnecessary weight, it would have been found that a car body, inherently quite as strong and stronger, quite as serviceable and of equal capacity and beauty could be built weighing, for the sake of argument, 4,000 lbs. less. The body equipment might be reduced 300 lbs. in weight. A lighter truck frame, lighter springs, axles and wheels are then possible, say a reduction of 1,800 lbs. Lighter motors might be considered, but there we find ourselves in the hands of the enemy. The motor manufacturers have fixed upon a given weight for a given capacity. Their product is good and it meets the demand. The question of weight does not affect them directly, except in so far as durability and low maintenance are concerned. They will argue that a lighter motor is quite possible, but it will cost more and the market places no premium on lightness. We have again to admit that, through our own fault, the market does not offer what we need and we decide on an equipment weighing 12,000 lbs. Altogether we have reduced the weight by 6,000 lbs., or three tons and can expect a saving of $300 a year per car in our power bill, all net profit because the cost of the lighter car need not be greater than the heavy one. The present value of this saving at 5% is $3,000. If we wish to expend a part of this amount towards nickel-steel, and aluminum in place of mild steel and cast iron and wood we can cut down the weight much further.

The possibilities of lowering the cost of transportation along this line are so great that several questions present themselves. Are we not justified in placing a premium upon lightness in car construction and car equipment even to the extent of doubling the first cost of a car? Is the saving of power the only economy to be effected by limiting car weights? Would the increased cost of maintaining very light rolling stock not be offset by greater savings in track renewals and repairs? Would the transmission problems of most 500 volt systems be simplified? If the average weight of rolling stock were decreased 25%, for a given size of unit, what decrease might we expect in car maintenance? Judging from my own experience, I should answer the last question by saying that the cost of all wearing parts of equipment such as brake shoes, brasses, gears, pinions, trolley wheels, carbon brushes, etc., would decrease in proportion. The wear of car wheels is more complicated but follows pretty much the same rule. Repairs to running gear, brake beams, brake heads, etc., also bear a very definite relation to weights and pressures handled.

Militia vs. Street Cars.

Our issue of July, 1909, contained full particulars of the conviction by the Winnipeg police magistrate of a Winnipeg Electric Ry. motorman for the alleged obstruction of the 90th Rifles on June 1, 1909. The circumstances were that a car was proceeding west on Broadway, when the 90th regiment was coming out of the drill hall, and crossing the street. The motorman rang his gong and stopped the car with the fender protruding over the crossing, whereupon Capt. Blanchard, with sword in hand, boarded the car and peremptorily arrested the motorman and took him to the guard house at the drill hall, and after detaining him there a short time, marched him under a guard of soldiers with fixed bayonets from the drill hall by way of Main St. to the police station.

The magistrate's decision was appealed to County Judge Walker, who took the evidence over again, but at the request of counsel for the prosecution, who evidently anticipated an adverse decision, the Judge stated a case to the Court of Appeal as to the legal point involved, in regard to which had the right of way, the electric railway or the militia, and the matter came before the Court of Appeal in June. The Winnipeg Electric Ry.'s counsel contended that the County Judge had no jurisdiction to state the case and reserve judgment. The Court of Appeal agreed with this and dismissed the matter.

The County Judge has since given judgment as follows:—"I must conclude from the evidence that the act complained of was (on the part of appellant, the motorman) purely accidental and not of such a nature as is contemplated by the statute as being an obstruction. The appellant had a right to run his car over the track, and this the respondent well knew. He, however, was bound to be diligent in running his car so as not to interfere with the rights of others. This rule will also apply to the movements of the troops if it is negligent, liability follows and negligence is defined (as one writer says) by that past master of English language, as well as of English law, Sir Frederick Pollock, in these six words, "Negligence is the contrary of diligence." I cannot help believing that the appellant, when he observed that he could not pass in front of the troops, as they were emerging from the drill hall, without interference, was very diligent in stopping the car as he did, and this was all he was called on to do. A reasonable patience of a few seconds on the part of respondent would have avoided the possibility of any collision whatever, and a proper handling of the troops

after the car had stopped, by way of a slight divergence, would have saved any further trouble, as there was ample room over the crossing (about 16 ft.) for the troops to pass, and I take it from the evidence they did, after the arrest, pass in front of car. I hold that the moving of the car during the scuffle was owing to the conduct of the troops and accidental. The conductor of car was a corporal of the 90th, and he says in his evidence that Capt. Blanchard, who was in command of the leading file of troops, and in a position to observe all that took place, said to him shortly after the arrest: "I do not think you intended to hit anybody." The evidence, to my mind, bears out this conclusion. I fail to realize there was any necessity for the action taken. It seems precipitate, arising from a claim of paramount right of way exercised without a considerate realization of the situation and right of others. Finally I hold that the occurrence, such as it was, so far as concerns the appellant, might reasonably and fairly have been treated at the most as a simple mishap. I therefore find a verdict for appellant and direct an order to go quashing the conviction, but under the circumstance without costs, excepting reporter's fee, which I fix at $5."

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—The Vancouver Park Commissioners considered, Aug. 10, a letter from the company asking for a lease of a sufficient right of way on the foreshore around Stanley Park for an electric railway. The letter was held over for future consideration.

The company has been making tests for the foundations of the new building which it proposes to erect at the corner of Hastings and Carroll streets, Vancouver. The plans for the building have not yet been definitely approved.

Clearing right of way for the line between Vancouver and New Westminster, via Burmley, is being proceeded with from the New Westminster end, and grading is reported to have been started near the Cariboo.

The approach of the B.C.E. Ry. to the north end of the Lulu Island bridge was completed Aug. 1, and track has been laid from the main line on Columbia St., on to the bridge. At the south end of the bridge an approach both for the highway and the railway is being constructed, the city contributing towards its cost. Further railway building along the Lulu Island river towards the city limits will be gone on with as soon as the bridge approaches are completed.

It was reported Aug. 8 that 46 miles of track had been laid on the line from New Westminster to Chilliwack, and that the line was expected to be completed and in operation by Oct. 1. Its total length will be 63 miles, and it is expected that the run will be made in two hours. A two-hour service is to be given in each direction, and the plans of the company are also said to include running a daily parlor car service over this line, with probably a buffet. The rolling stock will include eight or 10 passenger cars, 150 freight cars, three or more electric locomotives, and several lighter ones. The heavier engines will be used to haul 500 tons of freight. The freight cars will run up to 80,000 lbs. capacity.

A proposal for the erection of car shops capable of turning out all the cars required for the company's various lines is under consideration. As soon as the new freight sheds in New Westminster are completed the building on Twelfth St. at present used as a freight shed will be turned into a repair shop for the cars on the Fraser valley lines. The repair shop in Vancouver is too small to fulfil requirements there and increased accommodation must be had. The present car building shops at New Westminster are not sufficiently large to meet demands.

The by-law granting a franchise in the Point Grey district was approved by the ratepayers July 23. The company's General Manager wrote to the Reeve July 25, to the effect that the building of the lines A and B mentioned in the bylaw will be proceeded with at once, and desiring to know how much of the several streets were opened to permanent grade. It is expected the line beginning on Fourth Ave. and running along Alma St. to Tenth Ave., thence along Tenth Ave. to Sasamat St., thence along Sasamat St. to Fourth Ave. and thence west on Fourth Ave. to Dufferin St., will be completed by winter. The council is contemplating putting a steam shovel on Tenth Ave. for the more rapid completion of the grading, etc., on these streets.

C. Hoard, C.E., is making surveys for a proposed electric railway through Sidney and Saanich, on Vancouver Island. (Aug., pg. 681.)

Grand Valley Ry.—Route maps have been approved by the Department of Railways for extensions of street railway lines in Brantford, Ont.

A Brantford press report states that the project in which this company is interested for the building of an electric railway from that city, via Waterford and Simcoe to Port Dover, is again under consideration, and a plan is being discussed for providing a subsidy in aid. (Aug., pg. 682.)

Hamilton, Galt and Berlin Ry.—W. J. Grant, C.P.R. Commercial Agent, Hamilton, said Aug. 3, that engineers were completing surveys with a view of determining the most practical routes for this proposed electric line. Decisions were not arrived at in a hurry, but he expected that in about a month something definite might be heard about the line from Hamilton to Guelph Jct. The proposition would have first to be submitted to the C.P.R. Executive, and financial arrangements made.

Hamilton, Waterloo and Guelph Ry.—J. Patterson, who is promoting the building of this electric railway, returned to Hamilton, Ont., from London, Eng., Aug. 15, and said he had good hopes that the line would be built, but he could not make a definite announcement for a few weeks. (Aug., pg. 682.)

Hull Electric Co.—Grading has been in progress since July 15 on the extension from the C.P.R. station, Brewery St., Hull, Que., to the first tollgate on the Chelsea road, and it is expected to have a car service in operation over it by Sept. 30. (Aug., pg. 682.)

The London and Lake Erie Ry. and Transportation Co. has a gang at work at the London, Ont., end of the line to Port Stanley, straightening the road so as to enable it to give a better service. Between St. Thomas and Port Stanley there are no less than 33 curves, and it is said that most of these will be eliminated. The question of building a second track is also under consideration, but no decision has been reached as to whether this will be done or not. (May, pg. 399.)

Montreal St. Ry.—A petition has been presented to the city council protesting against the M.S.R.'s proposed car tracks on Dorchester St. (Aug., pg. 683.)

Moose Jaw Electric Ry.—A company with this title has been incorporated unders the British Columbia Companies Act to construct electric railways in British Columbia and Saskatchewan. We are advised that this has been done, owing to some difficulties respecting incorporation under the North West Territories Companies Ordinance. A special act will be applied for at the next session of the Saskatchewan Legislature, but meanwhile the preliminary work will be done under the British Columbia incorporation. J. B. McRae is acting as Engineer, and A. H. Dion, son of A. A. Dion, Superintendent Ottawa Electric Ry., will be in charge of construction and subsequent operation at Moose Jaw. The head office is, temporarily, in the Citizen Bldg., Ottawa.

The lines proposed to be built will extend from the exhibition grounds, along Main St. to the C.P.R. station, along Manitoba St., to between 10th and 11th streets, then across the C.P.R. tracks as far as Iroquois St., along this street to Sixth Ave., along Sixth Ave. to Saskatchewan St., and along this street to the exhibition grounds. There will be a branch line along Athabaska St. past the athletic grounds, another along High St., between Main St. and Sixth Ave., with a loop around Seventh Ave. and Manitoba St. to Sixth Ave., and another along Hochelaga St. to Eighth Ave. The lines on Main and High Streets will be double track lines. This will give about seven miles of track, which will be laid with seven inch, high T type rail, 70 lbs. per yard. The power house will be built at the corner of High St. and Fourth Ave., but the plans have not been definitely approved. The proposal at present under consideration is to instal two 150 k.w., 500-600 v., d.c. generators, driven by two 205 h.p. oil engines, combustion type, using crude oil as fuel. The cars to be used will be of the pay-as-you-enter type, and an order for six will be placed shortly. (Aug., pg. 683.)

Mount McKay and Kakabeka Falls Ry.—An agreement giving the company temporary rights for three months over the street railway tracks in Fort William has been approved by the Port Arthur and Fort William Railway Commission, the company to use its own power and cars. The company desires to haul gravel for construction purposes, and the agreement provides that the hauling is to be done at night only. (Mar., pg. 231.)

Nelson St. Ry.—The extension of the line in Nelson, B.C., has been completed, and placed in operation. The new cars have been built by the Ottawa Car Co. (Aug., pg. 683.)

Nipissing Central Ry.—A preliminary survey for a branch line from near Port Cobalt to Kerr Lake, Ont., is being made. The branch starts from the main line, passes through Port Cobalt and runs along the shore of Kerr Lake. It has not been decided when the line will be built.

The ratepayers of New Liskeard, Ont., will vote Sept. 3 on a bylaw granting a franchise to the company for the operation of an electric railway in the town. (June, pg. 495.)

The Ontario and West Shore Ry. Co. has secured options on the right of way required for building its line through Huron tp., with the exception of three properties, where it is expected the line will be run along the public highway. This gives the company a route into Kincardine, Ont. (Aug., pg. 683.)

Ottawa Electric Ry.—A permit has been granted by the city council for the erection of a brick transforming station on the south side of Slater St. Ottawa, to cost $18,000. In addition to this being made a distributing station for power, the company will concentrate its construction, meter and repair plants there. (July, pg. 585.)

People's Ry.—We are advised that the contract has been awarded for the grading of the section from Berlin to Bloomingdale, on the line to Guelph, Ont., to F. W. Maxwell, of Port Hope. Three miles of track is to be built by Dec. 1. A second contract has been let for the grading from Berlin westerly to New Hamburg, 14 miles, to D. B. Campbell, Latchford, Ont., to be completed by

Department of Railways and Canals.

QUEBEC BRIDGE.

Tenders for Superstructure.

Notice to Contractors.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Quebec Bridge Superstructure," will be received at this office until 12 o'clock noon, not later than September 1st, 1910, for the superstructure of a bridge across the St. Lawrence River near the City of Quebec.

Plans and specifications may be seen and forms of Tender obtained on and after July 1st 1910 at th office of the Quebec Bridge Board of Engineers, Canadian Express Building, Montreal, and at the Department of Railways and Canals, Ottawa.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the sontract.

Contractors are requested to bear in mind that tenders wil not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $500,000.00 made payable to the order of the Minister of Railways and Canals of Canada must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted and in accordance with the terms stated in the form of Contract accompanying the Specifications.

Cheques thus sent in will be returned to the respective contractors whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

L. K. JONES,
Secretary.

Department of Railways and Canals,
Ottawa, 17th June, 1910.

Dec. 30. The Acme Construction Co. is doing the grading between Bloomingdale and Guelph. This latter work has been in progress for over a month and is proceeding satisfactorily. It was expected that grading would be completed as far as New Germany by Aug. 17, and the balance by Dec. 15. Grading for 29 miles is expected to be completed by Dec. A contract has been let to T. Robbins, Galt, Ont., for all the concrete work on the line. This includes three large piers and two abutments for the bridge over the Grand River, east of Berlin, and has to be completed by Dec. 1.

We are also advised that it is intended to start surveys for the line from Guelph, to Elora, Fergus and Arthur, and to complete the surveys from Guelph to Hespeler, and Puslinch Lake. When this line is completed the company will be enabled to connect with the Galt, Preston and Hespeler Ry., and through it with other lines. It is intended to open an amusement park during the summer between Berlin and New Hamburg. The plans on hand and contemplated, if carried out, will give 80 miles of line by the end of 1911.

A plan has been submitted to the London city council by W. H. Bugg and J. C. Moody for the extension of this line from Stratford to London. The plan was a preliminary one. but if there was disposition shown to give it consideration, the company's engineers would go over the ground and prepare detailed plans. The council promised to take up the matter again.

Several members of the directorate of the People's Ry., went over the line of the London, and Lake Erie Ry. and Transportation Co., Aug. 9, and discussed the question of buiding a branch of their line from Berlin to St. Thomas, to connect with the L and L.R. Ry. and T. Co.'s line.

Guelph ratepayers will be asked early in Sept., to vote on a by-law granting a franchise to the company within the city. Stock amounting to $160,000 has been taken in the company, with the approval of the ratepayers as follows: Berlin, $60,000; Wilmot tp., and New Hamburg village, $20,000 each; Wellesley, and Blenheim, $15,000 each; Tavistock village and Waterloo tp. $10,000 each. (Aug. pg. 683.)

Pictou County Electric Co.—The Nova Scotia Legislature has repealed rule 5 of schedule A, chap. 137, of 1902, and substituted a new one, providing (a), that platforms of all cars shall be provided with gates and doors; that passengers shall be received and discharged on either side, except at turnouts, when the left side only shall be used; (b), that spitting shall not be allowed on the cars; (c), that no person may cross over the company's bridge across the East River, New Glasgow; (d), there shall be no loitering about the company's property.

The act also declares that the company is possessed of all the powers and privileges of the Egerton Tramway Co.; ratifies the trust deed to the Eastern Trust Co. to secure the issue of bonds of the tramway company, and authorizes an exchange of the existing bonds, if required by the bondholders, for bonds of the Pictou County Electric Co. (July, 1909, pg. 523.)

Port Arthur and Fort William Electric Ry.—The ratepayers of Port Arthur, Ont., will vote Sept. 8 upon a bylaw to provide $12,000 for the new car barns now under construction. (Aug. pg. 683.)

Quebec Ry. Light and Power Co.—Considerable progress has been made on the new office building which the company is erecting on the corner of Crown and St. Joseph streets, Quebec.

The engineering department is at work on the plans for the 3¼-mile upper level line at Montmorency Falls park, the plan, profile and book of reference of which has been deposited with the Registrar of Quebec county.

The 2.50 mile extension from the city to the top of Sillery Hill, near the site of the new Quebec Bridge, is expected to be completed early in Sept. (Aug. pg. 683.)

The St. George Electric Co. is authorized by the Quebec Legislature to build an electric tramway from the Quebec Central Ry. St. George station through St. George, Beauce county, and the Riviere du Loup valley to the Kennebec line near the International boundary separating Quebec from Maine.

Sherbrooke Ry. and Power Co.—This is the new title authorized by the Quebec Legislature for the Sherbrooke St. Ry. Co. The head offices are to be in Montreal, the operating office only in Snerbrooke. The company is given power to build electric railways both in Sherbrooke and outside, but not exceeding the limits of St. Francis district. Freight may be carried as well as passengers, and mails "by animals, electricity, or compressed air or other motive power, except steam, as the company from time to time deems expedient, except that during the period of winter, the company may substitute sledges drawn by horses." The other parts of the act refer to the company's powers as to the development and distribution of power.

Construction is being proceeded with in connection with the power plant, at which it is proposed to develop 2,500 h.p. A contract has been let to the Bishop Construction Co. for the erection of a power house in Sherbrooke. (June, pg. 497.)

Simcoe Ry. and Power Co.—An order in council has been passed by the Ontario Government approving of by-laws of the county of Simcoe and the townships of Tiny and Matchedash granting the company the use of certain roads and road allowances for the purpose of erecting a pole line for the transmission of electricity from the Big Chute on the Severn River into Midland, Ont. The company has power to build electric railways radiating from Midland. (May, pg. 401.)

Stratford Ry.—A bylaw was passed by the ratepayers July 30 by 1,492 votes to 48 granting a franchise for an electric railway in Stratford, Ont., to a syndicate of St. Marys men, who were associated with the St. Mary's and Western Ontario Ry., a steam railway operated and controlled by the C.P.R. (Aug. pg. 685.)

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for June, $253,180; working expenses $159,095; net operating earnings $94,085; renewal funds $17,852; net earnings $76,233; approximate income from investments $16,500; net income $92,733, against $200,624 gross earnings; $116,-025 working expenses; $84,599 net operating earnings; $13,958 renewal funds; $70,641 net earnings; $13,550 approximate income from investments; $84,191 net income, for June 1909. Aggregate gross earnings for 12 months ended June 30, $2,981,617; net earnings $1,239,-839, against $2,298,778 gross and $1,-027,116 net for same period 1908-09.

Calgary St. Ry.—Total revenue for June, $19,419.10; expenses, maintenance of way and structures $1,020.96, maintenance of equipment $1,193.02, transportation expenses $3,726.00, general expense $584.62, power $2,530.00, total $9,054.60; net earnings $10,364.50.

Calgary St. Ry.—Gross earnings for July were $23,570.55, against $4,703.65 for July, 1909, the first month of operation.

Capt Breton Electric Co.—The gross earnings for May were $9,196.14, against $7,073.36 for May, 1909. The net earnings for the five months ended May 31 were $14,441.52, against $10,013.58 for the five months ended May 31, 1909.

Halifax Electric Tramway.—Railway receipts for July, $22,176.80, and for two weeks ended Aug. 14, $10,490.94, against $20,125.47 and $10,067.62 for same periods 1909.

Hamilton St. Ry.—The gross receipts for the quarter ended June 30 were $91,764.91, against $82,453.14 for the same period 1909. The amount paid to the city for the quarter was $9,221.16, against $8,476.21 for the same period 1909.

London St. Ry.—Gross earnings for June, $22,905.09; expenses $16,027.00; net earnings $6,878.09; deductions $2,-363.05; net income $4,515.04. Aggregate gross earnings for six months ended June 30, $117,264.69; expenses $86,-598.68; net earnings $30,666.01; deductions $14,256.90; net income $16,409.11.

London St. Ry.—Gross earnings for July, $24,248.90; expenses, $16,556.08; net earnings $7,692.82; deductions, $2,-441.75; net income $5,251.07, against $24,802.95 gross earnings; $15,767.84 expenses; $9,035.11 net earnings, for July 1909. Aggregate gross earnings for seven months ended July 31, $141,513.59; expenses $103,154.76; net earnings $38,-358.83; deductions $16,698.65; net income $21,660.18, against $135,798.89 ag-

Montreal St. Ry.—Passenger earnings for July, $383,371.70; miscellaneous earnings $15,475.22; total earnings $398,846.92; operating expenses $215,-224.22; net earnings $183,622.70; city percentage on earnings $49,992; interest on bonds and loans $14,705.50; rent leased line, $552.90; taxes $4,000; surplus $114,372.30; expenses per cent. of earnings 53.96, against $334,237.57 passenger earnings; $11,335.99 miscellaneous earnings; $345,573.56 total earnings; $177,412.11 operating expenses; $168,161.45 net earnings; $34,945.22 city percentage on earnings; $14,439.62 interest on bonds and loans; $498.67 rent leased lines; $3,000 taxes; $115,-277.94 surplus; 51.34 expenses per cent. of earnings for July 1909.. Aggregate total earnings for 10 months ended July 31, $3,490,646.48; operating expenses $2,021,516.05; net earnings $1,469,130.-43; total charges $446,853.74; surplus $1,022,276.69; expenses per cent. of earnings 57.91, against $3,137,546.83 aggregate total earnings; $1,866.015.41 operating expenses; $1,271,531.42 net earnings; $388,574.71 total charges; $882,-956.71 surplus; 59.47 expenses per cent. of earnings for same period 1908-09.

Port Arthur and Fort William Electric Ry.—The total receipts for July were $14,189.48, and the expenditure $8,103.56, leaving net earnings of $6,-085.92. The monthly report showed:—Car mileage, 50,141 miles; gross earnings per car mile, 28.281 c.; operating expenses per car mile, 16.162 c.; net earnings per car mile, 12.189 c.

Toronto Ry.—Gross earnings for June, $353,791.91; expenses $170,426.48; net earnings $183,365.43, against $323,722.95 gross earnings; $155,919.81 expenses; $167,803.14 net earnings for June, 1909. Aggregate gross earnings for six months ended June 30, $1,656,841.51; expenses $870,381.43; net earnings $786,460.08, against $1,483,749.53 aggregate gross earnings; $775,005.02 expenses; $708,-744.51 net earnings for same period 1909.

Winnipeg Electric Ry.—Gross earnings for June, $242,420; expenses $117,-128; net earnings $125,292, against $193,-836 gross earnings; $95,111 expenses; $98,725 net earnings for June, 1909. Aggregate gross earnings for six months ended June 30, $1.532.195; net earnings $754,880, against $1,210,903 gross and $602,315 net for same period 1909.

The Canadian Pacific Railway Company have 3,000,000 acres of selected lands for sale in Manitoba and Saskatchewan.

Our new, illustrated handbooks describe them fully and will be promptly sent free to any applicant.

Write at once for any of the following books—maps and price lists will accompany them:—

"The Heart of the Saskatchewan Valley."—Describes lands for sale in part of Western Saskatchewan.

"Where Wheat is King."—All about Central and South-eastern Saskatchewan.

"Western Canada."—An illustrated handbook of the Canadian West.

"Western Progress."—An illustrated monthly bulletin, presenting in concise form up-to-date information concerning agricultural and commercial conditions in Western Canada, and containing announcements regarding the Company's new towns.

Address Desk R.,
F. T. GRIFFIN, Land Commissioner, Winnipeg.
J. L. DOUPE, Asst. Land Commissioner.

CANADA NORTH-WEST LAND CO.

This Company has 525,000 acres of selected lands in Manitoba and Saskatchewan which offer excellent opportunities to settlers and investors who desire to secure good lands in well-selected districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

Electric Railway Notes.

C. Murphy, foreman trolley department B.C. Electric Ry., died at Vancouver, B.C., recently.

The London St. Ry. has ordered one heavy double broom electric sweeper, from the Ottawa Car Co., Ottawa.

The Edmonton Radial Ry., has ordered one heavy double broom electric sweeper from the Ottawa Car Co., Ottawa.

The Quebec Ry. Light and Power Co., has received four pay-as-you-enter cars, 18 ft. long, from the Ottawa Car Co., Ottawa.

The Toronto Suburban Ry., has received two 49 ft. pay-as-you-enter cars from the Preston Car and Coach Co., Preston, Ont.

The Edmonton Radial Ry., has received two pay-as-you-enter cars, mounted on 27-G-1 trucks, from the Ottawa Car Co., Ottawa.

The Hamilton St. Ry. has received one pay-as-you-enter car, 43 ft. long overall, with longitudinal seats, mounted on 27-G-1 trucks, from the Ottawa Car Co., Ottawa.

Wm. Boucher, conductor on the Hull Electric Ry., has been convicted of using a digger on his fare box, and sentenced to six months imprisonment.

R. H. Sperling, General Manager B.C. Electric Ry., accompanied Geo. Kidd, Secretary of the Board of Directors, London, Eng., on his trip of inspection over the company's lines early in Aug.

The ratepayers of Detroit, Mich., will be asked in Nov. to vote on the question of acquiring the ownership of the Detroit United Ry. by the city. The D. U. Ry. owns the Sandwich, Windsor and Amherstburg Ry. in Canada.

The London, Ont., city council has sent to the London St. Ry. a bill for $1,000, representing the alleged cost to the city of repairs to water pipes, claimed to have been made necessary by electrolysis.

A memorial tablet to the late John Bell, K.C., General Counsel of the G.T. R., who died in June, 1906, aged 83, has been placed in St. Andrew's Church, Belleville, Ont., of which he was an elder and trustee for many years.

The Vancouver city council has been advised by the B.C. Electric Ry. that it is the company's intention to equip all its cars operating in the city with a new pattern of fender, which is being constructed at the company's shops in New Westminster.

The Port Arthur and Fort William Electric St. Ry. commission has asked the Port Arthur, Ont., city council to purchase a car to replace car 16, which was recently burned. This car was exclusively used in the service of the Port Arthur city council for haulage purposes.

The Port Arthur and Fort William Electric Ry., has received four 49 ft. pay-as-you-enter cars from the Preston Car and Coach Co., Preston, Ont. Two of these cars are for Port Arthur and two for Fort William, and they are, in each case, similar to those already supplied, and of which we have previously given particulars.

The Quebec Ry., Light and Power Co. operates an observation car over its city lines at a fare of 25c. per passenger. A complaint was made alleging that the company was only allowed to charge 5c. fare. The company's case was that if the fare for the trip was collected in the ordinary way it would equal 25c. The case was dismissed.

Suit has been entered in the Ontario courts, by J. M. Dixon, Edmonton, Alta., and S. M. Coulter, Toronto, to recover from W. G. Trethewey, Toronto, $176,000, alleged to be due for securing a street railway franchise in Edmonton, for which, it is claimed, the defendant agreed to give a share in certain northwest lands, which he had failed to do.

An action brought against the Windsor and Tecumseh Electric Ry. and its directors collectively by G. E. Thomas, for $5,500 damages, was dismissed at the recent assizes at Sandwich, Ont. The directors entered into a contract with G. E. Thomas for overhead work, but the shareholders refused to ratify it, and Mr. Thomas thereupon sued for the amount stated as damages.

A special investigation having shown considerable dishonest practices by some employes of the Hull Electric Co., which operates an electric railway between Ottawa and Aylmer, Que., it has been found necessary to add to the protective features of the fare boxes, and a device invented by the General Superintendent, G. Gordon Gale, for which it is claimed that the fare box door is fastened in such a way that it is impossible to open it without detection, is being tried.

At the suggestion of the Selkirk, Man., board of trade, it has been decided to form a commission composed of representatives from the Selkirk town council, and the councils of the rural municipalities of Kildonan, St. Andrews and St. Anne's, for the purpose of watching the railways operating within their boundaries, and generally to deal with railway matters affecting the several municipalities. The Secretary of the board of trade has been asked to become secretary of the special body.

The steel pay-as-you-enter cars, floor plan of which is given on this page, and which the Montreal St. Ry. is adding to its equipment were described in our Aug. issue, pg. 681. We have since received the following additional particulars:— Length over bunters, 46 ft. 5 in., over vestibules, 45 ft. 5 in.; body, 31 ft. 11 ins.; length of front vestibule, 5 ft. 4 ins., of rear platform, 7½ ft.; width over rubbing strips, 8 ft. 3½ ins.; over side panelling, 8 ft. 2½ ins.; interior finish, cherry; seats, non-reversible, upholstered in rattan; trimmings, solid bronze and polished.

The number of injuries to persons and loss of life by street car accidents is being considered by the City Engineer of Montreal. He is devoting a good deal of attention to the subject, and says he hopes to be able to design something in the way of a shield which will have the effect of protecting the whole front of the car. The principal difficulty in the way of doing anything effective is the snow in winter. The Quebec Public Utilities Commission has had the matter under consideration and a return is being prepared showing the number of such accidents, as far as possible, as have occurred.

The Judicial Committee of the Privy Council has granted the city of Montreal special leave to appeal from the judgment of the Supreme Court of Canada, on the question of the jurisdiction of the Board of Railway Commissioners over the Montreal St. Ry.'s through traffic with the Montreal Park and Island Ry. The decision referred to reversed an order of the Board of Railway Commissioners, directing the Montreal St. Ry. to enter into any agreement necessary for the carrying out of the Board's order on the Montreal Park and Island Ry., to grant certain special facilities to residents of the district through which it operates.

The British Columbia Electric Ry. put in force on the Vancouver-New Westminster and the Eburne and Steveston lines on Aug. 1, the card system of car dispatching. As soon as the regular service to Chilliwack has been started the new system of dispatching will be put in force on that line also. The system was inaugurated by Trainmaster W. H. Elson, and is being operated by E. S. Sterling, Chief Dispatcher, and J. Masters, L. Grimmer, —. Frizzel, E. Miller and —. Higgins, dispatchers. The dispatching office is at present at the car barns, but it will be located in the headquarter office when the new building is completed.

N. C. Pilcher, Manager of the Port Arthur and Fort William Electric Ry., has resigned, the resignation taking effect Aug. 15. The commission offered an increase of $500 a year in order to retain his services, but Mr. Pilcher declined to consider it. He has been appointed Manager of the Sherbrooke Ry. and Power Co., Sherbrooke, Que.

G. McPhillips, Civil Engineer, says he is the only surviving official of the first electric railway in Canada, and the second on the American continent. It was, he says, built in 1885, and ran from the G.T.R. bridge at Walkerville, to Windsor, Ont., on wooden rails, trimmed with iron straps. The project was abandoned, but he says the poles and wire arms stood on Sandwich St., Windsor, until 1892.

The Berlin and Waterloo St. Ry. Co. has been denied by the Judicial Committee of the Privy Council, special leave to appeal from a judgment of the Supreme Court of Canada, in its case against the town of Berlin, Ont., as to the basis on which the street railway was to be valued when taken over by the municipality. The arbitrators in their award valued the railway as being a railway in use and capable of being used as a street railway, and did not allow anything for any privilege or franchise. The petitioner contended that the valuation should have been on the net earnings. The decision of the arbitrators was originally upheld by the Ontario High Court, reversed by the Ontario Court of Appeal, and the original award of the arbitrators was later restored by the Supreme Court of Canada.

Cassandra-Advance Investigation.

The following judgment has been delivered by Capt. L. A. Demers, acting Wreck Commissioner, concurred in by F. Nash and F. Hamelin, in the complaint of the captain of the Donaldson Line s.s. Cassandra, against the captain of the Montreal Transportation Co.'s steamboat Advance, for a violation of the rules of navigation within the port of Montreal, on June 13.

The court is of opinion that, firstly, the master of the Advance having taken a pilot on board, should have, in an occasion of the kind, accepted his suggestion to await the passing of the Cassandra, the in-coming vessel, before making any attempt to proceed. Admitting that the pilot's suggestion was not agreeable to the master who is the responsible man, and notwithstanding his statement that there was danger in taking the proper side of the channel to go down the river, as the current might have thrown the vessel across the bow of the Cassandra, the court claims that such a procedure should have been adopted, as by the rules of the road, the Cassandra having a red light on her starboard bow, it was her duty to keep out of the way by either porting, stopping or reversing. It may be presumed that during the outburst of temper which the master showed when he pushed the pilot away from his post, he may have forgotten the orders he gave subsequently, and the court accepts the evidence of the Cassandra witnesses, corroborated by the pilot of the Advance, against the statement made by the master of the Advance. Though, at no time, was a collision very imminent, the avoidance was due only to the precautionary measures taken by those on the Cassandra. The rules for the narrow channels and rivers are, that ships should take the right side of the channel, which rules were not complied with by the captain of the Advance, and no matter what were his intentions, or his fears about adopting certain ways, or following the instructions of the pilot, he should have observed the regulations, or awaited the passage of the Cassandra, either by going to the wharf, or stopping or backing his vessel, or returning to the place he had left. Such course could easily have been adopted, as he was out of the current in still water, there being no wind to affect his vessel, therefore the court concludes that the complaints of the pilot and master of the Cassandra, as well as those of the pilot of the Advance, are well founded, and that such action on the part of any master or officers of vessels cannot be countenanced or overlooked, the safety of traffic in the port of Montreal, or anywhere else must be assured. In view of the fact that there was no delay nor damage to the Cassandra, the court has no power to inflict a fine, but severely reprimands the master of the Advance for contravening the rules framed for the protection of traffic in harbors and rivers, and also warns him as well as others, that in the future, for any attempt to disregard the existing laws, the certificates of the offending parties will be dealt with.

The Minto-Rosalind Collision.

The collision between the Dominion Government s.s. Minto and the s.s. Rosalind, at Charlottetown, P.E.I., May 24, has been investigated by W. R. Lugar, acting Wreck Commissioner, with A. Brown, Master Mariner, and J. White, harbormaster. Following is their judgment:—

The Rosalind was lying at Peake's wharf no. 2, on May 24, and was moored on the east side, but projecting from the wharf about 70 ft. The s.s. Minto was coming up the harbor to take up her usual berth at the Marine Department wharf, lying eastward of the Rosalind. The tide was nearly at half ebb, with a fresh breeze blowing from the southwest. The weather was clear and the time about 1.30 p.m. The master of the Minto was endeavoring to get his vessel into her usual berth and under estimated the strength and set of the tide, which formed an eddy round the stern of the Rosalind, thereby causing the Minto to set towards the former vessel, damaging her own boats, davits, rails and stanchions; and also the teak quarter rail stanchions, flag staff, awning spars and after davit standard of the Rosalind. Taking into consideration the careful manner Capt. Finlayson has always navigated the Minto, and the manner in which he endeavored to minimize the collision, we do not consider it a case for dealing with his certificate, but consider it necessary to warn him to be more cautious when coming into the harbor, and finding vessels projecting from the wharf beyond the ordinary custom of this port, and to give them a wider berth.

Stranding of the s. s. Aeota.

The judgment of the court, consisting of Capt. L. A. Demers, acting Wreck Commissioner, assisted by J. Bain and N. MacLeod, as assessors, in the matter of the grounding of the s.s. Aeota, recently, was as follows:—

That in view of the fact that the vessel was being navigated in what may be termed foreign waters to the master, he was guilty of a grave error of judgment, when having only an approximate position at Cape Magdalen, he attempted to steer a course more southerly, which was in truth, too fine, under the existing atmospheric conditions. The court is of opinion that when the approximate distance was found at Cape Magdalen, a course should have been taken, keeping some distance from the land, and when the distance from Magdalen to Martin River had been made, it holds that as a precautionary measure, the master should have stopped the vessel and awaited the lifting of the fog. It has been shown that he failed to take into consideration the influence of the current, the tide being at ebb, which had a tendency to throw the vessel towards the land, which effect was all the more pronounced owing to the slow speed, and as she was headed in a southerly direction. The court therefore censures the Master for his lack of adequate caution in the navigation of his vessel under the conditions which led up to the stranding.

Steamboat John Hanlan Collision.

Capt. L. A. Demers, acting Wreck Commissioner, assisted by J. B. Foote and G. C. Holloway as assessors, recently held an investigation into the collision of the Toronto Ferry Co.'s steamboat John Hanlan, with a gasolene launch in Toronto bay, whereby two lives were lost. The following judgment was delivered:—

The court finds that the captain of the ferry steamboat, indirectly contributed to the collision by not blowing a whistle of warning, and by not keeping a proper lookout on board, which is necessary at all times, especially in Toronto bay, where there is a number of small craft; also by not having launched a boat and taking all necessary measures to assure himself that a rescue was impossible, and by showing an ignorance of the working of his propellor, and the action of it on his vessel when going full speed astern; and for these reasons, the court has no option but to condemn Capt. Joyce and suspend his certificate for three months, from July 28 to Oct. 28, and in the meantime the court orders the captain to submit to an examination as to his hearing and sight, and if an unfavorable report is received, his certificate will be retained and cancelled. The examination to be undergone before Capt. Moller the examiner for Toronto district. Regarding the gasolene launch, the court is of opinion that it was navigated in a careless manner, and considers it would fail in its duty if it did not bring to the attention of the proper authorities, the necessity of making stringent regulations for the operation of small pleasure craft on Toronto bay, and is under the impression that such pleasure craft should at no time interfere with the traffic carried on in the bay, and should all carry the regulation lights, placed in such a position that there should be no convergence of the lights, that is to say, that one light should be seen across the other bow, but this is a suggestion only, as the court has no power to order it.

Since the foregoing judgment was delivered, the Ontario Attorney-General took action against Capt. Joyce of the steamboat John Hanlan, and the two men who operated the launch, under sec. 284 of the Criminal Code, to which special reference was made in our last issue. Later, the proceedings against Capt. Joyce were dropped.

Notices to Mariners.

The Department of Marine has issued the following:—

69. July 22.—192. Quebec, Ottawa river, Lake of Two Mountains, Ile aux Tourtes, buoy established. 193. Ontario, River St. Lawrence, Thousand Islands, light established on island south of Bridge island.

70. July 25.—194. Nova Scotia, Scatari island, north east point, change in characteristic of fog alarm. 195. Nova Scotia, Cape Breton island, east coast, Flint island, characteristic of fog alarm. 196. Prince Edward Island, north coast, Savage harbor, change in position of range lights. 197. Prince Edward Island, north coast, North Rustico, new range lights.

71. July 26.—198. British Columbia, Triangle island, Ikeda bay, and Prince Rupert harbor, wireless telegraph stations established. 199. British Columbia, Vancouver island, west coast, Nootka sound, Friendly cove, proposed lighthouse. 200. British Columbia, Vancouver island, Scott islands, Triangle island, lighthouse building.

72. July 27.—201. British Columbia, Vancouver island, west coast, Clayoquot Sound, Village channel, off Stockham island, beacon established. 202. British Columbia, Chatham Sound, Tree bluff (Jap point), buoy established.

73. July 29.—203. Ontario, River St. Lawrence, Aultsville, buoys established. 204. Ontario, River St. Lawrence, Cole shoal, intended change in position of gas buoy.

74. Aug. 2.—205. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Montreal harbor, change in position of Hochelaga range lights.

The names of the barges Aberdeen and Ivy, have been changed by orders in council, to Gladys H. and Donald D., respectively.

Atlantic and Pacific Ocean Marine.

Capt. Cooper, R.N.R., of the C.P.R. s.s Empress of China, has been awarded a medal for long service in the Royal Naval Reserve.

The Elder Dempster Co.'s s.s. Benin, which arrived in Montreal Aug. 15, from England, has been placed on the Montreal-Mexico route.

The Canada Line's s.s. Prinz Oskar, which was recently damaged in the St. Lawrence channel, and which has been repaired at Quebec, sailed for Hamburg Aug. 16.

A. Piers, Manager C.P.R. Steamship Lines, Liverpool, Eng., was in Montreal early in August, on his annual consultation trip in relation to the company's winter schedule.

The s.s Aeota, which ran aground recently, near Martin River, has been temporarily repaired at Quebec to enable her to proceed to England, where complete repairs will be undertaken.

The shipliners at Montreal have applied for the appointment of a board of conciliation, to investigate their demands on the shipping companies for increased wages.

The Thomson Line commenced its autumn service between Mediterranean ports and Montreal, Aug. 25, by the sailing of the s.s. Bellona from Naples. The service will be continued as long as the St. Lawrence route is open for navigation.

The Canadian Northern Steamships' s.s. Royal Edward, which arrived at Quebec, Aug. 10, made a new land to land record on the Atlantic. The time taken was 3 days 15 hrs., or about 3 hrs. less than the previous record.

A bill has been introduced into the British House of Commons, making it compulsory that all vessels, British or foreign, which embark passengers at British ports, be equipped with a wireless telegraph installation, capable of transmitting 100 miles, with a penalty of £1,000 in the event of non-compliance.

The Government has renewed the mail subsidy contract with the Union Steamship Co., for service between Vancouver and Australia, for one year. Reports are current that the Government will shortly call for tenders for a five year contract for this service, and it is understood that there will be some keen competition.

Montreal press reports state that the preliminary investigation into the cause of the grounding of the s.s. Stigstad, at Cap a la Roche, will, in view of the fact that there have been other similar accidents this year at this point, lead to a more searching enquiry. It is also stated that some of the larger vessels will not navigate the channel at night, until it has been widened at Cap a la Roche.

The Canadian Mexican Pacific Steamship Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $500,000, to take over as a going concern, the business now carried on by T. H. Worsnop, as the Canadian Mexican Pacific Steamship Co.; to build, purchase and otherwise acquire and operate steam and other vessels; to acquire postal or other subsidies; to build and

own wharves, docks, etc., and to conduct a general navigation business.

Press reports state that the Merchants' and Shippers' Steamship Line is being organized in Australia, to operate a fast line of cargo steamships, with large refrigerator accommodation and large space for all classes of perishable goods, between Australia, Tasmania, New Zealand, United States, Canada and Great Britain. It is stated that the service will be started shortly with five vessels, maintaining regular monthly sailings. The line will, it is said, be managed by the Sydney Shipping and Mercantile Agency, of Sydney, New South Wales.

Maritime Provinces and Newfoundland.

The Nova Scotia Legislature has authorized the city of Dartmouth to issue $75,000 debentures for ferry purposes.

The Dominion Department of Public Works will receive to Sept. 12, tenders for building a one-yard dipper dredge for Prince Edward Island.

The Dominion Department of Public Works has recently awarded dredging contracts in Miramichi Bay to W. J. Poupore, Montreal, and A. and R. Loggie, Loggieville, N.B., the amount of each contract being $100,000.

The Sydney Ship Chandlery Co. Ltd., has been incorporated by the Nova Scotia Legislature, with a capital of $10,000, and office at Sydney, the provisional directors being: J. Murphy, Louisburg; C. E. Morris and J. McNamara, Sydney, N. S.

Bowring Bros. are reported to have in contemplation the building of an additional steamship to run on the St. John's and New York route, in conjunction with the s.s. Florizel. The estimated cost of the proposed new vessel is reported as $400,000.

The Atlantic Fisheries Co. Ltd., of Lunenburg, N. S., has amalgamated with the C. Robin Colas Co., Ltd., and A. G. Jones & Co., of Halifax, and will conduct business under the name of Robin, Jones and Whitman, Ltd. The steamship agencies heretofore carried on by A. G. Jones and Co., will be continued under the old name.

The Newfoundland Steam Whaling Co.'s s.s. Sobraon has been sold to a Norwegian firm. She was built at Sunderland, Eng., in 1889, her dimensions being, length, 286.3 ft., breadth 41 ft., depth 26.4 ft., tonnage, 2,385 gross, 1,541 register. Her equipment includes triple expansion engines with cylinders 23½, 39 and 64 ins. diar., by 42 ins. stroke, having 278 n.h.p. The price paid is stated to have been £8,250.

The city of Sydney has been authorized by the Nova Scotia Legislature, to borrow $50,000 for the acquirement of a site for a ship-building plant, dry dock and ship repairing works, or either of them, and to provide annually out of the rates, sufficient to pay 1½% on the cost of the plant, not exceeding $1,500,000, for 20 years. The act is not to take effect until it has been formally adopted by the ratepayers in accordance with the provisions of the city charter and amending acts.

The s.s. Scotsburn, which has been built at Mahone Bay, N.S., for the Halifax and Glace Bay Steamship Co., was recently towed to Halifax, where her engine and boiler will be installed. When completed, the vessel will be operated over the Halifax-Cape Breton route, making calls at Sydney, North Sydney, Glace Bay, Port Morien, Main-a-Dieu, Louisburg, Gabarus and Fourche, by way of Bras d'Or, on alternate trips. She is 121 ft. long, 23 ft. beam, with 9 ft. hold, and has accommodation for about fifty passengers.

The following changes have been made in the port charges at St. Pierre, Miquelon: French or foreign vessels, over 25 tons register, engaged in fishing or any kind of navigation, $2.50 a ton a year; vessels over 25 tons register, entering for shelter and not landing merchandise, importing fresh fish only, 50c. a ton a year; vessels up to and including 25 tons register, foreign going coasters, or fishermen, fitted out in the colony, vessels importing coal or bait, free; the acts of 1906, 1907 and 1909, relating to port charges have been repealed.

Constant and Hawthorne of Montreal, acting for European clients, have written the Sydney, N.S., city council, offering to locate a dry dock, and ship building and repairing plant there, provided the city grant a bonus of $350,000 and free site The matter will be taken up by the ratepayers on the recommendation of the council. The plans presented cover the construction of a berth for building vessels up to 300 ft. long; engine shop; working plant; floating dock of the second class section steel pontoon type, capable of accommodating a vessel of 15,000 tons register, and a marine slip capable of handling vessels of about 5,000 tons.

Province of Quebec Marine.

L. C. Webster and W. Dobell have been elected members of the Quebec Harbor Commission.

The dredging of the St. Charles River, for the improvement of its navigation, was commenced Aug. 15.

Capt. L. A. Demers, Wreck Commissioner, left Ottawa Aug. 12 for a trip of inspection, and examination of the St. Lawrence pilots.

The Maisonneuve town council has passed a bylaw granting exemption from taxation, for 20 years, to the Vickers, Son and Maxim interests, for their proposed ship-building, repairing and dry dock plant at Molson's Creek.

The s.s. Crown of Aragon, which was chartered by the Dominion Iron and Steel Co., has been seized on a claim for $10,000 by the Canadian Electric Light Co., for damage alleged to have been caused to its cable between Quebec and Levis.

The Montreal harbor revenue for July was $56,456, against $54,073 for July 1909, and from the opening of navigation, the revenue was $169,296, against $142,128, for the same period 1909. There was a considerable decrease in the receipts from local traffic.

The Dominion Department of Public Works has awarded contracts for dredging at Montmagny, to L. Cohen and Son, Montreal, and for the construction of a breakwater at Matane, to N. Trudel. The dredging contract totals $8,000 and the breakwater $5,500.

W. J. Thompson, Manager Quebec and Levis Ferry Co., was sentenced by the Superior Court, Quebec, Aug. 5, to 48 hours imprisonment, and the company was fined $50 for contempt of court, in connection with the litigation proceedings between the Quebec and Levis Ferry Co., and the Levis Ferry, Ltd.

Press reports from Quebec, Aug. 8, stated that following an agreement, which has been reached between the rival ferry companies, the warrant issued by the Admiralty Court for the steamboat Lauzon, has been dropped, and a settlement reached by the Levis Ferry Ltd., paying the Quebec and Levis Ferry Co., $500.

The Montreal Harbor Commissioners are reported to have decided to erect a new office building for their traffic and elevator staffs, opposite the Jacques Cartier pier. It is stated that the building will be two stories, costing about $10,000, and that it will be ready for occupation by the opening of navigation next year.

The St. Lawrence Bridge Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $500,000, and office at Montreal, to carry on a bridge building business, and in connection therewith, to own and operate steam and other vessels, and to engage in contracts for engineering and other works involving the use of same.

G. W. Stephens, Chairman Montreal Harbor Commissioners, in a recent interview, is reported to have said, in regard to the proposed construction of a dry dock at Montreal, that while nothing had been settled definitely, there was a probability that a dock would be established there before next season was over. The Government is still considerign the question of a subsidy.

Donald Fraser and Sons, Ltd., has been incorporated by the Quebec Legislature, with office at Cabano, with power, among other things, to own and operate steam and other vessels, to carry on a general navigation business, and to erect telegraph lines in Temiscouata, Kamouraska and Rimouski counties. The provisional directors are D. and A. Fraser, D. Fraser, Jr., W. Matheson and A. Brebner.

The Quebec city council has approved the ferry committee's report respecting the protest recently made against the vessels and service of the Levis Ferry, Ltd., by the Quebec and Levis Ferry Co., which formerly had the contract for operating the ferry between Quebec and Levis, and recommended that the former company be notified that it must conform to the contract or it will be annulled. It is stated that if the Levis Ferry, Ltd., is compelled to conform to the contract immediately, new boats will have to be acquired, as the present ones are not paddle wheel steamers, for which the contract calls.

Ontario and the Great Lakes.

Moore and Fraser, Port Stanley, are reported to have purchased the steam tug Prodigy at Cleveland, O., for fishing purposes.

The Dominion Department of Public Works will receive tenders to Sept. 12 for the construction of an extension to the north wharf at Pelee Island.

The Dominion Department of Public Works received tenders, Aug. 31, for the construction of a breakwater at Bare Point, Port Arthur.

The steamboat Ossifrage, which grounded in the Thames River, near Chatham, Aug. 11, was released Aug. 15. The damage sustained is said to be small.

The steamboat, D. A. Gordon, which recently arrived on the Great Lakes, from England, was recently reported ashore on Parisian Island, Whitefish bay, Lake Superior.

The Dominion Department of Public Works will receive to Sept. 13, tenders for the construction of an extension to the breakwater in Colpoy's bay at Wiarton.

F. S. Wiley, Port Arthur, is reported to have purchased the Pittsburgh Steamship Co.'s steamboat J. B. Trevor, which was wrecked last fall on Isle Royale.

The Department of Railways and Canals recently received tenders for placing stone protection on the summit level, and for straightening the channel at head of lock 2, on the Welland Canal.

The Minister of Marine and the Minister of Public Works left Brockville, Aug. 4, on the Government steamboat Simcoe, for an inspection trip of the harbors and rivers of the Great Lakes.

HERMANN BOKER & CO., 332 St. James St., MONTREAL

Forwarders Ltd., incorporated under the Dominion Companies Act, with office at Kingston, Ont., has been licensed to carry on business in Ontario, with A. McLelland, Kingston, as its attorney.

Press reports state that a Government life saving station will be established shortly at Point Pelee. It is stated that the equipment will include a steel motor boat.

Capt. J. Whiteside, of the Merchants Mutual Steamship Co.'s steamboat Acadia, was killed at Port Arthur, Aug. 4, by the breaking of a derrick boom, while he was superintending the unloading of the vessel.

The damage caused by the carrying away of the gates at lock 17 on the Cornwall canal recently, has been estimated at $12,000, including the damage to the steamboat Phœnix, and to the Canada Cotton Co.'s property and stock.

The steamboat H. M. Pellatt, in tow from Buffalo to Ashtabula, was run down by the Marquette and Bessemer car ferry 15, bound from Conneaut to Port Stanley, Ont., damaging her considerably. She has been docked at Cleveland for repairs.

The Windsor, Ont., steamboat City of Dresden, was seized Aug. 6, and fined by U.S. Customs officials, for violation of the customs laws, in landing a cargo at Sandusky, Ohio, from Rondeau, Ont., without first obtaining permission.

The Northern Navigation Co.'s s.s. Hamonic is reported to have created a record for the 289 miles of the Sault to Port Arthur run, doing the journey in 15 hrs. 30 mins. The previous best is stated to have been the C.P.R. s.s. Keewatin, in 16 hrs. 50 mins.

The St. Lawrence and Chicago Steam Navigation Co.'s s.s. E. B. Osler, ran aground in the St. Clair River, near Port Huron, Aug. 15, during a fog, and was released, apparently without damage, after having a portion of her cargo of coal lightered.

A press report states that new concrete wharves have been built at Sand Point and Arnprior, Ont., on the Ottawa River, that it is proposed to build a similar wharf at Norway Bay, Que., and that steamboats will be put on to serve these places. The reports state that Mackenzie, Mann & Co. are interested.

The Niagara, St. Catharines and Toronto Navigation Co. is in the market for a steel steamboat, about 200 ft. long, for the Toronto and Port Dalhousie route, and also for new boilers for the steamboat Garden City, to be installed during the winter. Particulars will be supplied by E. F. Seixas, General Manager, St. Catharines.

H. Sutherland, Executive Agent Canadian Northern Ry., Winnipeg, was in Port Arthur early in August, when he inspected the coal and ore docks there. He is reported to have stated that the accommodation there would have to be largely increased, but that nothing could be decided until the matter had been submitted to the directors.

The U. S. Lake Survey reports the levels of the Great Lakes for July, in feet above tidewater, as follows: Superior, 601.89; Michigan and Huron, 580.50; Erie, 572.35; Ontario, 246.29. Compared with the average July levels for the past 10 years, Superior was 0.92 ft. below; Michigan and Huron, 0.72 ft. below; Erie 0.52 ft. below, and Ontario 0.53 ft. below.

The Jaques Transportation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $250,000, and office at Ottawa, to build, purchase and otherwise acquire and operate steam and other vessels; to conduct salvage operations, and to construct wharves, piers, docks, etc. The provisional directors are: C. A. Jaques, R. Bickerdike and A. M. Jaques, Montreal; J. H. Hall, Ottawa, and W. S. Hall, L'Orignal, Ont.

This company has been incorporated to take over the steamship C. A. Jaques, a description of which was given in our Aug. issue. She will be run in the freight trade between Montreal and Fort William and Port Arthur, under the management of the Merchants Mutual Line. The officers and directors of the company are:—President, R. Bickerdike; Vice President, J. H. Hall; Managing Director, C. A. Jaques; Secretary Treasurer, A. M. Jaques; other director, W. S. Hall.

The Detroit and Owen Sound Summer Resort Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $100,000 and office at Owen Sound, to conduct a summer resort in Sarawak township, Ont., and in connection therewith, to own and operate steam and other vessels, and to carry on a general transportation business by water. The provisional directors are: I. N. Aldrich, Detroit, Mich.; B. Worley, F. H. Wheeler, Chicago, Ill.; E. Lemon and C. A. Fleming, Owen Sound, Ont.

The Toronto board of control has decided to provide a 20 ft. channel through the bay, and to build a dock at Ashbridge bay, at an estimated cost of about $200,000. The dock will be 250 ft. wide by 600 ft. long, with composite wood and concrete substructure, and concrete above the water line. Freight sheds 500 ft. long by 30 ft. wide, by 14 ft. high, will also be erected. This is stated to be the first step of an extensive scheme of improvement, which the city will undertake.

Polson Iron Works, Ltd., has just completed a steam yacht for J. F. Kuhn, Pittsburgh, Pa. It has been named Ella Mary, and is a screw-driven vessel, with engine of 9 n.h.p., and has dimensions, length, 66 ft.; breadth, 11.7 ft.; depth, 6.1 ft.; tonnage, 42 gross, 25 register.

The Upper Ottawa Improvement Co., has added another vessel to its fleet. The Hiram Robinson was built this year at Sand Point, Ont., and is a screw driven vessel, with engine of 37 n.h.p.. Her dimensions are, length 110 ft.; breadth 23.6 ft.; depth 6.7 ft.; tonnage, 203 gross, 118 register.

A Belleville press dispatch says:—The Ontario and Quebec Steamship Co. has been formed by Hepburn & Co., of Picton, and the owners of the steamboats Brockville, Aletha and Varuna. The company will build a new steamer, to cost $130,000, which will be run in connection with the Alexandria on the Montreal route.

The Pointe Ann Quarries Ltd., has registered its steamboat Renvoyle, at Toronto. Some details of this vessel were given in a recent issue. The following are her dimensions; length, 250 ft.; breadth, 42.7 ft.; depth, 16.3 ft.; tonnage, 1830 gross 1176 register. She is a screw-driven vessel, with engine of 157 n.h.p.

The Western Dry Docks Co., Port Arthur, has placed orders for one large plate shear, one bending roll, one angle shear, one lathe and one drill, with the John Bertram and Sons Co., Dundas, Ont.; for electrical equipment with the Canadian Westinghouse Co., Hamilton, Ont., and for pumping machinery with the John Inglis Co., Toronto.

The Porcupine Trading and Transportation Co., Ltd., has been taken over by A. Miller, of Haileybury, and will in future be operated as the Miller Porcupine Transportation Line. It is stated to be the intention to run a freight and passenger service between Kelso and Porcupine. The boats which were being operated on the Frederickhouse River are being overhauled for the passenger service. The freight boats are running to within six miles of Porcupine, where the freight is transferred to canoes.

A press report from Fort William, Aug. 15, states that following an informal conference between city officials and officials of the Northern Navigation Co., the following information was given out by the mayor:—"Things being equal, or nearly equal, the headquarters of the Northern Navigation Co. will be established in Fort William. Things not being equal, or nearly so, Fort William the business of the company will be transacted in Port Arthur, until conditions force the consolidation of all G.T.P.R. business in Fort William."

Capt. J. McGiffen, probably the best known captain on the Great Lakes, died at Toronto Aug. 19, aged 68. He had been in the Niagara Navigation Co.'s service for 23 years, having commanded, consecutively, the Chicora, Cibola, Chippewa and Cayuga, and being at the time of his death the senior captain and commodore of the fleet. Though he had been suffering from diabetes for a number of years, he was on duty up to with-

Preston Ontario

in a few days of his death, when a comparatively trifling wound on a finger caused him to lay up. The funeral took place at Toronto Aug. 22. Capt. Sylvester, Capt. Crangle, Capt. Trowell, Capt. Jackson, F. Barlow Cumberland, Vice President Niagara Navigation Co., and B. W. Folger, General Manager Niagara Navigation Co., acting as pall bearers. Flowers were sent by the Niagara Navigation Co., Shipmasters' Association, officers of the Niagara Navigation Co.'s vessels, Niagara Gorge Rd., Hamilton Steamboat Co., Argyle Steamboat Co., and others.

Manitoba, Saskatchewan and Alberta.

The Winnipeg wharf committee, met Lt.-Col. W. P. Anderson, Chief Engineer of the Department of Marine, in Winnipeg recently, when matters relating to the establishment of Winnipeg as a public harbor, and the construction of wharves and other works, were discussed.

The Arctic Ice Co.'s steel steamboat, Amelia Mac, was launched at Winnipeg, late in August. Her dimensions are, length 70 ft.; beam, 16.6 ft.; draught, 4.6 ft. She is equipped with double compound engines with cylinders 7 and 14 ins., diar., by 10 ins. stroke, driving twin screws. This is claimed to be the first steel boat to be launched in Winnipeg.

A recent dispatch from Ottawa states that the reports received of the survey along the Saskatchewan River, in connection with the proposed opening of the waterway between Winnipeg and Edmonton, indicate that preliminary estimates will be ready by the next assembling of Parliament. It has been stated that the work can be done for about $15,000,000, exclusive of the construction of locks at Grand Falls.

The Peace River Trading and Navigation Co., is reported to have entered on a programme of improvement in that district, which will involve the expenditure of about $300,000. F. S. Lawrence, General Manager, who was in Winnepeg recently, stated the company had in contemplation, the building of a stern wheel steamboat, to run from Vermillion Falls to Hudson's Hope, B.C., about 500 miles, which latter point is only a short distance from Prince Rupert.

In our July issue, under this heading, we mentioned that the s.s. Mikado had arrived in Winnipeg from Selkirk, on June 10, and stated that it was said this was the first steamboat plying on Lake Winnipeg to go up to the city. It should have been stated that it was the first steamboat plying on Lake Winnipeg to go up to the city since the opening of the St. Andrew's lock and dam. The Hudson's Bay Co.'s steamboat Colville, which for many years plied on Lake Winnipeg, and prior to the advent of the railways, carried the company's supplies across the lake to Grand Portage, at the mouth of the Saskatchewan River, frequently went up to Winnipeg during high water periods.

B.C. and Pacific Coast Marine.

A ferry service was commenced between Ladner and Steveston, early in August, by the new steamboat New Delta, recently built at Vancouver.

The C.P.R. steamboat Kaleden, recently built for service on Okanagan Lake and River, has been put into service between Penticton and Okanagan Falls.

The Gulf Steamship and Trading Co., has inaugurated a steamboat service between Victoria and New Westminster. Two round trips are being made each week, the rates being the same as on the C.P.R. vessels.

Judgment was delivered Aug. 1, in the case of the collision of the C.P.R. Charmer and the s.s. Bermuda, which occurred some time ago. The Charmer has been held responsible for the accident, and condemned in damages, stay of execution being granted, pending an appeal.

The plans, which have been submitted for the construction of a ferry building at North Vancouver, provide for a building 132 by 26 ft., including winter and summer waiting rooms, board room, manager's and secretary's offices, etc. It will be arranged in one storey, and heated by hot water.

The Canadian Western Lumber Co., Ltd., with head office in Toronto, and which has power to own and operate steam and other vessels, and other means of transportation, has been licensed to carry on its business in British Columbia, with J. D. McCormack, Fraser Mills, as its attorney.

The West Coast Fishing and Curing Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $50,000, to conduct a general fishing and packing business, and in connection therewith to own and operate steam and other vessels, wharves, warehouses, etc.

The Northern British Columbia Development Co., Ltd., has been incorporated under the B. C. Companies Act, with a capital of $25,000, to carry on a general development business, and in connection therewith, to build, purchase or otherwise acquire and operate steam and other vessels.

It is reported that W. R. Grace and Co. will build four steamships for a service between British Columbia, Puget Sound, and other Pacific coast ports. The plans for the vessels show dimensions: —Length, 410 ft.; breadth, 52 ft.; depth, 22½ ft., with a dead weight capacity of 7,600 tons, and capable of a speed of 12 knots an hour.

The Balcom Steamship Co. is reported to have decided to operate a regular service between Victoria, Prince Rupert and Stewart. The company is, at present, running one steamboat under charter, and it is said, will charter another immediately, and expects to have two more vessels from England on the route in the spring.

The Progressive Towing Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $100,000, to take over the business now carried on by the Progressive Steamboat Co., Ltd., at Vancouver; to purchase or otherwise acquire and operate steam and other vessels, and conduct a general navigation business.

Press reports from Vancouver state that the second vessel which the C.P.R. has under construction in Scotland for the Pacific Coast service will be named Princess Mary. It was anticipated that she would be launched towards the end of Aug., and she is expected to be ready for service before the end of the year.

The North Arm Steamship Co., Ltd., has been incorporated under the B. C. Companies Act, with a capital of $25,000 to take over the business at present carried on on Burrard Inlet, under the name of the North Arm Steamship Co., and to build, purchase or otherwise acquire and operate steam and other vessels in the passenger and freight business.

The Sechelt Steamship Co.'s s.s Sechelt during a fog, Aug. 7, ran on the rocks near Prospect Point lighthouse, and sank. The passengers and crew were landed safely at the lighthouse. She was built at Pontiac, Wash., in 1893, and was formerly known as Hatty Hansen. Her dimensions were, length, 73 ft., breadth 15.2 ft.; depth, 7.4 ft.; tonnage, 105 gross, 71 register, and she was equipped with a 16 h.p. engine driving a screw.

The wharf constructed by the Provincial Government at Stewart, has been taken over by the Dominion Government, and arrangements are being made for the building of an approach to it, so that access can be had to it from the land side, at all times. Previously, it was only possible to reach it from the land side at low tide. It is reported that Mackenzie, Mann & Co., will shortly commence the construction of a private wharf at Stewart, in connection with the Portland Canal Short Line Ry.

The C.P.R. s.s. Princess May struck a reef at Sentinel Island, in the Lynn canal, Aug. 5, and eventually sank in deep water. Assistance was called for by wireless telegraph and several steam tugs were dispatched from Juneau, where the passengers and crew were safely landed. The Princess May, formerly Hating, was built at Newcastle, Eng., in 1888, and was purchased from the Chinese government in 1901. She was a screw driven vessel, with engine of 450 n.h.p. Her dimensions were: length, 249 ft.; breadth, 33.2 ft.; depth, 17.7 ft.; tonnage, 1,717 gross, 892 register.

Press reports from Vancouver, recently stated that a service between Vancouver and Fort George was about to be inaugurated, by rail, automobile and steamboat. The steamboat which will be used in the service is owned by the British Columbia Express Co., and is named B. X. She was built this year at Soda Creek, B.C., and is a paddle-wheel steamer, with engine of 27 n.h.p.. Her dimensions are: length, 127.5 ft.; breadth, 28 ft.; depth, 5.1 ft.; tonnage, 513 gross, 323 register. The headquarters of the company are at Ashcroft, and the boat will run between Soda Creek and Fort George, making three round trips each week. The complete journey from Vancouver to Fort George of 530 miles will be accomplished in 36 hrs., and the return journey in 30 hrs.

Welland and Georgian Bay Canal.

An Ottawa dispatch of Aug. 23 says: —The Department of Railways is having a survey made to determine the cost of enlarging the Welland Canal, and it is expected that before Parliament meets the work will be completed. A rough estimate fixed the cost of making a 21 ft. passage, at $50,000,000, which is about half what the Georgian Bay Canal is estimated to cost. However, it is pointed out that as the enlargement of the Welland Canal would have to be followed by the enlargement of the whole system of St. Lawrence Canals the cost of improving the Welland route might be greater than the Georgian Bay Canal. The company which wants to build the latter waterway, with generous Government aid, renewed its offer before the departure of Sir Wilfrid Laurier for the west. The Prime Minister has stated that both waterways will be developed as soon as the finances of the country warrant. However, one has to come first, and the survey which is now being made of the Welland will aid Parliament in deciding which.

Vessels Removed from the Register.—The following vessels were removed from the register during July, for the reasons assigned: Steam—Daughter of the Peaks, Kenora, Ont., nine tons, condemned; James Semple, Pictou, N. S., 63 tons, broken up; Sayona, 30 tons, sold to foreigners. Sailing—Acadian, Weymouth, N. S., 32 tons, sunk; Harold L. Berry, Charlottetown, P.E.I., 99 tons, wrecked; Havelock, Annapolis Royal, N. S., 198 tons, wrecked; Native of Foucher, Arichat, N. S., 16 tons, burnt; Reynard, Parrsboro, N. S., 560 tons, wrecked; St. Joseph, Quebec, Que., 115 tons, broken up.

The Water Carriage of Goods Act.

The Water Carriage of Goods Act, the text of which we published in our June issue, comes into force Sept. 1. Reports state that shipowners maintain that it makes them appear to be the insurers of the cargo, and that it will inevitably tend to raise rates to the detriment of the shipping trade. In this connection it may be as well to point out that clause 4 provides that any bill of lading containing a clause whereby the owner or charterer is relieved from liability for loss or damage arising from negligence in loading, custody or delivery, or the obligations to properly man, equip and supply the vessel, are lessened or avoided; or the obligations of the master, officers or agent to carefully handle, stow, care for and deliver goods, is lessened or avoided, such clause shall be null and void. Clauses 6 and 7 provide that neither the ship, owner, charterer nor agent shall be liable for loss or damage arising from faults or errors of navigation, or latent defect, nor for loss by fire, dangers of navigable waters, acts of God or public enemies, inherent defect, quality or vice of the thing carried, insufficiency of package, seizure under legal process, acts of omission by shipper, attempting to save life or property at sea, etc., if, in the first two cases mentioned, due diligence is exercised to have the ship in all respects, properly manned, equipped and supplied.

Beeson's Marine Directory of the North Western Lakes, has reached its 24th year of publication. The tabulated information is as complete as usual, and the illustrations are numerous. In the general information is given descriptions of the Canadian harbors on the Upper St. Lawrence River, and Great Lakes and Georgian Bay, compiled from official sources. The compilation of the information and its arrangement are personally attended to by H. C. Beeson, who started the publication, and he also is its publisher from his offices, 1340 Washington Boulevard, Chicago, Ill.

Capt. H. St. G. Lindsay has been appointed Examiner of Masters and Mates, vice Capt. L. A. Demers, appointpointed Wreck Commissioner.

Orders in council have been passed approving regulations for the governance of draw or swing bridges, other than railway bridges, and for the establishment and use of cable ferries, over and across navigable waters, and rescinding the orders in council, respecting same issued May 3.

Iron Castings, Defects and Remedies.

To many consumers an iron casting is an iron casting, and little thought or attention is given to its quality, apart from a general surface examination, to see whether it appears to be sound and if it is clean and of the desired dimensions.

In some cases, the casting must be machined prior to use, and the serious defect may develop that the iron is so hard as to turn the edge of the tool, or make the work of machining so slow that labor costs are high. If the casting cannot be machined, it must be rejected and delay occurs in getting replacement; and even when it can be slowly machined and finally gets into service, difficulty soon begins, for a casting of this type though having a high tensile strength, is unfortunately brittle and fragile under impact, and, as a consequence, failure is apt to occur after a short service.

The cause of such hardness is generally excess either of sulphur or of manganese, due to defective quality of the cupola charge, that is to say, of the pig iron, or scrap, or coke, one or all. In some cases also the silicon is too low for the character of the casting. Sometimes, too, the moulding sand has been improperly tempered and the iron has been chilled, or, again, perhaps a poor grade or an excessive proportion of scrap has been used in the charge.

From this brief statement it will be evident that "hard iron" is not by any means a result of any one cause, but may be due to many widely differing conditions.

In order to find the proper remedy, the cause of the difficulty must, of course, be determined. Often an analysis of the iron will tell the story, or again, in some cases the physical condition of the casting will give the clue by presence and appearance of blowholes, shrinkage-cracks and other characteristic defects.

If the hardness is caused by excess of sulphur or by otherwise incorrect composition, the inference is that proper care has not been used in the selection of the material, and purchase should be made under carefully arranged specifications, fixing the proportion of silicon, phosporous, sulphur, and carbon to accord with the properties desired in the castings. For instance, if tough, strong, easily machined iron is desired, the silicon, sulphur, phosphorus, and manganese should be limited and the quality of the coke should be carefully investigated in order to hold down the proportions of sulphur and of ash, for obviously it is a sheer waste of time and money to pay great attention to the quality of the pig iron and then accept and use shipments of coke which may contain thirty times as much sulphur as is present in ever so poor a grade of pig iron. Under such conditions nothing but hard castings may be expected.

Porous, spongy iron is another source of annoyance and loss to the consumer Frequently a great deal of work will be put upon a casting in the machine shop, only to have a large cavity finally develop, rendering the casting unsafe for the service intended. In such case, replacement must be made by the foundry, but the labor is lost and the delay which occurs in replacement often causes great inconvenience. Frequently the surface of the casting shows no indication of this defective condition.

Howard G. Kelley
Chief Engineer Grand Trunk Railway.

Porosity is frequently due to blowholes in the iron, as for instance, when gas has been trapped in the casting owing to failure to provide proper vents. In some cases, the iron may not have been fluid enough when poured into the mold, and in consequence, the small bubbles of gas could not escape before solidification occurred, and an unsound, honeycombed castings is the result.

Every foundryman knows well the importance of "hot iron"—that is to say, iron which is at such a high temperature when poured into the ladle that it is almost as fluid as water. Such iron fills the molds thoroughly, and many of the foundry troubles which otherwise are apt to result are avoided. To secure it, one must pay special attention to the cupola charge. A sufficient proportion of coke must be used, and its quality must be carefully regulated. The proportion of sulphur and of ash must be low, and dust and small pieces which would tend to check the draught and thus prevent free-burning must be absent. A sufficient air pressure must be maintained, and the cupola practice so regulated that a quick melt will be secured. Other things being equal, the shorter the time in the cupola, the better the chance to get good castings.

Shrinkage holes or cracks are apt to occur with hard, high sulphur iron, and this condition is due simply to the fact that iron of this character contracts to a much greater extent than does a softer iron containing a large proportion of graphitic carbon. Shrinkage holes are a fruitful cause of failure, and they are particularly objectionable owing to the fact that they frequently do not appear upon the surface, and hence the weakness may not be suspected until failure occurs. The remedy for such condition, obviously is to keep at a minimum the proportion of sulphur in each constituent of the foundry charge, and take proper precautions to keep the iron soft.

Defects of castings are, unfortunately, of so many varieties that any attempt to cover the subject even in a brief description, would weary your patience, and I have, therefore, confined myself to a few of the typical cases which are seen all too often in service. "Strong as iron" is an axiom, but frequently the appearance of the metal belies the truth. As an instance of this, I have in mind, a heavy, massive cast iron base weighing many tons which supported a large shop tool. After a short service cracks began to develop, necessitating the removal of the tool and the replacement of the base. A careful investigation was made to determine the cause of failure and it was found that the proportion of phosphorus and of silicon in the iron were excessive, causing the metal to be exceedingly weak, and hence resulting in fracture. High phosphorus is particularly objectionable when the casting is subjected to impact, as for instance, in wheel-centres, cylindersr, columns, etc., and unluckily for the consumer such iron can generally be obtained at a considerably lower cost than can a stronger, tougher, grade, and consequently, unless each shipment is systematically tested before use the better quality cannot be expected. Many cases have come under our observation in which wheel-centres and cylinders containing about one per cent. of phosphorus have cracked after a service of only a few weeks, or even days, while with the phosphorus reduced

Iron Castings. Fig. 1.

to about ½ of 1% and with the other elements properly proportioned the castings would give good service for years under the same conditions.

In cylinders, radiators, and other castings, a very close texture is essential in order to avoid leakage. Often there is little or no indication to the eye that holes exist in the iron, and yet under test the pressure gauge falls, showing that the iron is porous. Such character may be due to the presence of slag and oxide in the casting, or, in other words, the continuity of the iron may be broken up by fine particles of foreign matter. This condition may be caused by overblowing the iron in the cupola, or it may result from the impurities in the scrap, and in order to remove it thorough deoxidation is essential.

From what has been said, it will be readily understood that radical differences exist in the structure of the metal of castings, and within recent years great strides have been taken in the development and microscopic study of the characteristic forms, and it has become possible to identify many causes of difficulty by the appearance of polished or etched sections cut from the castings.

Fig. 1 shows a very open structure with large areas of graphite. A structure of this kind is relatively weak, and not well adapted to withstand impacts. In fig. 2 the iron is porous and contains considerable oxidized metal, a consequence of defective foundry practice. In fig. 3 the metal as a whole has a close texture, and is strong and well adapted for the service intended. The iron is largely free from slag and oxides and the graphite, although present in even larger proportions than in figure 1, is distributed in fine lines throughout the metal, greatly increasing the strength. The analysis of this iron showed that the constituents had been carefully selected, and its structure proves that correct methods of foundry practice have been used.

The foregoing paper was prepared by Robt. Job, Director of Laboratories, Milton Hersey Co., Limited, for presentation before the Canadian Railway Club.

Railway Lands Patented.—Letters patent were issued during July, covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	20.15
Canadian Pacific Ry.	972.46
Canadian Pacific Ry. roadbed and station grounds	156.62
Grand Trunk Pacific Ry.	836.51
Total	1,985.74

Sir Thos. G. Shaughnessy, President C.P.R., has given $1,000 towards the National Apple Show at Vancouver, B.C.

A. Smith, cashier of the Canadian Northern Transfer Co., Winnipeg, Man., was placed under arrest Sept. 7, on a charge of embezzlement, the alleged shortage being $2,500.

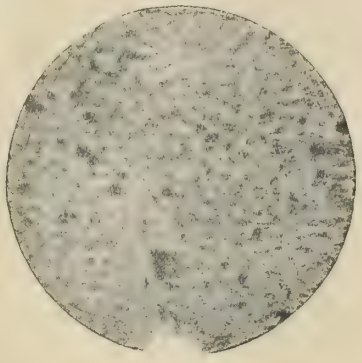
Protection of Wooden Trestles.

The Board of Railway Commissioners has passed the following order 11446:

In pursuance of the powers conferred upon it by secs. 30 and 269 of the Railway Act, and of all other powers possessed by the Board in that behalf; and upon hearing what was alleged at the sittings of the Board held in Ottawa on June 8, 1909, by counsel and representatives for the Canadian Northern, the Grand Trunk and the Canadian Pacific Railway Companies, and the Michigan Central Rd. Co.: it is ordered

1. That every railway company subject to the legislative authority of the Parliament of Canada, operating by steam power any railway or railways, any part or parts of which is or are constructed of, or upon, wooden trestles the whole of which cannot be seen from an approaching train for a distance of at least 1,000 ft., do, during May, June, July, August, September and October of each year, provide, place, and keep a watchman, track-walker, fire alarm signals, ballast flooring, zinc covering over caps and intersections, or approved fireproof paint, as hereinafter directed, for the purpose of protecting the said trestles from fire, each such company having the option of adopting any of the said foregoing methods of protection.

2. That every such company shall cause to be placed and maintained at every trestle less than 30 ft. in length, one barrel of a capacity of at least 45



Iron Castings. Fig. 2.

gallons, and on trestles of over 30 ft. in length a like barrel upon or near each end, with intermediate barrels of the like capacity not more than 150 ft. apart; provided, however, that pile trestles over streams or other bodies of water need not be furnished with intermediate barrels.

3. That every such company shall cause the said barrels to be kept filled with water.

4. That every such company shall cause all brush and dead grass to be removed from beneath and around every such trestle, and shall cause its right of way crossed by such trestle to be kept free from combustible matter.

5. That on or in the neighborhood of timber lands, or in localities distant from settlement, every such company shall cause to be provided pails for use at all trestles, and all watchmen and track-walkers shall carry such pails while upon duty at trestles.

6. That where the protection provided is by watchman or track-walker, all trestles on main lines shall be inspected at least twice each 24 hours, at intervals of not less than eight hours, and once every 24 hours on branch lines.

7. That in the event of any such barrrel or pail not being in good and efficient condition for holding water, every such watchman or track-walker shall forthwith repair or replace the same, or if it cannot be done by him, he shall forthwith report such condition to his superior officer Every such watchman or track-walker shall see that water barrels are at all times kept filled to within 10 in. of the top, or forthwith report same to his superior officer. Every such watchman or track-walker, whenever any such trestle is injured by fire, shall, as soon as possible thereafter, report the same to his superior officer.

8. That the fire alarm signals be equal, in the opinion of an engineer of the Board, to the Montauk thermostat.

9. That if fireproof paint is used, one coat thereof, at least equal to the Clapp fireproof paint, be applied at least every five years.

10. That the ballast flooring be of gravel and be at least equal to the standard of the flooring adopted by the Great Northern Ry. Co., plans of which are on file with the Board. This flooring consists of a complete coating of gravel from beneath the head of the rail to the ties, extending laterally from outside guardrail to outside guardrail.

11. That if zinc or galvanized iron is used, the caps, stringers, and the outside of the batter posts of every such trestle, and, if the company desires, the ties, be covered with a zinc or galvanized iron covering.

12. That every railway company failing or neglecting to comply with any of the foregoing regulations, shall be subject to a penalty of $30.

13. That every watchman or track-walker failing or neglecting to make inspection in accordance with the foregoing regulations, or failing or neglecting to make any of the reports herein required of him, or otherwise defaulting in any of the duties imposed upon him by this order, shall be subject to a penalty of $15 for each such failure or neglect.

14. That every railway company shall cause every watchman or track-walker to be furnished with a copy of this order.

15. That order 5103, July 30, 1908, be rescinded.

A. E. Voysey, General Traffic Department, C.P.R., London, Eng., in renewing his subscription, writes: "I look forward with much interest to reading The Railway and Marine World every month."

The Board of Railway Commissioners has approved of the following passenger tariffs:—Supplement no. 1 to local standard passenger tariff no. 1 of the St. Maurice Valley Ry., fixing a fare of 3 cents a mile between Shawinigan Falls and Grand Mere, Que., same as is in force on the previously completed portion of the line from Three Rivers to Shawinigan Falls. Standard passenger tariff of the Algoma Central and Hudson Bay Ry.; and of the Manitoulin and North Shore Ry., at the rate of 4 cents a mile. Standard passenger tariff, C.R.C. no. 550 of the Great Northern Ry., for the following lines in Canada:—Crow's Nest Southern Ry., 4 cents a mile; International Navigation and Trading Co., 4 cents a mile; Manitoba Great Northern Ry., 3 cents a mile; New Westminster Southern Ry., 4 cents a mile.

Iron Castings. Fig. 3.

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

Improvements in Locomotive Boilers.

By H. H. Vaughan, Assistant to the Vice President Canadian Pacific Ry.

(CONTINUED FROM SEPTEMBER ISSUE.)

STAYBOLTS.—In Canada and the U.S. are universally of wrought iron, generally 1 in. in diameter although sizes from ⅞ to 1⅛ ins. are used to a certain extent. The outer ends are usually drilled with a 3-16 in. hole 1¼ ins. deep, for the purpose of indicating by the escape of water any breakage that might occur. In place of the rigid bolt various types of flexible bolts are frequently substituted, and fig. 28, shows a flexible bolt which is in common use, while fig. 29, shows a patented type of flexible bolt called the Tate which is also used by a number of administrations replying. The latter possesses the advantage that deposits of scale cannot interfere with its flexibility. Flexible bolts of whatever type are usually applied to fire-boxes at the points where the amount of breakage of staybolts experienced is large. Fig. 30, shows a representative application in which the flexible bolts are disposed along the edges and corners of the fire-box sheets, which are the points where breakage most frequently occurs, and the number of flexible bolts is usually about 30 to 40 of the entire number of staybolts in the fire-box. On Wooten fire-boxes the breakage occurs in a different location. viz., for about 2 ft. above the mud ring throughout the entire length of the side sheets, and roads on which this type of boiler is used apply flexible staybolts in that location. While not common practice certain administrations have largely extended the use of this type of bolt. It has given exceedingly good satisfaction so far as freedom from breakages is concerned but on account of its increased cost the question of determining to what extent it is economical to apply them is largely dependent on the service obtained from the ordinary type of bolt. This has been considerably improved by the increase that has taken place in the water space around the fire-box and recent indications would appear to show that while the use of a certain number of flexible staybolts is advisable that the number employed will not be largely increased. In South America where copper fire-boxes are used copper staybolts are alone employed and flexible bolts are consequently not used.

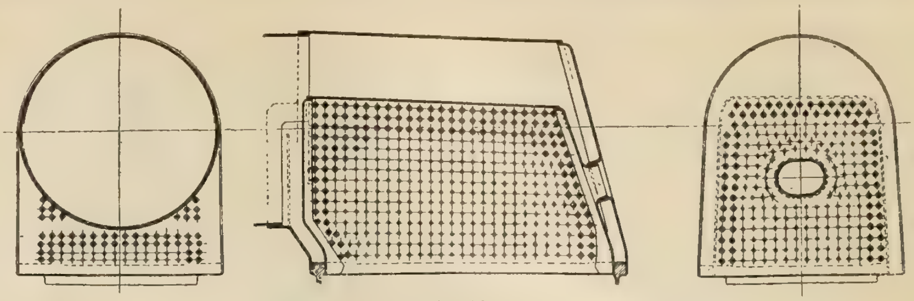


Fig. 30.

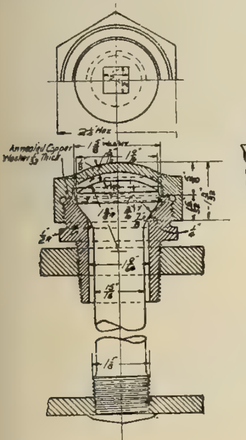

Fig. 28.

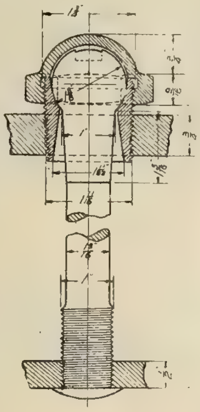

Fig. 29.

TUBES are usually 2 ins. in diameter although some administrations use 2¼ in. tubes on large engines while others use 2¼ ins. when tubes are over 15 to 18 ft. in length. Replies would indicate that the use of 2¼ in. tubes is usual on long boilers, but that 2 in. tubes have been found satisfactory for lengths of 18 to 20 ft. The tubes are usually 0.12 ins. in thickness but a number of administrations report using tubes 0.11 ins. in thickness with satisfactory results. The usual spacing center to center for a 2 in. tube is 2¾ ins. and for 2¼ in. flues 3 ins. A number of administrations. especially those operating in districts where the water is not good. have increased the spacing to 2⅞ ins. for 2 in. and 3⅛ in. for 2¾ ins., and report better circulation and improved results. In the front tube sheet the spacing is usually 2 11-16 to 2¾ ins. for the 2 in. tubes, and a corresponding distance for 2¼ in. tubes. No difficulty is experienced with smaller spacing in the front tube sheet, and the weight of the boiler can evidently be somewhat reduced. The tubes are usually disposed in rows that are vertical and incline at 30 deg. to the horizontal. Occasionally two vertical rows of tubes are used in the center, and one administration is using three vertical rows in the center, and three horizontal rows about the middle of the sheet. A few administrations use vertical and horizontal rows only and while these roads are comparatively few in number this arrangement is claimed to give better circulation and tend to keep the tubes cleaner.

Apart from the South American administrations which are using brass tubes the invariable practice is to cut out the tube when the end has been damaged by continual tightening, and subject it to what is termed rattling by rolling it with other tubes in a machine which removes the scale. A piece about 7 ins. long is then welded on the original tube to restore it to its proper length. This process is termed safe-ending and is illustrated in fig. 31. It will be seen that the body of the tube is expanded to taper from the inside outwards, while the safe end is tapered from the outside to the inner edge. The safe end is then welded to the body of the tube and the opposite end of the original tube cut off to length. The hole in the tube sheet is usually made of the same diameter as the tube, viz., 2 ins. for 2 in. tubes. The end of the tube is reduced in diameter to 1⅞ ins. and a copper ferrule 1-16 in. or less in thickness and the same width as the thickness of the tube sheet is placed in the hole in the tube sheet with its edge about 1-16 in. below the back surface of the sheet. The ferrule is slightly rolled to hold it in place and the tube inserted until its end projects 3-16 ins. beyond the sheet within the fire-box. The tube is then rolled in place and its appearance at this stage is shown in fig. 32. The roller expander used is shown in fig. 33 of what is frequently termed the Dudgeon type. The tube end is next expanded with what is termed a Prosser expander, which expands the tube slightly on both sides of the tube sheet driving the projecting end outward and pinching the tube tightly against the sheet on both outside and inside. Its appearance when this operation is completed is shown in fig. 34. The tool which does this work is made in sections which are expanded by the driving in of a tapered pin and is called the Prosser expander after its inventor. It is shown in fig. 35. The end of the tube is next beaded over and its appearance when this is completed is shown in fig. 36, which also shows the action of the beading tool. This is shown in detail in fig. 37, and the gauge by which the tool is maintained in its proper shape is shown in fig. 38. The process illustrated while varying slightly in detail is practically in universal use throughout the U.S. The inside shape of the Prosser expander and of the beading tool vary somewhat with different administrations. but with each, the shape of these tools is maintained with the greatest care, as any variation in their form or dimensions, at the various points at which this work is done, will cause serious damage to the ends of the tubes through reducing their thickness unevenly and will materially affect the service they give. At the front end of the boiler no copper ferrules are used. The hole is usually ⅛ in. larger than the actual diameter of the tube, and the tube is slightly enlarged before being put in, and expanded into the sheet by a roller expander. Some administrations depend entirely upon rolling in the front sheet, others bead 20% of the flues in the front sheet while some bead

PITTSBURG AND NEW YORK

all flues in the front sheet in addition. The usual practice is to bead a portion of the flues in the front sheet, especially when the boiler pressure is over 180 lbs. In some cases where horizontal and vertical rows of flues are used, these are beaded while those in the remaining rows are simply rolled. No trouble is reported in either case in the front flue sheet and there is no question that flues properly rolled into this sheet furnish ample strength to withstand the strains.

Water Gauges.—The use of both gauge cocks and glass water gauges is practically universal. The gauge cocks are located on the right hand side of the back of the boiler where they can be easily reached by the engineer. The glass water gauges are usually placed on the left side, the common arrangement being similar to that shown in fig. 39. The distance from fire-box crown sheet to the bottom of gauge cock, which is usually placed on a level with the bottom of the visible portion of the glass water gauge, varies considerably on different roads. The smallest figure reported is 2½ ins. and the greatest 7 ins. General practice would indicate that this figure should not be less than 3 ins. while many administrations prefer 3½ or 4 ins. The gauge cocks are usually three in number. the distance from center of bottom to top gauge cock being very generally 6 ins. The visible portion of the glass water gauge is very generally 8 to 9 ins. in length, the tendency being to reduce this and a length of 7 ins. is in common use. In place of glass tubes, various designs of reflex gauges are extensively used having an opening of 6½ to 8 ins. The water is visible in the gauge glass at from 3 to 4 ins. above the crown sheet while with the gauge glass full of water the depth of water is from 10 to 11 ins.

Boiler and Fire-box Material.—The plates of the shell of the boiler are almost universally obtained to specification, while those for the fire-box, in addition to conforming to specification, are frequently required to be furnished by certain makers. The specifications in use follow very closely those of the

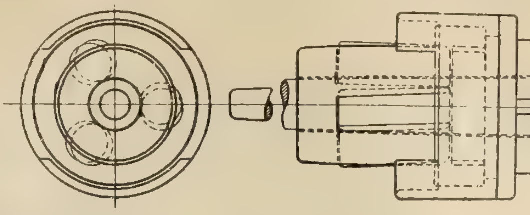

Fig 33.

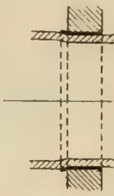

Fig. 34.

American Railway Master Mechanics Association, extracts from which are as follows:

1—Special requirements for shell sheets.—This grade of steel is known to the trade as flange or boiler steel. The desired tensile strength is 60,000 lbs. per square inch, with minimum and maximum limits 55.000 and 65,000 lbs. The elongation in 8 ins. shall not be less than 25% for sheets ¾ in. thick or under. For thicker sheets, deduct 1% from specified elongation for each one-eighth inch additional thickness.

2—Chemical requirements for shell sheets.
Phosphorous shall not exceed (acid) 0.06%
Phosphorous shall not exceed (basic) .... 0.04%.
Sulphur shall not exceed .... 0.05%.
Manganese .... 0.30 to 0.60%.

3—Special requirements for fire-box steel.—The desired tensile strength is 57,000 lbs. per square inch, with minimum and maximum limits 52,000 and 62,000 lbs. The elongation in 8 ins. shall not be less than 26%.

4—Chemical requirements for fire-box sheets.
Carbon .... 0.15 to 0.25%.
Phosphorous shall not exceed (acid) .... 0.04%.
Phosphorous shall not exceed (basic) ... 0.03%.
Sulphur shall not exceed .... 0.04%.
Manganese .... 0.30 to 0.50%.

5—Bending tests.—Test specimens for this purpose shall be 1½ ins. wide, and for material ¾ in. or less in thickness shall be of the same thickness as that of the finished sheet. For sheets more than ¾ in. thick the bending test specimens may be ½ in. thick. The sheared edges of bending test specimen may be milled or planed. The cold bending test shall be made on material in the condition in which it is to be used. The specimen for quench bending test shall be heated to a light cherry red. as seen in the dark, and quenched in water having a temperature between 80 deg. and 90 deg. Fahr. Boiler steel and fire-box steel, before and after quenching, shall bend cold 180 deg. flat on itself without fracture on the outside of the bent portion. The bending test may be made by pressure or by blows. One cold bending specimen and one quenched bending specimen will be furnished from each plate as it is rolled. The homogeneity test for fire-box steel shall be made on one of the broken tensile specimens.

6—Specimens for tensile test.—Two tensile test specimens will be furnished from each plate as it is rolled. The standard test specimen of 8 in. gauged length shall be used for the tensile test.

7—The Homogeneity test.—For fire-box steel is made as follows: A portion of the broken tensile test specimen is either nicked with a chisel or grooved on a machine, transversely about 1-16 in. deep, in three places about 2 ins. apart. The first groove should be made on one side, 2 ins. from the square end of the specimen; the second, 2 ins. from it on the opposite side, and the third, 2 ins. from the last and on the opposite side from it. The test specimen is then put in a vise, with the first groove about a quarter of an inch above the jaws, care being taken to hold it firmly. The projecting end of the test specimen is then broken off by means of a hammer, a number of light blows being used, and the bending being away from the groove. The specimen is broken at the other two grooves in the same way. The object of this treatment is to open and render visible to the eye any seams due to failure to weld up, or to foreign interposed matter, or cavities due to gas bubbles in the ingot. After rupture, one side of each fracture is examined, a pocket lens being used if necessary, and the length of the seams and cavities is determined. The broken specimen shall not show any single seam or cavity more than ¼ in. long in either of the three fractures.

A number of administrations specify that plates which are used for throat sheets, dome collars or which undergo severe flanging shall be furnished to fire-box steel specifications. The specifications for methods of inspection, variations in weight. etc., vary considerably but otherwise the more important variations from the above specifications are as follows: The Pennsylvania, Baltimore & Ohio and Southern Railways, specify that the elongation for boiler plates shall equal 14,000,000 divided by the tensile strength in pounds, and do not reject plates for high tensile strength if the elongation is over 28%. These roads also desire that the plates shall contain 0.03 % copper. Several administrations in place of allowing a different amount of phosphorous in basic and acid steel simply specify that the amount of phosphorous shall not exceed 0.05%. The Pennsylvania Rd. specifies for fire-box steel a tensile strength of between 55,000 and 65,000 lbs. per square inch with an elongation equal to 14,500,000 divided by the tensile strength in pounds. The Baltimore & Ohio Railroad specify a tensile strength of between 48,000 and 58,000 lbs. per square inch with the same elongation. A number of administrations specify for fire-box sheets that the sulphur shall not exceed 0.035%. The Pennsylvania, Baltimore & Ohio and several other large administrations also specify that the manganese shall not exceed 0.45% or the silicon 0.03%. The Pennsylvania Rd. desires that the plates shall contain 0.03% of copper but reject if they contain more than 0.05%. The Baltimore & Ohio Railroad desire that the plate shall contain 0.02% of copper but reject if they contain more than 0.03%. In general, however, it may be stated that the specifications of the American Railway Master Mechanics Association represent the average material specified for use in boiler steel. There is a tendency to use steel either slightly softer, or slightly harder than that specified by the Association for fire-box plates and also to insist on the sulphur and phosphorous content being

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

somewhat below that mentioned. Many specifications specify that the steel desired for fire-box plates is the best that can be made by modern methods and the various specifications are evidently drawn with this end in view.

TUBE MATERIAL.—For many years charcoal iron has been considered the best material for boiler tubes. Seamless steel is now extensively used, and is considered by many preferable for that portion of the tube which is inserted into the tube sheet. as it is found to give longer life before renewal is required. A number of administrations replying express a preference for the lap welded charcoal iron tube, while others consider charcoal iron tubes resist pitting better than steel tubes but do not last as long in the tube sheet. Some administrations use a tube of charcoal iron but weld to it a seamless steel end, and where trouble is experienced by the water attacking the body of the tube this would apparently be the best practice. Usually the same material is used for the body of the tube and for the safe ends which are welded to it, after it has been removed from the boiler, in order to restore it to its original length. In some cases, however, the safe ends are made of greater thickness than the body of the tube. usually 0.135 in., and two large administrations apply steel safe ends to new wrought iron tubes before placing them in the boiler.

In order to determine the quality of the material some administrations depend entirely upon the brand, others entirely on the specification while a combination of the two is in general practice. Specifications employed are usually similar to those of the American Railway Master Mechanics Association which are as follows:

SPECIFICATION FOR IRON LOCOMOTIVE BOILER TUBES.

1—Tubes are to be made of knobbed, hammered charcoal iron, lapwelded.

2—Tubes must be of uniform thickness throughout, except at weld where an additional thickness of 0.015 will be allowed. They must be circular within 0.02 in., and the mean dismeter must be within 0.015 in. of the size ordered. They must be within 0.01 in. of the thickness specified and not less than the length ordered, but may exceed this by 0.125 in.

4—Tubes must have smooth surface, free from all laminations, cracks, blister, pits and imperfect welds. They must be free from bends, kinks and buckles. and from evidence of unequal contraction in cooling or injury in manipulation.

5—Bending tests.—Strips ½ in. in width by 6 ins. in length, planed lengthwise from tubes, after having been heated to a cherry red and quenched in water at 80 deg. Fahr., shall bend in opposite directions at each end, without cracks or flaws and when nicked and broken by slight blows, these strips must show a fracture wholly fibrous.

6—Expanding test.—Sections of tubes 12 ins. long shall be heated a length of 5 ins. to a bright cherry red in daylight and then placed in a vertical position and a smooth taper steel pin at blue heat will be driven into the end of the tube by light blows of a 10 lb. hammer. Under this test the tube must stretch to 1⅛ times its original diameter without splitting or cracking. The pin used shall be of tool steel tapered 1½ ins. to the foot. In making this test, care must be taken to see that the end of the tube is smoothly trimmed.

7—One tube is to be tested. as required in pars. 5 and 6, in each lot of 250 tubes or less.

8—Crushing test.—A section of tube 2½ ins. long, when placed vertically on the anvil of a steam hammer and subjected to a series of light blows, must crush to a height of 1⅛ ins. without splitting in either direction and without cracking or bending at weld.

9—Hydraulic test.—Before shipping, each tube must be tested by manufacturer to 500 lbs. per square inch, and each tube must be plainly marked in the middle: "Knobbled charcoal, tested to 500 lbs. pressure."

10—In addition to the above tests, tubes which, when inserted into boilers, split or break while being expanded or beaded, and also individual tubes which fail to pass surface inspection will be rejected and returned to the makers at their expense.

11—Etching test.—In case of doubt as to the quality of the material, the following test shall be made to detect the presence of steel. A section of tube, turned or ground to a perfectly true surface on the end. will be polished free from dirt or cracks. and the end of the tube will be suspended in a bath of nine parts water, three parts sulphuric acid and one part hydrochloric acid. The bath will be prepared by placing water in a porcelain dish, adding the sulphuric and then the hydrochloric acid. The chemical action must be allowed to continue until the soft parts are sufficiently dissolved so that the iron tube will show a decided ridged surface, with the weld very distinct, while the steel tube will show a homogeneous surface.

SPECIFICATIONS FOR SEAMLESS, COLD DRAWN STEEL LOCOMOTIVE BOILER TUBES.

1—Tubes are to be cold drawn, seamless and made of open-hearth steel.—It is desired that the steel from which the tubes are manufactured should have the following chemical composition:

Carbon	0.15 to 0.20%.
Manganese	0.45 to 0.55%.
Sulphur, below	0.03%.
Phosphorus, below	0.03%.

Tubes containing more than 0.03 phosphorous or sulphur will be rejected.

2—Tubes must be of uniform thickness throughout.—They must be circular within 0.02 of an inch and the mean diameter must be within 0.015 in. of the size ordered. They must be within 0.01 in. of the thickness specified and not less than the length ordered, but may exceed this by 0.125 in. They must be free from bends, kinks and buckles.

4—Bending test.—Strips ½ in. in width by 6 ins. in length, planed lengthwise from tubes, after having been heated to a cherry red and quenched in water at 80 deg. Fahr., shall bend in opposite directions at each end, without cracks or uaws.

5—Expanding test.—Sections of tubes 12 ins. long shall be heated a length of 5 ins. to a bright cherry red in daylight and then placed

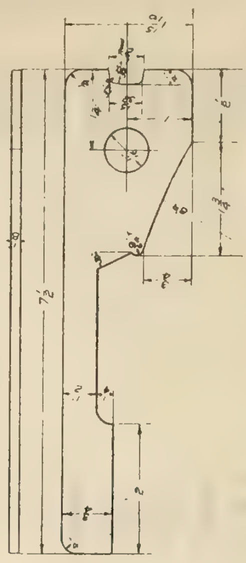

Fig. 38.

in a vertical position and a smooth taper steel pin at blue heat will be driven into the end of the tube by light blows of a 10 lb. hammer. Under this test the tube must stretch to 1⅛ times its original diameter without splitting or cracking. The pin used shall be of tool steel tapered 1½ ins. to the foot. In making this test care must be taken to see that the end of the tube is smoothly trimmed.

6—Crushing test.—A section of tube 2½ ins. long, when placed vertically on the anvil of a steam hammer, and subjected to a series of light blows, must crush to a height of 1⅛ ins. without splitting in either direction.

7—Flattening test.—A test piece of tube 6 ins. long, when flattened lengthwise cold until the sides are separated by a distance equal to the gauge of the tube, must not show any splits or cracks.

8—One tube is to be tested as required in pars. 4, 5, 6 and 7 in each lot of 250 tubes, or less.

9—Each tube must be subjected by the manufacturer to an internal pressure of 1,000 lbs. to the square inch and must be plainly stenciled Seamless Steel Tubes, tested to 1,000 lbs.

It is unusual to adopt these specifications in their entirety and the expanding test, in par. 6 of specification for iron locomotive boiler tubes, is frequently omitted. Several administrations also use a crushing test similar to par. 8 in specification for iron locomotive boiler tubes. but employ a section of tube 1¼ ins. long, which when flattened down solid must show but slight cracks for iron tubes, and no cracks whatever for steel. Direct tensile tests are seldom used, but one administration specifies a tensile strength lengthways of the tube of 48,000 lbs. per square inch, and an elongation of 20% in 2 ins. Another large administration uses a special test in which the tubes are forced cold over a steel tapered plug, and must expand to 1.3 times their original diameter without splitting, but in general there is a tendency to simplify specifications for wrought iron tubes, and with seamless steel tubes, on account of the uniformly high quality of the material required to withstand the drawing process, there is a tendency to accept tubes made by a reliable manufacturer without extensive specifications.

STAYBOLT MATERIAL.—The quality of the iron used is in most cases determined by the brand. On account of the continual bending strains which staybolts are subjected to, by the relative movement which occurs between the inner and outer fire-box sheets, the structure of the iron is at least equal in importance to its physical properties, and, with the exception of a few administrations, specifications are not used to determine whether any make of iron is acceptable or not, but are used in connection with the brand as a safe guard. One administration which depends upon specifications, expresses the opinion that the make of iron should also be taken into

consideration, thus confirming the opinion that the method of manufacture is an important factor in the life of the stays. Where specifications are used, the usual requirements are a tensile strength of from 48,000 to 52,000 lbs., with an elongation of 28% in 8 ins. In some cases the elongation required is specified to vary with the strength. Thus an iron is accepted with 46,000 lbs. provided the elongation is 30%, and with 51,000 lbs. provided the elongation is 27%. The reduction of area of the fracture is occasionally specified, and where dependence is placed on the specification, this requirement is more important than any other in determining the extent to which the iron has been worked and its relative quality. A practical test is frequently specified to ensure that the iron can be rivetted cold without splitting and bending tests are used in which the iron is specified to bend over 180 deg. without fracturing, either hot or cold, the additional requirement being occasionally inserted that it shall be tested in two directions at right angles to each other. A test is also in common use in which the threaded bar is bent for 180 deg. over a bar having a diameter equal to its own. These tests are all directed to ascertain the required physical qualities and requirements have during the past few years been specified which are intended to ensure the suitability of the structure of the material accepted by them for staybolt purposes. A threaded bar is held firmly at one end and vibrated at the other end in a straight line or in a circle. Under these conditions the iron must stand a certain number of vibrations without fracturing. The three leading specifications in use are as follows:

(a) The free end of the bolt, which is 6 ins. in length, is moved a circle of 1-16 in. radius, at a speed of 100 revolutions a minute. and at the same time subjected to tensile strain of 2,400 lbs. per square inch. To be accepted the iron must stand the following number of revolutions; ⅞ in. bar 3,000 revolutions, 1 in. bar 2,200 revolutions and 1 1-16 in. bar 1,500 revolutions;

(b) The free end of the bar, which is 5 ins. long, is vibrated in a straight line for 1-16 in. on each side of the axis of the bar, so that its free end is deflected over a total space of ⅛ in. The bar is at the same time subjected to a tensile strain of 2,800 lbs. per square inch. To be accepted the bar must stand not less than 2,400 double vibrations before breakage.

(c) The free end of bar, which is 5 ins. in length, is vibrated along a straight line alternately ⅛ in. on each side of axis of bar, so that the end of the bar moves over a space of ¼ in. To be accepted the iron must stand not less than 2,000 double vibrations before breakage.

It cannot be said that the various tests referred to above have entirely solved the question of the best quality of iron for staybolts. A number of administrations still consider that the service test is the most reliable for determining whether a brand of iron of good quality is satisfactory for service, and experience has shown that the physical qualities may vary within wide limits, and yet satisfactory results be obtained. There is no doubt, however, that a high grade of iron is required in order to stand the continued bending which occurs.

While these specifications apply to the material for the staybolts below the top of the fire-box, many administrations use the same quality of material for the radial or crown stays, while the others accept iron for this service having a tensile strength of 48,000 to 52,000 lbs. and an elongation of from 26 to 28% in 8 ins. The latter practice is satisfactory on account of the greater length of stays above the top of the fire-box, for which wrought iron of a reasonably high quality will meet requirements.

Life of Fire-boxes.—The life obtained from steel fire-boxes varies considerably with the quality of the water used and with the type of fire-box. No reliable information is obtainable with reference to the influence of the quality of steel on the life of the fire-box with the exception that one administration reports steel having from 0.10 to 0.18% carbon has been found to give better results than steel having from 0.18 to 0.25% while several report that a special brand of acid steel having exceptionally low phosphorous and sulphur has been found preferable. Some administrations with locomotives of an older type in which the fire-box is deep and placed between the frames and where water is of good quality report the life of fire-boxes as high as 20 years and over, but the general experience with modern engines using 180 to 200 lbs. boiler pressure is that the life varies from two to four years in bad water districts, up to 10 years and over where water is good. The exact life of fire-boxes is difficult to determine from the fact that the various sheets composing it do not last the same length of time. Where the nature of the scale is such that the sheets become easily overheated and the service is severe, side sheets in engines of the wide fire-box type are occasionally replaced in from one to one and a half years, while crown sheets which do not deteriorate so quickly give considerably longer service. Thus one administration reports that side sheets are being renewed in from one to three years while crown and flue sheets average five years life.

It is difficult to present any correct figures on account of the great variation in the conditions. The figures given above are fairly representative of the replies received from a number of administrations. The Buenos Ayres and Rosario Ry. which uses both copper and steel fire-boxes states that with copper the life of the fire-box has been from 10 to 12 years and steel about four years. This would indicate a considerably longer life for copper fire-boxes than for one made of steel, but the copper fire-box has been found impractlcable in American service on account of the rapid erosion caused by the sparks, due to the high rates of combustion at which engines are frequently worked. It should be borne in mind in connection with the life of fire-boxes, that in American practice the miles run per locomotive, per annum are exceedingly high, 30,000 to 35,000 miles frequently being obtained, while individual engines in passenger service have been run from 6,000 to 7,500 miles per month. Measuring the life of fire-boxes therefore in terms of years does not represent entirely the service obtained, unless the miles run per month or per annum are taken into account and when this is done the service obtained from steel fire-boxes becomes satisfactory. The reason for the rapid deterioration of the side sheets in wide fire-box engines in service where the water is of bad quality is not entirely clear. It has, however, recently been ascribed to the inclination of the fire-box sheets towards each other at the top so that the bubbles of steam formed next the sheet are not wiped off by the ascending streams of steam bubbles from other portions of the sheet, as is the case with fire-boxes of a narrow type placed between or on top of the frames. Some boilers have recently been constructed in which the width of the fire-box is reduced in order to allow of the inclination of the fire-box sheet being outwards towards the top so as to obtain this action. Whether from this cause or not there is little doubt that overheating of side sheets occurs and that the reason is on account of insufficient circulation. Some recent experiments have indicated that an improvement may be obtained by arranging for a greater depth of water in the sides of the fire-box below the surface of the grates and this would also confirm the theory that defective circulation is a reason for the short life frequently obtained from side sheets on boilers of the wide fire-box type.

The Life of Tubes varies largely with the quality of the water. It is common practice to safe-end or weld additional portions on to the body of the tube from four to 10 times where the water is such that no pitting of the body of the tube occurs. The length of time required before the tube is removed on account of the end being so damaged by rolling and beading that it cannot be maintained in a sufficiently tight condition for proper service, varies, according to the water conditions, and type of engine, from five to six months up to three years and over. On one railway, tubes are removed for safe-ending after 40,000 to 60,000 miles in freight service and 75,000 to 110,000 miles in passenger service. On another they are removed in bad water districts after five to six months and in relatively good water districts after 10 to 12 months. The shortest life of the body of the tube reported is from two to three years while some administrations report tubes lasting as long as 15 years and over. Where no pitting occurs and the water is of an average quality, the life of the body of the tube will average from eight to 12 years before it is scrapped on account of insufficient strength. The Buenos Ayres and Rosario Ry. which uses both brass and iron tubes reports brass tubes as lasting from 10 to 12 years while iron tubes are scrapped after four years on account of pitting. This evidently is caused by the quality of the water and there would not appear to be a very great difference between the life of the brass and iron tubes where the water is not of such a quality that the body of the tube is attacked.

(To be continued in next issue.)

Railway Commissioners' Enquiries.

The Board of Railway Commissioners has asked each railway under its jurisdiction to file by Oct. 1 a statement showing separately for each division, or each district, the number of level crossings on its lines, either with the company's own tracks or with other companies' tracks, electric or steam. The statement is also to show what form of protection is now provided at the crossings, whether the interlocker is full or half, and if derails are inserted on one or both of the companies' lines forming the level crossing.

Another statement has been asked to be filed by Oct. 1, showing the location and name of street or highway at which electric bells are located, giving sufficient particulars to enable the Board's inspectors to identify the crossings.

The American Railway Bridge and Building Association will meet at Denver, Colorado, October 18 to 20, instead of at Fort Worth, Texas, as originally intended.

Orders-in-council have been passed at Ottawa, authorizing the sale to the C.P.R., at $10 an acre, of the following areas in the Yoho Park, in the British Columbia railway belt. For sidings and ways at Leauchoil, 9.50 acres; for station grounds at Wapta, 3.84 acres; for a water pipe line at Porcupine Creek, 2.16 acres; for station grounds and sidings at Ottertail, 1.15 acres.

Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending the skidding sheaves. They are hung from a vertically hinged jib or triangle the outer end of which is guyed by two lines, one on each side, which are power tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading.

The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from the tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines with stiff or swinging boom. Constructed entirely of steel, except loading boom.

IS WITHOUT QUESTION THE STRONGEST AND FASTEST MACHINE OF THE DAY

LOGGING CARS AND DUMP CARS

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

C. P. R. Suburban Tank Locomotives.

By G. I. Evans. Mechanical Engineer C. P. R.

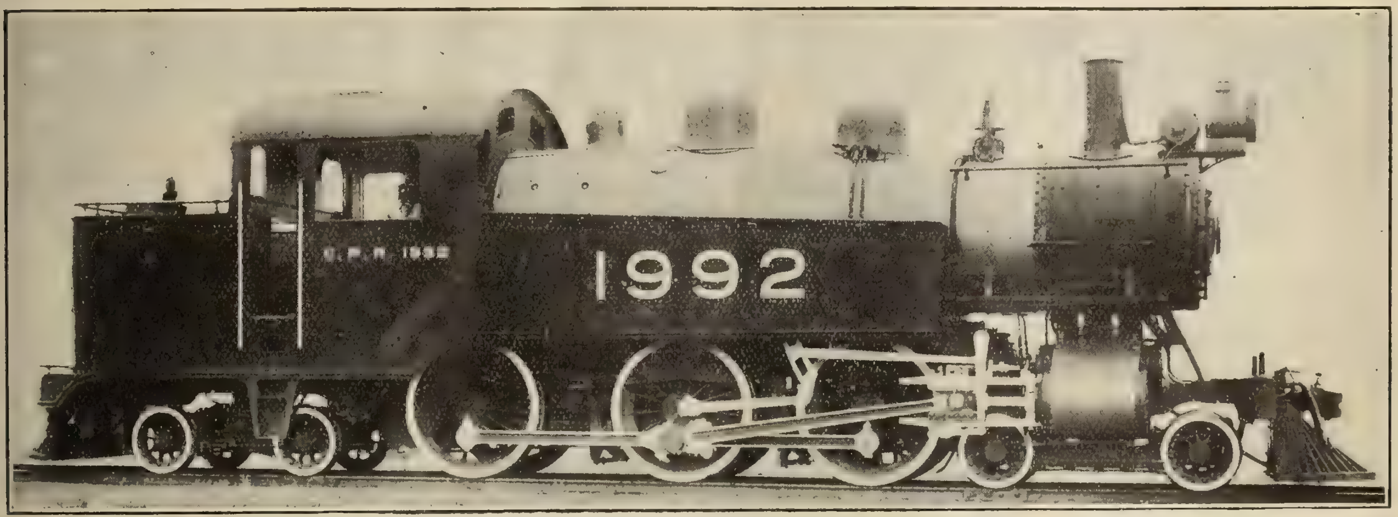
Two of these 4-6-4 locomotives have been designed and built under the supervision of H. H. Vaughan, Assistant to the Vice Pesident, at the C.P.R. Angus shops, Montreal, for suburban service on the main line out of Montreal. They run from Windsor St. station to Point Fortune, Que., 47 miles. The average train consists of six passenger cars and one baggage car; there are seven regular and 13 flag stops westbound, and four regular and 12 flag stops eastbound; the schedule times are 120 and 105 minutes respectively. Water and coal are taken at Rigaud, 40 miles from Montreal. The driving wheels are 63 in. in diameter and there are front and back four-wheel trucks; the capacity of the tank for coal is four tons and for water 3,000 gallons, which, in combination with a superheater, is sufficient, otherwise they could not make the water tank at Rigaud. Although in service but three months, these locomotives have already made something of a coal record, the consumption per unit mile (1,000-ton miles) was 345 lbs., and per locomotive mile 79 lbs., for the period ended July 14, which on suburban service, are very satisfactory figures. The principal dimensions, etc., are as follows:

Tractive power	28,100 lbs.
Weight on drivers, working order	135,000 lbs.
Weight on front truck, working order	49,340 lbs.
Weight on back truck, working order	51,660 lbs.
Weight, total, in working order	236,000 lbs.
Wheel base, driving	14 ft. 10 in.
Wheel base, total engine	38 ft. 10 in.
Weight on drivers÷tractive effort	4.8
Tractive effort×diameter drivers÷equivalent heating surface	753
Equivalent heating surface÷grate area	71
Weight on drivers÷equivalent heating surface	57.4
Cylinders, diameter and stroke	20 x 26 in.
Valves, diameter and kind	Piston, 12 in. diam.
Driving wheels, diameter	63 in.
Driving axles, size	9 x 12 in.
Boiler style, radial stayed, wagon top.	
Working pressure	200 lbs.
Firebox, length and width inside	114 x 41⅞ in.
Firebox, water spaces	4 in. front, 3 in. back, and 3½ in. sides.
Firebox, thickness of sheets	Top and sides ⅜ in., tube sheet ½ in., back ⅜ in.
Tubes, number and diameter	22 5 in., 173 2 in.
Length of tubes	165⅜ in.
Heating surface, tubes, 5 in. and 2 in.	1,645 sq. ft.
Heating surface, firebox	156 sq. ft.
Heating surface, total	1,801 sq. ft.
Superheating surface	366 sq. ft.
Equivalent heating surface	2,350 sq. ft.
Grate area	33.1 sq. ft.
Engine truck, kind	Four-wheel, radius bar.
Wheels, diameter	31 in.
Axles	6 x 10 in.
Water capacity, total	3,000 gallons.
Coal capacity	4 tons.

The general outline of the locomotive is shown by the line drawing and half-tone engraving. Considerable attention was paid to appearance, and the outlines of the tanks, coal bunker and cab were given considerable study before they were finally decided upon. The desired effect was to be such as to give the impression that the general appearance had been developed along definite lines and not merely allowed to grow carelessly into a combination of curves and rectangles like a child's block house, as detail after detail was worked up. There is, therefore, a harmony of outline and balance of the large flat surfaces of the tanks and cab which is seldom found on American tank locomotives.

As a tank locomotive for use in the service for which these were designed must be of such capacity as to bring its weight up to the limit of the bridges, every detail of the design was carefully figured so as to obtain sufficient strength with the least possible weight. This is illustrated by a number of features in which structural steel and steel plates have been used to build up brackets, braces and cross-ties which are usually made of cast steel; as, for example, the link bearing cross-tie which also forms a support for the tanks and a frame brace. Reference to the detail of this and the outline drawing shows that there is a main vertical member of ⅞ in. steel plate riveted to a ⅝ in. horizontal plate by steel angles. The side tanks are supported from the vertical member by ¼ in. expansion plates and braced longitudinally to the horizontal plate by ¼ in. gussets. The link is carrried by the vertical member backed up by the tank longitudinal gussets. The cross-tie is secured by the main frames by vertical bolts through its horizontal member, which has a 31¾ in. frame bearing and by two 3 x 2 x ½ in. steel angles bolted to the main frames on either side and afterwards riveted to the cross-tie. As the tanks are secured to the boiler at its front end and the whole construction of tanks and cross-tie riveted and bolted together both to boiler and frames, it forms an absolutely solid support for the link; in other words, the tank has been made to reinforce the cross-tie and resists the thrust of the link.

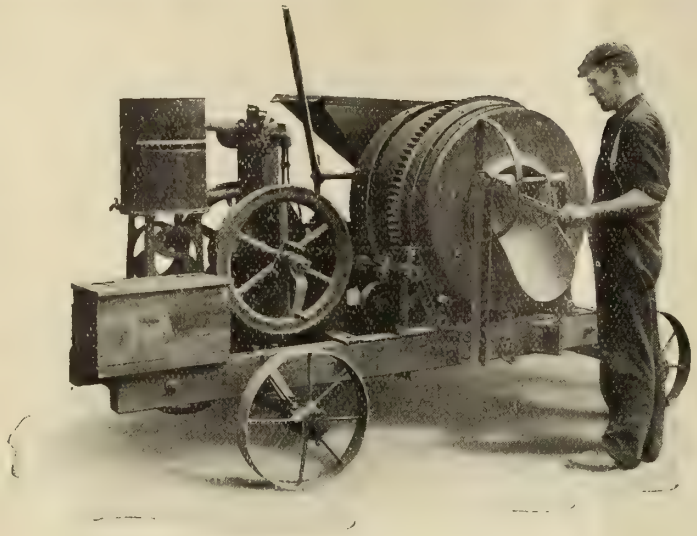
Other structural steel details are the rear engine truck cross-tie, front and back bumpers, expansion brackets, etc. The rear engine truck cross-tie is composed of a ¾ in. plate, braced by two ⅜ in. plates riveted to it. A check for the frame fit on each side was obtained by machining down a 1 in. plate to form the horizontal member. The rear bumper outside the frame is made only sufficiently strong to take push pole thrusts, but between the frames, where the pilot coupler is attached, it is strongly braced by 1 in. plate. There is a 15 in. channel facing which extends out to the sides of the back tank and has ⅜ in. top and bottom cover plates which braces it strongly together. The front bumper, which will have to withstand cornering thrusts and also protect the cylinders, is of a much stronger construction than the rear. There is a 15 in. channel facing, but the top and bottom cover plates have been made ½ in. thick and strongly reinforced by 3½ x 3½ x ⅜ in. steel angles. There is a steel casting between the frames which backs up the drawhead and also has finages to which the top and bottom cover plates are bolted.



Canadian Pacific Railway Suburban Tank Locomotive.

Tanks and Cab.—The front tanks, cab and rear tank are built up together in such a way as to be continuous from front to back. The front tank is secured to the boiler at a point just back of the cylinders, where there is no expansion, which means that it is rigid with the main frame, and, as the rear tank and cab construction is solidly braced to the frames the boiler does not, as with the usual construction, expand, carrying the cab back with it, but is free to move backward between the front tanks into the cab, although supporting at the same time the weight of the rear end of the front tanks. This has been arranged by making the front plate of the cab ¼ in. thick and reinforcing it by a 3 x 3 x ⅜ in. angle which rests on top of the boiler and extends outward on each side to bolt to a lug on the top of each side tank. This angle is not studded to the boiler, but rests on a smooth filling strip on its roof sheet to permit of free movement without putting any strain on the cab front or tanks. The tanks and cab are of the usual plate construction, strongly braced, the tanks have a system of splash plates so arranged as to effectively break up any surge of water from end to end. The top of the front tank is in line with the top of the rear tank on which the filling hole is located and two 7 inch equalizing pipes connect them together.

Frames.—The main and front frames are of steel, cast in one piece, and the back splices, which are wrought-iron, are let into a machined fit 1 in. deep and bolted on by 11 bolts 1⅛ in. in diameter. Through the use of Walschaert valve gear it was possible to liberally cross-brace the frames. At the front is the front bumper casting, followed by the cylinders, guide yoke and yoke sheet, link-bearing cross-tie and waist sheet, front expansion truck cross-tie and back bump-



The New No. 4
1910 Model
"Ransome"
Concrete Mixer
is recommended for

BRIDGE AND CULVERT WORK

We are now offering a really small Concrete Mixer—called our No. 4. It is built exactly along the lines of the larger sized Ransome machines—and will mix concrete or mortar perfectly. It has a batch capacity of 4 cubic feet and is rated at 40 cubic yards per day of ten hours.

The No. 4 Ransome machines are all equipped with a Gasoline Engine, complete with tanks, batteries, etc., also fitted with special Fixed Charging Hopper. While the batch in the drum is being mixed the hopper is being filled and by the pulling of a lever the whole batch is fed instantly into the mixing drum. The discharge is accomplished by reversing the discharge chute, as shown in cut.

This little No. 4 Mixer is complete in itself and is ready for instant operation. For bridge, culvert or small work of any description there is no better machine to be obtained.

Write for price and further particulars.

er. The back tank itself is also built down to the frame and secured to it by two 3 x 3 x ⅜ in. steel angles, and, as the bottom of the tank is supported by two crossbars of 5-16 in. steel plate the whole construction is exceedingly rigid.

THE BOILER is of the extended wagon top type with medium width firebox. There are 173 2 in. flues and 22 5 in., 13 ft. 9⅜ in. long. All of the side stays underneath the front tanks are flexible and a new system of cross braces for the roof sheet has been used. There are 8 of these, 1½ in. diameter, connected to the roof sheet by 5 x 3 in. tees, and they are so located as to prevent bulging of the roof, which reaches a maximum at a point just above the crown. The boiler, although not of the wide firebox type, has ample capacity to supply steam to the cylinders at any speed. This is shown by the B.D. factor (tractive effort×diameter driving wheels), which is equivalent heating surface, 753, or well within the limits of good practice.

THE CYLINDERS AND VALVE GEAR are of the inside admission piston valve type, with the valve chambers cast inside the main frames. This necessitates a rocker at the front end to transfer the line of motion from the radius bar on the outside of the driving wheels to the valve stem inside the frames. The front cylinder heads are of cast steel and the back cast iron, lugged for alligator type guide bars. The valve gear is of the Walschaert type, and the details are of the C.P.R. Co.'s usual construction, except that they have been made lighter than any previously used on this road. Two 3 in. vacuum relief valves are used connecting to each steam chest.

SPRING RIGGING.—The engine is equalized from the front truck to the back driver with equalizers on each side of the front truck. The back truck takes its weight direct from the frame and in this way the points of support are as though the engine had four pairs of driving wheels equalized together and a four-wheel centre pin leading truck. Both trucks, although of the four-wheel type, have radius bars, and the length of these bars has been determined with a view of making the rear wheels do some of the guiding and relieve the front wheels of excessive flange wear. This is best explained by referring to the diagram, which shows the wheel base of the locomotive, on a 15° curve, and the lengths of the radius bars are such that when taking a curve the front flange bears against the outside rail and the rear flange on the same side is also brought close to it instead of the outside leading and inside back flanges bearing as is usual with trucks of this type. Side movement of the trucks has been provided for by a system of slides having an incline of 1¼ in. in 10 in. These inclines have a centering effect of 8,100 lbs. and work in an oil bath formed by flanges on the supporting cross-tie on the truck; in this way uneven wear should be prevented. The truck radius bar and driving equalization systems present a novel and interesting arrangement, but the results obtained in service more than justify the innovation.

THE ASHPAN is of the usual plate construction and has liberal aid spaces under the firebox ring. It is fully protected against fire throwing by an inside deflector plate extending down past the air openings.

The injector check is of the latest C.P.R. type located on top of the boiler 30 in. back of the flue sheet and is placed underneath the bell stand. The check casting proper combines the R. & L. injectors and also has a connection for a blow-off pipe. An inside deflector plate serves to distribute the water after entering the boiler.

DRIVING WHEELS, RODS AND BOXES.—The driving wheel centres are of cast steel with pear section spokes and arch section rims; cast iron hub liners are let into and studded to the hubs. These run

609 Grain Exchange Bldg, CALGARY, J. F. Porter, Manager.

on babbitt faces on the driving boxes. Supplementary counterbalance weights are used in conjunction with the ordinary balances opposite the cranks and the wheels are balanced in accordance with the system worked out by H. H. Vaughan and fully described in the Railway and Marine World of November, 1909. The figures for one of these engines is reproduced in one of the illustrations.

The side and main rods are I section forged from mild steel with strap connections on the back end of the main rod and main crank pin. The driving boxes are 9 x 12 in. on all wheels. Faces in contact with shoes and wedges have brass liners studded and lugged to the boxes. Grease lubrication is used throughout.

GUIDES.—The guide bars are of mild steel arranged for a crosshead of the alligator type with yokes of universal mill plate 1½ in. thick made in three pieces. The cross plate suspends the legs, which are bolted to it with nine 1⅛ in. bolts. These in turn carry the guide bars by double cast steel knees. The crosshead is exceedingly light for a crosshead of this type; it weighs 350 lbs. complete.

Removable sectional liners are used and may be replaced when worn, without disconnecting the crosshead, by simply removing the side plates, which are held in place by six ⅞ in. bolts. This is one of the most successful types of crosshead which has ever been used by this road, and the difficulty of slack between the crosshead and bars has entirely disappeared since the adoption of this type of renewable shoe.

SUPERHEATER AND SMOKEBOX.—The smokebox and superheater arrangement are illustrated by the line drawing. Single adjustable draft pipes are used with a 5½ in. exhaust nozzle and 14½ in. taper stack. Draft through the 5 in. tubes which contain the superheater is controlled by an automatically operated damper which cuts it off when steam is not being used. Considerable difficulty is experienced with operating cylinders in general and experiments are now being made as to what would be the action of the fire on the superheater pipes if the damper cylinder and automatic damper were omitted altogether.

The throttle is of an ordinary type, arranged to take steam at the top, and has no drifting valve.

MISCELLANEOUS.—The grates are of the semi-box type, arranged to rock in two sections.

Electric headlights are on both front and back ends. The dynamo is located at the front and a system of switches is arranged to cut in either headlight as required.

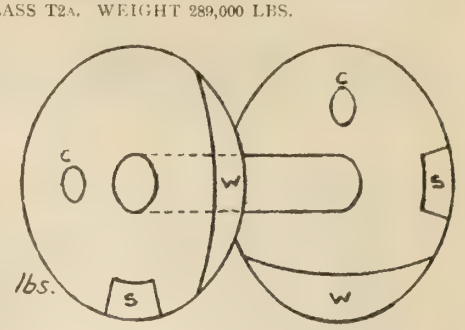
C. P. R. LOCOMOTIVE 1991. CLASS T2a. WEIGHT 289,000 LBS.

WEIGHT OF RECIPROCATING PARTS

Piston and Rod	465 lbs
Crosshead complete	350 lbs
Proportion of main rod (reciprocating) { Front end	215 lbs
{ ⅛ back end	65 lbs
Total for 1 side of engine	1095 lbs

WEIGHT OF ALL PARTS ROTATING AT CRANK PINS

Leading wheel. Front end of leading side rod		145 lbs
Main wheel { Back end of leading side rod,	240	800 lbs
{ Front " trailing "	245	
{ Proportion of main rod (rev'l'g)	315	
Trailing wheel. Back end of trailing side rod		145 lbs
Total for one side of engine		1,090 lbs



Note! In the succeeding data, all the rotating weights on wheel are reduced to the radius of the crank pin as follows:

Let W = Actual weight of any mass.
" X = Distance of its c.g. from centre.
" R = Radius of crank pin.

$$\text{Equivalent weight at crank pin} = \frac{WX}{R}$$

	Leading Right	Leading Left	Main Right	Main Left	Trailing Right	Trailing Left
Weight hung on pin to balance W	365	370	1070	1045	400	390
Rotating weight at crank pin	145	145	800	800	145	145
Direct overbalance	220	225	270	245	255	245
Supplementary balance weights	120	120	120	120	120	120
Total overbalance, average of R and L	342 lbs.		377 lbs.		370 lbs.	

Total reciprocating weights = 1095 lbs.
Sum of total overbalance = 1089 lbs.
Total horizontal unbalance = 6 lbs. or ·0025% of weight of engine.

Maximum overbalance on any wheel = $\sqrt{270^2+120^2}$ = 295 lbs., or 1.22% of wheel load in r main.

Transverse unbalance = Total reciprocating weight − [Total overbalance − Total Supplementarie]
" " = 1095 · [1089 − 360] = 366 lbs or .15% of engine weight

Total horizontal unbalance is the unbalanced part of the reciprocating weights, which by its inertia, tends to move the engine as a whole forward or backward on the track.

Transverse unbalance is the unbalanced part of the reciprocating weight, which by its inertia causes a nosing motion.

Maximum overbalance is the unbalanced revolving weight, which by its centrifugal force increases or decreasesthe pressure of the wheel on the rail. The force due to this weight, if large, may exceed pressure of wheel on rail, and lift the former against the springs, with possible damage to track.

The Travelling Engineers' Association at its recent annual convention at Niagra Falls, Ont., decided to appoint a committee to formulate a series of standard questions and answers to be used in the education of firemen. Among the papers presented was one on superheat as applied to locomotives. The committee having this matter in charge comprised H. H. Haig, E. Shally, O. R. Rahmeyer and Max Toltz, formerly with the C.P.R. Other papers included one on new valve gears prepared by a committee of which J. McManamy was chairman; "How can the travelling engineer best educate the present day fireman to become the successful engineer of the future," by J. C. Petty; "The latest development in air brake equipment and their effect on train handling," by E. F. Wentworth. Chicago was selected as the place of meeting for the 1912 convention, and among the officers elected were the following:—Second Vice President W. H. Corbett, road foreman of engines Michigan Central Rd.; members of the executive committee: J. McManamy, road foreman of engineers, Pere Marquette Rd.; M. J. McAndrews, road foreman of engines, Michigan Central Rd.

A Railway to Hudson Bay.

The Minister of Railways turned the first sod for the building of the substructure of the bridge over the Saskatchewan River at Pas Mission, Sask., Sept. 6. The place at which the start was made is on what is called the Mission Island, and the ceremony was performed in the presence of J. Armstrong, who is in charge of the surveys for the railway, and a number of officials of the Canadian Northern Ry., which has a line in operation to the Pas. In the course of a short speech the Minister stated that it was the Government's intention to make the river navigable to the Pas, so that freight could be handled on it from both directions. The question of the building of a railway to Hudson Bay had been under discussion for many years, and it was now generally admitted that the line should be built. The line would be of immense value to the Dominion as a whole.

The bridge proper will be 850 ft. long and there will be about 800 ft. of approaches. The roadbed will be 40 ft. above low and 12 ft. above high water. Mackenzie, Mann & Co., the contractors, have had a bridge building plant delivered, and a gang in charge of R. W. Graham is getting out the foundations for the piers, etc.

Letters from Fort Churchill, dated Aug. 3, and from York Factory, dated Aug. 10, reached Winnipeg Sept. 8. The Fort Churchill letters state that the survey parties told off to examine the harbors there and at Port Nelson had arrived and had established their headquarters at their respective bases. The Fort Churchill party is in charge of A. G. Bachard and C. Savery, and the Port Nelson party is in charge of H. S. Pariseau and J. Stanley. The objects which these parties have in view is the making of a complete survey of the water approaches to the two ports, the discharge of the rivers, and other hydrographic work, in order to obtain the necessary data upon which to decide which port will be the terminus. The present information shows that from the navigator's point of view Fort Churchill is the more advantageous, as there is deep water right to the shore, and for some miles inland, while at Port Nelson, there is shoal water for some miles from the mouth of the river, and a channel would have to be kept dredged. On the other hand it is pointed out that the Nelson route is open for a longer period each year, and that the country through which the line will pass from Split Lake to Port Nelson, offers greater facilities for the development of a remunerative traffic than does the bare country round Fort Churchill, and the somewhat restricted areas opened up by the Churchill river and its tributaries. The parties expect to complete their work in Jan., and will return to Ottawa, overland via Winnipeg. The York Factory letters state that T. Turnbull had arrived there, and had gone on to the Nelson River to make a survey from its mouth to the Manton rapids, with a view of reporting upon its navigability, etc.

W. Ogilvie, of the Department of the Interior, is reported to be making a study of the waterways opened up by the projected line to Port Nelson, with a view of determining the possibility of developing the water powers on them, and using the electricity developed for the operation of the line.

Referring to the question of operating the line when built, W. Mackenzie, President Canadian Northern Ry., is reported to have stated in an interview at Winnipeg, Sept. 16.: "If the Government was not taking action we would build the Hudson Bay line. We hope we may have an opportunity of operating it." (Sept. pg. 745.)

Locomotive Engineers' Requests.

The Board of Railway Commissioners will on Nov. 1 consider the following requests, etc., which have been submitted to them by the Dominion Legislative Board of the International Brotherhood of Locomotive Engineers:

At the last session of the Dominion Legislative Board of the International Brotherhood of Locomotive Engineers, held in Ottawa, March 29 to April 2 inclusive, the following resolutions were unanimously adopted and the Legislative Representative instructed to place them before you for most earnest consideration.

That sign-boards be placed at the side of the railway track defining the limits of cities, towns and villages, for the guidance and information of the men in train service.

That owing to the liability of accident and the exposure to the severe cold during winter, a law be enacted preventing the running of locomotives tender first beyond 10 miles, except in cases of emergency.

That a law be enacted requiring all railway companies in Canada to equip their locomotives with power head lamps and air bell-ringers.

That, recognizing the many dangers and the liability of accident in running over portions of the railway unknown to the engineer, a practical and competent engineer familiar with the road about to be run over, be placed upon the locomotive in addition to the regular engine crew.

That owing to the very fatiguing nature of our occupation and the constant demand for vigilance necessary for the faithful performance of our duties as locomotive engineers in handling the commerce of the country and the lives of its citizens, it therefore follows that we should be provided with clean, comfortable and sanitary quarters where we may be assured of uninterrupted repose and quiet in order to prepare ourselves for our important duty. Many terminals, we regret to say, are absolutely unprovided for in this respect. As a class we do not desire to patronize or frequent places where intoxicants are sold, and we therefore ask that the railway companies be required to establish suitable quarters at all terminals as above mentioned.

That owing to the absence of land marks in many of the localities in which our men are employed, and as a guide to inform them of their exact whereabouts in approaching stations, it was unanimously decided to recommend to you that a large sign board be placed one mile outside of yard limit.

That the matter of the removal of all snow-cleaning devices from locomotives, which was referred to you in 1908, be again brought to your attention, as we are firmly of the opinion that such devices should have no place on a locomotive, with the exception of the steel pilot plough now used by the C.P.R. in the mountain districts of British Columbia. These ploughs do not project above the buffer-beam nor do they touch the rail and are considered a reinforcement to the pilot.

That we request the Commissioners to take such action as they may deem advisable to have suitable inspection supplied for all wooden bridges.

That your attention be called to the fact that many of the modern engines now being built and used in Canada are totally devoid of any sense of comfort or convenience for the men who are obliged to spend the greater part of their time on them. Everything is apparently sacrificed in order to make them as huge and powerful as possible. As most of them carry at least 200 lbs. pressure per square inch, it means that the men who handle them are separated by only a few inches from a temperature of 387 degrees of

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

WIRE ROPE

Why experiment continually with wire rope you know is not up to "**Dominion**" quality—quality that means better material, better construction and better service?

Material—All our ropes are made from the best quality of wire, specially drawn to our rigid specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

Construction—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years' experience in manufacturing wire ropes enables us to offer the best to be had anywhere.

Service—Every length of "Dominion" Rope gives satisfaction, because it is serviceable and dependable.

All Lengths and Sizes Carried in Stock for Immediate Shipment

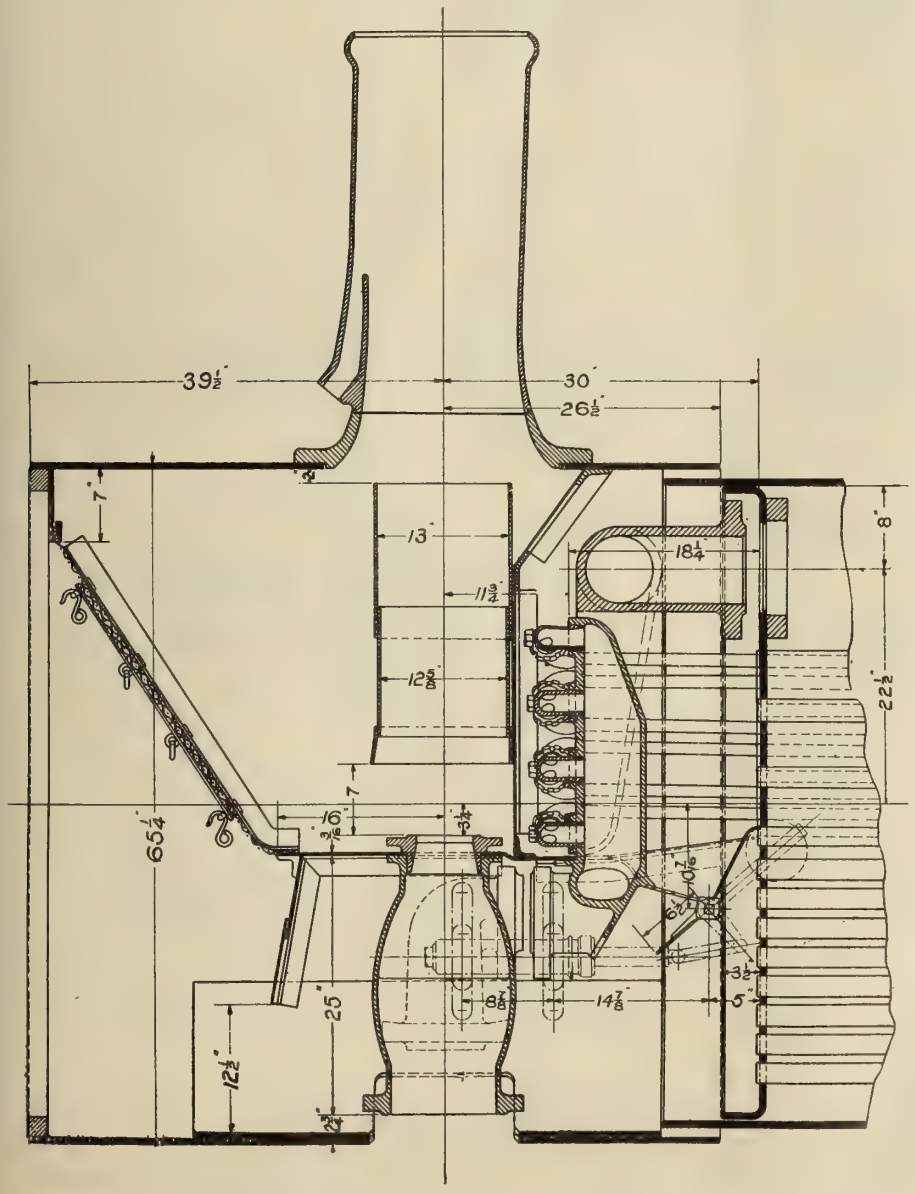
The Dominion WIRE ROPE Company Ltd., MONTREAL

heat. To get into position to handle these monsters, the engineer is obliged to climb over obstructions in the shape of different parts of the equipment and wedge himself in the narrrow space between the side of the cab and the boiler. Should the engine run off the track and turn over, the engineer has not the slightest chance of escape and would likely be crushed and scalded to death. Further, we ask that you give this matter most earnest consideration, and endeavor to place some limit on the size of boiler and cab that will allow for ample room and breathing space. The appliances for operating the engines are not infrequently placed in such very awkward positions that the engineers are at a disadvantage in cases of great emergency. Waterglasses, steam-gauges, air-gauges and lubricators, which require almost constant attention, are often found so inconveniently located that the engineer's attention is too long diverted from the track and signals.

That owing to the unclean condition of the working parts, especially that portion under the boiler and between the frames, and the liability to accident by the engineer in attempting to crawl under the engine, between the wheels, to inspect his locomotive, we recommend that the engineer be held responsible only for such defects as may be reasonably detected from the outside, and in addition to the inspection by the engineer the engines shall also be inspected by a competent inspector at all railway terminals, and the engineer not held responsible for any defects which the inspector may find.

We are of the opinion that as the safety of life and property depends upon the sight and judgment of the men who guide the traffic and having practical knowledge of the inability, under certain conditions, to obtain more than a partial view of the track and signals, such protection should be afforded as would enable the engineer to at all times have a clear and uninterrupted view ahead. Having examined a model of a storm guard or protector and heard the endorsement of one who had used it, we are unanimous in the proposal of recommending to the management of the several Canadian railways a trial of the "protector."

That owing to the fact that not infrequently an employe of a railway company is injured through no fault of his own, and the railway company's officials eventually refer him to their claims agent, who usually requests him to wait until he is completely recovered before making a settlement, thus requiring him in many cases to become indebted for the necessities of life for himself and family, we request that monthly payment of a sum at least equal to that which they would have earned, should be made to injured employes.



C.P.R. Suburban Tank Locomotive. Smoke box arrangement. (See also pg. 825.)

Hudson's Bay and Pacific Railway.

In our August issue we referred to a prospectus or circular issued for the purpose of selling Hudson's Bay and Pacific Railway Development Co.'s shares, particularly in regard to misstatements it contained as to guarantees by the Dominion Government, etc. Our September issue contained a letter from the Company's Secretary stating that the circular was entirely unauthorized, and was published without the Directors' knowledge or consent. In acknowledging receipt of that letter, we said in part: "There appears to be no doubt that the prospectus was dated as being issued from 56 Moorgate St., and that the names of your directors were printed thereon. Copies of the prospectus were received in Canada, and it would appear to us that at least after its issue, some of your directors must have seen or heard of it. If such was the case, we would be glad to learn whether they took immediate steps to repudiate the misstatements contained in the prospectus, or whether they waited until after we had exposed the inaccuracies, and after Sir Wilfrid Laurier had given a denial on behalf of the Dominion Government. We would be glad to be informed clearly on this point We would also like to learn definitely who the prospectus was issued by Its evident object was to promote the sale of your Company's securities. We desire to assist as much as possible any company having for its object the development of any portion of Canada by the building of necessary railways, but when we see statements made that we know to be untrue, we feel it our duty to contradict them."

We have since received a letter from J. G. F. Greville, Managing Director of the H.B. and P.R.D. Co., as follows. "We beg to say that the knowledge of the circular or prospectus came to us purely by accident, in the following manner: On July 23, we received through the returned letter office, Liverpool, an envelope addressed to our Secretary, and on opening it found an envelope addressed to A. Ford, 16 Berry Street, Liverpool, and marked by the postal authorities, "Gone away." In that envelope was the circular with a letter from a Mr. ———, of London, offering some shares for sale. We immediately wrote Mr. ———, informing him that such circular had been issued without the knowledge, authority or consent of this company, and threatening him with an action, and demanding to know by what authority he had issued it, who had printed it, etc., and to whom the shares he offered belonged, and that he had better destroy any he had got, and call in those he had sent out. This letter was written on July 25, and he 'phoned us up, informing us that he was very sorry, that he would destroy them, and call them in, but that he had received them from a Mr. ———, of ——— St., London, and we thereupon wrote a similar letter to Mr. ——— who informed us that he had obtained the information through one of our shareholders, when we at once called a board meeting and brought the matter fully before them, in consequence of which a disclaimer was published in all the English newspapers. We knew nothing of your statements, nor anything about what Sir Wilfrid Laurier had said. We think this gives you the information you desire, and in conclusion beg to say that this company never issued any prospectus of any description."

For obvious reasons we have omitted the names of the two persons mentioned by Mr. Greville.

Press reports from Prince Rupert, B.C., state that the assessors of that city have placed a value of $20,000 an acre on the G.T. Pacific Ry. lands there.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

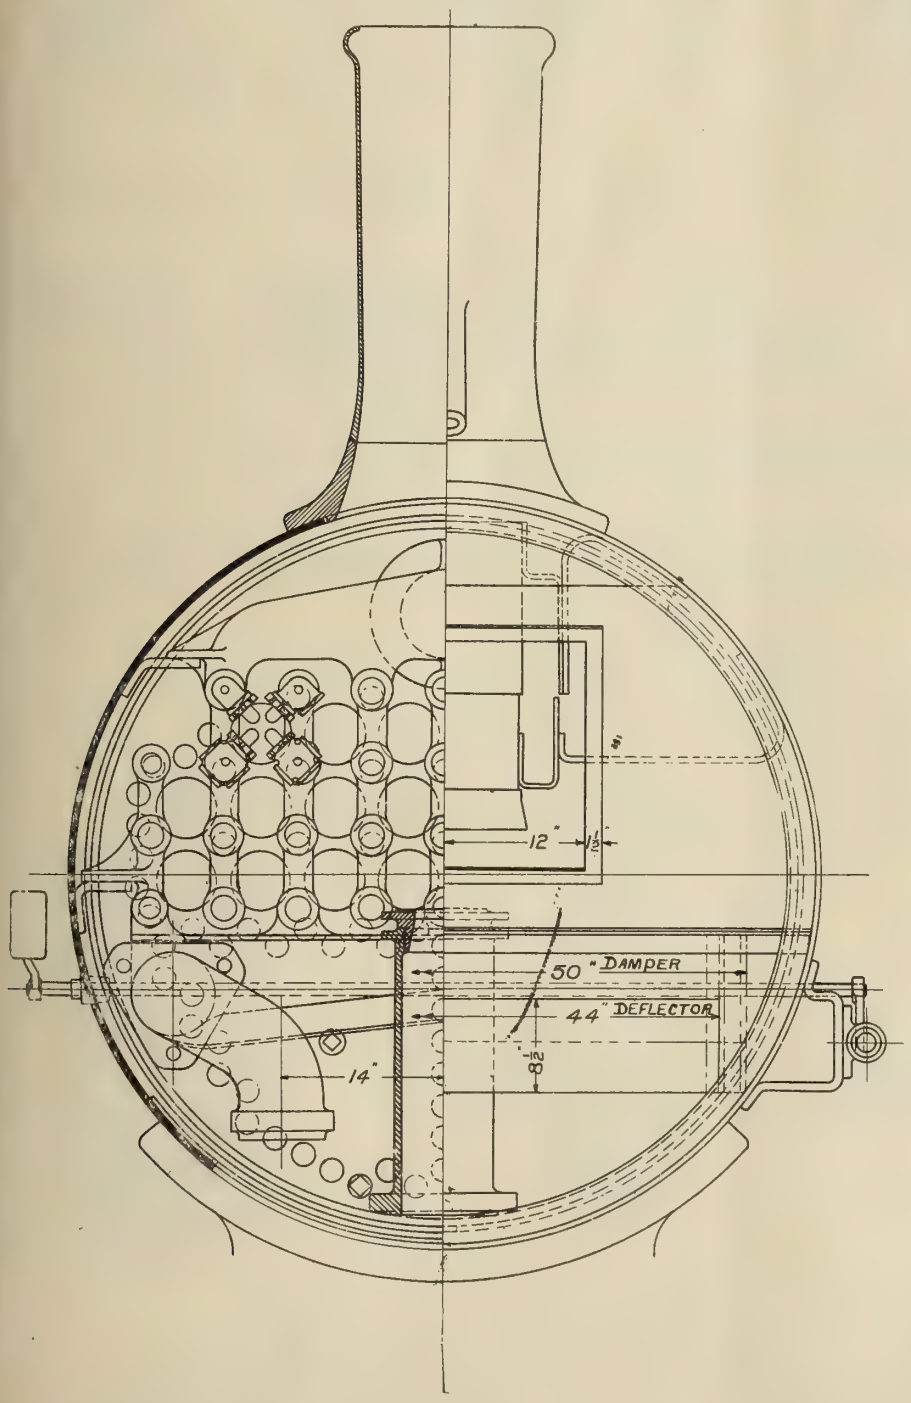
Alberta and Great Waterways Ry.—A conference between the officers of the company and former members of the Alberta Government, is reported to have taken place at Vancouver, B.C., Aug. 23, to consider future plans. Nothing has been given out as to what action was decided upon, and it is not likely that anything definite will be done until after the opening of the Legislature, when the new government will state its policy.

The Government decided Sept. 11, not to make the report of the Royal Commission, relative to the agreement with the railway, public before it was presented to the Legislature.

Alberta Central Ry.—We are advised that the building of this line projected from Red Deer to Rocky Mountain House, Alta., has been started, in the vicinity of Red Deer. As it was found to be too late in the season to let any contracts, the construction is being done by daily force under the direct supervision of J. Grant MacGregor, Chief Engineer. It is expected to carry on the work as long as the weather will permit. (Sept., pg. 725).

Algoma Central and Hudson Bay Ry.—A contract has been let. we are informed, to Austin and Nicholson, Chapleau, Ont., for the delivery of 250,000 ties between the crossing of the Montreal River and the Michipicoten River, Ont. (Aug. pg. 627.)

British Columbia and Alaska Ry.—The B.C. Government received information Sept. 6, that the reconnaissance surveys had been completed as far as Fort George and Quesnel, and that the survey parties were working towards the coast. An Ashcroft dispatch of Sept. 9, states that a party of the company's engineers arrived there from Quesnel, and went on to Vancouver, having been recalled. (Sept., pg. 725).



C.P.R. Suburban Tank Locomotive. Smoke box details. (See also pg. 823.)

Canada and Gulf Terminal Ry.—The building of this line from St. Flavie, on the Intercolonial Ry., to Matane, Que., is being proceeded with. Press reports state that the bridge over the Metis River has been completed; that the grading has been finished as far as Sandy Bay, and that it is expected the grading will be laid into Metis by Oct. 31.

We have been advised that work was begun on the line early in May and has since been continued over the first section from St. Flavie to Matane. Track is now being laid to the Tartigon River, mileage 21, and it is expected that the section to Matane, about 35 miles, will be ready for traffic by Nov. 1. H. Doheny is the contractor. Surveys are being made eastward from Matane towards Gaspe Basin. Arrangements have been made with the Intercolonial Ry. for the interchange of traffic at St. Flavie, as soon as the line is opened.

Graham Island.—A Vancouver press report of Aug. 29, said a gang of men was at work on the proposed railway from Queen Charlotte City to the coal fields, 12 miles. Queen Charlotte City does not appear on any existing maps, but the dispatch states that it had been decided to move the Government offices from Jedway to the newly named city. There are several charters for building railways on Queen Charlotte Islands, but the only one in which there is any mention of a Queen Charlotte as a town site or a city is on the charter for the building of the Island Valley Ry. (Sept. pg. 725).

Halifax and Eastern Ry.—We are advised that the official information furnished us and published in our last issue, that a contract had been let to Griffiths & Co., London, Eng., for the building of the line was not correct, the London directors having made some change in this respect, of which the local officers of the company at Halifax had not been informed at the time the information was given out. The local officers and the Chief Engineer are taking steps to let contracts for clearing and grading short stretches of the right of way.

The voting on a bylaw approving an agreement with the company for the location of its terminals in Dartmouth, N.S., which was fixed for Aug. 22, was cancelled, on account of an omission having been made in the official copy of the agreement made public. An investigation showed that the omission of the words was due to a clerical error. It has been decided to bring the whole matter up again before the council.

Several survey parties are in the field working between Dartmouth and Cow Bay. (Sept., pg. 725).

Intercolonial Ry.—In an interview at Fredericton, N.B., Sept. 8, the Deputy Minister of Railways said the station and yards there were much in need of improvement, and the Managing Board would shortly give consideration to what was to be done. He could not say whether, when a new station was built, it would be for the I.C.R. only, or a joint one with the C.P.R.

The members of the Managing Board were at Campbellton Sept. 6, and gave considerable time to the consideration of plans for the laying out of the terminals there, to replace those destroyed in the fire. Press reports state that it was decided to take steps for the expropriation of additional property, in order to extend the yards. Ottawa dispatches of Sept. 12 stated that the Board had decided on the plans for the new buildings. A Campbellton press dispatch states that work has been started on the new roundhouse, the work being done under the charge of the local staff by day labor.

The Managing Board made an inspec-

tion of the Indiantown branch from Blackville to Derby Jct., including the new line from Derby, Sept. 8, and on the following day inspected the new line being built into Chatham. About three miles of the line has been graded between Nelson and Morrison Brook, and one mile of track is reported laid from the Nelson end.

A recent Ottawa dispatch referring to the agitation which is being promoted in Ontario with a view of having the Intercolonial extended from Montreal to Toronto or to the Georgian Bay, stated the question is one of those which will be considered by the Cabinet. A second dispatch points out that such an extension would cost $20,000,000. and added that it was probable that engineers would be detailed to determine routes and to prepare plans. A third dispatch said it is stated in official circles there, that such an extension was not likely to come within the region of practical politics for some years to come (Sept. pg. 727.)

Kettle Valley Lines.—We are advised that the section of the line under contract at present is the first 30 miles out from Merritt, B.C., close to the present terminus of the C.P.R. Nicola Valley branch, to a point known as Railway Pass. The line will eventually be extended to Midway, where it will again connect with the C.P.R., and thus afford a southerly route between the Boundary country and the Pacific Coast. There will be six crossings of the Coldwater River on the present section, the bridges being Howe truss spans on concrete abutments. The maximum curvature of the line is 12 degrees, and a 1% gradient has been secured up to Railway Pass. The first 12 miles is comparatively flat and the work is mainly earth work; the other 18 miles is heavy sidehill work with considerable rock. The contractors are Macdonnell, Gzowski and Co., Vancouver, and sub-contracts have been let as follows:—MacMillan and Murcheson, Vancouver, 17 miles; Holby and Owens, Vancouver, four miles; J. B. Bright and Co., Vancouver, four miles; Macdonald and Lunge, Seattle, Wash., five miles.

Penticton ratepayers have ratified the agreement with the company for its location in the town. Surveys have been started, and it is expected the construction will be begun at an early date.

The valuators appointed to fix a value for the old Midway and Vernon Ry. grade and right of way and for the adjustment of accounts outstanding by that company, met in Victoria, recently, to complete their report. The amount fixed by the valuators will be paid by the K.V. Ry., in which company the property acquired will be vested. The M. and V. right of way ends at Rock Creek, about 10 miles out from Midway, and a contract is reported to have been let to L. M. Rice & Co., Seattle, Wash., to grade from Rock Creek to Bull Creek, 35 miles, the work to be started at once.

Referring to the building of the line to Railway Pass, a press report says the line will continue along the Coldwater to July Creek, along July Creek to Boston Bar Creek, along Boston Bar Creek to the Coquihalla reaching the latter in the vicinity of St. Elmo where the Fraser will be bridged so as to bring the line across to Ruby creek to connect with the C.P.R. This will give the Kettle Valley three junction points with the C.P.R., the other two being at Midway and Merritt. (Sept., pg. 727).

Klondike Mines Ry.—We are advised that the company's line is 31 miles long, that no extensions have been made during the past year, and no further construction is contemplated at present. (July, 1909, pg. 477).

Liverpool and Milton Ry.—We are informed that while an act has been passed authorizing the company to extend its lines, no construction is likely to be done at present. Negotiations have been going on for the last two years between the company and the Halifax and South Western Ry, in reference to the former being absorbed by the latter. It is not likely that either company will do any work towards extending the line this season. (May, pg. 557.)

Manitoulin and North Shore Ry.—The contract let to O'Boyle Bros., Construction Co., (Ltd.,) Sault Ste. Marie, Ont., is for the construction of about 18 miles of line from the north side of Goat Island channel near Little Current, northerly to Whitefish River, Ont (Sept. pg. 727.)

Michigan Central Rd.—The St. Thomas, Ont., city council has granted the company a permit for the erection of a roundhouse there, estimated to cost $50,000. (Sept., pg. 727).

New Brunswick Coal and Ry. Co.—The roundhouse at Minto, N.B., was totally destroyed by fire Sept. 14, together with two locomotives and a flat car. (Dec., 1909, pg. 883.)

Newfoundland Exploration Syndicate.—Under the terms of an agreement made between the Government and the N.E.S., Dec., 1909, and ratified last session of the Legislature, the N.E.S. is given the exclusive right to prospect for coal within the colony, except on certain specially reserved areas. The sum of $15,000 is to be expended during 1910, and a further $10,000 during 1911, in the event of coal in workable quantities not being found during 1910. The company's rights may be renewed after 1911, on terms to be agreed upon. In the event of coal being found in workable quantities the N.E.S. is to be given grants of lands, not to exceed four in number, the area of each grant not to exceed seven square miles, and no two areas to be nearer to each other than seven miles. The company is also to receive grants of land in fee simple for the right of way for railways, tramways, shipping ports, and sites for stations, buildings, yards, etc., together with alternate five acre blocks of land on either side of such railway or tramways, (should such land be in the gift of the crown). The agreement is signed on behalf of the N.E.S., by F. E. Proctor, V. B. G. Cooper, directors; and A. H. Gurr, secretary.

Northern New Brunswick and Seaboard Ry.—When the Canada Iron Corporation acquired the iron ore fields at the junction of the Austin Brook with the Nipisiguit River, some 23 miles from Bathurst, N.B., the Dominion Government had under consideration the build-

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.
MONADNOCK, CHICAGO

ing of a branch line from the Intercolonial Ry, there. Two routes had been surveyed, one from Red Pine station, 14 miles, and the second from Black's Cut, 19 miles. Subsequently the company came to an understanding with the Dominion and the provincial Governments, and the line from Black's Cut to the mines was built by Wheaton Brothers, the contractors. The ore trains run from Black's Cut, over the I.C.R for four miles to Bathurst, the harbor at which place is to be dredged to allow of steam and other vessels being brought in to be loaded. At present the ore is being shipped from Newcastle. (Sept. pg. 727.)

The Northern Quebec Colonization Ry. Co. was incorporated last session of the Dominion Parliament to build a railway from Tadousac, at the mouth of the Saguenay River, westerly along the north shore to Lake St. John, thence northwesterly to between Lake Chibougamau and Lake Mistassini, Que.; thence northwesterly to Hannan Bay. Ont.; and from between Lake Chibougamau and Lake Mistassini southerly to Weymontachene, Que., on the National Transcontinental Ry. The provisional directors are: N. Drouin, J. Picard, W. Ray, Quebec; P. Touriguy, Victoriaville, Que.; J. B. Phillips, Haileybury, Ont. (April, pg. 271).

Ottawa Rideau Valley and Brockville Ry.—A meeting for the organization of this company has been called to be held at the office of D. H. MacLean, Central Chambers, Elgin St., Ottawa, Oct. 4. The notice is signed by the following for the provisional directors:—A. McDermott, R. E. Elliott, F. A. Heney, E. W. Clark, G. E. Kidd, D. H. MacLean, W. C. Maclaren, J. H. Gilmour. (Aug., pg. 629).

Pincher Creek, Cardston and Montana Ry.—Under the terms of the company's act of incorporation, a meeting of shareholders for organization was called for Sept. 30. We were recently advised that the directors then already decided on were W. C. Teter, banker, 10 Wall St., New York City, and E. Van Etten, a director of the New York Central and Hudson River Rd. The three other directors had not been decided on at the time of our advice, but in accordance with the provisions of the act of incorporation they must be Canadians domiciled in Alberta. The company has power to build a railway of about 125 miles from the International boundary, via Cardston and Pincher Creek, to Pincher station on the C.P.R., with a branch line up the south fork of the Old Man River to the boundary of British Columbia. Surveys are being made for these lines under the charge of J. H. Fine, of Philadelphia, the company's Chief Engineer. No contract has yet been let, but we are advised it is expected to let one soon after the organization of the company has been completed, and to start building the line this fall. A contract has been let to A. J. McGuire for the supply of ties for the line.

Some delay is reported to have been met with in the survey on account of bush fires, but the preliminary work was reported completed Aug. 26. The provisional plans for the line from the boundary were submitted to the Alberta Government Aug. 29, and were approved Sept. 10. The plans show a line from the boundary, (where connection is to be made with a line to be built southerly to a junction with the Great Northern Ry. 28 miles south of Coutts), north westerly through Cardston and Pincher Creek to the west side of sec. 34 at the south fork of Old Man River.

It is said that the company has acquired control of another charter authorizing the building of a line through almost the same territory, and that at the next session of the Alberta Legislature it will apply for an extension of the charter permitting it to run the main line through Alberta by way of Calgary and Edmonton to the Peace River country. It is said a line will also run south into the Kootenay coal fields.

The additional lines projected also include a branch to the Kootenay coal fields, where it is reported that the company has secured large areas of coal lands.

Port Hood-Richmond Ry. Coal Co.—We are advised that so far the company is merely engaged in coal mining, although its charter authorizes the building of a line from Port Hood to Port Malcom, N.S. J. H. Henderson, Port Hood, N.S., is the company's chief agent. (June, pg. 451.)

Portland Canal Short Line Ry.—There has been deposited with the Department of Public Works at Ottawa, plan and description of a proposed railway wharf and trestle approach thereto, to be constructed at the mouth of Bear River, Stewart, B.C., and notice is given that application is being made for the approval of the same.

T. Cameron, who has been in charge of a grading contract on the line was in Prince Rupert, Aug. 30, and stated that nine miles were ready for track laying. A vessel with a cargo of rails for the line was lying in the harbor waiting for the completion of the wharf so as to unload. The plans for the station have been approved and the building will be started immediately. (Sept., pg. 727).

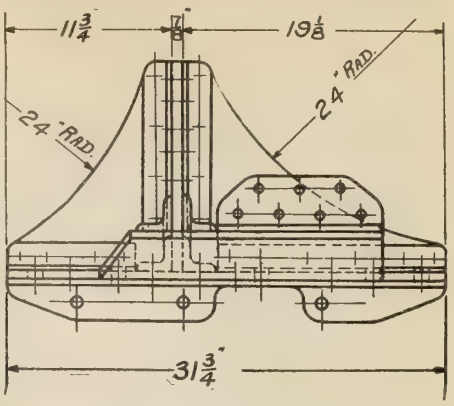
Port Simpson to Skeena River.—The British Columbia Legislature is being asked to incorporate a company with this title to build a railway from Port Simpson or Work Channel, to the eastern boundary of B.C. The route provisionally outlined in the application is via the south side of Work Channel to the Skeena River; along the north bank of this river to Hazleton, thence to the junction of the Bulkley and Skeena rivers; along the right bank of the Bulkley River to the Suskewa River, along the banks of the latter river and across a low divide to the head of Babine Lake, thence to the north end of Stewart Lake, and by the McLeod Lake to the Misnichinca River, along the valley of that river and by Summit Lake to Pine River Pass; thence northwesterly to the head of Pine River, along its valley to Moberley Lake, and thence by the Peace River Valley to the eastern boundary of the province. Barnard and Robertson, Victoria, are solicitors for applicants.

Prince Edward Island Tunnel.—Speaking at the annual meeting of the Maritime Board of Trade at Chatham, N.B., recently, Lieut.-Governor Tweedie of New Brunswick, said he was not in favor of constructing a tunnel under Northumberland Strait to connect the mainland railways with Prince Edward Island. He said the solution of the matter lay rather in the building of warehouses on the mainland where the produce of the island could be stored. (Jan.. pg. 23).

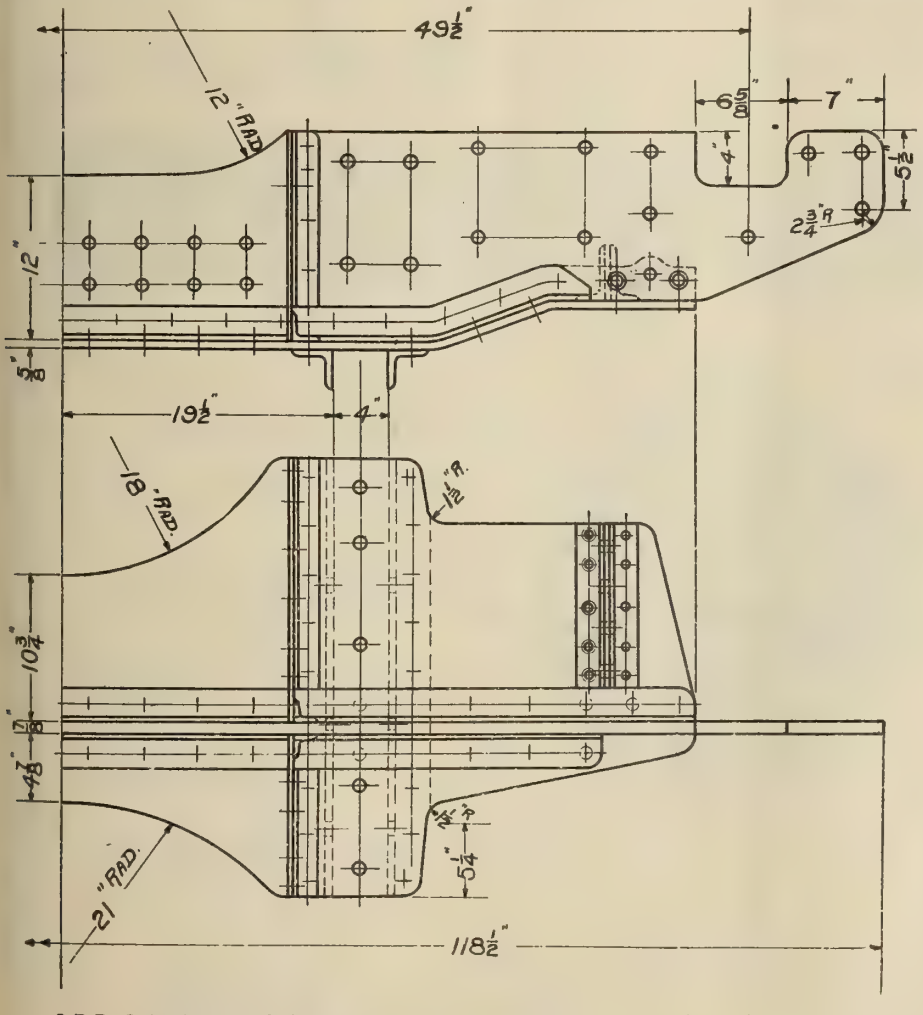
Quebec Central Ry.—The English officers of the company completed their annual inspection of the line Aug. 31. Press reports state that some new construction will be started in Bellechasse county at an early date. The only line which the company has under consideration which will pass through Bellechasse county is the extension from St. George, Beauce county to Cabano, on the Temiscouata Ry., and upon this line some work has already been done in Beauce county. Dorchester county lies between Beauce and Bellechasse counties. (Aug., pg. 631).

Reid Newfoundland Co.—We are advised that the company is erecting at St. John's, Nfld., a car building shop 228 by 50 ft. Orders have been placed for the machinery required, in addition to the present shop equipment. The company is at present building locomotives and cars for its lines, as it is required to do under the terms of the agreement approved last session of the Legislature. The company may in the future add a foundry to its shops at this point. The old car shops, President Reid said in a recent interview will be made an annex to the machine shop, where the company is at present cramped for space.

W. D. Reid, President, in speaking recently of the work on the Bonavista branch now under construction, said track was laid as far as mileage 43; the grading is finished almost down to salt water at Trinity, 52 miles. The clearing of the right of way is being kept well ahead of the graders, and on Aug. 30, the right of way had been cleared to the 58th mile. The location survey of the branch was completed. All the masonry on the line had been completed as far as Seal Cove, and the erection of the new station at Shoal Harbor had been started. (Sept., pg. 729).



C.P.R. Suburban Tank Locomotive. Frame details cross ties. (See also pg. 833.)



C.P.R. Suburban Tank Locomotive. Frame details cross ties. (See also pg. 833.)

Spokane International Rd.—Under the charter of the Cœur D'Alene and Pend d'Oreille Rd., an extension is being built from the main line of the S.I. Rd., 25.5 miles from Spokane, Wash., to Cœur d' Alene, Idaho, and a branch is also being built from Corbin. The S.I. Rd. connects at the International boundary with a C.P.R. branch leaving the Crow's Nest line at Yahk. (July, pg. 551).

Timiskaming and Northern Ontario Ry.—On returning to Toronto from his recent trip of inspection over the line, J. L. Inglehart, Chairman of the Commissioners, said the foundations of the bridge over the Wabis River at mileage 119 3-4 are completed and it is expected to have the steel superstructure in position before the end of October. The bridge wil be 400 ft. long.

Press reports state that engineers have been detailed to make a survey for a line from Cochrane to James Bay passing through the Mattagami country in which large iron ore deposits are reported to have been discovered. (Sept., pg. 729.)

Toronto.—The city of Toronto, Sept. 9, started building an industrial spur along the east bank of the Don River into the Ashbridge's Bay district. The line, which will be connected with the G.T.R., C.P.R. and Canadian Northern Ontario Ry., is for freight only. The work is being done under the superintendence of E. L. Cousins of the City Engineer's staff, and is expected to be completed by the end of the year. (Feb., pg. 111).

Toronto, Hamilton and Buffalo Ry.—Officers of the C.P.R. and of the T.,H. & B. Ry., met in Hamilton, Sept. 13, and H. H. Adams, Superintendent, T., H. & B. Ry., subsequently made the following statement: "The officers of the companies looked into the terminal facilities, but no drastic changes were decided upon. There was no mention made of the Canadian Northern Ontario Ry. coming to Hamilton, nor was anything said about the C.P.R. securing another entrance into the city. The proposed building of the Hamilton and Guelph Ry. by the C.P.R. was mentioned, but nothing definite was said, as the company is nearly tied up with existing problems in its present road. It was announced that nothing would be done this year to double-track the line east of the city." (Sept. pg. 729.)

Vancouver Island.—Referring to the reports as to the building of a logging railway from near Port Renfrew to Port San Juan, Vancouver Island we are officially informed that the Red Fir Co., Nanaimo, which was reported to be be-

hind the project, has no knowledge of the projected line.

Western Canada Power Co.—The line from Ruskin, B.C., on the C.P.R., to the company's power plant in course of erection at Stave River Falls, was expected to be completed by Sept. 30. The line skirts the wagon road almost the entire distance. Construction has generally been easy, there being only a few rather large cuts, and two places where any great amount of trestle work was required. Grant, Smith and Co., Spokane, Wash., were the contractors. (Aug., pg. 631).

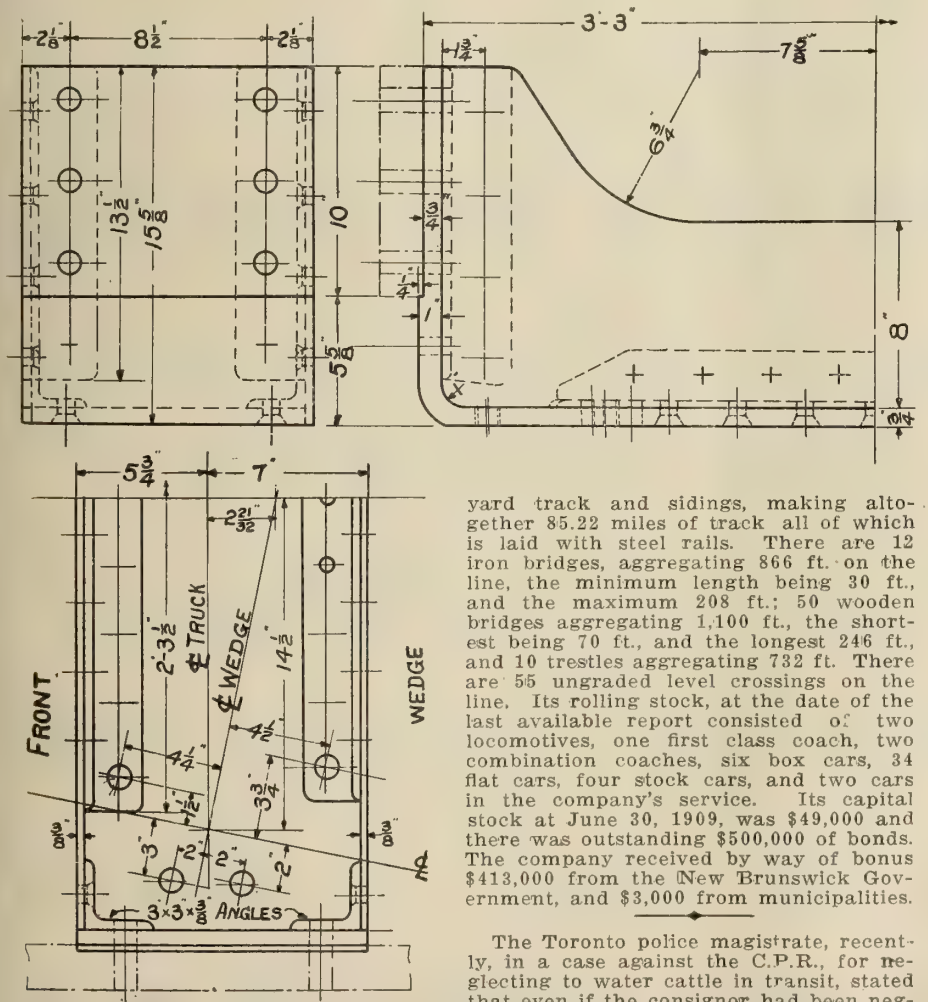
Winnipeg City Power Plant.—A Dominion order-in-council has been passed authorizing the Winnipeg city council to lease for five years a right of way for a spur line from the power line railway line between Lac du Bonnet and Point du Bois to a gravel pit to be opened on the north half of sub-division 5, sec. 2, tp. 16, range 14, east of the principal meridian. (Jan., pg. 23).

New Brunswick Southern Railway.

A special meeting of the shareholders of the company has been called to be held in St. John, N.B., Dec. 28, for the purpose of considering whether it is expedient to lease the company's railway to the C.P.R., and if so to approve of the terms, condition and form of lease. We are advised that the meeting is only a formal one, the C.P.R. having been in charge of the operations of the company for the last two years through the control of all the stock. The lease, which is for 999 years, provides that the C.P.R. shall pay an annual rental equivalent to 3% a year on the N.B.S.R. Co.'s outstanding bonds, aggregating $500,000.

The Shore Line Ry. was incorporated by the New Brunswick Legislature in 1889, and in 1895 the undertaking was declared to be one for the general advantage of Canada. The company was then given power to build a line from St. John to a connection with the Central Ry. on the St. Martin's branch, or at Norton in King's County, and to lease or otherwise acquire the line. The line built under the New Brunswick charter extended from St. John to St. Stephen, N.B., but nothing was ever done in the way of building the extension to the Central Ry., which has since been absorbed by the New Brunswick Coal and Ry. Co. The railway was not very successful and its control passed into the possession of the late Russell Sage of New York, from whose executors it has passed to the C.P.R. The title of the Shore Line Ry. was abandoned in 1901 when an act was passed by the New Brunswick Legislature authorizing the change. With a view of removing all doubts as to the company and its property an act was passed by the Dominion Parliament in 1908 recognizing the New Brunswick incorporation of the N.B.S. Ry., declaring its undertaking to be one for the general advantage of Canada, and authorizing the construction of a bridge across the St. Croix River at St. Stephen, for the purpose of making a connection with the Washington County Ry. in the State of Maine.

The N.B.S.R. is 82.19 miles long with 0.16 mile of a spur line, 2.87 miles of yard track and sidings, making altogether 85.22 miles of track all of which is laid with steel rails. There are 12 iron bridges, aggregating 866 ft. on the line, the minimum length being 30 ft., and the maximum 208 ft.; 50 wooden bridges aggregating 1,100 ft., the shortest being 70 ft., and the longest 246 ft., and 10 trestles aggregating 732 ft. There are 55 ungraded level crossings on the line. Its rolling stock, at the date of the last available report consisted of two locomotives, one first class coach, two combination coaches, six box cars, 34 flat cars, four stock cars, and two cars in the company's service. Its capital stock at June 30, 1909, was $49,000 and there was outstanding $500,000 of bonds. The company received by way of bonus $413,000 from the New Brunswick Government, and $3,000 from municipalities.



C.P.R. Suburban Tank Locomotive. Frame details, cross tie. (See also pg. 831.)

The Toronto police magistrate, recently, in a case against the C.P.R., for neglecting to water cattle in transit, stated that even if the consignor had been negligent, as alleged, the company was not absolved from responsibility, and could not contract itself out of its liability.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses and net profits from July 1, 1910, with increases over, or decreases from, those of 1909-10:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 1,225,100	$876,900	$348,200	$118,600+
Inc.	$ 381,600	$263,000	$118,600	.....

Approximate earnings for Aug., $1,093,000, and for two weeks ended Sept. 14, $544,300, against $807,100 and $430,100 for same periods 1909. Mileage operated, 3 297, against 3,094 during the same period 1909.

C.P.R. Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases over 1909-10, from July 1, 1910:

	Earnings.	Expenses.	Net Profits.	Net Increase or Decrease
July	$8,869,214.32	5,384,594.73	3,484,619.59	1,004,748.86+
Inc.	1,729,184.39	724,435.53	1,004,748.86	

Approximate earnings for Aug., $8,926,000, and for two weeks ended Sept. 14, $4,153,000, against $7,152,000 and $3,500,000 for same periods 1909.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for July, $311,982.85; operating expenses, $195,458.46; net revenue, $116,524.39, against $285,234.18 operating revenue; $203,288.70 operating expenses; $81,945.48 net revenue for July, 1909. Approximate gross earnings for Aug., $346,095, and for two weeks ended Sept. 14, $141,750, against $308,376 and $143,525 for same periods 1909.

MINERAL RANGE RD.—Operating revenue for July, $58,133.73; operating expenses, $72,552.53; deficit, $14,418.80, against $73,665.33 operating revenue; $62,850 operating expenses; $10,815.33 net revenue for July, 1909. Approximate gross earnings for Aug., $63,944, and for two weeks ended Sept. 14, $29,349, against $74,015 and $34,395 for same periods 1909.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RY.—Operating revenue for July, $1,228,655.09; expenses and taxes, $776,816.90; operating income, $451,838.19, against $1,144,521.82 operating revenue; $737.164.58 expenses and taxes; $407,357.24 operating income for July, 1909. Approximate gross earnings for Aug., $1,998.739, and for two weeks ended Sept. 14, $957,013, against $1,785,028 and $1,117,326 for same periods, 1909.

CHICAGO DIVISION.—Operating revenue for July, $806,661.07; expenses and taxes, $545,595.35; operating income, $261,065.72, against $718,412.08 operating revenue; $464,230.06 expenses and taxes; $254,182.02 operating income for July, 1909.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., and G.T. Western Ry. and D., G.H. & M. R. separately for July:

GRAND TRUNK RAILWAY.	
Earnings	$2,538,400
Expenses	1,826,750
Net earnings	$711,650
CANADA ATLANTIC RAILWAY.	
Earnings	$126,000
Expenses	135,900
Deficit	$9,900
GRAND TRUNK WESTERN RAILWAY.	
Earnings	$394,400
Expenses	335,700
Net earnings	$58,700
DETROIT, GRAND HAVEN AND MILWAUKEE RY.	
Earnings	$121,200
Expenses	120,200
Net earnings	$1,000

Approximate earnings for Aug., $3,885,049, and for two weeks ended Sept. 14, $1,921,444, against $3,879,409 and $1,836,641 for same periods 1909.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to Aug. 31:—

	1910.	1909.	Dec.
Grand Trunk	£1.151,928	£1,163,036	£11,107
Canada Atlantic	59,283	69,779	10,496
G.T. Western	183,405	215,267	31,862
D.G.H. & M.	57,084	66,425	9,341
Totals	£1.451,700	£1,514,506	£62,806

The C.P.R. staff records show, we were officially informed, Sept. 9, that the number of employes exceeds 76,000, of whom nearly 12,000 are in Montreal.

G. T. R. Betterments, Construction Etc.

New England Southern Ry.—E. H. Fitzhugh, Vice President G.T.R., was in Providence, R.I., Sept. 7, to confer with the Mayor as to the improvements which the newly appointed Harbor Commission proposes to carry out. Providence is the terminal point of the new line which the Central Vermont Ry., a G.T.R. subsidiary, proposes to build in order to secure an additional deepwater outlet.

Montreal Track Elevation.—R. S. Logan, Assistant to the President, in a recent interview upon the doing away with level crossings in Montreal, is reported to have said: "We have been considering this complicated question for fully 10 years, and we are to-day little farther advanced, but perhaps these latest plans may go through—who knows? Our engineers are at least going into the matter very thoroughly, and will have plans ready for the Board of Commissioners when the matter is to be taken up. Perhaps a definite announcement will then be made."

Ottawa Station and Hotel.—Work has been resumed upon the station annex, the walls of which were expected to be completed by Sept. 30. The work of tearing down the various old buildings on the site of part of the new building is being proceeded with, and the work generally on the station and hotel is being gone on with.

Toronto Belt Line.—The G.T.R. belt line has been reconstructed between the old Northern Ry. on Davenport St., and Yonge St., and was expected to be ready for freight operation by Sept. 30.

Bathurst St.-Humber Improvement, Toronto.—Actual work on the depression of the tracks between Bathurst St. and to the east of Sunnyside, and their elevation from Sunnyside to the Humber, was started Sept. 15. The engineering staff in charge of the work is located at No. 1 Cowan ave. The work at present being done is the preparation of the additional tracks necessary for the carrying on of traffic while the work is being gone on with on the new roadbed. Two steam shovels and one pile-driver are already at work. The operations are being directed by J. R. W. Ambrose, the company's grade separation engineer in Montreal, and S. D. McCooe is in charge of the work as superintendent.

Guelph Station.—A conference has been arranged between the citizens and the company for the purpose of discussing the question of the use of Jubilee Park, for the expropriation of which for station purposes the company has given notice.

Stratford-Goderich Line.—The ballast pit on the hill near Saltford bridge, Mitchell, Ont., has been reopened, and a siding laid into it for taking out ballast for the line between Stratford and Goderich, upon which heavier rails are being laid.

Goderich Yards.—Two additional sidings are being laid in the yards at Goderich, Ont., on a portion of the hillside recently taken in above the overhead bridge on the Stratford road. They will have accommodation for 75 cars. (Sept., pg. 751.)

Dominion Grade Crossing Fund.—The Dominion Parliament appropriated $1,000,000, spread over 10 years in aid of the elimination of grade crossings. The Board of Railway Commissioners has laid down the principal that the fund is to be used to assist municipalities and railway companies to abolish level crossings where such abolition is for the benefit of the public. About $25,000 of the fund was used in 1909, and about the same amount has been appropriated for the work this year.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

EXCURSION AND OTHER SPECIAL PASSENGER TRAFFIC.

11395. Aug. 15.—Whereas railway companies, subject to the provisions of the Railway Act, are occasionally offered excursion or other special passenger traffic which, if accepted, must be moved immediately, or with less than the three days notice required by the Act for filing the necessary special tariffs, and without affording the Board time for dealing with such matters by the customary procedure; and whereas by sec. 332, "the Board may, owing to the exigencies of competition or otherwise, notwithstanding anything in this section contained, determine the time or manner within and according to which publication of any such tariff is to be made;" and whereas the prompt acceptance and movement of the said traffic appears to the Board to be in the public interest; it is ordered that the Chief Traffic Officer of the Board be authorized to deal with such urgent cases on application of the companies by telephone or telegraph, and, in his judgment, and on behalf of the Board, to give the required permission, subject to such conditions as may seem to him to be necessary, including the immediate publication and filing of the requisite tariff; or to require the formal submission of the application to the Board.

COAL RATES FROM SOUTHERN SASKATCHEWAN.

11550. Sept. 1.—Re complaint of Eureka Coal & Brick Co. of Estevan, Sask., alleging discrimination in freight rates charged by the C.P.R. on coal from Estevan, as well as discrimination in switching charges on coal at Estevan in favor of shippers at Roche Percee and Bienfait; and re application of Roche Percee Mining Co., of Roche Percee, Sask., for order directing the C.P.R. to reduce the rate on coal from Roche Percee to all points east on its line, to the rate now charged on the same commodity from Bienfait to all points east on its railway; and for an order removing the switching charge of $2 a car now exacted from the applicant company; and for an order directing a rebate of all overcharges paid by the applicant company. Upon hearing the applications at the sittings of the Board held at Regina and Winnipeg in Feb. and Nov. respectively, 1909, in the presence of counsel for the Western Dominion Collieries Company and the Eureka Coal & Brick Co., the evidence offered, and what was alleged at the hearing; and upon reading the reports of the Chief Traffic Officer—It is ordered that the applications be dismissed.

SUPPLEMENT 3 TO CANADIAN CLASSIFICATION 14.

11599. Sept. 2.—Re application of Canadian Freight Association, under sec. 321 of the Railway Act, for order approving a proposed Supplement 3 to Canadian Classification 14:—The Canadian Freight Association having published the proposed advanced ratings in The Canada Gazette, as required by sec. 321; and the Board having furnished copies of the proposed supplement to the Canadian Manufacturers Association and the Boards of Trade of Montreal, Toronto, Winnipeg and Vancouver, and afforded sufficient time for the reception of objections to the proposed changes: Upon consideration of the said objections; and upon the hearing of the application in the presence of representatives of the railway companies the Managers of Transportation to the Canadian Manufacturers Association and the Montreal Board of Trade, and representatives of the Canadian General Electric Co., the Canadian Westinghouse Co., the Northern Electric Co., and the Otis-Fensom Elevator Co.; and upon the report and recommendation of the Chief Traffic Officer of the Board—It is ordered that the additions and changes embodied in the said proposed supplement 3 to Canadian Classification 14 be approved, subject to the following exceptions and additions:—

(1) The application for approval of the proposed increase in the carload rating of elevators and parts, in mixed carloads, from 6th to 5th class, is refused.

(2) The application with respect to the classification of churns is refused.

(3) The proposed ratings of electrical dynamos, generators, motors, transformers, and converters, small detached parts boxed, also of motors and pumps, combined, crated, small detached parts boxed, viz. l.c.l. 1st class, c.l. 5th class, to be changed to read l.c.l. 1st class c.l. 6th class; and the proposed ratings of dynamo bases (iron), detached from the dynamo, 1,000 lbs. per piece or over, viz. l.c.l. 3rd class, c.l. 5th class, to be changed to read "Same as castings."

(4) To the proposed rating of 2nd class, l.c.l., on rubber tiling, boxed, there be added a carload rating of 4th class.

And it is also ordered: (a) That the proposal of the Chairman of the Advisory Committee of the Canadian Freight Association, contained in his letter to the Board dated July 25, 1910, that, at the suggestion of the Deputy Minister of the Department of Naval Service, the classification of military stores and ordinance be applied also to naval stores and ordnance, be approved.

(b) That the proposed reduction in the rating of iron and steel fence gates, l.c.l., from 2nd to 3rd class, submitted to the Board in a letter from the Chairman of the Advisory Committee of the Canadian Freight Association dated Apr. 6, 1910, be approved.

(c) That the proposed rating of 2nd class on hockey sticks, l.c.l., finished or unfinished, in boxes, bundles, or crates, submitted to the Board in a letter from the Chairman of the Advisory Committee of the Canadian Freight Association, dated Aug. 19, 1910, be approved.

And it is further ordered: That the classification of churns, modified to read "hand churns," in straight carloads, be reduced from 5th to 6th class; and that the various ratings of churns so modified, be retained in the "hardware" and "woodenware" lists, and added to the "implement" list.

RATINGS OF OLD RAILS.

11562. Sept. 2.—Re application of Canadian Freight Association, dated July 3, 1909, under sec. 321 of the Railway Act, for approval of Supplement 2 to Canadian Classification 14: It having been arranged at the hearing at Ottawa, Sept. 22, 1909, for the proposed change in the ratings of old rails (iron or steel) to be held in suspension pending the furnishing by applicants of additional information relative thereto, order 8184, Sept. 25, 1909, approved the said supplement, subject, inter alia, to the condition that the proposed change with respect to old rails (iron or steel) be struck out, and the said additional information having since been filed with the Board, and upon consideration thereof—it is ordered that the application be dismissed.

Kingston's Ambition.—The city council of Kingston, Ont., has directed the City Clerk to write the Presidents of the G.T.R., the C.P.R., and the Canadian Northern Ry. asking them to state what inducements they would require to build a line through their city. The G.T.R. main line between Montreal and Toronto passes north of Kingston, the city being reached by a short branch. The C.P.R. has an entrance into the city over its Kingston and Pembroke Ry., which has its headquarters in Kingston.

THE MILBURN LIGHT

MADE FROM ACETYLENE GAS

FOR WRECKING CARS, STEAM SHOVELS, DREDGES, Etc.

For this class of work it is unsurpassed. The Light is supplied with a water tight cover, enabling it to withstand any amount of vibration.

One or two powerful reflected lights can be supplied by the one outfit, also a series of smaller burners. The light follows the crane or shovel and throws its rays directly upon the work. It lights instantly, requires no attention during use and positively defies wind and weather.

It gives 5000 CANDLE POWER FOR ABOUT 6c
AN HOUR AND LIGHTS 1500 FEET OF WORK

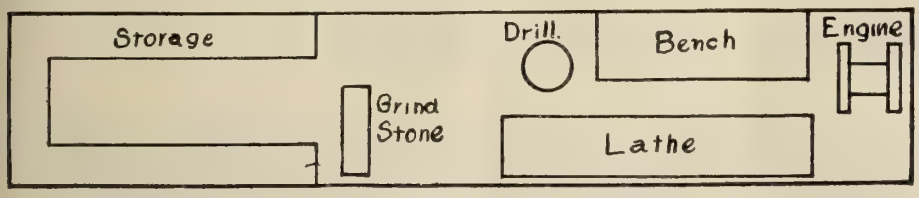
G. T. P. R. Machine Repair Cars.

The Grand Trunk Pacific Ry. has in use several machine cars for making repairs to locomotive and construction machinery at outlying points. They are ordinary box cars, arranged with windows for lighting purposes.

The equipment consists of a 12 inch lathe, a small drill, and grindstone; one of the cars also contains a shaper. The power used is a Fairbanks 6 h.p. gasoline engine, belted to a line shaft from which the power is transmitted to the machines.

As the work of construction has advanced farther west, and part of the road been put in operation, it has been found that one or two of the cars kept close to the front answer all requirements for light repairs. The cars, which would thus otherwise be thrown out of service, have been installed at divisional and round house points pending the providing of regular machine shops.

The advantage of having these cars close to the front on construction work can readily be seen. Without them, a foreman frequently has his ingenuity taxed to keep the equipment in working shape. A case in point is the breaking of a cast iron steam pipe on a steam shovel. This pipe broke off short next to the flange, about an hour before stopping time. By binding a piece of rope around the break and flange and running carefully it was possible to finish the day. The pipe was then removed and placed in the lathe, and the broken ends faced off, the inside of pipe and flange threaded and a two inch pipe nipple screwed in. When a new steam pipe arrived a week later from the general stores the repaired pipe was still giving perfect service and was left in place.



Another case is the chipping off of a piece of the seat on a locomotive throttle. The engine became unsafe to handle without brakes partly set. The breaking of a brake hanger pin disabled the brakes. A new pin was made in the lathe and the throttle removed and faced while the engine was being washed out. The machine car in this case saved a trip of over 100 miles over partly ballasted track.

International Traffic Control.—In an interview at Vancouver, B.C., Sept. 6, J. P. Mabee, Chairman of the Board of Railway Commissioners, is reported to have said that a basis of agreement for the control of international commerce between Canada and the U.S., was reached at the recent conference he had with M. A. Knapp, Chairman of the Interstate Commerce Commission. The details were being worked out, and when everything was completed the agreement would be presented to the Dominion Parliament and to Congress for ratification. M. A. Knapp, in an interview at Washington, D.C., Sept. 13, is reported to have said that another conference would be held either in Oct. or early in Nov., when he and Mr. Mabee, would further consider the matter. Mr. Knapp added that he expected to have his report ready for presentation by Jan. 1.

The Armstrong Cartage Co., which handles the C.P.R. and the Toronto, Hamilton and Buffalo Ry. cartage business in Hamilton, Ont., is building a large storage warehouse at the head of Victoria Ave. The basement is to be fitted with a cold storage plant.

October Birthdays.

E. N. Todd, Export Freight Agent C.P.R., Montreal, born at Huntington, Que., Oct. 17, 1879.

L. H. Wheaton, Division Engineer National Transcontinental Ry., Moncton, N.B., born at Sackville, N.B., Oct. 5, 1866.

G. B. Wyllie, Travelling Passenger Agent Illinois Central Rd., Buffalo, N.Y., born at Toronto, Ont., Oct. 15, 1851.

The Bay of Quinte Railway.

Following the purchase of the Central Ontario Ry., the Marmora Ry. and Mining Co.'s line, and the Irondale Bancroft and Ottawa Ry., the Mackenzie, Mann & Co., interests have secured the Bay of Quinte Ry. which has a total of 89.37 miles of line, distributed as follows:—Deseronto to Bannockburn, Ont., 76,00 miles; Deseronto westerly, 2.00 miles; and Yarker to Sydenham, 11.37 miles. These lines were built under different charters, and finally amalgamated under the title of the Bay of Quinte Ry. The company also operates over 19 miles of the G.T.R. In the official report the mileage is divided as follows:—main line, 78 miles; branches and spurs, 11.37 miles; operated under trackage rights, 19 miles; yard tracks and sidings, 15.30 miles. There are on the line 73 unprotected level crossings; 12 iron bridges of an aggregate length of 1,010 ft., the maximum length being 200 ft., and the minimum length 24 ft.; and one wooden bridge 60 ft. long. Its rolling stock, June 30, 1909, the latest report available, consisted of seven locomotives; 8 first class passenger cars; three baggage, express and postal cars; 18 box cars, 126 flat cars, 20 gravel cars, two cabooses and three other road cars. There was outstanding on June 30, 1909, $1,395,000 of common stock, and $880,000 of bonds. The subsidies paid on account of the building of the lines were: From the Dominion Government, $350,455.25; from the Ontario Government, $84,000, and from municipalities, $197,990.43.

The B. of Q.R. head office is at Deseronto, the principal officials being President E. W. Rathbun; General Freight and Passenger Agent, J. F. Chapman; Superintendent, H. B. Sherwood. We have reason to believe that matters in connection with the operation of the line will not be changed at present, probably not until the Canadian Northern Ontario Ry. from Toronto to Ottawa is built to a connection with the B. of Q.R. near Napanee.

Cuba Ry.—The report for the year ended June 30, shows gross earnings of $2,559,335, working expenses of $1,452,036, and net earnings of $1,107,299, against $2,157,167 gross, and $950,088 net for the yearr ended June 30, 1909, The proportion of working expenses to gross earnings was 56.73% against 55.95% in the previous year. There is under contract rolling stock to the value of $476,753. In order to provide for the large increase of trade, and for the new lines nearing completion, the shareholders have authorized the creation of a mortgage to secure an issue of 5% improvement and equipment bonds, the amount to be issued not to exceed $12,000 a mile of completed railway.

WAITING ROOM

21½ inches long, 3 inches deep.

Station Door Signs made of enameled iron are best. They are attractive signs and last forever.

The enamel is fused into the iron at a very high temperature, which insures their indestructible qualities.

We supply them with any lettering, in any quantity or colors.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them

11387. Aug. 11.—Amending order 11276 approving C.N.O.R. location in Belleville and Thurlow tp.

11388. Aug. 11.—Authorizing building of drain in con. 7, Malahide tp., Ont.

11389. Aug. 11.—Approving revised location of Eye Hill Creek extension of C.P.R. Pheasant Hills Branch from sec. 3, tp. 39, r. 28, w. 3 m., at mileage 0 and at mileage 492.2 on Pheasant Hills Branch at Macklin, to sec. 12, tp. 33, r. 22, w. 3 m., on Moose Jaw North Westerly Branch, being mileage 55.7 on extension.

11390. Aug. 11.—Authorizing C.P.R. to build bridge 24.2, Port Burwell Branch, Ontario Division.

11391. Aug. 11.—Extending time within which Essex Terminal Ry. was authorized by order 8993 to operate along Gravel Rds., Sandwich West tp., Ont., to Sept. 15.

11392. Aug. 9.—Authorizing C.N.O.R. to build between lots 10 and 11, con. 4, Clarke tp. and rescinding order 9562, Feb. 15, authorizing the construction of subway.

11393. Aug. 15.—Ordering C.P.R. to maintain day and night watchman at crossing of Winnipeg Electric Ry. on Logan Ave., Winnipeg.

11394. Aug. 1.—Granting application of Express Traffic Association of Canada, asking that the Board accept filing of joint tariffs of international express tolls from the U.S. to Canada, by F. G. Airy, New York, as joint agent for express companies interested.

11395. Aug. 15.—Authorizing the Board's Chief Traffic Officer to deal with urgent cases on application of railway companies in connection with excursion tariffs. This order is given in full on another page.

11396. Aug. 15.—Authorizing Coldwater village, Ont., to lay pipe under C.P.R. at Grey St.

11397. Aug. 15.—Authorizing town of Taber, Alta., to lay pipes under C.P.R. at DeVeber Ave.

11398. Aug. 15.—Authorizing town of Galt, Ont., to relay pipe under G.T.R., Galt and Berlin Branch, at Blair road and George St.

11399. Aug. 15.—Authorizing A. Leofred, C.E., of Quebec, to lay mains under G.T.R. at Charny, Que.

11400. Aug. 15.—Authorizing St. Lawrence and Adirondack Ry. to extend side track east of main line at Athelstan, Que., northerly and across third concession highway, Elgin tp., to its main line.

11401. July 25.—Approving revised location of Niagara, St. Catharines and Toronto Ry. across ponds 1, 2, and 3, opposite locks 12, 13, and 14, old Welland canal, Merritton, Ont.

11402. Aug. 16.—Authorizing C.P.R. to build spur from near Agassiz, B.C., on its main line, in s. e. 27-3-29, w. 6 m., northerly to ballast pit in sec. 34-3-29, w. 6 m.

11403. June 27.—Authorizing city of Brantford, Ont., to build foot crossing over Brantford and Hamilton Electric Ry., connecting Mary and Greenwich Sts., and crossing Brantford canal level.

11404. Aug. 16.—Rescinding order 2029, Nov. 26, 1906, made upon application of the National Transcontinental Ry. Commissioners, and authorizing them to join their tracks with the C.P.R., west of Rennie station, Man.

11405. Aug. 19.—Authorizing National Transcontinental Ry. to cross, at grade, C.N.R. Dundee branch, at mileage 246.5, St. Boniface, Man., the question of the interlocking appliances to be reserved for future consideration and in the meantime applicants to install a double arm semaphore to be operated by the trainmen.

11406. Aug. 18.—Authorizing British Yukon Ry. to open for traffic the portion of its line from Best Chance mine to Pueblo mine.

11407. Aug. 18.—Authorizing C.P.R. to use bridges 29.8, 35.6, 39.3, 47.9, 65.1, 87.12, and 87.37, on Esquimalt and Nanaimo Ry.

11408. Aug. 18.—Authorizing Montreal Light, Heat and Power Co. to erect wires across Dominion Bridge Co.'s siding, Lower Lachine road, Lachine, Que.

11409. Aug. 19.—Authorizing United Fuel Supply Co. to lay pipe under P.M.R. between cons. 1 and 2, Chatham tp., Ont.

11410 to 11416. Aug. 18, 19.—Authorizing Ontario Hydro-Electric Commission to erect wires at seven points.

11417, 11418. Aug. 18.—Approving location of C.N.O.R. station grounds at Port Hope and Greenwood.

11419. Aug. 19.—Authorizing Quebec Ry., Light and Power Co. to build branch from near Riviere des Chiens station on its main line to Tobin Manufacturing Co.'s yard and to cross public road in Chateau Richer parish.

11420. Aug. 18.—Authorizing G.T.R. to substitute plan C 2-36, dated Toronto, July 6, 1910, for plan 38, deposited in the Registry Office for Waterloo Co., on Apr. 16.

11421. Aug. 19.—Ordering G.T.P. Ry. to provide farm crossing for W. J. Beggs, Colonsay, Sask.

11422, 11423. Aug. 11-12.—Authorizing Volcanic Oil and Gas Co., to lay pipe under Essex Terminal Ry. and under G.T.R. at Tecumseh road, between Sandwich East tp. and Windsor, Ont.

11424. Aug. 22.—Authorizing T. H. & B. R. to build branch in Hamilton, Ont., from its easterly belt line northeasterly across Brant St., and G.T.R. Hamilton and North Western Division to the northerly limit of G.T.R. lands; to cross at grade, Brant St. and G.T.R. Hamilton and North Western Division north of Brant St. and east of McKinstry St.

11425. Aug. 22.—Authorizing town of Wingham, Ont., to lay pipe under C.P.R. at Minnie St.

11426, 11427. Aug. 20-22.—Authorizing Coldwater village, Ont., to lay pipe under and across G.T.R. and under C.P.R., Main St.

11428. Aug. 11.—Authorizing Saskatchewan Department of Public Works to construct highway across C.P.R. in north half of sec. 14, tp. 4, r. 10, w. 2 m.

11429. Aug. 22.—Authorizing C.P.R. to build branch from its Muskoka section where it intersects the northerly boundary of G.T.R. right of way, to Roman Stone Co.'s premises, Weston, Ont.

11430. Aug. 22.—Authorizing C.P.R. to build spur for Canadian Mineral Rubber Co.

11431. Aug. 22.—Approving C.N.O.R. location and revised location through Sidney tp. and Trenton, mileage 136 to 145.1.

11432. Aug. 22.—Authorizing C.N.O.R. to build bridge over Dawes Road, York tp., at station 139.

11433. Aug. 22.—Approving location of portion of C.P.R. Weyburn-Lethbridge Branch from sec. 4, tp. 8, r. 29, w. 2 m., at mileage 106, to sec. 8, tp. 9, r. 14, w. 3 m., at mile 200.

11434. Aug. 22.—Authorizing New Brunswick Southern Ry. (C.P.R.) to build bridge 19.82 over the Digdeguash River.

11435. Aug. 22.—Authorizing G.T.R. to build siding from south end of branch built on National Carbon Mnfg. Co.'s premises on lot 30, south of the Paton Road.

11436. Aug. 11.—Authorizing Hamilton Gas Light Co. to lav pipe on Lock St. bridge and over T.H. & B.R.

11437. Aug. 23.—Authorizing United Fuel Supply Co. to lay pipe under M.C.R. on Third St., Brigden, Ont.

11438. Aug. 23.—Authorizing Port Rowan Natural Gas Co. to lay pipe under G.T.R. at Port Rowan station, Ont.

11439. Aug. 24.—Amending order 11405, authorizing National Transcontinental Railway Commissioners to cross at grade, C.N.R. Dundee Branch, at mile 246.5, St. Boniface, Man.

11440. Aug. 24.—Authorizing G.T.R. to build siding and spurs along and across Pinnacle St. and Wharf St. to Canada Bolt and Nut Co.'s premises, Belleville, Ont.

11441. Aug. 24.—Authorizing Saskatchewan Department of Public Works to build highway over C.P.R. in s.e. ¼ sec. 2, tp. 25, r. 3, w. 2 m.

11442. Aug. 24.—Authorizing C.P.R. to build additional track across Holland St., Dundalk, Ont.

11443. Aug. 25.—Declaring that G.T.R. crossing known as no. 4 side road, about two miles west of Glencoe, Ont., is protected to Board's satisfaction.

11444. Aug. 25.—Authorizing G.T.P. Branch Lines Co. to divert highway in n.w. ¼ sec. 2, tp. 41, r. 22, w. 4 m., North Alberta District.

11445. Aug. 16.—Extending time within which C.P.R. was authorized by orders 10524 and 11134 to install electric bell at crossings of William St., London, Ont., for 30 days from Aug. 11.

11446. Aug. 2.—Amending Board's requirements regarding protection of wooden trestles. This order is published in full on another page.

11447. Aug. 16.—Approving agreement of Apr. 28, between Bell Telephone Co. and P. K. Hunt, Quebec.

11448. Aug. 16.—Extending time within which C.P.R. was authorized by orders 9722 and 10753, to build spur for Standard White Lime Co., at Beachville, Ont., to Oct. 31.

11449. Aug. 15.—Authorizing G.T.P.R. to divert road in n. e. ¼ sec. 35, tp. 22, r. 7, w. 2 m., Yorkton, Sask.

11450. Aug. 16.—Authorizing C.P.R. to build spur from block 10, lot 13, Kildonan, Man., northeasterly, northerly, and northwesterly through block 10 and along blocks 11, 12, 13, 14 and 15.

11451. Aug. 16.—Extending for 30 days from date time within which C.P.R. was authorized by orders 10523 and 11135, to install electric bell at crossing of Colborne St., London, Ont.

11452. Aug. 16.—Extending time within which C.P.R. was authorized by orders 10321 and 10883, to install electric bell at crossing at mileage 81.28, Toronto section, Markham tp., Ont., until Sept. 15.

11453. Aug. 23.—Authorizing T.H. & B.R. to rebuild wooden bridge over London and Hamilton road, Brantford tp., Ont.

11454. Aug. 23.—Ordering Red Mountain Ry. to erect signboards at all highway crossings on its line in compliance with sec. 243 of the Railway Act, and that it limit the speed of trains and engines to not more than six miles an hour from Rossland station, B.C., to 100 yds. west of Second Ave. crossing.

11455. Aug. 27.—Authorizing C.N.O.R. to build between lots 32 and 33, con. A, Haldimand tp.

11456. Aug. 23.—Authorizing C.N.O.R. to take possession of Central Ontario Ry. in Trenton from its junction with the C.O.R. south of Wragg St. to the intersection of Joseph and Queen Sts.; and to join with the C.O.R. there.

11457. Aug. 27.—Approving Manitoulin and North Shore Ry. Standard Passenger Tariff C.R.C. 8 applying a rate of 4c. a mile, or fraction thereof, between all stations on its line.

11458 to 11462. Aug. 27.—Authorizing C.N.O.R. to build across roads at five points in Trenton.

11463. Aug. 3.—Amending rule 6 of Canadian Classification 14.

11464. Aug. 26.—Authorizing Saskatchewan Department of Public Works to build highway over Qu'Appelle, Long Lake & Saskatchewan Ry. in s.w. ¼ sec. 33, tp. 19, r. 21, w. 2 m.

11465. Aug. 26.—Amending order 11424, authorizing T.H. & B.R. to build branch to the Oliver Chilled Plow Works, by adding that it be completed within three months.

11466. Aug. 26.—Authorizing G.T.R. to build siding, with spur, from its Northern Division, south of Tennyson Ave., Toronto, northerly crossing Tennyson Ave. to Connell Anthracite Mining Co.'s premises.

11467 to 11471. Aug. 29.—Authorizing Water Commissioners of London, Ont., to erect wires across the London and Port Stanley Ry., C.P.R., and London and Lake Erie Ry. Ry.

11472. Aug. 27.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at Asylum side road, London.

11473. Aug. 27.—Authorizing Montreal Light, Heat and Power Co. to lay pipe under G.T.R. on Cote St. Paul Road.

11474. Aug. 27.—Authorizing C.P.R. to build two extensions to spurs already constructed for Calgary Brewing and Malting Co., on n.e. ¼ sec. 11, tp. 23, r. 1, w. 5 m.

11475. Aug. 27.—Extending time within which C.P.R. was authorized to build spur across lot 1, and block 31, parish lot 35, St. John's, Winnipeg, until Oct. 18.

11476. Aug. 29.—Authorizing C.N.R. to build across highways between secs. 15 and 16, 16 and 9, 9 and 8, tp. 5, r. 6, w. 2 m.

11477. Aug. 27.—Authorizing C.N.O.R. to build across Sidney St., Trenton.

11478. Aug. 25.—Authorizing C.P.R. to change location of its station at Keeler, Sask.

11479. Aug. 25.—Authorizing C.P.R. to build spur across 9th Ave., and on block 124, together with a branch through lots 26, 27, 28, 29 and 30, in block 124, Moose Jaw, Sask., for the city of Moose Jaw, Moose Grocery Co., and Rex Fruit Co.

11480. Aug. 25.—Authorizing C.P.R. as lessee of the New Brunswick Southern Ry. to change location of its station at Bristol.

11481. Aug. 25.—Amending order 9273, authorizing city of Winnipeg to build bridge over C.P.R. to connect Brown and Brant Sts., by approving revised plan 4886.

11482. Aug. 25.—Authorizing C.P.R. to build additional siding across road allowance between n.w. ¼ sec. 19, tp. 17, r. 2, w. 3 m., and s.w. ¼ sec. 30, tp. 17, r. 2, w. 3 m.; also across road allowance between s.w. ¼ sec. 30, tp. 17, r. 2, w. 3 m., and s.w. ¼ sec. 25, tp. 17, r. 3, w. 3 m., at Parkbeg, Sask.

11483. Aug. 25.—Authorizing Montreal Light, Heat and Power Co. to lay pipe under C.N.Q.R. on Pie IX. Ave., Maisonneuve.

11484. Aug. 25.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Woodstock, Thames Valley and Ingersoll Electric Ry. at Mill and Charles Sts., Ingersoll.

11485. Aug. 30.—Authorizing town of Wingham, Ont., to lay pipe under G.T.R.

11486. Aug. 30.—Authorizing Water Commissioners of London, Ont., to erect wires

REMEMBER

When you require any new equipment in the line of Iron or Woodworking tools, —Williams & Wilson can furnish the Right Tools at the Right Price. Here are a few of our Agencies:

CANADA MACHINERY CORPORATION,
Iron and Woodworking Machinery.
FOOTE-BURT CO., High Duty Drilling Machinery.
NEWTON MACHINE TOOL WORKS,
Cold Saws, Milling Machines, Etc.
BULLARD MACHINE TOOL CO.,
Rapid Production Vertical Turret Lathes.
AJAX MFG. CO., Forging Machinery for Smith Shop.
WARNER & SWASEY, Turret Lathes for Brass and Iron.
LANDIS TOOL CO., Grinding Machinery.
KEARNEY & TRECKER, High Duty Horizontal Millers.
AMERICAN TOOL WORKS CO., Radial Drills, Etc.
—And numerous others.

We will gladly send Descriptive Circulars or Catalogues of any of the above.
Send us your inquiries.

11498. Aug. 30.—Relieving G.N.R. from providing further protection at crossing 2½ miles north of Colebrook, B.C.

11499. Aug. 31.—Approving Canadian Northern Alberta Ry. location through tp. 54, r. 27-28, and 1-3, w. 5 m., mileage 13.51 to 31.34.

11500. Aug. 31.—Approving location of new G.T.R. station at Hawksbury, Ont.

11501. Aug. 31.—Relieving C.N.R. from providing further protection at crossing in Roseburn section, immediately west of Hallboro station, Man.

11502. Aug. 26.—Amending order 11399, Aug. 15, authorizing A. Leofred, C.E., Quebec, to lay pipes under G.T.R. at Charny,

11503. Aug. 31.—Authorizing St. Maurice Valley Ry. to open for traffic the portion of its extension between Shawinigan Falls and Grand Mere, Que.

11504. Aug. 31.—Authorizing C.P.R. to build spur across block 34, across Xante St., and through Imperial Oil Co.'s premises on block 30, all on parish lot 11 D.G.S., St. John, Winnipeg.

11505. Aug. 31.—Authorizing the G.T.P.R. to cross, at grade, C.P.R. Pheasant Hills Branch, in n.e. ¼ sec. 36, tp. 36, r. 16, w. 3 m., Saskatoon District, Sask.

11506. Aug. 29.—Authorizing Water Commissioners of London, Ont., to erect wires across Bell Telephone Co.'s wires at Simcoe and Waterloo Sts.

11507. Sept. 1.—Authorizing C.P.R. to build bridge 78.5 over Baptist Creek, on its Windsor sub-division, Ontario Division.

11508.—Sept. 1.—Approving location of G.T.P.R. Prince Rupert easterly, mileage 434.5, to 482.421, Fort George District, B.C.

11509. Sept. 1.—Authorizing G.T.P. Branch Lines Co. to build across highway on its Prince Albert Branch, between sec. 36, tp. 36, r. 27, w. 2 m., Saskatoon District, Sask.

11510. Sept. 1.—Relieving G.T.R. from providing further protection at Cataraqui St crossing, about four miles west of Kingston Jct., Ont.

11511. Sept. 1.—Limiting publication of notice of application for approval of amalgamation agreement between C.N.R. and Edmonton and Slave Lake Ry.

11512, 11513. Aug. 29.—Authorizing town of Weyburn, Sask., to lay pipe under C.P.R. Souris Branch at s.e. ¼ sec. 20, tp. 8, r. 14, w. 2 m.; also under C.P.R. adjoining the town.

11514. Aug. 30.—Authorizing C.N.Q.R. to build a Y to connect its main line with its spur to St. Marc quarries, Grondines parish, and to take parts of lots 312, 314 and 315.

11515. Aug. 29.—Authorizing C.P.R. to build spur to T. W. McCohn's premises on block H, parish lot 53 D.G.S., St. James, Winnipeg.

11516. Aug. 30.—Authorizing G.T.P.R. to build spur across McDougall Ave., Edmonton, Alta.

11517. Aug. 30.—Approving location of C.N.R. through tps. 34-30 and r. 8-9, w. 3 m., from mileage 0 to 27.89.

11518. Aug. 30.—Authorizing C.N.R. to place its tracks across G.T.P.R. Tofield-Calgary branch in s.w. ¼ sec. 14, tp. 47, r. 20, w. 4 m., and to connect its Strathcona-Camrose Branch with its Vegreville-Calgary Branch in n.w. ¼ sec. 1, tp. 47, r. 20, w. 4 m.

11519. Aug. 29.—Authorizing C.P.R. to build bridge over Couchiching narrows, Orillia, Ont.

11520. Sept 1.—Authorizing town of Brockville, Ont., to lay pipe under C.P.R. at Louis St.

11521 to 11529. Sept. 1.—Authorizing Ontario Hydro-Electric Power Commission to erect wires at nine points.

11530. Aug. 30.—Authorizing Water Commissioners of London, Ont., to erect wires across Bell Telephone Co.'s wires at Simcoe and Maitland Sts.

11531. Sept. 1.—Approving standard maximum passenger toll of 3c. a mile between points on Manitoba Great Northern Ry. and 4c. a mile on Crow's Nest Southern Ry. and on New Westminster Southern Ry., also between points served by International Navigation and Trading Co. in B.C., shown in G.N.R. Standard Passenger Tariff C.R.C. 550.

11532. Aug. 30.—Allowing G.T.R. and G.T.P.R. until Sept. 1, 1911, within which to comply with requirements of sub-sec. 5 of sec. 264 of the Railway Act.

11533. Aug. 25.—Approving G.T.R. plan showing amended diversion of highway between cons. 1 and 2, Thurlow tp., Ont.

11534. Aug. 29.—Authorizing Water Commissioners of London, Ont., to erect wires across Bell Telephone Co.'s wires at Grey and Waterloo Sts.

11535. Sept. 1.—Authorizing G.T.R. to build extension of branch from west of St. Legar St., Berlin, to Anthes Furniture Co.'s premises.

11536. Sept. 1.—Authorizing C.P.R. to build two spurs across Cedar St. and J. Finlay & Sons' land, Norwood, Ont.

11537 to 11546. Aug. 29, 30.—Authorizing Water Commissioners of London, Ont., to erect wires across Bell Telephone Co'.s wires at 10 points.

11547. Sept. 2.—Granting temporary leave to National Transcontinental Ry. Commissioners to operate trains over certain portions of C.N.R.

11548. Sept. 1.—Amending order of Railway Committee of Privy Council, Sept. 23, 1898, by providing that Kingston and Pembroke Ry. may cross Montreal St., Kingston, with its freight trains, not exceeding 10 miles, and passenger trains not exceeding 15 miles, an hour.

11549. Sept. 1.—Amending order 11319, July 29, by authorizing Boston and Maine Rd. to install its standard electric bell at main road crossing, Lennoxville, provided it change the light and use disc with "danger" on it; and extending time for installation for 60 days from date.

11550. Sept. 1.—Dismissing application of Western Dominion Collieries Co. and Roche Percee Coal Mining Co., heard at Regina and Winnipeg in Feb. and Nov., 1909, respectively.

11551. Aug. 27.—Authorizing C.P.R. to build highway crossing where Stanley Ave., produced in a straight line, intersects its right of way, Fort William, Ont.

11552. Aug. 27.—Authorizing city of Fort William, Ont., to cross with its street railway G.T.P.R. spur on level, near the intersection of spur and G.T.P.R. main line at railway bridge in West Fort William.

11553. Aug. 27.—Dismissing application of city of Fort William, Ont., re C.P.R. Neebing Ave. crossing.

11554. Aug. 27.—Dismissing application of city of Fort William, Ont., to require C.N.R. to construct highway crossing at Argyle St.

11555, 11556. Aug. 27.—Authorizing C.P.R. to construct highway crossings at Mountain and Crawford Aves., Fort William, Ont.

11557. Sept. 2.—Authorizing W. J. Aikens, Dunnville, Ont., to lay pipe under Brantford St. Ry. (Grand Valley Ry.) on the Brantford and Hamilton road.

11558. Sept. 2.—Authorizing Simcoe Ry. and Power Co. to erect wires across G.T.R. on Hazel St., Waubaushene, Ont.

11559. Sept. 1.—Ordering G.T.R. to install, within 90 days, an improved electric bell at crossing of King's Road, Otonabee tp., Ont.

11560. Sept. 2.—Authorizing town of Maisonneuve to lay electric wire for fire alarm on Bennett Ave. under C.N.Q.R.

11561. Sep. 2.—Approving plan showing drain to be built under M.C.R. near Essex, Ont.

11562. Sept. 2.—Dismissing application of Canadian Freight Association for approval of Supplement 2 to Canadian Classification 14 in so far as it relates to ratings on old rails.

11563. Sept. 6.—Authorizing Seymour Power and Electric Co. to erect wires across G.T.R. in lots 8 and 9, con. 2, Thurlow tp., Ont.

11564 to 11566. Sept. 6.—Authorizing Ontario Hydro-Electric Power Commission to erect wires at two points in Hamilton and one in Preston.

11567. Sept. 7.—Authorizing C.N.Q.R. to open for traffic the portion of its line between Dugas Jct. and Rawdon.

11568. Sept. 7.—Authorizing Atlantic, Quebec and Western Ry. to build across high road to Gaspe ferry, York, Gaspe Co., Que.

11569. Sept. 7.—Approving, temporarily, agreement between Megantic People's Telephone Co. and Bell Telephone Co., Aug. 4.

11570 to 11578. Sept. 6, 7.—Authorizing C.N.R. to build across an irrigation ditch at nine points in Alberta.

11579. Sept. 7.—Approving Canadian Northern Express Co. by-law re filing tariffs of tolls.

11580. Sept. 7.—Approving Canadian Northern Telegraph Co. by-law re filing tariffs of tolls.

11581 to 11597. Sept. 6.—Authorizing C.N.R. to build across irrigation ditches at 17 points in Alberta.

11598. Sept. 6.—Authorizing C.P.R. to build spur for Edgewood Lumber Co. in lot 237, Kootenay district, B.C.

11599. Sept. 2.—Approving, in part, application of Canadian Freight Association for order approving proposed Supplement 3 to Canadian Classification 14.

11600. Aug. 31.—Approving plans and specifications of the Whitman drain under M.C.R.

11601. Sept. 7.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co. wires, East Flamboro tp.

11602. Sept. 7.—Authorizing Canada Southern Ry. to lay pipes for drainage under Wellington and Forest Sts. and Third Ave., St. Thomas, Ont.

11603. Sept. 7.—Approving, temporarily, agreement between Bell Telephone Co. and Highland Telephone Co., June 7.

11604. Sept. 6.—Approving drainage works across M.C.R. and P.M.R., according to G. A. McGubbin's reports of July 31, 1909, and May 14, 1910.

11605. Sept. 7.—Ordering that crossing of C.N.R. by National Transcontinental Ry. at mileage 246, near St. Boniface, Man., be protected by full interlocking plant, to be installed by National Transcontinental Ry. by July 1, 1911.

11606. Sept. 8.—Dispensing with publication of application for authority to build branch lines from east side of Pembina St., Winnipeg, to the Red River, and crossing Mulvey Ave. to connect with spur and authorizing C.N.R. to serve short notice on city of Winnipeg and property owners affected.

11607. Sept. 7.—Extending to Oct. 30, time within which three industrial spurs for Saskatchewan Flour Mills Co., Moose Jaw, be completed.

11608. Sept. 8.—Approving forms of freight and money receipts, MX 27 and MX 70, of Maritime Express Co.

11609, 11610. Sept. 8.—Approving, temporarily, until Dec. 1, contract forms of Pacific, Canadian, and Dominion Ex. Co.'s on file with Board under file 3518.

11611, 11612. Sept. 8.—Extending to Dec. 1 time within which North American Telegraph Co. and Bell Telephone Co. may charge telephone tolls which they were previously to July 13, 1906, authorized to charge.

11613. Sept. 7.—Authorizing C.P.R. to build spur from Western Road to Bell Telephone Co.'s premises.

11614. Sept. 7.—Authorizing C.P.R. to build extension of spur for G. N. Annable Co., Kootenay District, B.C.

11615. Sept. 8.—Approving, temporarily, until Dec. 1, contract forms, etc., of National and American Ex. Co's.

11632. Sept. 2.—Authorizing Ontario Hydro-Electric Power Commission to use its transmission wires erected across various railways and wires at 42 points.

11633. Sept. 7.—Authorizing H. A. Suggitt, of Coaldale, Alta., to lay a culvert under C.P.R.

11634, 11635. Sept. 6.—Authorizing Simcoe Ry. and Power Co. to erect wires across G.T.R. at Hazel St., Waubaushene, and in Tay tp., Ont.

11636. Sept. 13.—Authorizing C.P.R. to build bridge 40.3, on its London subdivision, Ontario Division.

11637. Sept. 13.—Authorizing C.P.R. to build additional siding, south of its main line, across Elk St., Elkhorn, Man.

11638. Sept. 13.—Authorizing C.P.R. to build bridge 80.09 over Potois Creek, on its North Bay subdivision, Lake Superior Division, Ont.

11639. Sept. 13.—Authorizing G.T.R. to build bridge between lots 89 and 90, con. 1, Tiny tp., Ont.

11640, 11641. Sept. 13.—Extending to Sept. 30 time within which C.P.R. was directed by orders 10707 and 10682 to install bells at Maple St. crossing, Hartland, N.B., and Foundry St. crossing, Woodstock, N.B.

11642. Sept. 13.—Authorizing G.T.R. to build bridge between lot 93, con. 1, and lot 93, con. 2, Tay tp., Ont.

11643. Sept. 7.—Ordering C.P.R. to reopen crossing at A. D. Hartley's farm, East Florenceville, N.B.

11644. Sept. 6.—Authorizing C.N.R. to build over and across irrigation ditch, n.w. ¼ sec. 11, tp. 25, r. 26, w. 4 m., Alta.

11645. Sept. 7.—Authorizing J. A. Thompson, of Moorefield, Ont., to lay pipe under G.T.R. in Maryborough tp.

11646. Sept. 7.—Authorizing G.T.R. to reconstruct bridge 50 over Conestage River, near Moorefield, Ont.

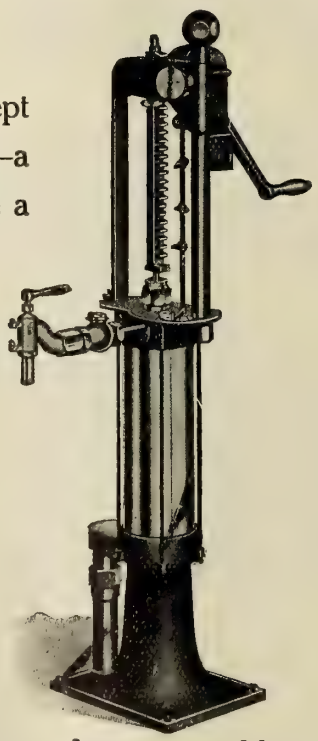
At the Mercy of a Faucet

is the store-keeper whose oils are kept in ordinary faucet tanks or barrels—a leaky or open faucet is apt to cause a big loss of oil at any time.



The Bowser self-measuring, long-distance Pump, No. 41, eliminates all such risks. It represents a happy combination of several types—the *strongly*-built pump for heavy lubricants; the *evaporation-proof* pump for gasoline and similar oils; the pump for paint oils and varnishes made to insure against *gumming* or *clogging*. It will handle any kind of oil used by railroads, and is therefore extensively used in small and large installations of

Bowser Oil Storage Systems

(Adopted by 150 railroads)

It dispenses the oils quickly, in quantities of accurate gallons, half-gallons, quarts or pints—one at each stroke—as may be desired. It has an important bearing on the reduction of the oil expense account; every store-keeper should read our booklet on the subject.

Just ask for Booklet No. 18.

S. F. BOWSER & CO. Ltd., 66-68 Frazer Ave., Toronto

11647. Sept. 13.—Extending to Oct. 15 time within which T. H. & B. R. was directed, by order 9026, to build highway bridge carrying Garth St., Hamilton, Ont.

11648. Sept. 13.—Authorizing city of Peterboro, Ont., to lay pipe under G.T.R. at Romaine St.

11649, 11650. Sept. 13.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at James St., Hamilton, and across Galt, Preston and Hespeler Electric St. Ry., at Galt.

11651. Sept. 13.—Authorizing Volcanic Oil and Gas Co. to lay pipe under C.P.R. at Belle River, Ont.

11652. Sept. 8.—Authorizing C.P.R. to build bridge over yard in Calgary, Alta.

11653. Sept. 14.—Approving location of G.T.P. Branch Lines Co.'s Young-Prince Albert Branch from sec. 31, tp. 40, r. 26, w. 2 m., to Prince Albert, Sask., mileage 55.148 to 111.536.

11654. Sept. 13.—Authorizing C.P.R. to build spur from near Roseberry St. to Tenth St., also four sub-spurs from blocks 70, 71 and 72, between Pacific and Rosser Aves., Brandon, Man.

11655. Sept. 14.—Authorizing C.N.O.R. to build between lots 6 and 7, con. A, Haldimand tp.

11656. Sept. 14.—Authorizing town of Grand Falls, N.B., to lay pipe under C.P.R. at Broadway.

11657. Sept. 14.—Authorizing Ontario Power Co. to erect wires across G.T.R. Welland Division in Crowland tp.

11658 to 11661. Sept. 14.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Hamilton Radial Electric Ry. in Saltfleet tp., and across Bell Telephone Co.'s wires in Waterloo tp., at three points.

11662. Sept. 15.—Approving C.N.O.R. plans for station at Brighton.

11663. Sept. 15.—Declaring that G.T.R. crossing at Main St., Glencoe, Ont., is protected to the Board's satisfaction and rescinding order 11443.

11664. Sept. 14.—Approving C.N.O.R. strain sheets for 100 ft. girder span across Factory creek on its Toronto-Ottawa line.

11665. Sept. 14.—Authorizing C.N.Q.R. to connect with National Transcontinental Ry. west of River Charest.

11666 to 11668. Sept. 15.—Approving G.T.P. Branch Lines Co.'s locations of stations at New Norway, Duhamel and Kingman, on its Tofield-Calgary branch, Alta.

11669. Sept. 14.—Authorizing C.P.R. to build two spurs for Globe Elevator Co., near Calgary Jct., Alta.

11670. Sept. 15.—Extending to Sept. 30 time within which C.P.R. was directed, by order 10707, to install electric bell at Maple St. crossing, Hartland, N.B.

11671. Sept. 15.—Relieving C.P.R. from providing further protection at crossing 1¼ miles west of Michel, B.C.

11672. Sept. 15.—Authorizing Light and Heat Commissioners of Guelph, Ont., to lay pipe under G.T.R.

11673. Sept. 14.—Authorizing Mount Stephen Mining Syndicate to lay pipe under C.P.R. three miles east of Field, B.C.

11674. Sept. 13.—Amending order 10344 by relieving Ops tp. from building approaches to bridge 2 miles west of Lindsay, Ont., and apportioning cost of building the bridge as follows: Ops tp., 20%; Railway Grade Crossing Fund, 20%, and remainder by G.T.R.

11675. Sept. 16.—Authorizing Montreal Light, Heat and Power Co. to lay a pipe under C.P.R. on St. Denis St.

11676 to 11680. Sept. 15.—Authorizing C.N.O.R. to build across side roads at five points in Sidney tp.

11681. Sept. 15.—Extending to Dec. 1 time within which city of Montreal may construct tunnel under C.P.R. at St. Lawrence Boulevard.

11682, 11683. Sept. 16.—Authorizing Esquimalt and Nanaimo Ry. to use bridges 29.8, 35.6, 39.3, 47.9, 65.1, 87.12, 87.37, 26.8, 28.2, 28.4, and 28.6, and rescinding orders 11407 and 6611.

11684. Sept. 16.—Authorizing C.N.O.R. to reconstruct eastern approach of bridge over Ottawa River near Hawkesbury by erecting 30 and 85 ft. place girder span.

11685. Sept. 16.—Authorizing G.T.R. to build sidings with spurs to Oliver Chilled Plow Works, Hamilton, Ont.

11686. Sept. 15.—Authorizing C.N.O.R. to build between lots 3 and 4, con. 1, Sidney tp.

11687. Sept. 17.—Approving location of C.P.R. new station at Strongfield, Sask.

11688. Sept. 16.—Extending to Sept. 30 time within which C.P.R. was directed, by order 11103, to install electric bell at highway crossing at Weston, Ont.

11689. Sept. 16.—Relieving C.P.R. from providing further protection at Eaton road crossing, Brighton, Que.

11690. Sept. 16.—Relieving G.T.R. from providing further protection at Ontario St. crossing, Cobourg, Ont.

11691 to 11695. Sept. 17.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at five points.

11696. Sept. 16.—Authorizing city of Toronto to lay pipe between Sunnyside and Roncesvalles Ave., under G.T.R.

11697. Sept. 15.—Authorizing W. P. Ferris to lay pipe under G.T.R. South Norfolk branch in South Walsingham tp., Ont.

11698. Sept. 16.—Authorizing Provincial Natural Gas and Fuel Co. to lay pipe under G.T.R. between Humberstone and Crowland tps., Ont.

11699. Sept. 17.—Authorizing town of Montreal East to lay pipe under Montreal Terminal Ry. at Laurendeau Ave.

11700. Sept. 17.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at Mutual St., Ingersoll.

11701, 11702. Sept. 17.—Authorizing Guelph, Ont., Waterworks Department to lay pipe under G.T.R. on Liverpool and Glasgow Sts.

11703 to 11706. Sept. 17.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across C.P.R. and Bell Telephone Co.'s wires at four points.

11707. Sept. 15.—Authorizing C.N.O.R. to build between lots 24 and 25, con. 1, Sidney tp.

11708. Sept. 19.—Authorizing C.N.O.R. to build across Division St., Cobourg, overhead.

11709. Sept. 17.—Authorizing C.P.R. to build spur for F. Fairey, lots 35 to 40, and at rear of lots 32 to 36, block 72, Calgary, Alta.

11710. Sept. 13.—Rescinding order 10509, Apr. 21, re subway at Division St., Cobourg, upon application of C.N.O.R.

11711. Sept. 13.—Approving C.N.O.R. revised location through Cobourg.

11712, 11713. Sept. 13.—Authorizing G.T.R to build sidings from near Caledonia station, Ont., to Caledonia Gypsum Co.'s premises, Seneca St., and Alabastine Co.'s premises, Paris, Ont.

11714. Sept. 15.—Approving C.N.O.R. station building at Don Jct.

11715. Sept. 19.—Authorizing Essex Terminal Ry. to build branch through portions of Walkerville and Windsor, Ont.

11716. Sept. 20.—Authorizing town of Montreal East, Que., to lay pipe under Chateauguay and Northern Ry., at Laurendeau Ave.

11717. Sept. 20.—Authorizing C.P.R. to build bridge 71.53, North Bay subdivision, Lake Superior Division, Ont.

11718. Sept. 20.—Relieving G.T.R. from providing further protection at first level crossing east of Seguin Falls station, Ont.

11719 to 11722. Sept. 19.—Authorizing Water Commissioners of London, Ont., to erect wires across Bell Telephone Co.'s wires at four points.

11723. Sept. 13.—Authorizing C.N.O.R. to build across C.P.R. near Chaudiere Jct.

11724. Sept. 13.—Approving C.N.O.R. location through Gloucester tp., mileage 0 to 5.3.

11725. Sept. 20.—Authorizing G.T.P.R. to build spur track from its main line south of the C.P.R. Wetaskiwin Branch crossing, Railway and Alberta Aves., to Thirrd St., Camrose, Alta.

11726. Sept. 19.—Approving location of G.T.R. proposed station and freight house and rearrangement of tracks at Hawkesbury, Ont.

11727. Sept. 9.—Dismissing application of St. Mungo Cannery Co., New Westminster, B.C., for order directing Vancouver, Victoria and Eastern Ry. and Navigation Co. to provide railway facilities from its premises.

11728. Sept. 9.—Ordering Vancouver, Victoria and Eastern Ry. and Navigation Co. to build wooden bridges over cutting at Lakewood Drive, Woodland Drive and Broadway, Vancouver, B.C., within six months from date, to be constructed in compliance with plans to be approved by an engineer of the Board.

11729. Sept. 8.—Dismissing application of Sumas tp., B.C., for order directing C.P.R. and V.V. & E. Ry. and Nav. Co. to provide offices on Canadian side of International boundary in Huntingdon, B.C.

11730. Sept. 9.—Dismissing application of city of Vancouver, B.C., for approval of plans and mode of crossing C.P.R. at Clarke Drive.

11731. Sept. 6.—Granting application of F. and M. Allen, for order approving extension of C.P.R. from lot 7, block 54, subdivision 185, Vancouver, B.C., across lots 7 and 8, to wharves.

11732. Sept. .—Approving Vancouver, Victoria and Eastern Ry. and Navigation Co.'s application for branch line from its main line in Huntingdon, B.C., to the International boundary.

11733. Sept. 9.—Authorizing Western Canada Power Co. to join its line with the C.J.R. near Ruskin, B.C.

11734. Sept. 6.—Ordering Vancouver, Victoria and Eastern Ry. and Navigation Co. to protect North Road crossing between New Westminster and Port Moody and Barnet, B.C.

11735. Sept. 20.—Amending order 11605 re interlocking plant at National Transcontinental Ry. and C.N.R. crossing near St. Boniface, Man.

11736. Sept. 20.—Amending order 9129 re C.P.R. branch line, lot 6, con. 4, Etobicoke tp., Ont., by authorizing C.P.R. to put in switches and semaphores to be operated by hand, and to put a day and night watchman and flag its trains on and off the joint section for three months from date.

11737. Sept. 20.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across C.P.R. between lots 157 and 158, Stamford tp.

11738. Sept. 9.—Dismissing application of city of New Westminster, B.C., for order directing Vancouver Power Co. to raise its wires over Fraser River bridge.

11739. Sept. 9.—Authorizing B.C. Public Works Department to build highway crossing over C.P.R. right of way east of Kault station.

11740. Sept. 20.—Authorizing Esquimalt and Nanaimo Ry. to build spur for Cowichan Creamery Co., Duncans, B.C.

11741. Sept. 13.—Authorizing C.P.R. to use jointly with G.T.R. the spur which G.T.R. was authorized by order 4816 to build from Mowat Ave. siding, Toronto, to H. Disston & Sons' premises.

11742. Sept. 20.—Authorizing Saskatchewan Government to build highway across C.P.R. in s.e. ¼ sec. 36, tp. 1, r. 7, w. 2 m.

11743. Sept. 21.—Extending to June 1, 1911, time within which C.P.R. was authorized by order 11402 to build branch from near Agassiz, B.C., to a ballast pit.

11744. Sept. 21.—Authorizing C.P.R. to rebuild bridge over road at mileage 70.5, Toronto subdivision, Ontario Division.

11745 to 11749. Sept. 21.—Authorizing Simcoe Ry. and Power Co. to erect wires across Bell Telephone Co.'s wires at five points in Tay tp., Ont.

11750 to 11753. Sept. 9.—Authorizing Vancouver, Fraser Valley and Southern Ry. to build over certain highways in Vancouver; to cross V.V. & E. Ry. at Burnaby; and certain highways in Hastings and Burnaby, B.C.

11754, 11755. Sept. 21.—Authorizing town of Brampton, Ont., to lay pipe under C.P.R. at Jessie and Railroad Sts.

11756 to 11760. Sept. 21.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.T.R. at two points, and across Bell Telephone Co.'s wires at three points.

11761. Sept. 21.—Authorizing town of Irvine, Alta., to build highway across C.P.R. right of way at Dunmore St.

11762. Sept. 8.—Authorizing British Columbia Government to open certain streets in Sumas tp. across C.P.R. right-of-way.

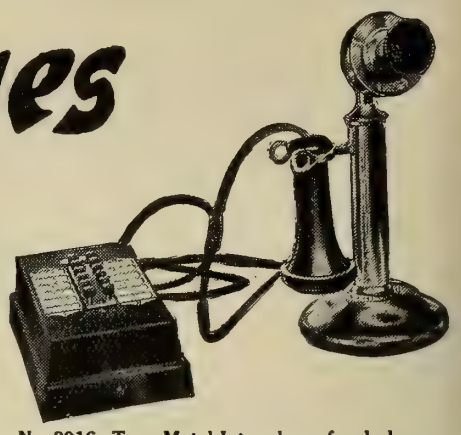
Matheson to Mattagami.—Press reports from Matheson, Sept. 6, state that Laird, is engaged in completing surveys for this proposed line, so that construction gangs can be set at work. The work will be comparatively light as far as Porcupine Lake, to which point it is expected have the track laid by Jan. 1. Between Porcupine Lake and the Montreal River the land becomes hilly, and there will be considerable cut and fill work, as well as some rock work. Steam will be used as a motive power at the beginning, but it is proposed to develop a water power at Sandy Falls, and use electricity. The plans for developing this water power have been completed, and it is expected that the construction will be begun at once. (See Temiskaming and Northern Ontario Ry., Sept., pg. 729).

Railway Subsidy Contracts.—The Dominion Government has entered into contracts, under the act granting aid to certain railways for the building of lines as follows:—With the Esquimalt and Nanaimo Ry. (C.P.R.), for 24 miles from Duncan's, on the main line, to Cowichan Lake; (Aug. 12). With the C.P.R., for an extension of 9.5 miles of the Winnipeg Beach line to Gimli, Man.; (Aug. 22). With the James Bay and Eastern Ry., for 100 miles westerly from Roberval, Que., in lieu of the subsidy granted in 1908.

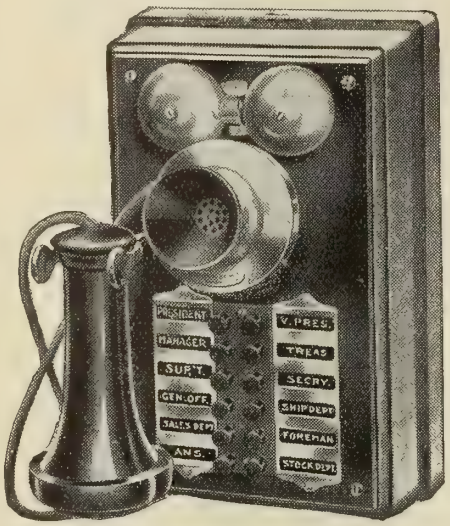
The C.P.R. has added to its passenger service a new night train each way between Toronto and Montreal. The trains arrive and depart at the Toronto end from West Toronto, and use the line to the north of the city, calling at North Toronto, and connecting with the main line east at Leaside Jct.

Inter-phones

Inter-phones will connect all your departments—bring all the strings of your business to your own office chair—and make it possible for you to get in touch with any of your employees—or for them to get in touch with each other—at a second's notice and without loss of time.



No. 2016—Type Metal Inter-phone for desk use



No. 1324 Non-Flush Type Metal Inter-phone for wall mounting

Inter-phones cost little to install and operate at a low maintenance charge. The minutes they save will pay over and over again the cost of their installation and operation.

On request we will be glad to send you **free** Bulletin No. 713 with full particulars.

HERMANN BOKER & CO., 332 St. James St., MONTREAL

National Transcontinental Railway.

In an interview Sept. 8, C. O. Foss, District Engineer for New Brunswick, is reported to have said that except for a stretch of four miles near Grand Falls, and the division yards at Edmonton, the N.T.R. in New Brunswick could be opened for traffic.

A defect was discovered Sept. 3, in the first caisson for the new main piers of the Quebec bridge, and it was condemned Sept. 6 by H. E. Vautelet, the only member of the Bridge Commission in Canada. It is said the caisson will have to be rebuilt.

An order-in-council has been passed authorizing the N.T.R. Commissioners to acquire the Champlain Market, Quebec, for terminal purposes, and they have paid the City Treasurer $100,000, the price of the property.

There is a considerable mileage of track laid in the Province of Quebec to which the completing touches are being given. This includes the 250 miles between the St. Lawrence River and Weymontachene, upon which recent press reports stated a train service would be operated this fall. We have been advised that there have, as yet, been no arrangements made for its operation by the G.T. Pacific Ry. The centre of construction of the next section of the line is at present at Cochrane, the Temiskaming and Northern Ontario Ry.'s terminus. From this point Foley, Welch and Stewart, working easterly, have 30 miles of track laid to Low Bush, where there is a big muskeg which is delaying the work somewhat. Westerly from Cochrane over 30 miles of track have been laid on the grading completed by Fauquier Bros. Tenders are under consideration for the supply of 7,543 tons of 80 lb. steel rails with the necessary fastenings, for delivery at Cochrane.

A temporary agreement has been reached between the Commissioners and the G.T. Pacific Ry., for the operation of the section of the line between Lake Superior Jct., Ont., and Winnipeg, so as to enable the G.T.P.R. to carry grain from Edmonton and intermediate points to Fort William.

Tenders were received by the Commissioners Sept. 27 for building freight sheds and storehouses at Lake Superior Jct., Ont., Redditt and Springfield, Man., the freight sheds to be completed by Dec. 31, 1910, and the storehouses by May 1, 1911.

The Western Construction Co., is reported to have practically completed the laying of the 12 inch water main from the Red River to the shops at Springfield, near Winnipeg. Tenders are under consideration for pipe tunnel and wiring ducts, and for the wiring system at the shops.

The question of the entrance of the line into Winnipeg from the east was settled, temporarily at any rate, Sept. 2, when an order was made by the Board of Railway Commissioners, granting running rights over the Canadian Northern Ry. for one year. This will enable the N.T.R. to be connected with the G.T. Pacific Ry.

GRAND TRUNK PACIFIC RAILWAY.

The G.T.P.R. has purchased a block of land on Broadway, Winnipeg, immediately east of the Manitoba club, and we are officially advised that Ross and McFarlane, architects, Montreal, are preparing plans for an hotel to be erected thereon.

The Minister of Railways completed his first inspection of the line Sept. 5; and on Sept. 13, C. M. Hays, President, accompanied by A. Smithers, Chairman of the Board, arrived in Winnipeg, having made an inspection of the completed line, and the sections under construction. Mr. Smithers stated that at all places where construction was in progress the contractors complained of the shortage of men. Notwithstanding this the company would not appeal to the Dominion or Provincial governments to permit the use of foreign labor.

Construction is being proceeded with rapidly and it is expected that track will be laid to Prairie Creek, Oct. 1, to the banks of the Athabasca by Dec. 1, and to Tete Jaune Cache by Sept., 1911. Reports from Prince Rupert, state that track has been laid to mileage 56, about three mile west of Hole-in-the-wall, where a bridge is being built. It is expected that track will be laid to Newtown, within two miles of Kitselas, by Oct. 30. Work is going on along the 140 mile section from Kitselas to Aldermere. Nothing definite has been settled as to the letting of a contract for the stretch between Aldermere and Tete Jaune Cache.

Grand Trunk Pacific Branch Lines.—An Ottawa press report Sept. 6 stated that a branch line would be built from Saskatoon through Melfort, to a connection with the Government railway to Hudson Bay at Pas Mission. We are, however, officially advised that if the G.T. Pacific Ry. line is connected at some future date with the Hudson Bay line, it will be done by extending the Yorkton-Canora branch northward. This branch line leaves the G.T.P. main line at Melville, Sask., from which point another branch is being built to Regina. An extension of this line southerly is projected and the question of the route is being discussed. On Sept. 15, the management stated that the route could not be changed so as to pass through Estevan.

A line has been located from Regina, westerly as far as Moose Jaw, and press reports Sept. 17, stated that a contract for grading of this line would soon be let. Speaking at Medicine Hat, Sept. 8, the Minister of Railways stated that the G.T.P. Ry. would build a branch line through that place, where the land for terminals has already been acquired.

While President Hays was in Wainwright, Sask., on his recent inspection trip he was reported to have stated that a branch line would be built from there into Battleford, and that engineers were at work on the surveys.

Foley, Welch and Stewart, have a contract for building a branch line from the G.T.P.R., about 16 miles west of Edson, Alta., southerly for about 70 miles. This branch connects with the Yellowhead Pass and the Pacific Pass coal companies' properties, in what is generally known as the Brazeau River coal fields.

We are advised that the company has secured a site adjacent to Parliament Square, Victoria, B.C., but nothing has as yet been determined as to the uses to which the property may be put. Newspaper reports stated it had been acquired for the erection of an hotel. (Sept., pg. 741).

Inverness Railway and Coal Co.

Owing to an error in composition in the extracts from the company's report for the year ended June 30, published in our Aug. issue, a slight inaccuracy occurred in the reproduction of the income account, which should have read as follows:—

Balance at June 30, 1908..		$352,894.46
Interest on bonds, etc.—		
First mortgage bonds....	$105,750.00	
Bank advances	61,368.77	
Sundry creditors	17,246.79	
Interest accrued to June 30, 1909 .....$19,227.75		
Less accrued at June 30, 1908, paid during current year. 19,227.75		
	$184,365.56	
Hire of equipment	1,570.14	
		185,935.70
		$538,830.16
Colliery—Gross earnings..$490,394.61		
Operating expenses 486,070.12		
		4,324.49
Railway—Gross earnings.$187,230.22		
Operating expenses..... 115,128.63		
		72,101.59
Operation, boats, etc.		620.95
Miscellaneous		26.70
Debit Balance June 30, 1909		$461,756.43

Great Northern Ry. Lines in Canada.

Midland Ry. of Manitoba.—In connection with the reports mentioned in our last issue, that a survey was being made for a line from the G.N.R. track in St. Vincent, Minn., to the Northern Pacific Rd. station at Pembina, N.D., over which the G.N.R. trains would be run to a more direct connection with the Canadian Northern Ry. than at present, we are officially advised that nothing is being done by the G.N.R.

Kaslo and Slocan Ry.—During the recent forest fires in British Columbia the line of the K. and S. Ry. was practically burned out. The line is being rebuilt as far as Sprouls, and it is reported that the work of rebuilding to the terminus at Sandon, will be completed in the spring of 1911.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The grading on the 15 mile stretch westerly of Princeton, B.C., was reported practically completed, and several gangs of men were reported to have been laid off at the end of Aug. About 100 men were reported at work early in Sept. finishing up the work. No further work is to be done on this section of the line at present.

J. H. Kennedy, Chief Engineer, arrived in Princeton, Sept. 1, from Hope, via Coquihalla Pass and the Otter Valley. He had been going over the line of the survey made by the company's engineers who had been engaged in trying to locate lower gradients than previously obtained over the Hope Mountains. He stated that along the Coquihalla River it was expected that a gradient of 2.50% would be obtained, but there was a possibility of its being reduced to 1%. The heaviest part of the work is on the western side of Hope Mountain. The highest point reached will be at Coquihalla summit, 3,600 ft. high. From the summit along Coldwater and Otter creeks as far as Tulameen a 1% gradient can be obtained. The survey is being made to reduce gradients, not for the purpose of laying out a new route. C. Shaw, is in charge of a party making a survey between Hope and Abbotsford, west of the mountains. Construction work on the line at Abbotsford has been suspended for the present. One reason for the suspension of the work is that satisfactory arrangements cannot be made for purchasing the right of way in Chilliwack township, and that the grading gangs are being laid off as their work at Abbotsford is completed.

The company proposes to start at an early date building a 120 ft. addition to its freight station in Vancouver.

The Mayor and a delegation of the Vancouver city council recently had a conference with the Provincial Government relative to the plans for work at False Creek, in connection with the carrying out of the agreement made with the company. (Sept., pg. 735).

Those interested in the development of the Canadian north-west estimate that three new towns a week will be placed on the map in the western provinces weekly for the next three years. About 150 new towns will be opened up on the G.T. Pacific lines; the Canadian Northern Ry. has already 35 new townsites under survey, and the C.P.R. has a large number of points arranged at which townsites will be laid out.

TOOLS FOR ALL PURPOSES

We carry the Largest and Best Assorted Stock of Tools in Canada, and Mechanics will find every new idea in the tool trade shown in our stock. We name below a few of our lines:

Wiley & Russel, Stocks, Dies, Taps, Etc.

Butterfield, Stocks, Dies, Taps, Etc.

Oster, Stocks and Dies

Starret's Fine Tools

Brown and Sharp's Fine Tools

Western Tool Co.'s Lathe, Planer, and Shaper Tools

We cordially invite all interested in Tools to come in and view our stock. We will gladly demonstrate any of our lines.

171 St. James Street, MONTREAL

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Referring to reports from Duluth, Minn., that the company was contemplating the purchase of the Minneapolis and Rainy River Ry., E. Pennington, President, stated Sept. 14, that the company had no such intention, and its engineers had not made an inspection with that object in view. Some of the company's engineers had gone over the line recently to report to some people, not connected with any railway, in the east, but for what object he did not know.

The Canadian Northern Ry. has increased the wage rate of its pipe fitters, from 32½c. to 36½c. an hour.

In the action brought by McRae Chandler and McNeil, to recover $72,000 from the Temiskaming and Northern Ontario Ry. Commission, for work done under contract, etc., the courts have ordered the plaintiffs to furnish further particulars.

C. P. R. Annual Report.

Following is the 29th annual report addressed to the shareholders over the signature of the President, Sir Thos. G. Shaughnessy:

The accounts for the year ended June 30, 1910, show the following results:

Gross earnings		$94,989,490.33
Working expenses		61,149,534.46
Net earnings		$33,839,955.87
Net earnings of steamships in excess of amount included in monthly reports		909,235.60
Interest on deposits and loans.	$904,742.19	
Interest and dividends on bonds and stocks held by the Co.:		
M., St. P. & S.S.M. Ry. bonds	159,720.00	
Mineral Range Rd. Co. bonds	50,160.00	
Montreal & Atlantic Ry. and other securities	71,214.08	
St. John Bridge & Ry. Extension Co. stock	50,000.00	
Alberta Ry. and Irrigation Co. stock	86,531.02	
M., St. P. & S.S.M. Ry. preferred and ordinary stocks.	1,104,110.00	
		2,426,477.29
		$37,175,668.76
Deduct fixed charges		9,916,940.33
Surplus		$27,258,728.43
Deduct amount transferred to steamship replacement acct.	$900,000.00	
Contribution to pension fund	80,000.00	
		980,000.00
From this there has been charged a half-yearly dividend on preference stock of 2%, paid April 1.	$1,102,599.98	
And a half-yearly dividend on ordinary stock of 3%, paid April 1	4,500,000.00	
And interest on instalments on new stock subscriptions, paid July 1	417,179.32	
		6,019,779.30
		$20,258,949.13
From this there has been declared a second half-yearly dividend on preference stock of 2%, payable Oct. 1.	$1,112,333.33	
And a second half-yearly dividend on ordinary stock of 3½%, payable Oct. 1	5,250,000.00	
		6,362,333.33
Leaving net surplus for the year.		$13,896,615.80

In addition to the above dividends on ordinary stock, 1% was paid from interest on land funds.

The working expenses were 64.38% of the gross earnings, and the net earnings 35.62%, compared with 69.92 and 30.08% respectively in 1909.

Four per cent. consolidated debenture stock to the amount of £1,598,935 was created and sold, and, of the proceeds, £1,068,965 was applied to the construction of authorized branch lines; £98,200 was used to acquire the same amount of 1st mortgage 5% bonds; and the balance, £431,770, was devoted to the acquisition of the bonds of other railway companies whose lines constitute a portion of your system, the interest on which had, with your sanction, been guaranteed by your company.

Four per cent. preference stock to the amount of £600,000 was created and sold, the proceeds being used to meet capital expenditures that had your previous sanction.

Your guarantee of interest was endorsed on 4% consolidated mortgage bonds of the M. St. P. & S.S.M. Ry. to the amount of $2,200,000, issued and sold to meet the cost of constructing 110 miles of railway added to that system.

With the consent of your company the surplus earnings of the Duluth, South Shore and Atlantic Ry. in excess of interest on bonds held by the public and rentals, were used for necessary additions to its facilities and for the general betterment of the property.

The sales of agricultural land during the year aggregated 975,030 acres, for $14,468,564.33, being an average of $14.84 an acre. Included in this were 145,421 acres of irrigated land, which brought $26.59 an acre, so that the average price of the balance was $12.78 an acre. After further surveys and reports your directors have decided that water should be provided for the eastern section of the irrigation block, containing about 1,100,000 acres, before anything is done in the central section, and, as a consequence, they have authorized the work, which will cover about three years and involve an estimated expenditure of $8,500,000, for which they will ask your approval. The average cost an acre of irrigating this block exceeds by a considerable amount the average in the western section, due to the greater difficulty in reaching the source of water, to the mileage of the ditches, namely, 3,500 miles as compared with 1,600, and to the improved character of the structures, but, in the light of past experience, your directors are confident that the financial and other results will be eminently satisfactory. The money required for this work will of course be provided from the accumulated land funds.

Your directors have entered into an agreement with the New Brunswick Southern Ry., which extends from West St. John to St. Stephen, N.B., 83 miles, for a lease of the railway for 999 years at an annual rental equivalent to 3% per annum on the outstanding bonds of the company to the amount of $500,000. The lease will be submitted for your approval.

An arrangement has been completed for the transfer to your company on demand of practically all the capital stock of the Dominion Atlantic Ry., consisting of £270,000 of preference and £230,000 of ordinary stock, at 60% of its face value for the preferred and 20% of its face value for the common shares. Some time, probably six or eight months, must elapse before the arrangement can be made effective. The railway extends from Yarmouth to Truro, with branches to Kingsport and Torbrook Mines, 247 miles, and a connection is made with Halifax under a contract with the Dominion Government for the use of 45 miles of the Intercolonial Ry. Your directors are confident that important traffic advantages will result from the acquisition of this railway and it will give your company a foothold in Nova Scotia where you have heretofore had no interests.

You will be asked to authorize the issue and sale of a sufficient amount of 4% consolidated debenture stock to provide for the construction of the following branch lines, all of which are in the agricultural districts of Manitoba, Saskatchewan and Alberta, namely: Moose Jaw-Outlook branch, 118 miles; Weyburn-Lethbridge branch, 50 miles; Teulon extension, 56 miles; Lauder-Griffin branch, 33 miles; Craven-Bulyea branch, 21 miles; Kipp-Aldersyde branch, 58 miles; Langdon branch, 40 miles; Regina-Colonsay branch, 134 miles; Snowflake branch extension, 7 miles; Virden-McAuley branch, 36 miles.

A railway between a point near Galloway, B.C., on your Crow's Nest line, and Golden, on the main line, would be of service to settlers in the Columbia and Kootenay River valleys, and would, no doubt, encourage further settlement. The distance between the termini is about 175 miles, but it is not desirable that the railway should be constructed over the whole distance immediately, but rather in stretches of 40 or 50 miles as circumstances may seem to warrant. A charter and the ordinary subsidy for this line were given by the Dominion Parliament to a company known as the Kootenay Central Ry. Co., and your directors have, subject to your approval, made an agreement with that company for the construction of the railway in sections of such length and within such period of time as your company may designate, each section when completed to be leased to your company for 999 years at a rental equivalent to the interest at 4% per annum on the bonds of the Kootenay Central Ry., issued with the consent of your company. The transaction will be submitted for your approval.

The growth of industries at Shawinigan Falls, Que., where a large water power has been developed, and the desirability of getting a better connection with the mills at Grand-Mere led to an arrangement with the St. Maurice Valley Ry. by which it agreed to construct its line between Three Rivers and Grand'Mere, 27.7 miles, and on completion to lease it to your company for 999 years at a rental equivalent to 4% per annum on its bonds, not exceeding $35,000 a mile, issued with the consent of your company. A resolution embodying the transaction will be submitted for your approval.

The death in Feb. last of Hon. Sir Geo. A. Drummond, who joined the Board in 1903, was a source of sincere sorrow to your directors who felt that they had lost in him a most capable colleague and esteemed friend. Earlier in the year Archer Baker, the company's European Manager, who had been attached to the staff since 1881, died suddenly in London, Eng. He was a most devoted and valued officer. A. R. Creelman, K.C., the company's General Counsel, was elected a director to fill the vacancy caused by the death of Sir Geo. A. Drummond.

The undermentioned directors will retire from office at the approaching annual meeting, they are eligible for re-election: Lord Strathcona, Sir Thos. G. Shaughnessy, and T. Skinner.

CONDENSED BALANCE SHEET.

ASSETS.

Railway and equipment		$317,226,265.81

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for July, $18,735, against $30,003 for July, 1909. Railway traffic receipts for Aug., $30,024, against $27,581 for Aug., 1909. Cumulative traffic receipts for two months ended Aug. 31, $58,006.

Algoma Central and Hudson Bay Ry.—A discharge of a mortgage given by the company to the Central Trust Co. of New York, Jan. 1, 1903, to secure an issue of bonds, and subsequently assigned to the United States Mortgage and Trust Co., was deposited with the Secretary of State at Ottawa, Aug. 27. On the same date a mortgage deed, dated July 1, 1910, given by the company to the U.S. Mortgage and Trust Co., to secure an issue of first mortgage 5%, fifty year gold bonds, guaranteed as to principal and interest by the Lake Superior Corporation was filed with the Secretary of State.

Bessemer & Barry's Bay Ry.—Press reports state that the Mackenzie, Mann & Co. interests have securred control of this mineral carrying line extending from near L'Amable on the Central Ontario Ry. to the older ore mines at Bessemer, Ont., five miles. This is not officially confirmed. The Dominion Parliament last session empowered the Ontario & Ottawa Ry. Co., a Mackenzie-Mann company, to acquire the Bessemer & Barry's Bay Ry. as well as a number of other lines the control of which has since been secured.

Buffalo and Lake Huron Ry.—After providing for the interest on the first and second mortgage bonds, the accounts for the half year ended June 30, showed a balance of £14,828 10s. 4d. available for dividend. Out of this the directors declared the usual dividend of 5s. 3d. per £10 share, carrying forward £1,043 17s. 1d. The dividend warrants were posted Sept. 6. The company receives £35,000 every half year from the G.T.R. as rental for the line from Goderich to the International bridge near Buffalo, N.Y., which is sufficient to pay the interest on the £763,758 of bonds, and 5¼% on the £525,130 of common stock, and a little over. Out of this surplus of income the company has secured at a cost of £8,062 17s. 8d. bonds of the nominal value of £13,894 9s. 4d.

The half yearly meeting of the shareholders was held in Liverpool, Eng., Sept. 6, when the report was adopted, and the dividend declared. The directors and officers are:—Chairman, M. H. Maxwell, Liverpool; J. M. Synge, Westerham, Kent; E. Ashton, Liverpool; Secretary, J. Lindley, London; Assistant Secretary, E. Capern, London.

Canada and Gulf Terminal Ry.—The annual meeting was held at Montreal, Sept. 7. Following are the officers and directors for the current year:—President, M. J. O'Brien, Renfrew, Ont.; Vice President, H. J. Lyons, Montreal; other directors, J. A. O'Brien, Renfrew, Ont.; F. W. Rous, Montreal; C. A. Gauvreau, Stanfold, Que.; J. A. Ross, St. Flavie, Que.; D. Caron, Guienne, Que.; A. A. Soucy, Matane, Que.

Central Vermont Ry.—Gross earnings for 12 months ended June 30, $3,785,-918; operating expenses, $2,860,278; net earnings, $925,640, against $3,795,332 gross earnings; $2,883,624 operating expenses; $911,707 net earnings for 1908-09. The balance in hand after deducting all charges for the year is $7,640, against $3,118 for the previous year. The expenses for the year were 75.5% of the gross earnings, against 75.9% for the previous year.

Dominion Atlantic Ry.—Gross earnings for July, $147,600, against $143,357 for July, 1909.

Grand Trunk Pacific Branch Lines. Co.—There has been listed on the London, Eng., Stock Exchange an additional £21,600 of G.T.P. Branch Line Co.'s 4% bonds.

Klondike Mines Ry.—Following are the officers and directors for the current year:—President, J. A. Seybold, Ottawa; Vice President, W. C. Greig; Secretary, A. Haydon, Ottawa; other directors: C. G. Kekewich, J. Latta, both of whom reside in London, Eng. The company does not make its annual report public.

Lake Superior Corporation.—Press reports state that application is being made to have the L.S.C. common stock listed on the Canadian and the U.S. stock exchanges. The company owns the Algoma Central and Hudson Bay Ry., the Manitoulin and North shore Ry., the Algoma Central Steamship Line, the International Traction Co., and the Trans St. Mary Ry., the latter two being the electric railway operated in Sault Ste Marie, Ont., and Mich., respectively.

Quebec and Lake St. John Ry.—Total earnings for July, $56,689.43; for Aug., $52,003.15, against $54,388.32 and $55,-420.84 for July and Aug., 1909, respectively. Aggregate total earnings for eight months ended Aug. 31, $376,063.25, against $387,830.72 for same period 1909. For the eight months ended Aug. 31, there was a decrease in the earnings per mile, of $38.22, as compared with the same period 1909. The mileage operated during the respective periods was 285.4 and 285.

Temiscouata Ry.—Profits for June, $6,450; for July, $4,646. Aggregate profits for seven months ended July 31, $26,474.

White Pass and Yukon Ry.—Gross earnings for July, $214,337, against $223,657 for July, 1909.

International Ry. of New Brunswick.—T. Malcolm, contractor for the building of this railway, in an interview in Montreal, Sept. 16, is reported to have said that the line from Campbellton to St. Leonards, N.B., 110 miles, would be ready for operation for its entire length, early in October. Two trains will be run each way daily. The stations on the line are Campbellton, Upsalquitch, Hillyards, Richards, Five Fingers, Jardine River and St. Leonards. The company has power to join with a U.S. company for the erection of a bridge across the St. John's River so as to make connection with the U.S. lines in Van Buren, Me., and a bridge is projected across the Restigouche River at Campbellton, N.B., to connect with the Atlantic Quebec & Western Ry. from Matapedia, which is being continued towards Gaspe. (Sept., pg. 727).

The Michigan Central Rd., is offering for sale four car ferries, heretofore operating between Detroit, Mich., and Windsor, Ont., they being of no further service, now that traffic is being diverted through the new Detroit River tunnel. Two of the ferries are of steel, and two of iron. The capacity of each is the same—21 cars. (Sept. pg. 725.)

Analysis of the Waters is the Basis for the Success of Dearborn Water Treatment

The foundation for our operations is a thorough knowledge of the conditions. Scale formation, corrosion, foaming, leaks and other troubles affecting locomotive boiler tubes and sheets are caused directly by the presence of salts in the boiler waters. By the analysis we obtain knowledge of the nature of each supply, and the treatment is made up of reagents that will handle the conditions over the entire district.

The treating of locomotive boilers by the Dearborn process requires no outlay of capital for installation of equipment; the manner of applying the treatment is simple; the cost per thousand gallons of water is less than by any other method; and the desired results are assured if the treatment is correctly used. Gallon samples of the waters required for analysis.

A HISTORY OF THE PAY-AS-YOU-ENTER CAR

AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., 100; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., 5; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 25; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co., Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Ry., Rockford, Ill.; Cairo Street Ry. & Lt. System, 6; Des Moines City Railway, Iowa, 12; Macon Ry. & Lt. Co., Macon, Ga.; Virginia Ry. & Power Co.; Columbia Elec. St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

Canadian Northern Ry. Construction, Etc.

The C.N.R. and St. John, N.B.—Speaking at St. John, N.B., Sept. 4, the Minister of Public Works said Mackenzie, Mann & Co., had expressed to him a strong desire to secure an outlet for their line at St. John. It had been suggested that the Intercolonial Ry. be transferred to them, but he believed that the country wished to retain that line as a government railway. If Mackenzie, Mann & Co., the Premier of New Brunswick, and himself would get together another means of meeting the wishes of the railway builders in reference to Courtenay Bay might be found.

Canadian Northern Quebec Ry.—In connection with the action instituted by the Quebec city council to recover $200,000, the bonus paid by the city to secure the location of workshops in the city, the council Sept. 10, decided to grant an extension of time to Oct. 1, to see what the company proposed to do. The application was made by the C.N.Q. Ry. Auditor, who stated that the company would carry out its obligations to the city.

The ten mile extension of the old St. Jacques branch, into Rawdon, Que., was opened for traffic Sept. 3. In connection with this branch it is stated in Montreal papers that the company expects at some future time to extend the line to Hudson Bay. It is claimed, so the reports state, that the only available pass through the Laurentian Mountains for reaching the National Trancontinental Ry. in northern Quebec is via Rawdon, and up the tributaries of the Lac Ouareau River.

Canadian Northern Ontario Ry.—Application has been made to the Board of Railway Commissioners for the approval of the location plans for the first five miles of a line from near Hurdman's bridge skirting south of the Rideau River. This is the eastern end of the line now under construction from Toronto.

The work on this line between Toronto and Trenton is everywhere well advanced, and the sub-contractors on grading are moving on beyond Trenton, from which point grading is being gone on with to Belleville. The route as approved through Sidney tp., is north of the highway from Trenton, to a point east of Belleville cemetery, thence south of the highway to the city. H. K. Wicksteed, Chief Locating Engineer, recently arrived in Belleville, for the purpose of going over the route located for the line easterly from that city, so as to connect it up at Deseronto, with the recently acquired Bay of Quinte Ry. This will necessitate a route following the bay shore, crossing the branch lines to the cement works on a viaduct, and keeping along the lake front to Deseronto. The Bay of Quinte Ry. will be utilized to Sydenham, from which place it is about 92 miles to Ottawa.

Angus Sinclair, who has the contract for building the line from Toronto to Trenton, has had his contract extended for 22 miles from Trenton to Shannonville. A press report of Sept. 17, says grading has been begun at Trenton, proceeding easterly, and that A. McGuinnis started work on the west side of the river, at Belleville, working west.

The Toronto-Trenton section of the line is expected to be opened for traffic about the end of the year, and it is hoped to have work on the Trenton-Deseronto section sufficiently far advanced, as to have it ready for traffic during the summer of 1911, and the rest of the line into Ottawa ready by the end of that year.

The question of the entrance of the line from Sudbury into Port Arthur has been before the Port Arthur city council upon several occasions recently. The city authorities are anxious to prevent the company securing all the water front north of Bare Point, and the City Engineer has prepared a plan showing an alternative route above the C.P.R. This latter line it was submitted would give a better gradient but would cost from $75,000 to $100,000 more than the shore route. H. K. Wicksteed, Chief Locating Engineer, was in Port Arthur, Sept. 3, in consultation with the municipal officers as to these proposals. He is said to have told the city authorities that the company wanted to have all arrangements completed this year so that the building of the line could be started in the spring, and carried through without any hitch.

James Bay and Eastern Ry.—Under the act granting aid to certain railways, a contract has been entered into with the Dominion Government for building 100 miles of line westerly from Roberval, Que., towards James' Bay.

Canadian Northern Ry.—The company's hotel in Port Arthur, Ont., is nearing completion. The main entrance is from Cumberland St., and there is also an entrance from the side overlooking the bay. The building is 51 by 213 ft., 94½ ft. high, and has 975,000 cubic feet of floor space. The exterior walls are Indiana limestone for the first two stories and lace-pressed brick above that. There is a deck house on the roof, and above the edge of the main walls all round there is a brick parapet, the court thus formed making a promenade and palm garden.

On the first floor are the main lobby, 27x68 ft.; cafe grill, 19.6x34 ft.; barber shop, 17x19 ft.; bar room, 17x27 ft.; ladies' parlor, 17x20 ft.; six stores each 17x47 ft. The office overlooks both entrances. On the second floor are the main restaurant, with a seating capacity for 120, and kitchen 20x69 ft. This floor also contains 10 bedrooms, 13.6x20 ft. each, and provided with bath, toilet and wash basin; also with clothes closet. The two rooms on either side, at the Arthur street end of the building, are arranged so that they can be used en suite. There are three complete bedroom floors. Each floor contains 23 bedrooms, 13 ft. 6 in. by 20 ft. each. The total number of rooms on these three floors is 69 rooms, making with the 10 rooms on the second floor, a total of 79 rooms in the hotel with bath, and adding the 24 rooms on sixth floor without baths, making a total of rooms for rental 103. In addition there are 12 servants' rooms on the sixth floor. On the roof is a fan house controlling the ventilation of the entire building, and in the basement is the boiler room, engine house, baggage room, stores, etc. The building is so arranged as to be added to when necessary.

The arrangement reported to have been completed Aug. 18, between R. J. Mackenzie for the company, and the St. Boniface city council, has been signed. It provides that if the plans of the National Transcontinental Ry. are changed along certain indicated lines, the C.N.R. will build a 38-stall roundhouse, and various other buildings, in St. Boniface, half of these buildings to be completed in 1911 and the remainder by the end of 1912. The contract on file in the city clerk's office shows that Mr. Mackenzie will endeavor to procure the erection of a steel traffic and street car bridge across the Red River at some point between Arnaud St. and Tache Ave., opposite Bannatyne Ave., Winnipeg, and the contract also contemplates the construction of a subway at Provencher Ave., and a union station in St. Boniface.

Press reports from Winnipeg, Sept. 15, state that W. Mackenzie, President, said the location for the hotel which the company proposed building in the city was the corner of Water and Main Sts., where the old Northern Pacific hotel formerly stood. The report states that the hotel will cost about $2,000,000.

A number of sub-contractors and C.N.R. engineers, etc., were recently proceeded against for trespassing on C.P.R. property, in the Rosebud country, along the route of the projected line into Calgary. After some conferences with J. S. Dennis, Assistant to the Vice President, C.P.R., an agreement was reached as to the building of the line through the C.P.R. irrigation belt.

M. H. McLeod, in an interview at Edmonton, Alta., Sept. 7, is reported to have said the contractors had the uncompleted portions of the route of the branch into Calgary covered with men, and he had hopes that the grading would be completed this year. The matter of the entrance into Calgary was taken up Sept. 1, with the city council there by President Mackenzie. The city asked the company to move the location of its tracks 25 ft. east, but Mr. Mackenzie said they could not be moved, and in the event of the Board of Railway Commissioners ordering a change, another site entirely might be selected.

The question of the location of the branch from the Vegreville-Calgary line, westerly to the Brazeau River Valley is causing a good deal of discussion. The Department of Railways in Aug., approved of the location of the line from Stewartwyn to the western boundary of range 25, and on account of the opposition of the Alberta Central Ry., it was suggested that the line might be located to Rocky Mountain House, via Lacombe, instead of Red Deer. President Mackenzie, is quoted as having said, Sept. 1, that although the line will not be completed, steel will probably be laid as far west as the Calgary and Edmonton Ry. this year.

Application is being made to the Board of Railway Commissioners for a recommendation to the Governor-in-Council for the sanction of an agreement amalgamating the Edmonton and Slave Lake Ry., with the Canadian Northern

Canadian Northern Pacific Ry.—W. Mackenzie, President, arrived in Victoria, B.C., Sept. 3, and discussed a number of matters connected with the route of the line in the province, etc., with the Provincial Government.

Work was reported to be in progress on the first 15 miles of the coast end of the line, Aug. 30. Five construction camps had then been pitched between Port Mann and Mount Lehman. C. H. Johnson had his gangs working between Port Mann and Mission City, his headquartersr being in New Westminster; C. R. Shock & Son were working on a five mile section on either side of Fort Langley, where the construction camp had been pitched, and McDonald Bros. have headquarters at Chilliwack, B.C., the end of the 60-mile section under contract. These are sub-contractors under the Northern Construction Co.

Engineers are engaged, under the direction of T. H. White, Chief Engineer, in making surveys at Port Mann for terminal yards, etc. W. Mackenzie, President, visited the site of the proposed terminals, Sept. 8, in company with T. G. Holt, the C.N.R. Executive Agent in British Columbia. In an interview at Vancouver before leaving for the east on the following said, Mr. Mackenzie is reported to have denied the report that his company intended to make application to the railway commission for a change of its route from Edmonton to the coast, and further stated that construction would be carried out with all possible dispatch, following the survey as at present located, with the possible exception of short distances where it may be necessary to deviate to avoid tunnel work or high grades. Edmonton and the coast would be connected at as early a date as possible consistent with the proper construction of a standard line with the lowest possible gradients. Con-

The Hudson's Bay Company

THE COMPANY OFFERS FOR SALE

Farming and Grazing Lands in Manitoba and the Northwest Territories

ON EASY TERMS OF PAYMENT

Town Lots for Sale at Winnipeg, Ft. William, Edmonton, Prince Albert, etc.

The Company has General Stores at Winnipeg, Vancouver, Calgary, Edmonton, and other places where purchasers will find the best of goods at moderate prices.

Transportation by the Company's Steamers, brigades of boats and canoes throughout the Territories not traversed by railways.

TATE BIFUNCTIONAL ACCUMULATORS

Are ideal for train lighting. They are 30 per cent. lighter than any other Storage Battery of same rated capacity.

They can be charged more rapidly, and show much higher Watt-hour efficiency on slow or rapid discharge.

They do not require to be washed out for the removal of sediment from the cells, because there is no sediment deposited.

This battery solves the problem of efficient lighting of trains by electricity.

It is important to railway managers that they should investigate the Tate Bi-functional Accumulator.

We also manufacture storage batteries for Automobile engine ignition and lamp lighting, and for all other purposes for which a storage battery can be used.

TATE ACCUMULATOR CO. OF CANADA, LTD.

TORONTO, CANADA

tracts for further sections of the line in British Columbia would be let during the current year.

At Vancouver, Sept. 9, the Board of Railway Commissioners had under consideration the C.N.P.R.'s application to use the C.P.R. right of way through the Fraser Canyon near Lytton, to which the C.P.R. raised no objection, but application was made to use the C.P.R. right of way also for seven miles above the Canyon. After some argument it was decided to engage C. E. Cartwright, to make an independent survey of the C.N.R. location in the district and to make an estimate of the alternative route suggested by the C.P.R.

Survey work is being carried on in connection with the proposed lines in Vancouver Island, under the charge of G. B. Hughes, Engineer for the Island lines. It was reported recently from Victoria that H. K. Wicksteed, expected to arrive Oct. 1, in order to pass upon upon the route located, before arrangements are made for letting contracts.

A Victoria dispatch Sept. 21, said it was reporrted that a contract had been let for building 30 miles to Sooke, the first section of the proposed line from Victoria to Barkley Sound, on the southwest coast of Vancouver Island.

Duluth, Winnipeg and Pacific Ry.—We are officially advised that the contractors, Foley, Welch and Stewart, have the whole line from Duluth to Virginia, Minn., covered with men, there being in all about 1,500 employed on the grading and timber bridging. It is expected to get about 25 miles of track laid this fall, and to finish up the work in the summer of 1911. The tunnel at Short Line Park, about eight miles from Duluth, will be about 500 ft. long. Work was started on it Sept. 13, and it is expected to have it completed in about a month. (Sept., pg. 733).

F. H. Phippen, K.C.; G. G. Ruel, G. F. Macdonnell, R. H. M. Temple and A. J. Reid, all of whom are connected in a legal capacity with the Canadian Northern Ry. and allied interests, are incorporators of the Candian Power and Paper Co., Ltd., which has been incorporated under the Dominion Companies Act, with a capital of $10,000.000, and office at Toronto.

The Secretary, Board of Railway Commissioners, has issued the following circular to railway companies: "Several accidents have occurred on railways subject to the Board's jurisdiction, due to overhead structures not being the height required by the statutes, and I am directed to ask that you report to this Board not later than Nov. 30 particulars of all overhead bridges, snow-sheds or other structures that are not of the statutory height."

G. T. R. Pacific Type Locomotive.

During the past few years the weights of express passenger trains have increased to such an extent that it has become necessary, on many roads, to employ six-coupled locomotives in high speed service. For work of this character, either the ten-wheeled or Pacific type is usually selected. With the same maximum load per driving wheel, the Pacific type shows no superiority over the ten wheeled type, as far as adhesion weight is concerned; and hence at slow speeds the tractive force developed by the two classes should be approximately the same. The Pacific type, however, possesses greater boiler capacity, and this is a distinct advantage in high speed work, or where long grades must be negotiated.

The Baldwin Locomotive Works has recently built five Pacific locomotives for the G.T.R. They are known as class P according to the railway company's classification. The tractive force exerted is 31,500 lbs., and with 131,050 lbs. on driving wheels, the ratio of adhesion is 4.15. They were built in accordance with drawings and specifications furnished by the G.T.R.

Grand Trunk Railway Pacific Type Locomotive.

The boiler used in this design is of the extended wagon top type with wide firebox. The longitudinal seams are sextuple riveted, and welded at the ends. The side water legs of the fire-box slope inward as they rise; the staying is radial, and the front end of the crown is supported on four rows of expansion links. The fire-door opening is formed by flanging both sheets outward, and uniting them with a sleeve. The master mechanic's standard front end is used, with a short extension and tapered stack. The furnace contains a brick arch, supported on four water tubes, each three inches in diameter.

The steam distribution is controlled by balanced slide valves, driven by Stephenson link motion. The rockers are placed between the first and second pairs of driving wheels, immediately in the rear of the links; and each rocker is connected to the corresponding link by a short transmission bar. The valve rods are necessarily long and are supported by the guide yoke. This plan of motion dispenses with heavy transmission bars, such as are necessary when the links and rockers are placed on opposite sides of a driving axle.

The frames are of cast steel, with rear sections of forged iron. For a locomotive of this size, the main frames are comparatively narrow, their uniform width being four inches. Each frame is cast in one piece with a single front rail, to which the cylinders are bolted. The rear sections are 2 inches wide by 12 inches deep, and are arranged to accommodate the trailing truck, which is of the radial type with outside journals. The driving springs are underhung, and are equalized with the trailing springs.

All truck wheels under the locomotive and tender are steel tired, and were manufactured by the Standard Steel Works Co. The trailing truck wheels have cast steel centres, while the front engine truck wheels and the tender wheels have cast iron centres. The Mansell style of fastening is used in all cases.

The tender frame is composed of 10 inch steel channels and the trucks are of the arch bar type, with cast steel bolsters. The tank has a water bottom, and provision is made for carrying 7,000 gallons of water and 10 tons of coal.

These locomotives, although not of exceptional size, are the first Pacific types shipped to Canada by the builders, and are therefore of considerable interest. The principal dimensions are as follows:

Gauge, 4 ft. 8½ in.
Cylinder, 22 in. x 28 in.
Valve, balanced slide.

Boiler—Type, wagon top; material, steel; diameter, 66 in.; thickness of sheets, 9-16 in. and ⅝ in.; working pressure, 200 lbs.; fuel, soft coal; staying, radial.

Fire Box.—Material, steel; length, 96⅞ in.; width, 75¼ in.; depth, front 72¾ in., back 56¼ in.; thickness of sheets, sides ⅜ in., back ⅜ in.; crown ⅜ in., tube ½ in.

Water Space.—Front, 5½ in.; sides, 4½ in.; back, 4½ in.

Tubes.—Material, steel; thickness, 0.125 in.; number, 305; diameter, 2 in.; length, 20 ft. 7 in.

Heating Surface.—Fire box, 170 sq. ft.; tubes, 3,274 sq. ft.; firebrick tubes, 28 sq. ft.; total, 3,472 sq. ft.; grate area, 50.6 sq. ft.

Driving Wheels.—Diameter, outside 73 in., centre 66 in.; Journals, main 9½ in. x 12 in., others 9½ in. x 12 in.

Engine Truck Wheels.—Diameter, front, 31 in; journals, 6½ in. x 10½ in.; diameter, back, 49 in.; journals, 8 in. x 14 in.

Wheel Base.—Driving, 13 ft. 4 in.; rigid, 13 ft. 4 in.; total engine, 33 ft. 2 in.; total engine and tender, 62 ft. 3½ in.

Weight.—On driving wheels, 131,050 lbs., on truck, front, 37,100 lbs.; on truck, back, 38,500 lbs.; total engine, 206,650 lbs.; total, engine and tender, about 345,000 lbs.

Tender.—Wheels, number, 8; diameter, 34 in.; journals, 5½ in. x 10 in.; tank capacity, 7,000 gals.; fuel, 10 tons.

Service, passenger.

Grand Trunk Ry.—U.S. press reports Sept. 16, stated that the G.T.R. directors had authorized the purchase of the Chicago Great Western Rd., if satisfactory terms could be arranged. C. M. Hays, President G.T.R., and the President of the C.G.W. Rd., were said to have had a conference Sept. 15.

Judge McGibbon, of Prince Edward Island, has been appointed Chairman of the Board of Conciliation and Investigation under the Lemieux act established to adjudicate on the question of wages and conditions of labor of the maintenance of way men on the Canadian Pacific, Canadian Northern, and Grand Trunk Railways. Messrs. McGuigan and Lee are the other two members of the board, representing the railway companies and the men respectively.

C.P.R. Betterments, Construction, Etc.

The Maritime Provinces.—The developments of the C.P.R. in Nova Scotia and New Brunswick is causing much speculation there at present particularly in Halifax and St. John. It is reported in Halifax that that city is to become the sole winter port for both passengers and freight and that in order to make it the more accessible a new line will be built, starting from near Fredericton, N.B., in as straight a line as possible through New Brunswick and Nova Scotia to Halifax, and that this line will be hurriedly pushed forward in the very near future. Another dispatch while suggesting the building of the line from Fredericton, to Halifax, says that the Nova Scotian port will be made the terminal for the Trans-Atlantic passenger trade, while St. John, will remain the freight terminal. The reports from St. John, N.B., claim that the company has purchased additional property in the city and on the water front, and that this purchase would give the company a commanding position at the head of the harbor, as well as on the West side, and terminals of its own for steamships on the Bay of Fundy service could be constructed there giving quick connection by the bay route. On Sept. 9, the Mayor of St. John stated that obstacles in the way of the transfer of the west side shore lots to the C.P.R. as a site for railway yards near the elevator, had been overcome, and he expected that the transfer would be made by the city very soon.

Place Viger Station Improvements.—A press report states that a contract was let Sept. 12, for the alterations and additions to the station and hotel at Place Viger, Montreal, to John Stewart & Co. The old buildings have already been cleared off the site, and the foundation of the new station has been put in. The entrance to the station, instead of facing Craig St., at present, will be at the corner of Craig and Berri streets, where a large rotunda will give entrance alike to the station and the hotel. The hotel entrance proper, however, will face the Viger Gardens, and the whole of the space now occupied by the station will be given over to the hotel, while the station itself will extend from Craig along Berri to Notre Dame. Into this new station the trains will be able to run without the sharp curve necessitated at the present time. There will be nine tracks in the station.

St. Louis de Mile End Station.—A permit has been issued for building a new station at a cost of $37,000 at St. Louis de Mile End, Montreal. It will be on the St. Louis boulevard, and will be 262 by 40 ft., and two stories high. D. L. Loomis & Sons are the contractors.

Lake Temiskaming Colonization Ry. Extension.—The Minister of Public Works for Quebec, stated in a speech at Ville Marie, Que., Aug. 29. that if the C.P.R. did not build its projected line from South Timiskaming within the next two years the Government would do so. (See also Long Soo and Abitibi Ry., July, pg. 549.)

Ottawa Yard Facilities.—The city authorities received notification from the company Sept. 14, of a project for extending its limits in the neighborhood of Wellington St. viaduct for the purpose of increasing the yard facilities and putting up new buildings. In his letter Vice President McNicoll said considerable land had been acquired and it was proposed to purchase an additional area taking in several blocks. The intention of the company is to erect a larger roundhouse and other buildings on the land acquired. The assessment on the property within the area indicated by the company is about $15,000.

Arrangements are being made between the Mayor and Vice President McNicoll for a meeting to discuss the project for a tunnel in the city.

Kingston and Pembroke Ry.—During the past three years, we are advised, the company has reballasted the main line with the exception of about 16 miles, which were in good shape. During the current season a large amount of ballasting was done, over $30,000 having been appropriated for that purpose. The other betterments included new work to bridges and culverts at five points; a siding off the Bradford branch; replacing 10 miles of fencing northward from Godfrey, and general repairs to bridges and culverts at 75 points.

Smith's Falls to Toronto.—Referring to the reports that the company was about to undertake the building of another line from Smith's Falls into Toronto, D. McNicoll, Vice President, in a recent interview, stated that it would rest entirely on the engineers' report. It was a question of gradients rather than route; it was most important to get a level line first, but the question of the route had also to be considered. One of the reports referred to stated that a line was to be built from Smith's Falls to Belleville and thence to Toronto, and another report was to the effect that the new line to Toronto would branch off the main line at either Perth or Bathurst. The company controls the Campbellford, Lake Ontario and Western Ry. charter, which was projected to give a line nearer the lake front than the present line. Several surveys have been made over the route proposed for this line, but nothing further has been done.

Toronto Improvements.—Vice President McNicoll, in an interview at Toronto, Sept. 13, said he was working on plans for a greater freight terminal in Toronto, but they had not taken definite shape. A few days previously he was quoted as saying that the company had made plans for Toronto and would shortly be making a proposition to the city council. These plans might include warehouses, new lines, new yards, freight sheds, stations and all things dealing with terminal matters. His own opinion was that the present site of the union station will become an undesirable one for a passenger station, and that with the development of the city northerly, he would not be surprised if, in course of time, the big station of the city will be located in the north.

Men started work Sept. 1, in the preparation of new freight terminals at North Toronto. The foundations for a freight shed have been completed and the brickwork is being proceeded with. Three new sidings have been laid, and other work is to be done.

West Toronto Yards.—Officials of the company and the York township council arranged, Aug. 30, for the protection of three level crossings. Two 30 ft. subways are to be put in, one at Elizabeth St., and one at the Scarlett Plains, while an 8 ft. subway is to be put in at Jane St. This latter subway is to be widened to 30 ft., at the cost of the municipality when desired. J. Oborne, General Superintendent, stated that the company would ask the council for some concessions at a later date in connection with the Toronto yards.

Lambton-Islington Second Track.—Steel has been laid on the second track which has been built from Lambton station to near the entrance to the golf club house, at which point, there is to be a change in the alignment, as the grading to the Humber river, and to near Islington station is being done on the north side of the existing tracks. Beyond Islington station, to the new line to Mimico, the grading is being done on the south side of the present tracks. The bridge and building department has a gang enlarging the culverts on the present line to accommodate the second track. The present second track from Toronto westerly ends at the eastern end of Lambton station, which building will have to be moved before connection can be made with the second track now being laid west of there.

Islington-Mimico Branch.—The branch line from west of Islington, to Mimico, Ont., has been ballasted, and the connection with the G.T.R. has been made. Land has been acquired to make a connection at the Islington end, so that trains may be run from the branch either east or west.

Ingersoll to Code Jct.—The grading and culvert work on the 4.5 miles of line between Code Jct., on the Toronto-Windsor line, and Ingersoll, Ont., is well advanced. The contractors are Maconell and Fletcher. This piece of line will connect up the old Tillsonburg, Lake Erie and Pacific Ry., now terminating at Ingersoll, with the St. Mary's and Western Ontario Ry., another C.P.R. subsidiary now having its eastern terminal at Code Jct., and will enable trains from St. Marys to be run through to Ingersoll direct instead of to Woodstock as at present.

In connection with the reports that the company contemplated the abandonment of Port Burwell, as a terminal for its cross lake ferry, the Dominion Government has under consideration the building of a 1,200 ft. breakwater at the southwest side of the harbor, with a view of preventing the formation of a sandbar, which is proving an obstacle to navigation.

London Improvements.—In an interview at London, Sept. 14, Superintendent McNeillie, stated that he expected to receive orders to go ahead with the improvements at the station and terminals any day. The roundhouse would be the first building to be erected.

A London press dispatch, Sept. 7, stated that plans had been received in the city showing a new station at Quebec road, a 26-stall roundhouse, machine shops, office buildings, and a considerable re-arrangement of the yards.

London-Port Stanley, Ont.—Press reports state that the company has been having surveys made for a line from near Belmont through Yarmouth tp., to Orchard Beach, on Lake Erie.

Thessalon Station and Yards.—An agreement has been reached by which a new station, 112 ft. long, will be built and additional siding accommodation provided at Thessalon, Ont., on the Algoma branch line.

Fort William, Ont.—A contract is reported to have been let to O. A. C. Stewart & Co., Winnipeg, Man., for the abutments and piers for the bridge over the Kaministikwia River, Fort William, Ont.

Subway at Kenora, Ont.—Plans were submitted to the Kenora town council, recently, for a subway under the C.P.R. tracks, at Main St., the work to cost about $40,000. The company will provide 70% of the cost; 20% will come from the Dominion level crossing elimination fund, and 10% will be provided by Kenora. The subway will be built by the C.P.R.

New Western Lines.—The shareholders will be asked at the annual meeting, Oct. 5, to authorize the directors to issue 4% consolidated debentures to provide for building the following branch lines in Manitoba, Saskatchewan and Alberta: Moose Jaw-Outlook branch, 118 miles; Weyburn-Lethbridge branch, 50 miles; Teulon extension, 56 miles; Lauder-Griffin branch, 33 miles; Craven-Bulyea branch, 21 miles; Kipp-Aldersyde branch, 58 miles; Langdon branch, 40 miles; Regina-Colonsay branch, 134 miles; Snowflake branch extension, seven miles; Virden-McAuley branch, 36 miles. These lines have either been completed, or are practically completed.

TAYLOR & ARNOLD, LIMITED

404 St. James St. - - - - MONTREAL

A contract has been entered into with the Dominion Government under the act granting aid to certain railways, for building an extension of the Winnipeg Beach line to Gimli, Man., 9.5 miles.

Winnipeg-Portage la Prairie Second Track.—The second track between Winnipeg and Portage la Prairie, Man., was expected to be completed Sept. 15.

Estevan Westerly.—In order to provide employment for settlers and their teams, W. Whyte, Vice President, has authorized the grading of about 20 miles westerly from Estevan, Sask. The work has been started.

Port Moody, Indian River and Northern Ry.—The line under construction is 18 miles long, and extends from Emerson's spur, at the eastern end of Port Moody, B.C., at which point it connects with the C.P.R. main line, to Indian River. This river flows into the north arm of Burrard Inlet. Work is going on between Port Moody, and a point on the north shore of Burrard Inlet, at a distance of about four miles from Emerson's spur. The line follows the eastern and northern shore of the inlet for the whole of the four miles, and is designed primarily to develop valuable water frontage on that portion of the Inlet for industrial purposes. So far as at present located the line has a maximum gradient of 0.7% and an easy curvature. With the exception of some trestle work across a portion of the mud flat at the extreme eastern end of the Inlet, there is no bridging of any importance on this four miles. It is expected that steel will be laid upon the four miles by the end of Nov. The contractors are Macdonell, Gzowski & Co,. Vancouver.

A press report states that over a mile of the line was ready for track laying, Aug. 30. In the course of the grading hard pan was struck which made construction more difficult and prevented the completion of the four miles by Sept. 1, as was at first contemplated.

Esquimalt and Nanaimo Ry.—The section of the Alberni extension as far as Cameron Lake has been completed, and it was expected that a train service would be placed in operation over it by Sept. 30. Work on the five mile section round Cameron Lake is being proceeded with satisfactorily, and it is expected that it will be completed by the end of the year. The grading is expected to be completed right into Alberni by Jan. 1, and the bridge work will be completed by Mar. 30, 1911, so as to allow the track laying gang to begin work at Cameron Lake, April 1.

A contract has been entered into with the Dominion Government under the act granting aid to certain railways, for building a line from Duncans, on the main line, to Cowichan Lake, 24 miles.

A Victoria dispatch of Sept. 20, said the company was calling for tenders for building the Comox branch.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—U.S. press reports state that a certificate has been granted to the company permitting it to build a line in Superior, Wis., from its present terminal to the ore docks; also an extension of the line to the proposed plant of the U.S. Steel Corporation, via the Tomahawk Bay route. (Sept., pg. 731).

Hudson's Bay and Pacific Ry.—G. Atwood, Chief Engineer of the Hudson's Bay and Pacific Ry., which has opened offices at Prince Albert Lake, has announced that he has been authorized to expend any monies necessary to complete a detailed survey for a route from Prince Albert to Fort Churchill. He says he has a large number of men in the field, and makes the announcement in refutation of the rumors that the London backers of the road were about to withdraw their support.—Prince Albert press dispatch.

Resignation of Thomas Tait.

A Melbourne, Australia, cable of Sept. 21, states that Thomas Tait, Chairman Victorian Railway Commissioners, has resigned and will return to Canada. The reason for his resignation, as stated in the dispatch, is on account of a recent accident at Melbourne, by which a number were killed and others injured. From the last Australian papers to hand it would appear that the accident was caused by the carelessness of some minor officials at the Melbourne terminus. The news of Mr. Tait's resignation is a matter of great surprise in Canada, as he has met with great success in his administration of the Australian railway, and has received much endorsement in Parliament and in the Victorian press generally.

Mr. Tait was born at Melbourne, Que., July 24, 1864, and entered railway service Sept., 1880, since when he has been, to July, 1881, clerk G.T.R. Audit Department; July to Oct., 1881, clerk in office of Assistant to President Chicago and Grand Trunk Ry.; Oct., 1881, to Apr., 1882, clerk in G.T.R. Solicitor's Office, Belleville, Ont.; Apr. to Oct., 1882, clerk General Manager's office, G.T.R.; Oct., 1882 to Sept., 1886, private secretary to Vice President and General Manager C.P.R.; Sept., 1886, to May 23, 1887, clerk General Traffic Manager's office, C.P.R.; May 23, 1887, to Feb. 1, 1889, Assistant Superintendent C.P.R.; Moose Jaw, Sask.; Feb. 1, 1889, to Mar. 12, 1890, Superintendent Ontario Division C.P.R., Toronto; Mar. 12, 1890, to Mar. 1, 1893, General Superintendent Ontario and Quebec Division, C.P.R.; Mar. 1, 1893, to May 3, 1897, Assistant General Manager C.P.R.; May 3, 1897, to Apr., 1901, Manager C.P.R. Eastern Lines; Apr., 1901, to Mar., 1903, Manager of Transportation, C.P.R. He sailed from Vancouver for Australia, May 1, 1903, having received the appointment of Chairman of the Victorian Railway Commissioners.

Since the above was put in type, we have been advised that Mr. Tait and his family will sail from Australia Nov. 30, via Indian and Europe, for Canada.

White Pass and Yukon Railway Rates.

British Columbia press dispatches early in September stated that the Board of Railway Commissioners had made an order respecting rates on the W.P. & Y. Ry. On Sept. 16, the Secretary of the Board at Ottawa advised us that no formal order had reached him for issuance.

The order was evidently promulgated in B.C., as the Vancouver World published it Sept. 13, as follows:—

"The British Yukon Ry. Co., the British Columbia Yukon Ry., and the Pacific & Arctic Ry. and Navigation Co., and the White Pass & Yukon Ry. Co. are to cease from discriminating against the applicant (Conrad), and in favor of the Atlas Mining Co., R. R. Neil and W. D. Greenhough and any and all said parties. That said railway companies cease and desist from discriminating in favor of the locality in which the Atlas mining properties are located and against the locality in which the mines of the applicant are located.

"That said railway companies file with the board on or before Nov. 1 tariffs showing the rates granted to the Atlas Mining Co., pursuant to the contract entered into between the Pacific & Arctic Ry. & Navigation Co. and the Atlas Mining Co., dated March 21, 1910.

"That said railway companies file with the board on or before Nov. 1 a tariff amending or supplemental to C. R.C. 9, issued Sept. 16, 1909, by the Pacific & Arctic Ry. & Navigation Co., the British Columbia Yukon Ry. Co., and the British Yukon Co., forming the 'White Pass and Yukon route,' giving carload rates of $1.75 a ton on ore and concentrates from Cariboo to Skagway.

"That the said railway companies grant to all shippers of ore and concentrates upon their line or lines of railway proportional rates and privileges at least as favorable as those granted to the Atlas Mining Co. under said contract.

"That said railway companies in due course obtain for the applicant if he notifies them in writing so to do, the same or as favorable ocean rates as they have obtained for the Atlas Mining Co., or in the event of said railway companies being unable to obtain the same or as favorable ocean rates for the applicant, then they are to cease and desist from obtaining discriminatory ocean rates for the Atlas Mining Co. and handle the ore of applicant, and that of all other shippers over their lines upon terms and conditions as to wharfage and otherwise exactly similar to that granted by said contract to the Atlas Mining Co."

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

W. W. Butler, Second Vice President and Director of the American Steel Foundries Co. while retaining those positions, has severed his active connection with the company in order that he may devote all his time to the Canadian Car & Foundry Co. and his other Canadian interests.

The Canada Iron Corporation Ltd. has issued an exquisitely printed and well illustrated, bound book, of 126 pages, containing full particulars of its activities, and information as to its iron mines, blast furnaces, car wheel and pipe foundries and machine shops, together with standard pipe and car wheel specifications.

The Canadian Gold Car Heating and Lighting Co. has issued a catalogue embodying all the various devices and special fixtures connected with its systems of train heating, with detail illustrations of all the parts. The descriptions given, cover steam and vapor heating, combined coal-fired heaters with hot water circulation, and electric heaters, as well as equipment for Pintsch gas and acetylene lighting systems.

A press dispatch says:—"Since the relining of the blast furnaces, the Nova Scotia Steel Co. has been putting all previous records for daily production far in the rear. Before the improvements were completed, the average daily output was 180 tons. Since that time, the average has been greatly increased, and some remarkable days have been put in. On one day the output was 210 tons, on another, 230 tons, and on another, 275 tons."

I.C.R. Buildings at Campbellton.—We are officially advised that as the season is so far advanced only temporary buildings will be put up to replace those burned, with the exception of the locomotive house and this work is being done by railway employes under the direction of the engineer, using as far as possible second hand materials which are available. Plans are being prepared for a station house, to be built next summer

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry.—G. A. Montgomery, heretofore Superintendent Manitoulin and North Shore Ry., has been appointed Superintendent Michipicoten Division A.C. & H.B.R., vice R. Y. Seelye, who was also Superintendent Helen Mine, and who has been appointed General Superintendent of Mines, Lake Superior Corporation. Office, Michipicoten Harbor, Ont.

Boston and Maine Rd., Maine Central Rd.—C. S. Mellen, President New York, New Haven and Hartford Rd., has also been appointed acting President B. & M., and M.C. Rds., vice L. Tuttle, resigned.

Canadian Freight Association, Western Lines.—W. E. Campbell has been appointed Secretary Treasurer, with jurisdiction over freight inspection and car rental on all lines in Canada west of and including Port Arthur, Ont.

A. C. Ferguson, heretofore acting Manager Canadian Car Service Bureau, Western Lines, has been appointed Chief Clerk Canadian Freight Association, Western Lines, Winnipeg office.

J. Burchell, heretofore Manager and Secretary-Treasurer, Canadian Car Service Bureau, Western Lines. Vancouver, will until Jan. 1, 1911 continue the work of supervision of freight inspection and car rental on lines in British Columbia, and all reports, correspondence, etc., should continue to be addressed to him.

Canadian Northern Ry.—T. Musgrove, heretofore freight repair foreman, has been appointed coach yard foreman at Winnipeg, vice A. E. Lewis, resigned.

T. A. Howell, heretofore in charge of the Salvation Army's immigration work at Toronto, has been appointed General Immigration Agent, C.N.R. Office, Toronto.

G. F. Southall, heretofore in the Salvation Army's immigration department at Toronto, has been appointed Travelling Immigration Agent, C.N.R. Office, Toronto.

Canadian Pacific Ry.—C. E. E. Ussher, heretofore Assistant Passenger Traffic Manager, Winnipeg, has been appointed Passenger Traffic Manager, vice Robt. Kerr, retired. Office, Montreal.

A. P. Walker, Assistant Division Engineer, Toronto, who has been on leave of absence, has returned, and resumed his duties.

M. A. Fullington, who acted as Assistant Division Engineer, Toronto, during the absence of A. P. Walker, has been granted a short leave of absence.

R. H. Pierce, heretofore Assistant Superintendent, has been appointed Superintendent Sleeping, Dining and Parlor Cars and News Service, District 4. Office, Moose Jaw, Sask.

R. R. Smart, heretofore Car Service Agent, Moose Jaw, Sask., has also been appointed Fuel Agent, Saskatchewan Division. Office, Moose Jaw.

G. Moth, heretofore Trainmaster at Moose Jaw, Sask., has returned to the locomotive service.

A. A. Smith, heretofore Trainmaster at Moose Jaw, Sask., has been appointed Trainmaster District 1, Alberta Division, vice A. N. Hobkirk, transferred. Office, Medicine Hat, Alta.

H. O. Whitney has been appointed Roadmaster Lethbridge subdivision, District 1, Alberta Division, vice —. Barry, assigned to other duties. Headquarters, Medicine Hat.

A. N. Hobkirk, heretofore Trainmaster District 1, Alberta Division, Medicine Hat, has been appointed Trainmaster District 2, Alberta Division, vice W. R. Boucher, transferred to Moose Jaw, Sask. Office, Calgary, Alta.

A. Houghton has been appointed Assistant Trainmaster District 2, British Columbia Division, vice A. Halkett, appointed Trainmaster at Moose Jaw, Sask. Office, Kamloops, B.C.

R. C. Barker, heretofore Chief Dispatcher District 2, British Columbia Division, Vancouver, B.C., has been appointed Chief Dispatcher District 3, B.C. Division, vice F. Walker, transferred. Office, Nelson, B.C.

F. Walker, heretofore Chief Dispatcher District 3, British Columbia Division, Nelson, B.C., has been appointed Chief Dispatcher District 2, B.C. Division, vice R. C. Barker, transferred. Office, Vancouver, B.C.

A branch office has been opened at Antwerp, Belgium, for the working of the Company's continental business, instead of it being represented by an agent as heretofore. T. McNeil, heretofore Traffic Manager Manchester Liners, Ltd., Manchester, Eng., has been appointed Agent, vice S. E. Cruse, resigned. Office, 25 Quai Jordaens.

Delaware and Hudson Co.—The office of General Auditor has been created, and the following change made in the organization of the accounting department: The Comptroller will have charge of the general, corporate and fiscal accounts. The General Auditor will have charge of the operating revenue and expense accounts. Allen McCarty has been appointed General Auditor. Office, Albany, N.Y.

Grand Trunk Pacific Ry.—The following agents have been appointed:—Rivers, Man., A. Donnelly; Pope, Man., S. Edwards; Lazare, Man., J. A. Jacques; Atwater, Sask., S. C. McDonald; Venn, Sask., R. M. Sutherland; Wainwright, Alta., A. M. McCorkle; Tofield, Alta., A. B. Dowling; Edmonton, Alta., W. H. Oliver.

Grand Trunk Ry.—G. Beckingham, heretofore Roadmaster, Point St. Charles, Montreal, has been appointed General Roadmaster Eastern Division, vice D. McCooe, promoted. Office, Montreal.

D. McCooe, heretofore General Roadmaster, Montreal, has been appointed Superintendent of Grade Separation at Toronto, and will have entire charge of all construction work in connection therewith. Office, Toronto.

F. W. Egan, having recovered his health, has resumed his duties as Superintendent Western Division, Detroit, Mich.

J. Ehrke, who has been acting Superintendent Western Division, Detroit, Mich., during the absence of F. W. Egan, has resumed his duties as Assistant Superintendent District 25 (Main line), and District 26. Office, Battle Creek, Mich.

The following agents have been appointed:—Newtonville, Ont., P. C. Brown; Pickering, Ont., F. S. Allin; Omemee Jct., Ont., H. S. Snider; Georgetown, Ont., J. T. Cameron; Lucan, Ont., W. J. Dore; London East (Pass.), Ont., C. Sampson; Ridgeway, Ont., A. Yaeck; Alma, Ont., W. J. Dobbie; Dalkeith, Ont., D. J. Mackintosh.

Manitoulin and North Shore Ry.—F. Robinson, heretofore Trainmaster and Chief Dispatcher, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., has been appointed Superintendent M. & N.S.R., vice G. A. Montgomery, transferred to A.C. & H.B.R. service. Office, Sudbury, Ont.

Michigan Central Rd.—G. E. Gott, heretofore Night Chief Train Dispatcher, has been appointed Chief Train Dispatcher, vice G. W. Babbitt, deceased. Office, St. Thomas, Ont.

W. H. McNabb has been appointed Night Chief Train Dispatcher at St. Thomas, Ont., vice G. E. Gott, promoted.

New York Central and Hudson River Rd., West Shore Rd., Boston and Albany Rd.—L. F. Vosburgh, heretofore Assistant General Passenger Agent, has been appointed General Passenger Agent, vice Gerrit Fort, resigned. Office, Grand Central Terminal, New York.

Pere Marquette Rd.—C. M. Booth, heretofore First Assistant General Freight Agent, has been appointed General Freight Agent, vice P. F. Gaines, deceased. Office, Detroit, Mich.

J. E. Williams, heretofore Chief of Tariff Bureau, has been appointed Assistant General Freight Agent, with general supervision of the Tariff Department, and such other duties as may be assigned. Office, Detroit, Mich. The position of Chief of Tariff Bureau has been abolished.

R. P. Paterson has been appointed Assistant General Freight Agent. Office, Detroit, Mich.

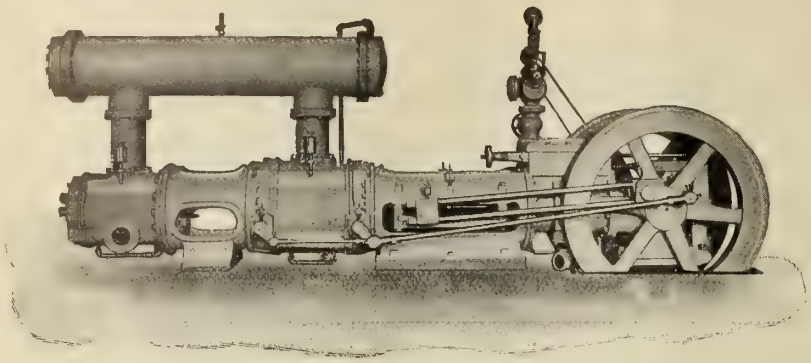
Reid Newfoundland Co.—T. Power has been appointed Roadmaster Division 2, between Whitbourne and Clarenville, including Placentia Branch, vice D. Ferguson, transferred.

W. C. Harvey has been appointed Travelling Marine Engineer, vice P. Stewart.

Transportation in Europe.

Following up his books on "Railroad Freight Rates," and "The Working of the Railroads," which deal with the operation of railways in the U.S. and Canada, L. G. McPherson, lecturer on transportation at John Hopkins University, has written a book dealing with transportation in Europe, the information upon which it was written having been collected during a visit to Europe with the National Waterways Commission. Mr. McPherson presented a formal report of his investigations to the Commission, and the present volume is a rearrangement and amplification of the report. After an introductory chapter, in which the author contends that continental Europe as a whole is the proper basis for a comparison of its traffic conditions with those existing in the United States, there are chapters dealing with land roads and interior waterways, the development of the railways, railway passenger tariffs, railway freight tariffs, concerning freight traffic, international rail traffic, phases of Government control, comparative usefulness of inland waterways and railways, and a summary of the situation on the continent. These chapters pass under review the whole traffic conditions of continental Europe, tracing the development from the days when the sole means of communication between one place and another, the undeveloped natural waterways, and pack trails on land, through the different stages to the present day condition of affairs. The development of transportation in England is dealt with separately, "because," as the author observes, "of its isolated position, its physical characteristics, and its peculiar political and economic development." The transportation status in England, he says, "although in certain general features analogous to that of the continent of Europe, is in important respects widely different." In addition to these differences there is also, he points out, a close relation between many English and United States institutions, which makes such separate treatment desirable. The book is full of information and gives a carefully written, full and well balanced review of the European situation. The book is published by H. Holt and Co., New York, and may be obtained through the Railway and Marine World's Book Department. The price is $1.62, including postage.

RAND CLASS "C-2" Straight Line Steam Driven Compound Air COMPRESSORS



Two paramount features of this type are ECONOMICAL CONSUMPTION combined with high EFFICIENCY.

A rigid self-contained design requiring the least possible floor space.

GOOD STEAM ECONOMY effected by Automatic Long Range Cut-off, consisting of special internal ports, combining convenience in starting with better steam economy by giving a quick, short, running cut-off.

CORLISS AIR INLET VALVES insuring large, free, quick opening and closing ports giving high volumetric efficiency.

SCULLY STEEL & IRON CO. DEPT. 22 **CHICAGO, ILL.**

MAINLY ABOUT PEOPLE.

A. MacMurchy, Solicitor C.P.R., Toronto, has returned there from England.

Mrs. Hayter Reed, wife of the Manager in Chief C.P.R. Hotels, has gone to England for a short visit.

Dr. N. A. Macnab, in charge of the hospital on the G.T. Pacific Ry., west of Edmonton, Alta., died there Sept. 16.

J. C. S. Bennett, C.P.R. official photographer, returned to Montreal, Sept. 14, from a tour through Western Canada.

R. S. McCormack of the C.P.R. Legal Department, Toronto, was married there to Mrs. E. E. Weir, of Hastings, Ont., Sept. 5.

W. Poupore, who died in Montreal, recently, aged 91, was father of W. J. Poupore, contractor for railway and canal works.

James Mills, LL.D., one of the Board of Railway Commissioners, has retired from the Board of Regents of Victoria University, Toronto.

W. J. Hatch, General Air Brake Inspector, C.P.R., Montreal, was elected Third Vice President of the Air Brake Association, at its recent convention.

W. M. Ryder, who died at St. Johns, Que., recently, aged 92, was father of E. A. Ryder, Secretary to the President, Boston and Maine Rd., Boston, Mass.

G. J. Bury, General Manager C.P.R. Western Lines, Winnipeg, attended a meeting of Western railway men in Chicago, Ill., Sept. 9 and following days.

J. M. Curry, Mayor of Amherst, N.S., and associated with the Canadian Car and Foundry Co., was married to Miss A. M. Mackeen, in Montreal, Sept. 7.

R. J. Mackenzie, of Mackenzie, Mann & Co., Winnipeg, bought in Toronto, Aug. 27, the pacing stallion Joe Patchen II., reports stating that the price paid was $12,000.

Lucius Tuttle, who has resigned the Presidency of the Boston and Maine and Maine Central Rds., was, from Jan., 1887 to 1889, Passenger Traffic Manager C.P.R., Montreal.

W. J. Crossen of the Crossen Car Manufacturing Co., Cobourg, Ont., is one of the directors of the Northumberland-Durham Power Co., and of the Central Ontario Power Co.

H. Murray, of Holmes, Murray and Sharkey, having a grading contract on the G.T. Pacific Ry. Tofield-Calgary branch, died Aug. 31. from injuries inflicted by a discharged laborer.

Miss Phyllis Hendrie, daughter of the late Wm. Hendrie, Hamilton, Ont., founder of the railway cartage firm of Hendrie & Co., and also engaged in railway contracting, was married to Allan Case of Toronto, recently.

P. V. Johnson, Seattle, Wash., who was associated with his brother, C. J. Johnson, on a grading contract on the Canadian Northern Pacific Ry., at New Westminster, B.C., died suddenly at Harrison Hot Springs, B.C., Aug. 31.

D. Murphy, C. E., who was engaged in construction of the lift locks on the Trent Valley Canal, died in a Montreal hospital, Sept. 14, as the result of an accident, his motor cycle having been run down by an automobile

J. T. McKenney, City Agent Northern Pacific Rd., Duluth, Minn., who was formerly ticket agent for the N.P. Rd., in Winnipeg, is reported to have been appointed District Passenger Agent same road, at St. Paul, Minn.

C. F. Merry, who was active in promoting the Dakota Southern Rd., a line which was projected to run to Valley City, S.D., and on to Winnipeg, Man., was arrested at Carrington, N.D., Sept. 11, on charges in connection with the promotion of the company.

N. Curry, President Canadian Car and Foundry Co., Montreal, has been elected Vice President of the Canadian Manufacturers Association. J. S N. Dougall, President Dougall Varnish Co., Montreal, has been elected Vice President of the Association for Quebec province.

Wm. Mackenzie, of Mackenzie, Mann and Co., exhibited a number of Jersey cattle from his farm at Kirkfield, Ont., at the Toronto Exhibition, which secured the following awards:—two senior championships, eight first prizes, one second prize, two third prizes and two fourth prizes.

F. A. Delano, President Wabash Rd., with one of his daughters and some friends started for a tramp in the bush near the Delano summer residence, near Cliff Lake, Mich., Sept. 4, and got lost. The party was found Sept. 6 on the shore of Lake Superior, seven miles from the Huron Mountain Club, having suffered considerably from exposure and want of food.

In referring to G. J. Bury, General Manager C.P.R. Western lines, in our last issue, it was mentioned that he started his railway career as stenographer for Wm. C. Van Horne. As a matter of fact he commenced work under Thos. G. Shaughnessy, when the latter was Purchasing Agent, afterwards becoming Mr. Van Horne's Secretary, and for a number of years he was between Messrs. Van Horne and Shaughnessy's offices.

N. S. Dunlop, represented the C.P.R., at the recent conference held at Boston, Mass., of the Railway Gardening Association of America. This association has for its object the promotion of flower planting and shrub growing on station grounds and railway property generally, with a view to making the places which are at present unsightly, attractive, and of making the bare places round railway stations attractive by providing seeds, bulbs, etc., for the station agents and other employes, and in advising as to the laying out of the waste land at stations and other places.

N. DesBrisay, whose appointment as Travelling Passenger Agent, St. John, N.B., was announced in our last issue, was, from June 14, 1904, to May 31, 1905, clerk in District Passenger Agent's office, St. John; June 1, 1905, to June 7, 1907, ticket clerk, City Ticket office, St. John; June 14, 1907, to Dec. 5, 1908, ticket clerk, s.s. Empress of Ireland; Dec. 5, 1908, to May 24, 1909, exchange ticket agent, Halifax, N.S.; May 27, 1909, to Nov. 19, 1909, exchange ticket clerk, Quebec; Nov. 19, 1909, to May 4, 1910, exchange agent, Halifax, N.S.; May 5 to July 15, 1910 exchange agent, Quebec; all service with the C.P.R.

L. F. Vosburgh, who has been appointed General Passenger Agent New York Central and Hudson River Rd., West Shore Rd. and Boston and Albany Rd., New York, entered railway service in 1893, since when he has been, to 1895, assistant night ticket agent Lake Shore and Michigan Southern Rd.; 1895 to 1897, assistant ticket agent, same road; 1897 to 1903. City Passenger Agent, same road; 1903 to 1906, General Western Passenger Agent, same road; 1906 to Feb. 1, 1910, General Eastern Passenger Agent, New York Central Lines, New York; Feb. 1 to Sept. 1, 1910, Assistant General Passenger Agent, New York Central Lines, New York.

Robert Kerr, who has retired from the position of Passenger Traffic Manager C.P.R., was born at Toronto, Aug. 23, 1845. He entered railway service in 1866, since when he has been, to 1879, warehouse clerk, etc., Northern Ry. of Canada; 1879, Through Freight Agent same road; 1879 to 1884, General Freight and Passenger Agent Northern and Northwestern Rys.; June 1, 1884, to Jan. 1, 1896, General Freight and Passenger Agent C.P.R. Western and Pacific Divisions, Winnipeg; Jan. 1, 1896, to June, 1899, Traffic Manager C.P.R. Lines West of Lake Superior; June, 1899, to Sept., 1910, Passenger Traffic Manager C.P.R., Montreal.

C. J. Panser, roadmaster Winnipeg Beach and Teulon branches C.P.R., died suddenly at his home in Winnipeg, Sept. 9, aged 64. Referring to Mr. Panser's death, Vice President W. Whyte, said:—"He came to Winnipeg in 1881 from the Southern Minnesota division of the Chicago, Milwaukee and St. Paul Rd., where he was employed under J. M. Egan, who was at that time Superintendent of the Milwaukee line. When Mr. Van Horne, now Sir William, came to the C.P.R. he brought with him Mr. Egan and Mr. Panser, the latter being employed on construction work, and shortly rose to the position of roadmaster, which he occupied from 1882 to the time of his death."

W. S. Kinnear, who recently resigned the Assistant General Managership of the Michigan Central Rd., on the completion of the Detroit River Tunnel of the construction of which he had charge, has been appointed President of the Kansas City Terminal Railway Co. at Kansas City, Mo. This company has been formed by the twelve large railway systems entering Kansas City, and the work contemplated consists of revamping the present Kansas City Belt Ry., operating some 61 miles, completing a six track belt line around the city and building a new union station. The total estimated expenditure is about $39,000,000 of which about $6,000,000 will be spent on the new union station.

The Galt Hospital at Lethbridge, Alta., was founded in 1885, by the late Sir Alex. Galt, its first home being a small wooden building. This was removed in 1891 when the existing main building was erected, also by Sir Alex. Galt, who also bequeathed the institution an endowment now amounting to $40,000. A nurses' home was added by E. T. Galt, and in 1908, he offered to donate $30,000 for extensions to the hospital if the city of Lethbridge provided a similar amount. This was done, and the new buildings erected, were opened Sept. 1, by Sir Wilfrid Laurier. The hospital is administered under the provisions of an act of the Alberta Legislature, E. T. Galt, President of the Alberta Ry. and Irrigation Co., being Chairman; and P. L. Naismith, General Manager A.R. and I. Co., being Vice Chairman.

C. E. E. Ussher, who has been appointed Passenger Traffic Manager C.P.R., Montreal, was born at Niagara Falls, Ont., Dec. 29, 1857, and entered railway service in 1874, since when he has been, to May, 1876, clerk in Auditor's office, Great Western Ry.; May, 1876, to June, 1880, clerk in General Passenger Department same road; June, 1880, to Apr., 1883, chief ticket clerk Wabash, St. Louis and Pacific Ry.; Apr. to Nov., 1883, rate clerk Chicago and Atlantic Rd.; Nov., 1883, to Nov., 1886, in commercial business at Hamilton, Ont.; Nov., 1886, to May, 1889, chief ticket clerk C.P.R.; May, 1889, to Jan. 1, 1898, Assistant General Passenger Agent C.P.R., Montreal; Jan. 1, 1898, to Dec., 1906, General Passenger Agent C.P.R. Eastern Lines, Montreal; Dec., 1906, to Sept. 30, 1910, Assistant Passenger Traffic Manager C.P.R., Winnipeg.

Howard G. Kelley, whose portrait appears on the first page of this issue, was born in Philadelphia, Pa., Jan. 12, 1858, and entered railway service in 1881, since when he has been, to 1884, Assistant Engineer on location, construction and bridge construction Northern Pacific Rd. Western and Pacific Divisions; 1884 to 1887, engaged in mining; 1887 to Jan., 1890, Resident Engineer and Super-

intendent of Bridges and Buildings, St. Louis Southwestern Ry. System, including the St. Louis Southwestern Ry. of Texas; Jan., 1890, to Mar., 1898, Chief Engineer same road; Mar., 1898, to July, 1907, Chief Engineer Minneapolis and St. Louis Rd., and from July, 1900, to July, 1907, also Chief Engineer Iowa Central Rd., and from Mar., 1898, to Mar., 1899, also Consulting Engineer St. Louis Southwestern Rd.; from July, 1907, Chief Engineer G.T.R., Montreal. He is a Member of the Institute of Civil Engineers of Great Britain, and of the American Society of Civil Engineers, and served two terms as President of the American Railway Engineering and Maintenance of Way Association.

Robt. Kerr, who has retired from the position of Passenger Traffic Manager C.P.R., was the guest of a number of representatives of various transportation companies, at dinner, Sept. 30, at the Windsor Hotel, Montreal, when he was presented with a grandfathers' clock with full set of chimes. The committee which had the arrangement in hand, consisted of:—G. T. Bell, Assistant Passenger Traffic Manager, G.T.R.; G. Hannah, General Passenger Agent, Allan Line; R. F. Macfarlane, General Passenger Agent, White Star-Dominion Line; W. Stitt, General Passenger Agent, C.P.R.; T. Henry, Manager Richelieu & Ontario Navigation Co.; V. G. R. Vickers, Superintendent Dominion Ex. Co.; W. A. Cooper, Superintendent Sleeping, Dining and Parlor Cars Service, C.P.R.; Guy Tombs, General Freight and Passenger Agent, Canadian Northern Quebec and Quebec and Lake St. John Rys.; F. J. McClure and W. A. Coates, General Passenger Agent, and General Freight and Passenger Agent, Donaldson Line; N. Mooney, General Agent Passenger Department, New York Central Lines; J. O. Apps, General Baggage Agent, C.P.R.; H. R. Charton, General Advertising Agent, G.T.R.; W. T. Robson, Advertising Agent, C.P.R.; W. G. Annable, General Passenger Agent, C.P.R. Steamship Lines, and F. M. Southam, of the Southam Press.

Quebec Central Ry.—For the year ended June 30 the directors announce a dividend of 2%, or 10s. per £25 share, this being the first distribution on this issue since the company was formed. The net revenue for the year was $351,900, an increase of $55,100, and after meeting all interest charges, there remains a surplus of $70,800, which, added to $46,300 brought forward, gives a total credit balance of $117,100.. The 7% income bonds are now quoted at 116, and on this basis the yield is 6%, the company has the right, however, to pay off the issue at par at the commencement of 1922. The capital stock stands at 16, which, on the basis of the dividend now declared, represents a return of 12½%. The outlook for the current year is fairly satisfactory, and it is possible that, now a commencement has been made with dividend payments, the company will achieve considerable progress during the next few years.—Canadian Gazette.

J. W. Gerell, formerly Manager Toronto Shipyards, has been appointed Assistant Manager Polsons Iron Works, Toronto.

A Montreal press report of Sept. 28 states that C. Murphy, heretofore General Superintendent Eastern Division C.P.R., Montreal, has been appointed General Superintendent of Transportation C.P.R. Eastern Lines, Montreal.

M. O. Robinson, heretofore C.P.R. Resident Electrician, at Fort William, Ont., was appointed Manager of the Port Arthur-Fort William Electric Ry., by the joint street railway board, Sept. 7. His salary is fixed at $175 a month, and his appointment dates from Oct. 1.

Have YOU Salary-Raising Ability?

That's the kind of ability that brings promotion, keeps positions safe in times of trouble, and wins success. That's the kind of ability the International Correspondence Schools can give to you—whether you're a young man or an old man, an office man or an outside man, a day worker or a night worker—and no matter where you live nor how little spare time you have.

You must learn to do some one thing better than the other fellow. The trained man has the advantage every time.

As surely as the I. C. S. have raised the salaries of tens of thousands of others, they can raise your salary. It costs you nothing to find out how. Read the list of positions in the attached coupon, mark the one you like best, and mail the coupon to the I. C. S. Doing so places you under no obligation whatever. **Send the coupon NOW.**

Railway Rolling Stock Notes.

The Nova Scotia Construction Co. has received one four-wheel locomotive from the Montreal Locomotive Works.

The Fraser River Lumber Co. has ordered 50 flat logging cars from the Canadian Car and Foundry Co., Montreal.

The Dominion Coal Co. has ordered 50 all steel hopper cars from the Canadian Car and Foundry Co., Montreal.

The Intercolonial Ry. has received two consolidation locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Western Canada Power Co. has purchased a 40-ton locomotive for its line from Ruskin to Stave River Falls, B.C.

The Canada Cement Co. has ordered four 50-ton steel hopper cars from the Canadian Car and Foundry Co., Montreal.

The Canada Iron Corporation has ordered 60 steel ore cars, 50 tons capacity, from the Canadian Car and Foundry Co., Montreal.

The Canadian Malting and Brewing Co. has ordered one 30-ton refrigerator car from the Canadian Car and Foundry Co., Montreal.

The International Ry. of New Brunswick has ordered one special passenger car from the Canadian Car and Foundry Co., Montreal.

The Canadian Bridge Co., Walkerville, Ont., has ordered two 40-ton steel flat cars from the Canadian Car and Foundry Co., Montreal.

The Portland Canal Short Line Ry. has received two box cars. 30 tons capacity, from the Canadian Car and Foundry Co., Montreal.

G. W. T. Nicholson, St. Timothee, Que., has received one four-wheel locomotive from the Montreal Locomotive Works.

The C.P.R. has ordered two rotary snow plows from the Montreal Locomotive Works. They will be more powerful than any yet built.

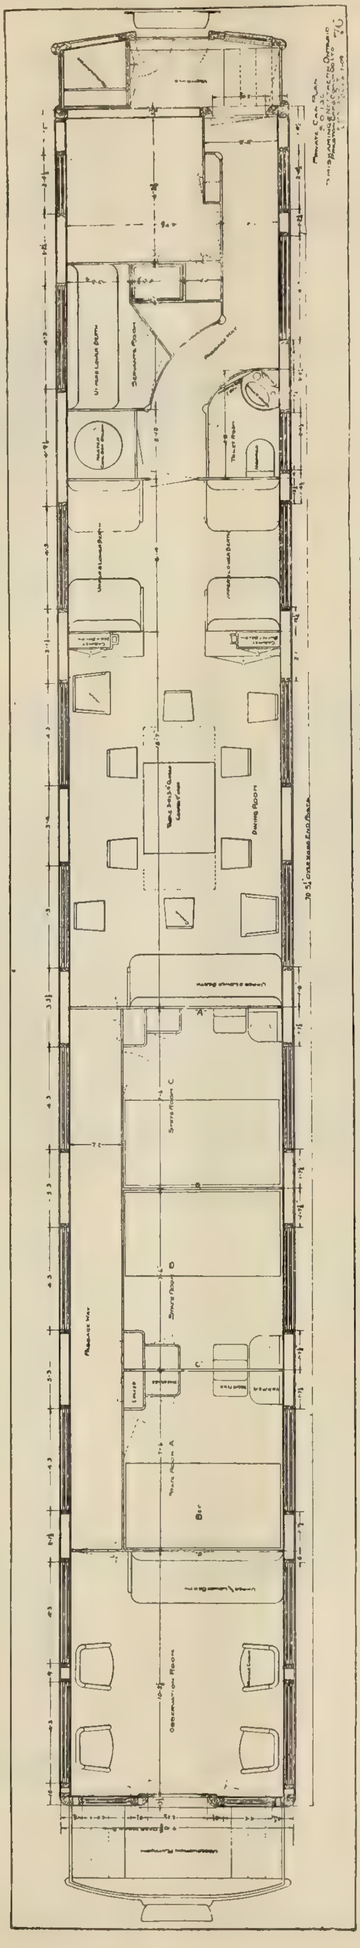
The C.P.R. has ordered 20 steel tank cars, two 40-ton experimental drop bottom cars for grain, and five all steel snow plows, from the Canadian Car and Foundry Co., Montreal.

The British Columbia Electric Ry. has ordered 25 flat logging cars, 40 tons capacity, from the Canadian Car and Foundry Co., Montreal.

The Canadian Northern Ry. recently ordered from the Canadian Car and Foundry Co., Montreal, 10 first class cars (being built at Amherst, N.S.), five baggage cars, 630 box cars, 30 tons capacity (115 of which have been delivered), and four dining cars (one of which has been delivered).

N. Curry, President Canadian Car and Foundry Co., in an interview at Montreal, Sept. 16, said that during the present year the company will turn out 12,000 cars, even if no further orders are booked. Of this number 4,000 cars have already been delivered. The company's three plants, Mr. Curry added, are running to their fullest capacity.

The new parlor cars which the G.T.R. is building at its Point St. Charles shops for use on the International Limited, will be 73 ft., long over end sills, and will be equipped with cast steel body bolsters, extra heavy beams and steel platforms. The trucks will be of six-wheel type, with 38 in. Krupp steel tires and steel bolsters. They will have high speed air brakes and air signals, and be heated with straight steam from the locomotive, electric lighting and electric fans. The parlor will be finished in African mahogany, with inlaid and marquetrie design, with trimmings of statuary bronze; carpets in two toned green, with chairs upholstered in green plush, and green leather in the smoking room. Each of the cars will have a library, free to the occupants, with the latest books, and the whole will be equipped with the most approved appliances for comfort and convenience.



Temiskaming and Northern Ontario Railway Commissioners' Official Car. Floor Plan.

The new dining cars which the G.T.R. has recently built at its Point St. Charles shops, for the International Limited, are equipped with six-wheel trucks, fitted with 38 in. Krupp steel tires and steel bolsters, steel platforms with standard wide vestibules, high speed air brakes and air signals, heated with straight steam from the locomotive and with cooking ranges. They are lighted by electricity, and the dining rooms are finished in African mahogany, with accommodation for 30 diners in each. The kitchens are equipped with the most improved devices for expeditious service, and special arrangements have been made for a supply of water under air pressure. Following are the chief dimensions:—

Length over end sills	70′ 7″
Length over buffers	78′ 7″
Extreme width	10′ 1½″
Extreme height	14′ 6½″
Total inside length	69′ 10″
Length of dining room	32′ 6″
Width of dining room	8′ 8″
Length of kitchen	15′ 10″
Width of kitchen	6′ 7″

The Intercolonial Ry. is building, at its Moncton shops, N.B., one stores car with steel underframe, made by the Canadian Car and Foundry Co., Montreal, and six cabooses, of which the following are the chief particulars:—

Stores Car.

Length over end sills	41′ 0″
Width over side sills	9′ 1⅝″
Height, top of sills to under side of plates	7′ 9″
Length inside	40′ 2⅜″
Width inside	8′ 6″
Outside of end sill to centre of body bolster	5′ 6″
Centre to centre of cross frame tie timber	9′ 0″
Height, top of rail to centre of drawbar	2′ 10½″
Wheel base of truck	5′ 6″
Door openings	3′ 0″
Distance between truck centres	30′ 0″
Underframes	Steel
Truck bolsters	Simplex
Journal boxes	McCord
Air brakes	Westinghouse

Six Cabooses.

Length over platform sills	35′ 6″
Length over nailing strips on end sills	30′ 0″
Width over nailing strips on side sills	9′ 0″
Height, top of nailing strips to under side of plates	6′ 8″
Length inside	29′ 6⅛″
Width inside	8′ 6⅛″
Height inside, top of floor to under side of carlin	7′ 1¼″
Outside of end sill to centre of body bolster	5′ 0″
Centre to centre of cross frame braces	6′ 4″
Height, top of rail to centre of drawbar	2′ 10½″
Wheel base of truck	5′ 0″
Door opening, side	2′ 10″
Door opening, end	2′ 3″
Distance between truck centres	20′ 0″
Platforms	Standard Coupler Co.
Journal boxes	McCord
Air brakes	Westinghouse

The Temiskaming and Northern Ontario Ry. has added to its rolling stock a private car, named Sir James, which has been built by the Preston Car and Coach Co., Preston, Ont., for the use of the members of the Commission. It is unique, and is said to be the first of its kind, either built or used, in Canada. The underframe is entirely of steel, the centre member being a box girder, composed of two 20 in. channels, extending continuously from buffer beam to buffer beam, boxed top and bottom, with ½ in. by 20 in. steel. The draft gear is encased in the end of the box girder. On the side framing, which is of structural steel cased with wood, is a steel plate, extending continuously from end to end of the car, and from the outside sill to the sash stool. On the top of this is rivetted a compression member of ¾ in. by 6 in. steel extending from end to end of the car body. There are no under

truss rods of any description. The trucks are composed entirely of steel, each having four side bearings. On the top of each journal box there is an equalizing spring soft enough to take care of all the inequalities of the rail, and still not stiff enough to communicate the jolt to the car. It is equipped with Westinghouse air brakes, with 18 ins. cylinder, and is lighted with Pintsch gas and electricity. The electric current is obtained from a Tate bifunctional accumulator storage battery, which is said to be the first of its kind to be used for car lighting. The battery weighs 500 lbs., and it will light continuously, fifty 16 c.p. lamps and operate nine fans for 24 hours. The Safety Car Heating and Lighting Co.'s system of heating is used, with two water tanks, 24 by 120 ins., with hot and cold water throughout the car. The interior is finished in quartered oak, inlaid with white holly and ebony of plain design, all polished. The observation room is situated in the rear, with an open platform. There are three staterooms, dining room, two sleeping sections, heater room, servants' room with upper and lower berths, toilet room and kitchen. The observation room is equipped with a speed indicator and air gauge piped direct from the train line and back of the cylinder, so that observations can be made. The car is similar in most respects to one in use on the Pennsylvania Rd.

Among the Express Companies.

A. C. Thorn, heretofore agent Dominion Ex. Co., at Halifax, N.S., has been appointed city agent at Quebec, vice H. Henderson, resigned.

J. H. Greig, heretofore assistant cashier Dominion Ex. Co., Montreal, has been appointed agent at Halifax, N.S., vice A. C. Thorn transferred to Quebec.

The Canadian Northern Ex. Co. has opened offices at Cromer, Durban, Grays, Hilton, Ladysmith, Pleasant Point and Rounthwaite, Man.; Candian, Carlesburg, Jameson, Kendal and Pelly, Sask.

G. H. H. Nase has been appointed Route Agent Canadian Ex. Co., with charge of routes 55, 56, 57 (Moncton to Sackville inclusive), 58, 59, 65, 90, 92, 93, 94 and 95, with headquarters at St. John, N.B., vice J. H. Parr transferred to Montreal.

We are officially advised that the Canadian Northern Ex. Co., has not yet made any direct appointments in connection with its eastern business. The express service on the Canadian Northern Ontario lines, is under the jurisdiction of A. J. Hills, Superintendent C.N.O.R., Toronto, and on the Quebec lines, it is under the supervision of W. A. Kingsland, Auditor C.N.Q.R., Quebec.

The Dominion Ex. Co., in announcing that, from Sept. 1, it operates over the Dominion Atlantic Ry. in Nova Scotia, and over the Dominion Atlantic Steamship Line St. John to Digby and Yarmouth to Boston, states that waybills will be made for shipments to and from any former Maritime Ex. Co.'s offices at rates obtained by adding to the local rates to Halifax, St. John or Truro, the rates shown in transfer tariffs from such points to destination, graduating once under the aggregate through rate per 100 lbs. For the steamship service between Yarmouth and Boston, until further notice, business originating west of Vanceboro, and any business for Boston requiring all rail service, will be routed as heretofore.

The Nova Scotia Temperance Act of 1910, in sec. 10, provides that no common carrier, express company, or other carrier, shall accept from any person in any part of the province, any package containing intoxicating liquor for carriage, or delivery to any person, in any

municipality in which the act is in force, other than to a vendor duly appointed under the provisions of part 1 of the act, or a legally qualified physician, chemist or druggist. Sec. 11 provides that every package of liquor so shipped, or offered for carriage, shall bear in some conspicuous place, a label containing in full the name and address of the person shipping the package and of the person to whom the package is to be delivered, and the character and quantity of the liquor contained in the package. Sec. 32 provides for the enforcement of a penalty of not less than $20 nor more than $50 for each offence, under secs. 10 and 11. The act is in force in every part of Canada in which the Canada Temperance Act is not, excepting Halifax county and city and Richmond county, in which places, the act comes into force on the expiration of the existing licenses.

The Dominion Ex. Co., following the acquirement of the Dominion Atlantic Ry. by the C.P.R., has succeeded the Maritime Ex. Co., which operated over the D.A.R., from Halifax to Yarmouth, 215 miles; Windsor to Truro, 57 miles; Kentville to Kingsport, 13 miles; and the Dominion Atlantic Steamship Line, between St. John, N.B., and Digby, N.S., and Yarmouth, N.B., and Boston, Mass. The number of offices taken over is 50. An office will be opened at Boston, Mass., under the name of the Western Express Co. The territory taken over has been added to the Dominion Ex. Co.'s Atlantic Division, of which V. G. R. Vickers is Superintendent, as well as Superintendent of the Western Ex. Co. F. W. Branscombe, route agent, has been placed in charge of the new territory, and he will be assisted for a time by T. R. McKenzie, route agent. The D. A. R. agents will act as express agents at all stations, except at Truro, N.S., where F. Fennell, Dominion Ex. Co.'s agent, has taken charge; Halifax, N.S., where J. H. Greig has been appointed; St. John, N.B., where J. R. Haycock has been appointed, and Yarmouth, N.B., where an exclusive agency has been established, in charge of A. M. Steves. The Western Ex. Co.'s agency at Boston, Mass., has been placed in charge of J. F. Masters.

Telegraph and Cable Matters.

The Canadian Northern Telegraph Co. has opened offices at Cromer, Durban, Grays, Hilton, Ladysmith, Pleasant Point and Rounthwaite, Man.; Candian, Carlesburg, Jameson, Kendal and Pelly, Sask.

At a sitting of the Board of Railway Commissioners held in Winnipeg, Sept. 22, the application of the Winnipeg Board of Trade and of the Winnipeg Grain Exchange to have the tariff of tolls charged by the telegraph companies operating in and out of Winnipeg set aside, was heard.

A. B. Smith, Manager G.T.P. telegraphs, while in Fort William, recently, is reported to have said, that the telegraph lines between Fort William and Winnipeg, and between Lake Superior Jct., and Winnipeg, were completed. The line is also being erected westward, concurrently with the construction of the railway.

The Dominion Government has a staff of engineers engaged in locating a route for a telegraph line along the Skeena River to Stewart on the Portland Canal. It is stated that this connection for Stewart will follow up the Kitsumkalum valley, across the Naas valley to Alice Arm, and from thence to the Portland Canal and Stewart.

The Board of Railway Commissioners has approved Tariff C.R.C. 1, the local tolls, of the Anglo-American Telegraph Co. The rate is 25c. for 10 words and 2c. for each additional word, between the company's offices in Prince Edward Island, and also between P.E.I. and New Brunswick. The rates for press messages are 25c. for 100 words, and ¼c. for every additional word.

We are officially advised that the Dominion Wireless Telegraph Service has been transferred from the Department of Marine to the Department of Naval Service. The officials of the telegraph service, are, C. P. Edwards, Superintendent of Radio-telegraph Service, Ottawa, and E. J. Haughton, District Superintendent of Radio-telegraph Service, Victoria, B.C. The latter has charge of the Pacific coast branch of the service, and reports to the Superintendent.

J. Kent, Manager C.P.R. telegraphs, and B. S. Jenkins, General Superintendent of Telegraphs, C.P.R. Western Lines, were in Vancouver recently, on an inspection trip. It was stated that the delay in the completion of the cable, which will improve the communication between Vancouver and Victoria, was due to manufacturers in the east being unable to ship material, owing to congestion of orders. It was, however, expected that the cable would be ready for operation by Oct. 1.

The Dominion Wireless Telegraph-Telephone Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and offices at Windsor, to deal in wireless telegraph and telephone instruments, to erect and operate wireless telegraph and telephone systems, and to conduct a general wireless telegraph and telephone business for hire. The provisional directors are:—J. Clark, A. Beckett, S. Anderson, Windsor; L. F. Boomer, Cleveland, O., and T. E. Clark, Detroit, Mich.

The Pacific Cable Board's report for the year ended Mar. 31, shows that 115,663 messages were dealt with against 103,812 in the previous year, the number of words being 1,356,135 against 1,225,048. One of the increases was in press messages, due to the decrease in rates, as a result of the negotiations of the Imperial Press Conference held in London, Eng., last year. The chief increase, however, was in ordinary messages, amounting to about 10%. The total receipts were £111,723, with a credit balance of £17,956. The traffic receipts show an increase of £403, but owing to transfer delays, £2,211, which should have been credited to 1909-10, has had to be included in the current year's accounts. The report states that difficulties, largely geographical and climatic, with the land lines in Canada, have been spoken of in previous reports, after full consideration, the Board has come to the conclusion that much could be done to minimize these if it had in its own hands the working of the line between Bamfield and Montreal. It has, accordingly, entered into an agreement with the C.P.R. for a lease, exclusively, for five years, of a line between these points, which the company is to maintain in good condition, while the Board provides the working staff and retains such portion of the tolls as have hitherto been paid to the C.P.R. This arrangement, it is claimed will have several advantages, keeping, at all times, a clear line for the Board's messages and allowing the adoption of the Continental system of operating, thus involving less risk of error in transmission than the American system.

Temiskaming and Northern Ontario Railway Commissioners' Official Car.

Grain Elevator Notes.

The Brown Brothers Elevator Co., has been incorporated under the N.W.T. Companies Ordinance, with a capital of $10,000 and offices at Regina, Sask.

The Dominion Premier is reported to have stated, while on his western tour, that the Government would build an elevator at Prince Rupert, B.C.

The Alberta-Canadian Elevator Co. is reported to have leased a storehouse in New Westminster, B.C., while it is arranging to erect an elevator there.

The contract for the erection of a 200,000 bush. elevator at Sudbury, Ont., costing $135,000, is reported to have been placed with the Barnett and Record Co.

The Suplee Elevator Co., has been granted a license to do business in the province of Quebec, with its chief place of business at Montreal, and R. F. Ogilvie, as its principal agent.

The Saskatchewan Elevator Commission returned to Regina recently, from a

trip to several U.S. western cities, where enquiries into the shipping and general elevator conditions were made.

D. Horn, Grain Inspector at Winnipeg, is reported to have resigned, to accept the managership of King's elevator at Port Arthur, Ont., which was operated jointly by the C.P.R. and the late J. G. King.

The G.T.P. Elevator Co.'s elevator at Fort William, Ont., was operated for the first time, Sept. 9, when the first grain was passed through. This elevator was fully described in our Jan., 1909, issue, and illustrated in our Aug., 1909, issue.

The Manitoba Elevator Commission has purchased three elevators from the Western Elevator Co., the Winnipeg Elevator Co., and the Farmers Elevator Co., all of which are situated at Underhill, with a combined capacity of 105,000 bush. It is stated that only one of these will be open for business this season.

The Dominion Millers' Association, at its annual meeting at Toronto, Sept. 2, passed a resolution that the association should co-operate with the Grain Growers' Association of the Northwest, and with the exporters to make proper representation to the Government towards taking over the terminal elevators at Fort William and Port Arthur.

The W. B. McKay Co., has been incorporated under the New Brunswick Companies Act, with a capital of $49,000 to purchase and carry on the business heretofore conducted at Sussex, N.B., as W. B. McKay & Co., and in connection therewith to erect and operate grain elevators. The provisional directors are, W. B. McKay, C. D. Davis G. B. McKay, C. H. Perry, and M. McKay, Sussex, N.B.

The grain elevator capacity at Montreal, according to the Montreal Harbor Commissioners' report for 1909, includes six elevators, with accommodation for 4,100,000 bush., as follows:—Harbor Commissioners' no. 1, 1,000,000 bush.; Montreal Warehousing Co., A, 500,000 bush., B, 1,000,000 bush., C, 600,000 bush.; C.P.R., A, 500,000 bush., B, 500,000 bush.

The Montreal Harbor Commissioners' report for the year ended Dec. 31, 1909, just issued, shows that 11,554,262 bush. of grain were handled at the elevator during the year, against 8,661,350 bush. in 1908, and 1,078,289 bush. in 1907. From the commencement of the season, the elevator was worked day and night, and on several occasions was unable to deal with the grain offered.

Work on the preparation of the site for the erection of the Montreal Harbor Commissioners' elevator at Montreal, is progressing rapidly. It is stated that about one half of the foundation work has been completed. The bed is of concrete, re-inforced with steel. This work will be continued as long as the weather permits, the wood work being prepared during the winter, so that the whole may be rushed early in the spring. In connection with the elevator, two jetties will be built for the accommodation of two vessels, and the elevator will be connected with the existing grain carrier system.

The Armstrong Towing Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and office at Cache Bay, to carry on a towing, rafting, wrecking and general shipping and forwarding business. G. Grant, A. Dods and B. Williams, Toronto, are the provisional directors.

The repairs and improvements at lock 17, Cornwall canal, are about completed. A new weir has been built west of the lock gates to effect a better regulation of the flow of water. This will not be used this season, as some clearing work remains, which cannot be accomplished until the canal is drained off.

2 GRAND PRIZES AND 5 GOLD MEDALS

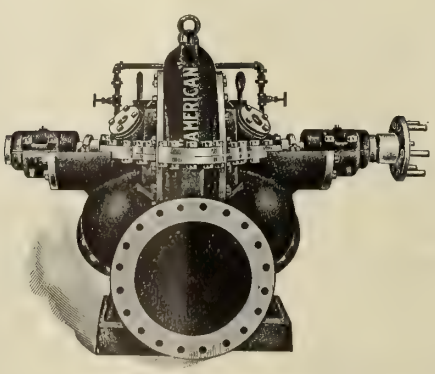
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

Street Railway Track.

By Guy Boyer, Superintendent of Construction, Montreal Street Railway.

Track construction, and its maintenance, is an important subject, and the matter has been so fully written up and discussed that it is difficult to add anything new. I do not intend to go into the various details, but will endeavor to make a few brief comments, in regard to track foundation, and its maintenance.

The reconstruction of track in a large system like that of the Montreal St. Ry. is a difficult problem, and it is made more difficult, on certain streets, over which the cars of various routes travel, making a minute and a half headway between cars, the traffic cannot be conveniently diverted to other streets. Taking it for several months back, the average number of passengers carried, during 24 hours, amounts to 331,581.

In regard to the use of concrete for track foundation, it is my contention that there is only one way to make it satisfactory, in a climate where we have such extremes of heat and cold, as in Montreal, that is the concrete is of little use as a foundation for track, if we do not go below the frost line. This, you are all aware no company could afford to do, as the expense would be too great.

A method of construction we have adopted today, is as follows: We adapt ourselves to conditions. Where we open up a piece of track, to renew the rails, and find that the foundation is good, with ties that are sound, and fairly well bedded in concrete, they may have settled in places, we clean off all loose material, lay our rails, bring them to correct new surface, with oak shims placed over the old wood ties, then tamp up the rails with a slightly moistened mixture of cement, sand and fine gravel, or crushed stone, in the proportions of 1 cement, 3 sand and 8 gravel. The heavy traffic is allowed over the rails, which helps the tamping and indicates when it is uniformly well done. After the rails have been tamped, and retamped, until practically no movement can be detected, a layer of concrete is put down to raise between the rails, and the strips outside, to the proper height The layer of concrete forms an even hard surface to support the blocks. Room must be left for at least half an inch of sand to cushion the blocks.

We have found that pitch as a filler for spaces between the blocks has cost us a great deal of money, and it has proved practically worthless. This may be due to poor quality of pitch, extreme heat and cold, and probably to use of salt. Owing to the fact that the pitch has not given satisfaction, we are now using a cement grout as a filler, and have found it will prevent water from getting under the blocks. In Montreal, where we lack drainage underneath the foundation of our tracks, water, frost, and heavy traffic all tend to destruction of track.

The surface drainage of streets is also an important matter. I have observed where the streets are nearly level, and improperly crowned, after a rain storm, the water has laid on the surface of our track, and after some time, has apparently filtered through the foundation and put the track in bad shape. For an example of this, take any road, I don't care where, and notice the track laid on the hills, with quite a steep grade, where the strain on the rails and joints is greater than on a flat street, and I think you will agree with me that the foundation of tracks holds up better, owing to the water draining off rapidly.

The construction we have adopted for streets about to be paved, and for streets already paved, where the original foundation is found defective, is to put in ties, spaced 18 ins. apart, then dig out all soft clay or other poor material, so that at no point will there be less than six inches of well rammed stone or good material underneath the ties. The coarser grades of stone are placed in the bottom and pounded in layers. Finely crushed stone is used on top and the ties tamped and retamped, until brought as near as possible to a uniformly solid bearing. The uniformly, well pounded stone bed, is prepared so that there is a slight depression around the sides and ends of the ties, in order to insure that sufficient cement from the concrete will find its way to their base, sides and ends, to preserve the wood, and at the same time give the concrete a chance to grip the convex sides of the ties. When the traffic has demonstrated that all the ties show practically no movement, the space inside and outside the rails is filled with concrete to the height required for the kind of block used, space being left for a cushion. We feel satisfied that this kind of foundation will allow the rails to spring slightly, which seems to be necessary, and at the same time will form a good foundation for the blocks. Offset drains from the stone foundation under the tracks, should be placed at all depressions in the street to carry off to the sewers any surface water from leaks in the water-mains, or service pipes. This is a matter the city should give attention to.

If slight settlement takes place at the joints or elsewhere, I feel confident that with the ties to shim on, or repacked if found necessary, that repairs can be made better and at a much less cost.

The contention, a few years ago, was that the more rigid the foundation the better the track, but we have found out since that the more rigid the track the more expensive the maintenance, as the life of the rails is reduced to a minimum. For example, take an intersection laid in concrete and an intersection laid in macadam with ties. There can be the same amount of cars passing over each one and the one in macadam will wear several years longer. It stands to reason that the more rigid you have a diamond or any part of an intersection or any piece of track, the quicker it will wear out. Take for example a piece of steel: put it on a piece of wood and hammer it, you do not dent the steel. Put the same piece of steel on an anvil where there is no cushion and you will soon find that the steel bears an impression.

Our great trouble is keeping the track in proper repair, and I want to draw attention to a few causes of the rapid destruction of track. I contend that any car allowed out on service, with one or more flat wheels, instead of bringing in a revenue, is causing a deficit, owing to the damage it does to the track. Trucks out of square are bad. Cars stiff on the friction plates use up extra power and wear out the rails on curves very rapidly. The weight and the speed of cars require our special attention.

Another thing which tends to make bad places in the track is the numerous excavations made adjacent, parallel, and sometimes underneath, for sewers, water and gas pipes, conduits, etc., also open cuts and tunnels made at right angles under the tracks. We have kept a record of cuts made underneath the tracks since July 1, 1907, and up to May 31, 1910, we have recorded 3,315. These cuts average practically 10 ft. damage to our track, making 6 miles of defective track in three years or two miles a year. Trouble is sure to develope, in course of time, at each place where a cut is made, resulting in a nasty sag in the track, causing the pavement to break up. The bad places that arise from the last named source are apt to be put down to faulty track construction. By referring to the record of cuts, the real source of the defects can be accounted for. It seems to me that any street railway company could justly demand compensations from the city, company, or individual, which made an excavation that caused damage to the track foundation.

The Toronto Tube Question.

Messrs. Jacobs and Davies, consulting engineers of New York, were instructed May 25 to report for the information of the Toronto City Council their views as to the necessary arrangements for handling the traffic, having in mind the present system and the city's rights to construct tubes in the central part and surface lines in the outlying districts, and also their views in regard to the likelihood of such an undertaking being self-sustaining, making the estimate of the cost of construction, equipment and maintenance and probable business, and their views as to the most feasible location of such tubes and surface railways.

In their report, dated Aug. 25, a summary of the history of the Toronto Ry., the Toronto and York Radial Ry., and the Toronto Suburban Ry., is given, with details of their lines and operation. It is pointed out that the different lines are of different gauges, as follows:

Toronto Railway ..... 4 ft. 11 in.
Toronto and York Radial Ry.—
Metropolitan division ..... 4 ft. 8½ in.
Scarboro and Mimico divisions.... 4 ft. 10⅞ in.
Toronto Suburban Ry. ..... 4 ft. 10¾ in.

Referring to the service given by the existing lines, the report says:—

"The traffic situation in Toronto is such that it will be one growing only in the northerly radiations in relation to the business centre; also there can be little question but it will grow fast; and unseemly congestion in the streets may be avoided even with profit financially by the adoption of subways in the not far distant future. Comparatively speaking, there is no unusual congestion of traffic, the only congestion at the present time being chiefly confined to Yonge St. Congestion will of course grow, and it will be admitted that the fewer public railways on the surface of the streets the more presentable the city, and the freer also will be the surface for proper conduct of other classes of traffic, and the better able will the trolley lines be to conduct the business of distribution with comfort to the public. We have carefully studied the present street railway system, and we find that so far as the supply of cars, the routing, and the general conduct of the system are concerned, we see no occasion to suggest any improvement. Slight exception might be taken to the number of routings on Yonge St., and it might be possible to select parallel streets for a few of these routes, though it must be more apparent to you than to us what may be done or possible in this direction. The quality and comfort of many of the cars, particularly of the trailers, admits of improvement. Congestion is a comparative term, and it must be admitted, in comparison with other cities, we have observed a very small proportion of the passengers have to stand, and that only for a small part of the journey. There is no reason, however, why Toronto

should suffer any discomfort in its transit facilities because other cities do, and additional and better cars can most certainly be welcomed. It seems that conditions attaching to the franchise do not permit of an understanding between the city and the railway company whereby passengers may—on a single 5c. fare—obtain transportation within a radius of say from 6 to 8 miles from the City Hall. On the other hand, Toronto, being about 10¼ miles in extreme length by 3¾ miles in width, is a most unusual city in the fact that for its population it extends over a very large area, making it, what it seems to be, an exceedingly open, attractive and healthful city, but for that very reason it makes transit to some extent more expensive to operate because of longer distances to travel.

After reviewing the whole situation and comparing Toronto with United States and European cities, the engineers submit the following solutions of the problem:—

Scheme 1—This is what we consider the most ideal subway system following the lines of the present streets that could be laid out; that is to say, it is comprehensive and would form part of a circular system which the city may require at some future date. This circular system would be a complete subway ring, with its northern part along St. Clair Ave. and its lower eastern portion passing through Broadview, Danforth and Woodbine, while its western portion would find its way from the foot of Yonge St. to Keele terminus via the busiest streets of wards 4, 5 and 6. The northern portions of this circular system would be outside the city limits of 1891, and radial lines feeding and being fed by the circular rapid transit subway would expeditiously convey passengers during the day and perhaps goods and merchandise during the night into the heart of the city. The scheme is divisible into three main portions: A line down Yonge St. from St. Clair Ave. to Wellington St.; a line from Broadview and Danforth to Front and Yonge; a line from Front and Yonge to Dundas and Keele at the north-west corner of the old city limits.

Our estimate for this scheme, considered and constructed as a whole, is $23,470,000, including equipment, car yards, converting station, land, contractors' profits, engineering, and carrying charges during construction; of this amount $16,755,000 is for construction of subways and stations and installation of track, and $903,000 is for carrying charges during construction. If the project is divided for the purpose of construction and operation into three component parts—the arms radiating from near the south of Yonge St.—the cost would be somewhat higher, and the estimate comes to for section (a) $6,100,000, of which $4,180,000 is for construction and track, and $232,000 is for carrying charges; for section (b) $11,350,000, of which $8,187,000 is for construction and track, and $436,000 is for carrying charges; for section (c) $6,235,000, of which $4,189,000 is for construction and track, and $240,000 is for carrying charges. This makes the total cost of scheme 1, considered as three sections, $23,685,000.

The subway system just outlined would be incomplete without an additional system of radial surface lines outside the city limits of 1891. The following routes may be recommended: Lines to the north from St. Clair Ave. on Bathurst St. and Lakeview Ave; lines to the northwest from Keele terminus via St. Clair Ave. and Jane St.; lines to the east from Broadview and Danforth terminus, passing along Danforth with branches to the north via Leslie St. and Woodbine Ave. This would open up a large territory north of Danforth Ave. Consideration of the exact routes of these radial lines can be matured later, the main point being to extend them into territory now unserved.

Scheme 2 consists of a line running up Yonge St. from near the Union Station to

The Quickest Route to MUSKOKA

The other railways of the Canadian Northern Railway System traverse the finest summering country in **Nova Scotia, Cape Breton Island, Quebec, Western Ontario,** and the **West.** For booklets and information write to the Information Bureau, Canadian Northern Railway System, Toronto, Ont.

St. Clair Ave. We have selected three alternative routes for this, and our object in doing so has been to see how low a cost could be reasonably expected for such a line. The three routes are as follows: (a) On Yonge St.; (b) on Teraulay St.; (c) on Victoria St. and Yonge St. The object of (b) and (c) is to pass through as much length as possible in streets that have no car lines on them, thus reducing the cost of construction.

Scheme 2 (a): There are seven stations on this line, and our estimate for the work, as before, including equipment, contractors' profits, engineering, land, and interest during construction, is $6,762,000, of which $4,777,600 is for construction of subways and stations and installation of track, and the amount included for carrying charges is $260,000.

Scheme 2 (b) by Teraulay St. is a line following a route by which, in order to save cost, Yonge St. is avoided as much as possible. There are six stations on this line, and the estimate of the cost, inclusive of equipment, land, contractors' profits, engineering, and interest during construction, is $5,540,000, of which $3,781,000 is for construction of subways and stations and installation of track, and $213,000 is for carrying charges during construction. This scheme aims at tapping the district between the Metropolitan and the Weston lines in Toronto Junction. Surface lines would be suggested north into St. Clair Ave. and north of that again via Forest Hill Road, Vaughan Road, Bathurst St., etc.

Scheme 2 (c): This scheme follows Victoria St., and like the previous one, avoids the expense of passing under the busiest portion of Yonge St. There are seven stations on this line, and the estimate for the work, including equipment, land, contractors' profits, engineering and interest during construction, is $6,825,000, of which $4,819,000 is for construction of subways and stations and installation of track, and $263,000 is for carrrying charges. The extra length over scheme 2 (a) does away with the saving effected by not passing under Yonge St. for its entire length, while the route itself is not so good. Therefore, as between schemes 2 (a) and 2 (c) the former is preferable.

As an addition to either of these routes, we merely suggest the consideration of an eastern branch on the line of Bloor St. This necessitates the building of a double-decked viaduct to connect Bloor with Danforth, and crossing the Rosedale valley road and the Don valley. This is not at all a cheap piece of work, as the viaduct crossing is expensive; however, it links up Bloor and Danforth—which might be a desirable and logical thing to do as a civic improvement—and serves to open up the district north of Danforth. The estimate for this work, not necessarily an adjunct to the simple Yonge St. scheme, is $2,613,000, including contractors' profits and engineering; of this $100,000 is for carrying charges and $1,400,000 is for the viaduct.

Scheme 3—Having outlined certain suggested routes, following the present layout of the city streets, we may make one more estimate. We have been supplied with a map of the city on which are shown two proposed main diagonal streets, going respectively northwest and northeast from near the foot of Yonge St. The estimate for the subway work in this diagonal street scheme is $17,700,000, of which the amount for construction of subway and stations is $11,816,000, and that for carrying charges during construction is $680,000.

The report then deals with various systems of operating the lines, criticising adversely municipal ownership and operation, and favoring the city building the transportation system and letting a company operate it. This method is favored on the grounds that the credit of a municipality is generally better than that of a company, and the latter being better to regulate.

Quebec Ry., Light and Power Co.

The company is operating 56.22 miles of track, of which 17.22 miles are in the city, and 39 miles are suburban lines. Its rolling stock comprises 35 closed cars and 34 open cars operated on the lines in the city, and 75 cars operated on suburban lines. On the old Quebec, Montmorency and Charlevoix Ry., a steam freight service is also given for which there are 90 flat cars, 16 box cars and one stock car. Five locomotives are owned, which are used not only to operate the freight service but to haul passenger trains off other lines carrying pilgrims to the shrine at Ste. Anne de Beaupre. The company owns the hotel at Kent House, which is being enlarged at a cost of $50,000, and provides a number of attractions in the Montmorency Falls park.

Extensions of the company's lines are constantly being demanded, and at present two important new lines are under construction. The first of these is an upper level line to Montmorency park, leaving the present line at Beauport, and ascending gradually until the summit is reached, then running along the edge of the cliff to the park. The second new line is nearly complete, and is an extension of the line westerly from the city to the top of Sillery Hill, about 2.5 miles. The directors and officers made an inspection of this line, Sept. 12. A double track had then been laid to Belvedere Road, and a single track for a considerable distance further west. A passenger service was placed in operation Sept. 18 to Montcalm Park, a mile and a half west of Maple Ave., and it was expected that the balance of the line, about a mile, would be ready for the operation of passenger cars early in Oct.

In order to provide for the increasing business on existing lines, and for the operation of the new lines, C. E. A. Carr, General Manager, recently stated that the company had on order 16 pay-as-you-enter type cars, and was installing additional machinery in its power stations.

For the purpose of bringing together the entire office and operating staff of the Quebec Ry., Light, Heat & Power Co., and its subsidiary companies including the Quebec Ry. Light & Power Co., an eight storey office building is being erected at the corner of Crown and St. Joseph St. An illustration of this building is given on this page. The building will be of steel with terra-cotta fire proofing for floors and partitions. The first two stories will be faced with granite, and the upper stories, either of granite trim and Scotch brick or terra cotta. The building will have a floor space of about 100,000 square feet. The main portion of the new building will be laid out as offices for the company, and the portions not required for the company's immediate use will be leased. (Sept., pg. 783).

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Plans were submitted to the Vancouver board of works, Aug. 23, showing a number of extensions and new lines which the company had in contemplation in the city. Some of these lines will be built at once, particularly the loop line via Cedar Cottage. The plans have been sent to the city council.

J. C. M. Buntzen, a director of the company, stated in Vancouver, Sept. 2, that the proposal to build a new central station on the site of the present building would have to be postponed for some time owing to the heavy construction programme in hand.

The new service between Vancouver and New Westminster, through Burnably municipality has been started. The delay in starting it was caused by the straightening and lowering of the track

C. P. R. LANDS

The Canadian Pacific Railway Company have 3,000,000 acres of selected lands for sale in Manitoba and Saskatchewan.

Our new, illustrated handbooks describe them fully and will be promptly sent free to any applicant.

Write at once for any of the following books—maps and price lists will accompany them:—

"The Heart of the Saskatchewan Valley."—Describes lands for sale in part of Western Saskatchewan.

"Where Wheat is King."—All about Central and South-eastern Saskatchewan.

"Western Canada."—An illustrated handbook of the Canadian West.

"Western Progress."—An illustrated monthly bulletin, presenting in concise form up-to-date information concerning agricultural and commercial conditions in Western Canada, and containing announcements regarding the Company's new towns.

Address Desk R.,
F. T. GRIFFIN, Land Commissioner, Winnipeg.
J. L. DOUPE, Asst. Land Commissioner.

CANADA NORTH-WEST LAND CO.

This Company has 525,000 acres of selected lands in Manitoba and Saskatchewan which offer excellent opportunities to settlers and investors who desire to secure good lands in well-selected districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

near the Wise road on the interurban line. Under the Vancouver Fraser Valley and Southern Ry.'s charter the company proposes to build another line to connect Vancouver and New Westminster. The original plans for the Vancouver end of the line were disapproved by the city, and new ones were submitted Sept. 7. These are under consideration and a satisfactory agreement is expected to be reached at an early date.

The New Westminster board of works recommends the approval of plans for a wharf for the company at the lower end of Eighth St.

On the line from New Westminster to Chilliwack, grading is reported as progressing satisfactorily. The work across the Sumas prairie was expected to be completed Sept. 15, thus finishing the work. The steel laying gang was following close behind the graders and track was expected to be laid into Chilliwack by Oct. 1. The overhead work is being put up between Abbottsford and Sumas prairie, between which point and Chilliwack it has already been completed. The substation at Chilliwack is expected to be completed by Oct. 1, and the substations at Clayburn and Majuba Hill are also well advanced.

Plans have been prepared for a new car barn at Third St., first east of St. Davids Ave., North Vancouver.

Work on the extension in Point Grey is being progressed with, and it is expected that the Oak St. and Alma Road lines will be completed this year.

A party of engineers has started work on a survey for a route for a line along the Dyke Road towards Port Guichon. F. R. Glover, Assistant General Manager, stated at a dinner given to the Vancouver Board of Trade at Ladner, Aug. 30, that sooner or later the company would have a line through that country. The only obstacle in the way was that the building of a bridge over the Fraser River was a big undertaking for so short a line as this would be. The company's engineers were collecting data preparatory to giving an estimate on the cost of a structure for the Delta line.

We are advised that the company has in contemplation the building of an electric railway in the Saanich district, from Victoria to the northerly point of the peninsula, 22 miles. Preliminary surveys have been made for this line by C. E. Cartwright, C.E. It has not been definitely decided whether the line will be built. (Sept., pg. 781.)

Grand Valley Ry.—The Brantford, Ont., city council has passed a bylaw permitting the Brantford St. Ry., a component part of the G.V.R., to lay a track to the Holmedale district at once, and allowing it to postpone laying the Eagle Place and West Brantford line until next year. The line will go down Church St. to West Mill, and will be used for freight as well as passenger traffic. Tenders are being asked for the work and it is expected to have the line completed by Dec. 15. Some delay is being experienced in the work of track laying, etc., in Brantford owing to the scarcity of labor, and the City Engineer was directed Sept. 3, to endeavor to have the work pushed ahead more expeditiously.

On the Grand Valley section of the line, press reports state that contracts are about to be let for building and equipping a substation at Paris. (Sept., pg. 781).

Hamilton, Waterloo and Guelph Ry.—J. Patterson, who is promoting this proposed electric railway left Hamilton, Ont., for London, Eng., Sept. 15, without having made any announcement as to the probable building of the line. He was reported to have completed financial arrangements for this purpose when he returned from England in Aug. (Sept., pg. 781).

Kamloops to Okanagan Lake.—With a view of developing some extensive gypsum deposits, H. Pearce proposes to obtain power to build an electric railway from Kamloops to Grand Prairie, Vernon and on to Okanagan Lake. The projected line would connect with the C.P.R. and the Canadian Northern Pacific Ry.

London, Aylmer and Port Burwell Electric Ry.—Press reports state that J. H. Teall, Tillsonburg, Ont., has completed arrangements for financing the building of this projected electric railway from Port Burwell, via Aylmer to London, Ont. A site for a terminal has been secured on the creek at Port Burwell, and it is reported that the Elgin county council has had plans prepared for building a steel bridge to carry an electric line, across the creek so as to give access to the lake front. The people of Port Burwell, the reports state are looking forward to the starting of construction in the spring.

London to Sarnia.—A London, Ont., dispatch of Sept. 21 says: "The proposed London to Sarnia electric railroad, for which ex-Ald. Stewart holds the charter, will be taken over by an English syndicate. It was stated to-day upon first class authority that a syndicate has sent representatives to this country, who have quietly looked over the proposition and been most favorably impressed with it. Several prominent London men will go upon the board of directors."

The Moncton Tramway Electricity and Gas Co. has an agreement with the Moncton, N.B., city council by which it may take over the electric and gas plants owned by the city, and operate them for a period of years on a percentage of earnings basis. It has also a franchise from the city for operating a street railway for a period of 40 years from Mar. 26, 1910, the routes to be subject to the approval of the council. The first line to be built will probably be on Main St., from the Intercolonial Ry. station to King St., along King St. to St. George St., then to the Intercolonial Ry. shops and back to the station.

Dr. Henderson, President of the M. T.E. and G. Co., is also President of the Maritime Oil Products Co., which owns petroleum and gas wells on the Stoney Creek district of Albert county, about 10 miles south of Moncton, and proposes to pipe gas to the city for fuel and light purposes.

The officers and directors of the M.T.E. and G. Co. are:—President, Dr. J. A. Henderson, London, Eng.; Vice President, F. W. Sumner; other directors:—Hon. C. W. Robinson, T. Williams, G. R. James, H. M. Wood, Sackville, N. B.; General Manager, O. P. Poggs; Secretary and Treasurer, W. F. Wheeler. Unless otherwise stated, all the officers and directors reside in Moncton. (July, pg. 585.)

Montreal and Southern Counties Ry.—In connection with the extension of the line from St. Lambert, we are advised that what is described as the Chambly extension is about a mile of track in St. Lambert, which will have to be laid to connect the present track with the Central Vermont Ry. branch, which has been leased. This extension is expected to be completed next spring. The work of electrifying the C.N.R. branch from St. Lambert to Richelieu is being proceeded with, and it is expected to have it completed by June, 1911. The C.V.R. line extends on from Richelieu to Farnham, on to Granby, and has its terminus at Waterloo, and there is a branch line extending from near Marieville, known as the St. Cesaire branch. It is intended to electrify the line to Granby, and the St. Cesaire branch, but, we are advised, that it may not be done for some time yet.

We are further advised that it is not intended to go on with the building of the Bouchierville or Laprairie sections at present. (Sept., pg. 781).

Montreal and Toronto Underground Lines and Terminals.—A. P. Gillies is quoted as stating that the capital for the building of an underground system in Montreal has been underwritten. All that was required, in order to go ahead with the work, was a franchise, and steps, he added, would be taken at an early day to bring the matter before the city council and the board of control. (Sept., pg. 727; and Montreal Central Terminal Ry., July, pg. 549).

Montreal Street Ry.—Work has been started on the new construction and repair shop at Youville, Montreal. The main building will have an area of 115,000 square feet, and there will also be several other smaller buildings. All of these will be connected with tracks, and the yard will also contain sidings for unloading material, and for holding cars awaiting repair. The stores department will be a separate erection 198 by 55 ft. All the buildings will be of brick and Montreal limestone. (Sept., pg. 781).

Moose Jaw Electric Ry.—The City Clerk was instructed to write to the company, Sept. 8, calling attention to the slow progress of construction, and urging greater speed if the company is to fulfil its agreement.

A prospectus which has recently been issued sets out that the company has been incorporated under the British Columbia Companies Act with offices at Victoria, B.C., and registered under the Foreign Companies Ordinance of Saskatchewan, with offices at Moose Jaw, Sask. The authorized capital is $400,000, and its present object is set out as the construction and operation of an electric railway system in Moose Jaw. The officers and directors are:—President, A. A. Dion; Vice President, N. J. Ker; Secretary-Treasurer, D. R. Street; Solicitor, E. J. Daly; other directors:—D. O'Connor, Jr., P. B. Melton, E. M. Saunders and J. T. Cashman; Chief Engineer, J. B. McRae. With the exception of Messrs. Saunders and Cashman, who reside in Moose Jaw, all the officers and directors live in Ottawa. The franchise acquired by the company is for twenty years, at the end of which term the city council must either buy the property and plant at its real value, with the consent of the ratepayers, or continue the franchise for another twenty years. For five years the company will be exempt from all taxes or charges by the city; for the remaining 15 years, the company will pay taxes on half the assessed value only on real estate, plant and equipment. The city is to receive during the second five years of the franchise $250 a mile of unpaved streets occupied by the tracks, and $500 a mile of paved streets, and for the remaining 10 years of the franchise double these rates. Three miles of track is expected to be in operation by Jan. 19, 1911, and an additional three miles by Dec. 31, 1911, but these dates may be extended. The cost of these six miles of line is estimated at $200,000. (Sept., pg. 781).

Nanaimo, B.C.—An agreement has been arrived at with the Dominion Stock and Bond Co., granting a franchise for an electric railway in Nanaimo, B.C. The city council is preparing a bylaw to confirm the agreement and will submit it to the ratepayers at an early date. The agreement provides for the building of a line in Nanaimo, and extending to Brechin, Wellington and Ladysmith, and such other points as it may seem advisable from time to time. It is proposed to build about 20 miles of line, the city to guarantee the company's 4½% bonds for $300,000. The company is to set aside 10% of its annual net profits, out of which the bonds are to be repaid, and upon this having been accomplished, the same percentage of net profits is to be paid into the city treasury. (Aug., pg. 683.)

Niagara, St. Catharines and Toronto Ry.—The line from Welland to Port Colborne, Ont., is now practically completed and it is expected to have it opened for traffic early in Oct. In regard to future extensions press reports state that the extension from Port Colborne to Fort Erie will be gone on with next year, and that plans are under consideration for a line from St. Catharines to Niagara-on-the-Lake and Queenston. In this connection there are reports current that arrangements are being made by which the Canadian division of the International Ry., which includes the Niagara Falls Park and River Ry., will be taken over and operated in connection with the N St. C. and T. Ry., Jan. 1, 1911. The I. Ry. began the issue of new tickets on the Canadian division Sept. 1, on which notification is given that they will be void after the new year, and this is taken to imply that there will be some change in the operation of the line then. (July, pg. 585).

Niagara Falls, Welland and Dunnville Electric Rd.—This projected electric railway is to run from Niagara Falls, west along Lundy's Lane to Allanburg, thence south to Port Robinson, and on to Welland, continuing south to Daneville, thence westerly to Dunnville, a total distance of 35 miles; with a branch line from near Allanburg westerly through Fonthill and Fenwick, thence south six miles to Marshville, where it rejoins the main line. A report as to the route, probable cost of construction, estimated traffic, is being prepared by Roberts and Abbott, engineers, Cleveland, Ohio. The officers and directors are:—President, F. R. Lalor, M.P., Dunnville; Vice President, G. Arnold, Ridgeville; Secretary, F. E. Misener, Marshville; Treasurer, G. H. Burgar, Welland; other directors:—H. A. Rose, Welland; J. C. Gardner, C.E., Niagara Falls. (May, pg. 399).

Nipissing Central Ry.—The ratepayers of New Liskeard, Ont., on Sept. 3, voted in favor of a bylaw granting a franchise for the building of an electric railway on the streets of the town. The line is to enter the town from Haileybury, where it at present has its terminus, and is to be built by Nov., 1911. (Sept., pg. 781).

North Midland Ry.—The promoters of this company, which has power to build lines from London to Stratford, Ont., and various places in Huron county, are submitting plans to the various municipalities through which the line will run, for the purpose of securing franchises, and a guarantee of bonds. It is estimated that a bond issue of $800,000 will be necessary to finance construction, and it is proposed to ask London to guarantee $200,000 of this, and to ask the municipalities to guarantee the balance in proportion to the mileage of line built in each. The company proposes to use hydro-electric power to be purchased from the municipalities. (Mar., pg. 233).

Ontario and West Shore Electric Ry.—Two special meetings of the Goderich, Ont., town council, have been held to decide on the streets which shall be utilized by the company for its lines, but no decision has been reached. Another meeting has been called and it is expected to have the matter settled at an early date so as to enable the track to be laid and the first section of the line completed by the end of the year. The company has not yet done anything in the way of building a power house. (Sept., pg. 787).

Ottawa Electric Ry.—The permit granted for the erection of a brick transformer station in Ottawa was for the Ottawa Electric Co., and not for the Ottawa Electric Ry., as stated in our last issue. (Sept., pg. 781).

Peoples Ry.—Work is being gone on with at various points on the line, and recent reports state that over five miles of grading has been completed between Bloomingdale and Berlin, Ont., and that a steam shovel and 45 teams are at work grading between Petersburg and New Hamburg. (Sept., pg. 781).

Port Arthur and Fort William Electric Ry.—The ratepayers of Port Arthur, Ont., voted Sept. 8, in favor of the by-law to raise $12,000 by debentures for the purpose of building a new car barn. (Sept., pg. 783.)

Sherbrooke Ry. and Power Co.—The laying of the new rails on the street railway was begun Sept. 5, and it is expected to have the work completed by the winter. (Sept., pg. 783.)

Stratford Ry.—The directors of this at present unincorporated company, with some of the members of the city council of Stratford, Ont., went over the route of the proposed electric railway between Stratford and St. Marys, Aug. 27, and suggestions were made for altering the projected route at various points with a view of making it more convenient for future extensions. Stratford city has already passed a bylaw granting a franchise for lines in the city. (Sept., pg. 783).

Toronto and York Radial Ry.—Plans have been filed with the Ontario Railway and Municipal Board for a deviation of the line at Mimico creek, where there are some very sharp curves, and a small river to cross. It has been necessary to purchase additional land for right of way, and a sufficient area has been acquired to provide for laying a long siding or crossing point at this deviation, which takes in the proposed new bridge over the creek. The foundation work for the new bridge is being proceeded with, and grading for the deviation has been started. The company has not made any definite plans for building a second track. (July, pg. 585).

Toronto Eastern Ry.—Press reports, Sept. 17, stated that engineers had nearly completed surveys for the first section of this projected railway, and that the first section to be built would be from Toronto to Newcastle, Ont. The route will be on a private right of way just north of the Kingston road, nearly all the way. The reports further state that a considerable part of the right of way has been secured, and that contracts for grading, etc., will be let at an early date. Negotiations are reported to be in progress for the entrance into Toronto. (Aug., pg. 685).

Toronto Ry.—By an arrangement between the company and the city council a start has been made on the construction of two out of the six new lines ordered to be built by the Ontario Railway and Municipal Board. A start was made on the Harbord St. line at Ossington Ave., Sept. 16, and on the Wilton Ave. line at Sherbrooke St., Sept. 19. The city grades the portion of the street on which the track is to be laid, and concretes and paves it, after the company has laid the tracks. (Aug., pg. 685).

Welland, Ont.—A press report says that a franchise has been granted by Crowland tp., to C. J. Laughlin, Toronto, to build an electric railway from Welland to Welland Jct., Ont. (Aug., pg. 685).

Winnipeg Electric St. Ry.—Work was started Aug. 20, putting in the diamond on Main St., at the corner of Euclid Ave., for the belt line to run down Euclid to Sutherland Ave., and across the Louise bridge. The standards for carrying the trolley wire along Portage Ave. west to the city limits are being erected, and it is expected that the double track line on this section of the company's line will be ready for traffic early in Oct. (Aug., pg. 685).

The British Columbia Electric Ry., which formerly paid a bonus, at the end of each year, to its employes, has granted an increase in wages in lieu, to date from July 1, the commencement of the financial year.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for July $283,535; working expenses $173,850; net operating earnings $109,685; renewal funds $23,820; net earnings $85,865; approximate income from investments $22,000; net income $107,865, against $220,665 gross earnings; $123,063 working expenses; $97,602 net operating earnings; $16,084 renewal funds; $81,518 net earnings; $16,500 approximate income from investments; $98,018 net income for July, 1909. The working expenses from July 1, include an increase in wages to employes, granted in lieu of the bonus formerly paid at the end of the year, which was not included in these returns.

Berlin and Bridgeport Electric St. Ry.—Following are the officers and directors for the current year:—President, W. H. Breithaupt; Vice President, J. S. Anthes; Secretary, A. Millar; other directors, L. J. Breithaupt, G. M. Shirk.

Halifax Electric Tramway.—Railway receipts for Aug., $22,781.86, against $21,370.12 for Aug., 1909.

Hull Electric Co.—The annual meeting was held Sept. 7. Following are the officers and directors for the current year: President, A. R. Creelman, K.C.; Vice President, W. R. Baker; other directors, D. McNicoll, I. G. Ogden, E. W. Beatty, J. Oborne and E. Hanson.

London St. Ry.—Gross earnings for Aug., $23,165.50; expenses $16,231.42; net earnings $6,934.08; deductions $2,441.75; net income $4,492.33, against $22,465.38 gross earnings; $14,498.61 expenses; $7,966.77 net earnings; $2,441.75 deductions; $5,525.02 net income for Aug., 1909. Aggregate gross earnings for eight months ended Aug. 31, $164,679.09; expenses $119,386.18; net earnings $45,292.91; deductions $19,140.40; net income $26,152.51, against $158,444.27 aggregate gross earnings; $111,675,33 expenses; $46,768.94 net earnings; $19,256.08 deductions; $27,512.86 net income for same period 1909.

Montreal St. Ry.—Passenger earnings for Aug., $382,817.76; miscellaneous earnings $16,010.81; total earnings $398,828.57; operating expenses $216,314.19; net earnings $182,514.38; city percentage on earnings $50,854.46; interest on bonds and loans $14,482.71; rent leased lines $552.90; taxes $4,000; total charges $69,890.07; surplus $112,624.31; expenses per cent. of earnings 54.24, against $344,513.84 passenger earnings; $10,715.88 miscellaneous earnings; $355,229.72 total earnings; $180,582.60 operating expenses; $174,647.12 net earnings; $44,083.70 city percentage on earnings; $14,444.55 interest on bonds and lonas; $498.67 rent leased lines; $3,000 taxes; $62,026.92 total charges; $112,620.20 surplus; 50.84 expenses per cent. of earnings, for Aug., 1909. Aggregate total earnings for 11 months ended Aug. 31, $3,889,475.05; operating expenses $2,237,830.24; net earnings $1,651,644.81; total charges $516,743.81; surplus $1,134,901; expenses per cent. of earnings 57.54, against $3,492,776.55 aggregate total earnings; $2,046,598.01 operating expenses; $1,446,178.54 net earnings; $450,601.63 total charges; $995,576.91 surplus; 58.60 expenses per cent. of earnings for same period 1908-09.

Port Arthur and Fort William Electric Ry.—The report of the operations of the line for the year ended June 30, shows there are 19 miles of track being operated, 10 in Port Arthur, and 8 in Fort William. Gross earnings were $130,664.32; operating expenses, $74,373.44; net earnings, $56,290.88. Statistics:—car mileage 491,760; fare passengers carried, 2,832,426; passes and transfer passengers, 28,000, making total passengers carried, 2,852,426; average fare per da. passenger, 4.1985 cents; average fare all pas-

sengers, 4.1690 cents; earnings per car mile, 26.3037 cents; operating expenses per car mile, 15.1237 cents. Capitalization of line:—Port Arthur, $339,087; Fort William, $307,000; total, $646,087.13. Total expenditure on construction and equipment, $644,700.

Quebec Ry., Light and Power Co.—Following are the officers and directors for the current year:—President, W. G. Ross; Vice President, Hon. E. B. Garneau; other directors:—R. Forget, N. Belleau, J. N. Greenshields, Hon. R. Mackay, Hon. C. E. Dubord, Hon. L. P. Pelletier, L. C. Webster; General Manager, C. E. A. Carr; Secretary, C. J. Piggot; Treasurer, W. J. Lynch. The new directors are:—Hon. E. B. Garneau, Hon. L. P. Pelletier, Hon. C. E. Dubord and L. C. Webster, who take the place of F. W. Ross, Frank Ross, W. Price and L. C. Marcoux. The meeting of shareholders, held in Quebec, Sept. 13, is reported to have been a formal one.

St. Thomas Street Ry.—Reports presented to the street railway committee of St. Thomas, Ont., show that for the year ended June 30, eight cars were being operated, the average daily mileage being 687, against seven cars covering 1,064 miles a day in the year ended June 30, 1909. During the past financial year the service was changed from a 15 minute to a 20 minute one. The pay roll for the first week in Sept. 3, was reported to be $249.57, against $187.32 for the corresponding week in 1909.

Toronto Ry.—The Toronto board of control passed the following resolution, Sept. 9:—"Whereas it is desirable for the city to make an effort now to acquire by purchase the Toronto Ry. and to secure legislation to that end it is recommended that the board of control be authorized to confer with the President and directors of the company with this end in view and to report to council the result of such conference, and further, that if a basis of purchase agreeable to council be arrived at legislation be applied for to carry out such purchase." A couple of days previously it passed a resolution directing the City Solicitor to prepare a bill for the expropriation of the Toronto Ry., and to apply to the Ontario Legislature to have it passed. The Legislature has three times refused to pass such a measure.

Toronto Ry.—Gross earnings for July, $367,211.14; expenses $186,183.96; net earnings $181,027.18, against $329,803.94 gross earnings; $168,200.88 expenses; $161,603.06 net earnings for July, 1909. Aggregate gross earnings for seven months ended July 31, $2,386,423.94; expenses $1,237,497.49; net earnings $1,148,926.45, against $2,144,087.13 aggregate gross earnings; $1,098,841.11 expenses; $1,045,246.02 net earnings for same period 1909.

Winnipeg Electric Ry.—Gross earnings for July, $252,014; working expenses $119,754; net earnings $132,260, against $214,087 gross earnings; $100,950 working expenses; $113,137 net earnings for July, 1909. Aggregate gross earnings for seven months ended July 31, $1,784,210; net earnings $887,140, against $1,424,991 aggregate gross earnings; $715,452 net earnings for same period 1909.

Application has been made to the Dominion Department of Labor, by the maintenance of way employes of the C. P.R., the Canadian Northern Ry., and the G.T. Pacific Ry., for boards of conciliation. The employes have in each case named W. T. J. Lee, of Toronto as their representative, and F. H. McGuigan will represent the C.P.R. The other two companies have not named their representatives.

Electric Railway Notes.

J. H. Gunn, son of Jas. Gunn, Superintendent Toronto Ry., died there, Sept. 15, aged 18.

The B.C. Electric Ry. has ordered 25 flat logging cars, 40 tons capacity, from the Canadian Car and Foundry Co., Montreal.

The Winnipeg Electric Ry. has ordered eight steel underframes for cars, from the Canadian Car and Foundry Co., Montreal.

The Montreal and Southern Counties Ry., has received one heavy double broom electric sweeper from the Ottawa Car Co., Ottawa.

The Moose Jaw Electric Ry. has received six pay-as-you-enter cars, 31 ft. long, mounted on single trucks, from the Ottawa Car Co., Ottawa.

The Quebec Ry., Light and Power Co. has received four pay-as-you-enter cars, 29½ ft. long, and two interurban cars, 60 ft. long, from the Ottawa Car Co., Ottawa.

J. R. Blackett, formerly Chief Auditor Dominion Coal Co., Glace Bay, N.S., has been appointed Comptroller Halifax Electric Tramway Co., a newly created position.

The Grand Valley Ry., Brantford, Ont., is reported to be in the market for eight single-truck city cars, two double-truck city cars and a single-truck snow sweeper.

The four pay-as-you-enter cars which the Quebec Ry., Light and Power Co. has received from the Ottawa Car Co., as mentioned in our last issue are 29½ ft. overall, and 18 ft. long without platforms.

The Montreal board of control decided Sept. 2, to ask the city council to repeal the present bylaw prescribing the kind of fender to be used by the electric railway lines in the city, and to decide on a new pattern.

A list of shareholders of the Quebec Ry., Light, Heat and Power Co., shows that 12,682 shares are held in France, 3,006 in England, 1,798 in the United states and 20 in Spain. The stock is distributed among 529 shareholders.

D. McDonald, Manager of the Montreal Street Ry., was present at the European Tramways Congress at Brussels, Belgium, Sept. 7-11, where he exhibited a pay-as-you-enter car, of which he is one of the patentees.

M. O. Robinson, heretofore Resident Electrical Engineer C.P.R., Fort William, Ont., has been appointed Manager Port Arthur and Fort William Electric Ry., vice N. C. Pilcher, whose appointment as Manager Sherbrooke Ry. and Power Co., was announced in our last issue.

The Electric Railway Construction Co., has been incorporated under the British Columbia Companies Act, with a capital of $600,000, to carry on a general contracting business, and to promote companies for the operation of railways, including tramways and street railways.

H. W. Protzeller, Assistant Superintendent Twin City Rapid Transit Co., St. Paul, Minn., has been appointed General Manager International Transit Co., operating in Sault Ste. Marie, Ont., and Sault Ste. Marie, Mich., and which is controlled by the Lake Superior Corporation. T. J. Kennedy, heretofore Manager, and who was also Superintendent Algoma Central and Hudson Bay and Manitoulin and North Shore Rys., will devote his time to those railways, on which considerable extensions are in progress and projected.

W. J. Lynch, Treasurer Quebec Ry., Light, Heat and Power Co., was presented with an address and a cabinet of cutlery, at a dinner given in his honor Sept. 13, by the officers and officials of the company in connection with his wedding, which took place in Quebec, Sept. 16, the bride being Miss Pacaud.

At a recent meeting of the North Toronto council, a letter was read from the Toronto and York Radial Ry., in response to a previous one from the council, that the company was not prepared to make any concessions in return for establishing a Sunday service, but that it would be willing to meet the ratepayers' wishes, so far as the service was concerned, if they would join with the company in endeavoring to secure the necessary permission.

The Toronto board of control has awarded the contract for the construction of a bridge to carry the highway, with the Toronto Ry., over the Don River and the railway tracks, at Queen St. East, to the F. H. McGuigan Construction Co., for $193,000. The bridge was ordered by the Board of Railway Commissioners, the cost to be borne in the following proportions, city of Toronto, 15%; Toronto Ry., 15%; C.P.R., 35%; G.T.R., 10%, and Canadian Northern Ry., 25%.

The various electric companies having overhead wires in Montreal, including the Montreal Street Ry., the Montreal Park and Island Ry., the Montreal Terminal Ry., and the Public Service Corporation (formerly the Suburban Tramway Co.), have notified the city council that they are prepared to put their overhead wires in the civic conduit, which the corporation has been authorized by the Quebec Legislature to build, and will choose one member of the Board, in accordance with the terms of the act.

An injunction was obtained Sept. 14, restraining the contractors for the new power dam of the Sherbrooke Ry. and Power Co., from building a flume across certain properties. The judgment directs the suspension of the work until the main issue has been disposed of by the courts. The company was expecting to have the dam completed, so as to be able to turn on power by Nov. 1.

The Winnipeg city council's legal officers are preparing to bring an action to have the Winnipeg Electric Ry.'s franchise forfeited on account of alleged breach of contract in respect of the construction of new lines. The council has passed resolutions calling for the building of certain new lines, which the company has failed to build, and the City Solicitor has advised the council that this is sufficient grounds upon which to ask the courts to cancel the franchise.

St. Leonards, N.B.,-Van Buren, Me., Bridge.—The bridge which is about to be built across the St. John's River, to connect St. Leonard, N.B., and Van Buren, Me., under the charge of a commission appointed by the Dominion Government and the State of Maine, will be a highway one, but designed to carry electric cars, also. The Commissioners are: S. J. Chapleau, District Engineer, Department of Public Works, Ottawa, and P. D. Sargent, State Commissioner of Highways, Augusta, Me. The bridge will be 752 ft. long between back walls, and will consist of three spans of 143 ft. each, and one span of 322 ft.; carried on abutments, at the shore ends, and the three piers in the river. These piers and abutments are to be concrete. The bridge is designed for the following live load:—a 24-ton street car on two axles 7 ft. apart, and a 10-ton wagon on two axles 10 ft. apart, and 6 ft. gauge, or 100 lbs. per square ft. of roadway and sidewalk. The substructures is to be completed by Dec. 1, and superstructure by Apr'l 1, 1911. The amount voted by the Dominion Parliament and the Maine Legislature towards the erection of the bridge was $28,125 each.

GRAND MASTER, Capt. J. H. McMaugh, Toronto, Ont.; GRAND SECRETARY-TREASURER, Capt. H. O. Jackson, 376 Huron St., Toronto.

Lighthouse and Buoy Steamer Estevan.

The specifications for the new twin-screw lighthouse tender and buoy steamboat, to be named the Estevan, for the Canadian Government, provide for the building of a vessel having the following principal dimensions: Length between perpendiculars, 200 ft.; moulded breadth, 38 ft.; depth, moulded to main deck, 17 ft. 6 in.; depth to lower deck, 10 ft.; depth main deck to bridge deck, 7 ft. 11½ in.; load draft, mean, 11 ft. 6 in. She is to have a deadweight carrying capacity of 375 tons; a coal capacity of 260 tons, and to have a speed of 12 knots an hour on a six hours trial.

The hull is to be of steel to be equal to class 100 A1 at Lloyds', with double bottom from peak to peak; fitted for water ballast, and divided into seven watertight bulkheads. The scantlings specified are those considered suitable for the work of the buoy service, and for navigation in icefields 12 inches thick. The vessel is to have a straight stem and elliptical stern, provided with two steel masts with p. p. topmasts. The propelling machinery is to consist of two sets of inverted, vertical, direct-acting, triple-expansion, surface-condensing engines, each set having three cylinders working on separate cranks placed at angles of 120 degrees with each other in the sequence of high, low and intermediate when the engines are going ahead. The engines are to be capable of developing the indicated horse power necessary to drive the vessel at 12 knots an hour on a trial of six hours duration when running at about 130 revolutions a minute with 180 lbs. steam pressure in the boilers. Steam will be supplied by two cylindrical, single ended boilers fitted for forced draught. The propellers are to be three-bladed, of the built-up type, are not to overlap and are to work outwards in going ahead.

The vessel will have four decks, lower, main, bridge, and boat. The main part of the lower deck will be given over to the boilers, engines and coal bunkers, aft of which will be an engineers' workshop, dynamo room and steward's storehouses, while forward will be provided the b'sn's store, and quarters for firemen and seamen. On the main deck aft, will be provided the quarters for the engineers, second and third officers, cooks, stewards, and the special employes of the lighthouse and buoy section of the Marine Department, together with mess rooms; while forward of the open part of the deck will be the bath and washhouses, winches, etc. On the bridge deck will be quarters for the captain and the chief officer, and two two-bed staterooms for departmental officers upon inspection duty. Over this is the boat deck. The vessel throughout is to be suitably equipped and furnished, and provided with electric light, including a 25,000 candle power search light. The following boats are to be supplied: Two surf boats, 26 ft. long, 8 ft. beam, and 2 ft. 5 in. deep; one captain's dinghy, 20 ft. long, 6 ft. beam, and 2 ft. deep; and one steam launch 30 ft. long, 7 ft. beam and 3 ft. 6 in. deep. This launch is to be provided with engines capable of driving her eight knots an hour, steam being supplied by a patent water tube boiler, provided with a patent paraffin burner, capable of raising steam from cold water in eight minutes, and tested under hydraulic pressure to 1,000 lbs. to the square inch. The vessel is also to be provided with a steamboat hoisting winch; a five-barrelled 20-ton steam winch; two 2-ton double-barrelled steam winches, and a wireless telegraph equipment, the motor generator consisting of a 110 volt. 60 cycle single phase generator connected at full load.

Proposed Dry Dock Construction.

The Dominion Dry Dock Co., Ltd., the incorporation of which took place recently, with a capital of $1,000,000, has completed its organization, and proposes to construct dry docks at Levis and St. John, N.B., and may also assist in increasing the capacity of the existing dry dock at Halifax, N.S. The dry dock, which will probably be built at Levis, will be larger than is required to obtain a Government subsidy on a first class dock, as provided in the recent subsidy act. The dimensions proposed, are as follows:—

Length from outer caisson stop to head	1,000 ft.
Width on floor	102 ft.
Width at coping	134 ft.
Width at entrance	100 ft.
Depth of water on entrance sill at high water	36 ft.

It will be fully equipped with the necessary machinery, repairing plant and shops, for its efficient operation, and for repairing vessels of the largest type, or now under construction. The estimated cost of the proposed work is $4,000,000.

In connection with the proposed works at St. John, N.B., three sites are at present under consideration. The location of a site mainly depends on whether the Government will vote the necessary money, and start work on the opening up of Courtenay Bay, in order to make provision for the proposed Grand Trunk Pacific Ry. docks and terminals. The dimensions of the dry dock have not been settled on, as yet, but it is anticipated that the Government may require them to be the same as the one at Levis. The question of shipbuilding is also under consideration, and the carrying out of any plans in this direction, will depend entirely upon the business which may be anticipated from the erection of such works as will be undertaken. It is stated that, at present, it would be impossible to compete with British shipbuilders, in view of the higher cost of labor and material, and it would be necessary to be certain of a continuous supply of orders. Plans for the proposed dry dock at Levis will shortly be submitted to the Government, and if approved, work will be commenced almost immediately, the contractors being MacArthur, Perks and Co., Ottawa. The incorporators of the Dominion Dry Dock Co., include Sir Thos. G. Shaughnessy, President C.P.R.; Hugh A. Allan, Allan Line; G. D. Davie, Quebec; W. M. Dobell, Quebec; W. E. Foster, St. John; Lord Pirrie, Chairman Harland and Wolff, Ltd., Belfast, Ireland; Sir Robert W. Perks, Chairman MacArthur, Perks and Co.; and A. M. Grenfell, London, Eng.

The first cargo of the 1910 wheat crop was shipped from Fort William, on the C.P.R. s.s. Assiniboia, Aug. 29, to Owen Sound, for J. Richardson and Sons, Ltd., Kingston.

Notices to Mariners.

The Department of Marine has issued the following:—

82. Aug. 17.—221. British Columbia, Burrard Inlet, First Narrows, Prospect point, change in character of light. 222. British Columbia, Burrard Inlet, First Narrows, west entrance, change in position of gas lighted beacon, fog bell established.

83. Aug. 19.—223. Prince Edward Island, north coast, change in position of Cove head range lights. 224. New Brunswick, east coast, Kouchibouguac bay, Sapin point light station, light mast replaced by tower. 225. Newfoundland, west coast, St. John's bay, rock found southward of.

84. Aug. 22.—226. British Columbia, Vancouver island, west coast, Barkley Sound, Banfield creek, life saving station established. 227. Alaska, Revillagigedo channel, Spire island reef, light established. 228. Alaska, Tongass Narrows, East Clump, light established. 229. Alaska, Tongass narrows, Channel island, light established.

85. Aug. 23.—230. Quebec, River St. Lawrence below Montreal, Boucherville channel, off Ile Charron, buoys established.

86. Aug. 25.—231. Quebec, Ottawa river, Lake of Two Mountains, Graham, color of daymarks. 232.—Ontario, Lake Erie, Pelee passage, change in fog alarm at lighthouse.

87. Aug. 31.—233. British Columbia, Vancouver Island, west coast, Clayoquot sound, Hecate passage, uncharted rock. 234. British Columbia, Strait of Georgia, Galiano island, Porlier pass, bearing of range lights. 235. British Columbia, Fraser river, New Westminster, railway swing bridge, signal drum established. 236. British Columbia, Chatham sound, Malacca passage, reefs eastward of Bamfield islands, beacon established.

88. Aug. 31.—237. Nova Scotia, south coast, Liscomb shoal, bell buoy established. 238. Newfoundland, east coast, Catalina, Green island, change in characteristic of fog alarm. 239. Newfoundland, east coast, Fogo island, Burnt point, change in characteristic of fog alarm.

89. Sept. 3.—240. Ontario, Lake Erie, Rondeau harbor, construction of breakwater extension to west pier, caution. 241. Ontario, Georgian bay, Parry Sound approach, Wabuno channel, Sister rock, light established on beacon. 242. Ontario, Lake Superior, chart, Copper island to Lamb island issued.

90. Sept. 3.—243. Prince Edward Island, North coast, Cascumpecque harbor, range lighthouses moved from Sandy island to Alberton. 244. New Brunswick, Gulf of St. Lawrence, South Tracadie gully, changes in light station.

91. Sept. 6.—245. New Brunswick, south coast, Bay of Fundy, St. Martins, lighthouse erected on the outer end of the east breakwater pier.

92. Sept. 9.—246. British Columbia, Vancouver Island, Scott islands, Triangle island, lighthouse established.

93. Sept. 14.—247. British Columbia, Vancouver Island, southeast coast, Victoria harbor, uncharted rock. 248. British Columbia, Burrard Inlet. First narrows, west entrance, sounding of fog bell at beacon. 249. British Columbia, Vancouver Island, east coast, Horswell channel, change in character of buoy.

94. Sept. 15.—250. Ontario, St. Joseph channel, shoal water in channel at Bamford island, caution. 251. Lake Winnipeg, north end, entrance to Nelson river, Warren landing, change in position of back light of upper range. 252. United States of America, Lake Superior, Isle Royale, Rock of Ages light station, permanent light established.

95. Sept. 16.—253. New Brunswick, Bay of Fundy, Deer island, off North West harbor, Pomped ledge, beacon erected. 254. Quebec, Gulf of St. Lawrence, Moisie river, range lights again in operation.

St. Lawrence route, completing the journey from Rimouski in 5 days 11 hrs.

Capt. R. Barrett, R.N.R., formerly commodore of the Allan Line, died recently at Liverpool, Eng., aged 84. He entered the Allan service in 1870, and commanded a number of the company's earlier vesels, retiring some years since.

Newfoundland press reports state that the Donaldson Line s.s. Tritonia is being altered to fit her for the wood pulp trade between Newfoundland and Manchester, Eng., and also to enable her to cope with ice in an all the year round service.

Capt. Kendall, of the C.P.R. s.s Montrose, is reported to have been awarded £250, by the British Government, in connection with the capture, on board, of H. H. Crippen, charged with murder in London, and Miss Le Neve, now charged as an accessory after the fact.

The Canadian Northern Steamships Ltd., has decided to use Halifax, N.S., as its winter port, the first vessel on the winter service to arrive there being the Royal Edward, scheduled to leave Bristol, Eng., Nov. 22, and leaving on the return trip Dec. 7.

The s.s. Ben Cruachan, which grounded near Louisburg, about three months ago, has been repaired at Halifax, N.S. The bottom was badly damaged, it taking 125 steel plates, each 19 by 3 ft. to put her in sea going condition. She was in dry dock 56 days, the repairs being reported as costing $80,000.

The Osaka Yosen Kaisha has decided to include Victoria, B.C., as a port of call for its trans-Pacific service. the first arrival there scheduled being the Tacoma Maru, on Oct. 6. The company has four vessels in service, and will add two more, the Mexico Maru and the Canada Maru, early next year.

The Newfoundland Premier was in Quebec recently on his return from The Hague, and is reported to have said that his object in visiting there, was to meet representatives of certain Canadian shipping companies with a view to arranging some additional steamship facilities between Newfoundland and Great Britain.

The New Zealand Shipping Co. is reported to have sold its interest in the Canadian-Australian Steamship Line, to the Huddart and Parker Line, owners of the s.s. Zealandia, which company, in conjunction with the Union Steamship Co., will carry out the existing mail contract for the Canadian-Australia service until July 31, 1911.

The complete breaking up of the wrecked s.s Heimdal at Sable Island has been abandoned owing to the lateness of the season. The machinery, etc., has all been removed. Wreckers are at work on the s.s. Hestia. which was wrecked at Grand Manan last year. It is hoped that the machinery and cargo will be salved, after which, the hull will be broken up.

Recent press reports stated that the Canadian Northern Steamships, Ltd., would shortly commence a regular weekly service between Canada and Europe, and in this connection would take over the operation of its s.s. Volturno, which is now being run, by arrangement, by the North West Transportation Co. We are advised that at present there is nothing in the statements, and that no such decision has yet been arrived at.

A New York press dispatch states that the White Star-Dominion Line's steamships Laurentic and Megantic, will, this winter, make several trips to Halifax, from Liverpool and Portland. The first trip of the Laurentic. it is stated, will be made in Dec., from Liverpool, while the Megantic will be placed in the service for three trips. It is also stated that the company will arrange that the steamers can call on their eastbound trips.

The silly season is still on. Montreal press reports state that a scheme has been mooted in Europe, with a view to interest capital, for the establishment of a steamship service, between Halifax and Europe, the vessels required to be constructed on the "roller" principle, according to plans prepared by G. H. Knapp, the inventor of a roller boat, which was built in Toronto, and which has caused considerable amusement and trouble in Toronto waters for several years.

At a recent conference of the representatives of the regular Trans-Pacific lines, at San Francisco. a tentative agreement was arrived at for the regulation of the steerage passenger rates to and from the Orient. Under the old agreement the rates on the C.P.R. Empresses was $51, and on the C.P.R. s.s. Monteagle, $43.50, while under the new arrangement the latter rate has been raised to $47.50. C. E. E. Ussher, Assistant Passenger Traffic Manager, Winnipeg, and C. B. Foster, Assistant General Passenger Agent, Vancouver, represented the C.P.R.

Sir H. Montagu Allan, who presided at a luncheon in London, Eng., Sept. 1, to celebrate the opening of new offices at 14 Cockspur St., is reported to have said, in connection with the Atlantic service, that designs for new vessels, for the Allan Line, were being made, and the company hoped shortly to call for tenders for the construction of larger and faster steamers than any at present running between Great Britain and Canada. We are advised that the company is working on plans for three vessels, each about 22,000 tons, and 675 feet long, for a speed of 22 knots an hour.

The bill, which will come before the British Parliament shortly, making it compulsory, that vessels carrying 50 or more persons, including the crew, shall be equipped with a wireless telegraph installation, is to be opposed. Various chambers of commerce and several shipowners in Great Britain, have expressed themselves as strenuously opposed to such an act, claiming that it would injuriously affect the freight trade. increase freight rates and give a monopoly to wireless telegraph companies, while it is also stated that there are no shore stations on the East Indian and Australian routes.

Agents for Western Canada.

Capt. L. A. Demers, Wreck Commissioner, held an enquiry Sept. 1, into the cause of the grounding of the s.s. Craigendoran at Anticosti Island, at the end of August. It was claimed, on behalf of the captain of the vessel, that the sunken wreck of the s.s. Idaho, which has been lying in the neighborhood for a number of years may have been the cause of the accident. The charts, place the derelict some distance from the course which was being taken by the Craigendoran, but it is suggested that it may have shifted its position, as the charts are somewhat old. The Wreck Commissioner, after hearing all the evidence, said he would deliver judgment at a later date.

Maritime Provinces and Newfoundland.

Capt. A. McLeod has been appointed captain of the Charlottetown Steam Navigation Co.'s s.s. Northumberland, succeeding Capt. A. McLean, deceased.

W. C. Harvey, heretofore chief engineer of the Reid Newfoundland Co.'s s.s. Bruce has been appointed Travelling Marine Engineer for the company, with headquarters at St. John's.

From advices received in St. John's, Nfld., the decision in the enquiry into the cause of the collision between Harvey and Co.'s s.s. Regulus and the s.s. Karema, which has been held in New York, is against the Regulus. It is stated that she will be sold by public auction.

The Dartmouth, N.S., Ferry Commissioners, who recently considered tenders for the construction of a ferry steamer of steel and wood, have rejected all tenders made, and will call for new ones. The tenders ranged from $20,500 to $100,450.

The Gypsum Packet Co. of Windsor, N.S., is reported to have purchased the three masted ship Glooscap, which is being converted into a barge at New York. She was built at Spencer's Island, N.S., in 1891, her dimensions being:—Length, 238.1 ft.; breadth, 42.9 ft.: depth, 23.9 ft.; tonnage, 1,721 register.

The ferry service between Sydney and North Sydney, was commenced Sept. 4, by the steamboat Wampanoag. She was built in the U.S., and is a screw driven vessel, with engine of 13 n.h.p., and is of the following dimensions:—length 57.3 ft., breadth 12 ft., depth 8.4 ft., tonnage, 38 gross, 22 register. She is owned by J. Doran, Levis, Que.

Capt. A. C. McLean, of the Charlottetown Steam Navigation Co.'s s.s. Northumberland, died at Charlottetown, P.E.I., recently, aged 71. He was born at Richibucto, N.B., and followed the sea since he was 11 years of age. He, at various times, acted as pilot between St. John and Digby, on the St. Lawrence route, to the Magdalen Islands, and other places.

The Newfoundland fisheries dispute between Great Britain and the U.S., which was referred to The Hague for arbitration, has been decided in favor of Great Britain on the two most important points, viz.: the right to regulate the time and method of fishing, and the exclusion of U.S. fishers from bays, under the headland doctrine, by which the three mile limit is to be measured from an imaginary line drawn across the mouth of the bay, and not following the windings of the bay's coast line. Points granted in favor of the U.S. include that U.S. fishermen cannot be compelled to report to custom houses; that they cannot be taxed with light, harbor and other dues; that U.S. vessels may employ Newfoundland fishermen, and that its vessels may purchase supplies and have other commercial privileges on treaty coasts, and may fish in bays on treaty coasts, except Labrador.

Province of Quebec Marine.

C. J. Smith, General Manager Richelieu and Ontario Navigation Co., sailed from Montreal, Sept. 9, for Great Britain, to arrange for building a steamboat for the company's Saguenay line. The dimensions of the proposed vessel are:—length overall, 284 ft. 4 ins.; length over stem and stern posts, 274 ft. 8 in.; breadth of beam on frame, 40 ft.; breadth of beam extreme, 57 ft. 10 ins.; depth of hull, molded, 16 ft. 5½ ins.; boiler to work at 175 lbs. pressure.

A warrant has been issued in the Montreal Admiralty Court for the seizure of the steamboat Lorancia, on behalf of H. Sicotte of Valleyfield, Que., who claims to own 64 shares in the vessel on a bill of sale. The shares claimed constituted a first mortgage, and it is stated that the first mortgagee declines to hand over the boat. She is a screw driven boat, with engine of 27 n.h.p., and was built at Valleyfield in 1909, her dimensions being, length, 112 ft., breadth 22.2 ft., depth 7.7 ft.; tonnage, 346 gross, 205 register.

Ontario and the Great Lakes.

The Department of Public Works will receive tenders Oct. 4, for the reconstruction of the wharf at Lakeport.

The Department of Public Works received tenders, Sept. 21, for the construction of a pier at Brockville.

The Department of Public Works will receive tenders, Oct. 4, for the construction of a breakwater at Goderich.

The work of deepening the Welland river at Chippewa, to 12 ft., is in progress, by the Russell Contracting Co., Toronto.

The Montreal Transportation Co.'s steamboat Rosemount was docked at Kingston Sept. 16, for repairs, having started a number of plates by grounding on a shoal near Alexandria Bay.

W. Freeland, who for many years was well known on the Toronto water front, and who owned and operated the Freeland dock, recently purchased by the Niagara Navigation Co., died at Toronto, Sept. 9, aged 80.

The Richelieu and Ontario Navigation Co.'s steamboat Kingston, was towed into Kingston Sept. 15, after having drifted for about 10 hours, with a broken shaft. She was subsequently towed to Toronto.

The captains of the Niagara Navigation Co.'s steamboats Cayuga, Chippewa, Chicora and Corona, were fined $650, in the aggregate, at St. Catharines, Sept. 1, for breaches of the Liquor License Act on board their vessels.

The canal committee of the Dundas council received tenders, recently, for the dredging of the Desjardins canal, in accordance with the Jennings award, in-

LAKE GRAIN SHIPMENTS, 1909 CROP.

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped from the different elevators at Fort William and Port Arthur, of the crop of 1909, Sept. 1, 1909, to Aug. 31, 1910, inclusive, with ports of destination. The last two figures in each column after the period represent lbs.

volving the removal of about 27,500 cubic yards of material. The work is to be completed by Dec. 1.

At the recent annual meeting of the Lake Shippers Clearance Association, at Winnipeg, it was announced that the first year had been a most successful one, the handling of grain had been simplified and expedited to a great extent, and there was a surplus of $5,875.

The Marine Department's fog horn at Pelee Passage, Lake Erie. has been changed from a steam siren to a compressed air diaphone, the compressor being driven by an oil engine. The blasts and intervals remain unchanged.

The Richelieu and Ontario Navigation Co. has been suffering considerable loss recently, owing to the theft of ships' stores. A number of employes on the steamboat Toronto were arrested recently at Toronto, on charges of theft, and some restaurant keepers have also been charged with receiving.

The C.P.R. s.s. Alberta will, it is reported, be lengthened by about 42 ft. during the winter. It is said that the change, involving an expenditure of nearly $60,000, will be commenced immediately after the last sailing of the season, and be completed in time for the re-opening of navigation.

The Lesslie Contracting Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $10,000 and office at Kingston, to carry on a general wrecking and salvage business, and in connection therewith to own and operate steam and other vessels. The provisional directors are, H. E. Richardson, J. F. and E. V. Lesslie, Kingston.

The annual meeting of the Kingston Shipbuilding Co., was held at Kingston, Sept. 9. Following are the officers and directors for the current year:—President, S. Dyment, Barrie; Vice President, H. A. Calvin, Kingston; Secretary-Treasurer, W. J. Fair, Kingston; directors: H. B. Smith, Owen Sound; A. Macdougall, Duluth, Minn.; J. McKelvey, Kingston; J. M. Smith, Collingwood.

The U.S. Lake Survey reports the stages of the Great Lakes for Aug. in feet above tidewater, as follows:—Superior 601.96; Michigan and Huron 580.35; Erie 572.09; Ontario 246.05. Compared with the average Aug. levels for the past 10 years, Superior was 0.99 ft. below; Michigan and Huron 0.85 ft. below; Erie 0.62 ft. below, and Ontario 0.54 ft. below.

The report of the International Waterways Commission on the question of the construction of a dam on the St. Lawrence at Long Sault Rapids, is stated in Montreal to be held up indefinitely. The press report states that there is to be a new commission, permanent in its character, and implementing the provisions of the Waterways Treaty between Canada and the U.S., to which the question will be handed for discussion and decision.

The Toronto Harbor Commissioners met the Minister of Public Works in Toronto recently, and urged that the Government undertake the work of dredging a channel in the Toronto harbor, to enable vessels with 20 ft. draught to come up to the docks which the city is about to build at Ashbridge's bay, at a cost of about $130,000. In reply, it was suggested that the request be made by the civic authorities in the regular way, when it would receive the best consideration.

The Montreal Transportation Co.'s steamboat Bothnia is reported to have been sold to Capt. Loonan of Collingwood, for operation between Georgian Bay and Tonawanda, N.Y., in the lumber trade. The price paid is stated to have been $10,000. The Bothnia was built at Garden Island in 1895, and was formerly named Jack. She is a screw driven vessel with engine of 200 n.h.p., her dimensions are:—length 178 ft., breadth 37.8 ft., depth 12.3 ft.; tonnage, 833 gross, 478 register.

The Pittsburg Steamship Co.'s steamboat John B. Trevor, which was wrecked at Isle Royale last fall, and which was recently purchased and salved by F. S. Wiley, Port Arthur, is to be rebuilt during the winter and placed on the Canadian register. She was built at Cleveland, Ohio, in 1895, her dimensions being:—Length, 308 ft.; breadth, 38 ft.; tonnage, 1,713 gross, 1,318 register, and she is equipped with triple expansion engines with cylinders 18¾, 32 and 54 ins. diar. by 42 ins. stroke, supplied with steam by two Scotch boilers 12 by 13 ft.

Hall and Eligh, Ltd., the incorporation of which we announced in our July issue, has been formed to take over the business of Hall and Eligh and the steamboat Roberval, which operates between Chicoutimi, Que., and the Great Lakes, in a general forwarding business. The Roberval is a screw driven vessel with engine of 27 n.h.p., built at Toronto in 1907. Her dimensions are:—length 128 ft., breadth 24 ft., depth 9 ft.; tonnage, 344 gross, 157 register. The provisional directors are, J. H. and W. J. Hall, P. and E. W. Eligh, Ottawa, and E. A. Hall, L'Orignal, Ont.

The Marquette and Bessemer Dock and Navigation Co.'s car ferry Marquette and Bessemer no. 2, which is being built to replace the one lost in Lake Erie last fall, was launched at Cleveland, O., Sept. 3. Her dimensions are, length 350 ft., breadth 56 ft., depth 19½ ft., with capacity for 30 loaded cars. She will be equipped with two triple expansion engines, with cylinders 19, 35 and 52 ins. diar., by 40 ins. stroke, supplied with steam by four Scotch boilers 13¾ ft. diar. by 12 ft. long. The cost is quoted as $400,000, and she is expected to be ready for service between Conneaut and Port Dover, by the end of October.

The vessel which the Inland Lines Ltd., has under construction at Collingwood, is stated to be the largest Canadian built freighter. She will have a capacity of 10,000 tons, or 400,000 bush. of wheat, and be about 525 ft. long. It is intended to utilize her in the ore, coal and grain trades on the upper lakes. It is anticipated that she will be launched in December, and be ready for the re-opening of navigation. The company also has another vessel under construction, for use in the combined passenger and freight trade on the lower lakes. She will have accommodation for about 200 passengers.

The ratepayers of Owen Sound have passed a bylaw granting a bonus of $50,000, empowering the corporation to take $50,000 of stock and to provide the money by the issue of debentures, for the construction and operation of a dry dock, ship building and ship repairing plant, and structural steel works, at a minimum expenditure of $800,000. In the agreement for such construction, entered into with E. Box, C.E., of Tynemouth, Eng., the corporation agrees not to enter into negotiations with any other party for the construction of such works within six months from May 18, provided the plans are submitted to the Department of Public Works within that time, and the work commenced within 12 months. The bonus is payable on completion of the work, and it is understood that application will also be made for a Government bonus under the act granting aid for the construction of dry docks. E. Box, is at present in England, arranging for the organizing of the company and the financing of the work.

The Ontario and Quebec Navigation Co., Ltd., has been incorporated under the Dominion Companies Act with a capital of $1,000,000, and office at Picton, Ont., to carry on a forwarding, passenger and transportation business, and to own and operate steam and other vessels and other transportation facilities. The provisional directors are, B. R., J. de C., and R. G. K. Hepburn, A. Leslie, Picton; J. F. Chapman, Deseronto, and H. Dempsey, Trenton. The company, which has been re-incorporated, owns the steamboats Aberdeen, Alexandria, Lloyd S. Porter, and Water Lily, and is reported to have absorbed the Quinte Navigation Co., Picton, which owns the steamboats Aletha, Brockville and Varuna. Press reports from Picton, state that A. W. Hepburn has sailed for Great Britain to superintend the construction of a steel vessel, to be built on the Clyde, at a cost of about $140,000, which, it is said, will reach Canada in time for the re-opening of navigation, and be placed on the Toronto, Charlotte, Montreal and Quebec route. The new vessel, will it is said have capacity for 250 passengers and about 450 tons of freight.

Manitoba, Saskatchewan and Alberta.

H. P. Naylor and Co., Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $20,000 and office at Winnipeg, to carry on lumbering, and other business, and in connection therewith to own and operate steam and other vessels, for the transportation of passengers and freight.

The Government survey of the Saskatchewan River, is progressing satisfactorily, though some difficulty has been experienced, owing to men leaving the work. The engineer in charge is reported to have said recently, that everything is now running smoothly, and he hoped to complete the survey before the ice comes.

Coast Lumber Yards, Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $250,000 and office at Winnipeg, to carry on a general land and lumber business, and in connection therewith to own and operate steam and other vessels, wharves, docks, elevators, etc., and to conduct the business of an elevator and general transportation company.

The Governor General-in-Council has approved regulations for the operation of the St. Andrew's lock, on the Red River, providing that the Dominion Department of Public Works shall have control of the operation, that the lock shall be open for navigation each day and night, except from midnight on Saturdays to midnight on Sundays, during the navigation season, except at any particular time or season an order in council be made to the contrary. All vessels when passing through the locks or approach channels, do so at the risk of their owners, and the Department is absolved from any responsibility for delay due to accident, etc., and no vessel shall be permitted to pass the lock, unless an agreement is signed by the person in charge, binding him to observe the rules and regulations in force, subject to penalties, as provided. Before passing the lock those in charge of a vessel shall receive a "let pass" at the lock statistical office, where they must supply on a form prepared for the purpose, the registered tonnage of the vessel, nature and quantity of cargo as set out in the bill of lading, and destination, and in the cases of rafts, the number of pieces, feet b.m., etc. The District Engineer, or Superintendent, has power to stop any vessel or raft for examination, and the permission to pass must be shown when required by such officer. No vessel drawing more than 9 ft. shall be allowed to use the lock, and no animal traction shall be used. Government vessels shall have priority over all other vessels, vessels in passenger traffic, running on schedule time, and excursion steamers and market boats, coming next, followed by freight vessels, even though carrying passengers to a limited extent, private boats, etc. Other provisions of a general nature are made, and penalties arranged for infraction of the rules.

B.C. and Pacific Coast Marine.

The Barnet Lighterage Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $10,000, to carry on the business of ship builders and vessel owners, etc.

It is reported that the Balcom Steamship Co. has chartered a steamship, at present running between Liverpool, Eng., and Spanish ports, for service between Vancouver and Stewart.

The receipts of the North Vancouver city ferries for Aug., were $9,151.65, an increase of nearly 50% over Aug., 1909. Owing to the successful operation of the ferries, the city has reduced the fares, now selling 30 tickets for $1.

The British s.s. Bramley claims to be the first vessel to unload cargo at Powell River, a new B.C. port, opposite Comox. The captain is reported to have said that there is an excellent harbor, and that in a few years it will be a busy place.

The Canadian Arctic Whaling Co., has been incorporated under the B.C. Companies Act, to own and operate steam and other vessels, to engage in whaling, fishing and various other enterprises.

THE GRAND TRUNK RAILWAY COMPANY OF CANADA.

NOTICE is hereby given that the ordinary half-yearly general meeting of the Grand Trunk Railway Company of Canada will be held at the City Terminus Hotel, Cannon Street, London, E.C., on Monday, the 24th day of October, 1910, at twelve o'clock noon precisely, for the purpose of receiving a report from the directors, and for the transaction of other business of the company.

Notice is also given that the transfer books of the company in London and Montreal will be closed from Friday, the 23rd September, to the day of meeting, both days inclusive.

By order,

ALFRED W. SMITHERS, Chairman,
H. H. NORMAN, Secretary.

Dashwood House, 9 New Broad Street,
London, E.C., 10th September, 1910.

AMALGAMATION NOTICE

Pursuant to Section 361 of the Railway Act, and to the Order of the Board of Railway Commissioners for Canada, No. 11,511, dated September 1st, 1910, notice is hereby given that on the eighteenth day of October, 1910, at ten o'clock in the forenoon, or so soon thereafter as the application can be heard, an application will be made to the said Board, at its office in Ottawa, by the Canadian Northern Railway Company and the Edmonton and Slave Lake Railway Company, for a recommendation to the Governor-General in Council for the sanction of an agreement amalgamating the said companies.

Dated at Toronto this 6th day of September, 1910.

GERARD RUEL,
Solicitor for the said Companies.

The company's offices are to be in Vancouver, and its capital is fixed at $500,000.

While on the Pacific coast, the Dominion Premier is reported to have said that, following a conference with Capt. Nicholson, Manager G.T.P. Steamship Co., the Government would install 15 lights on the northern route, and provide the necessary equipment for the safe and speedy navigation of the waters there.

E. J. Chamberlin, Vice President and General Manager G.T.P.R., is reported to have said, while in Vancouver, recently, in referring to the G.T.P.R. charter of the steamboat Rupert City, that it was felt that a vessel for the exclusive purpose of transporting construction material was needed, and the Rupert City would be used for that purpose until Dec. 15, when the charter expired. The charter might be renewed for another year, but the question of purchase had not been considered.

The London advertising agents of the Canadian Northern Steamships, Ltd., recently sent an item to the press to the effect that the company had decided to enter the Pacific coast trade, and that it was arranging for two passenger vessels of the most modern type for its proposed B.C. Coast Service, which, it was stated, would be inaugurated next May. We have been unable to obtain any confirmation of this, and we are disposed to regard such a statement, as, at least, premature. A prominent Toronto official of the company says that the information quoted is incorrect.

The Balcom Steamship Co., which has recently entered the northern B.C. trade between Victoria and Stewart, is operating three steamboats in the service, and is conducting negotiations for the establishment of a weekly passenger and freight service between Victoria and northern B.C. ports. It is reported that next season the company will have an additional steamship of about 1,200 tons register, having a speed of 14 knots an hour, with accommodation for 200 passengers, brought out from England.

In response to a delegation, comprising members of the Nelson and Revelstoke Boards of Trade, Associated British Columbia Chambers of Commerce, and representatives from the States of Oregon and Washington, regarding the proposed opening of a waterway from the Rockies to the Pacific, part of which passes through Canada, the Premier, said recently, that he considered it the Government's duty to look into the matter, and he would ask the Minister of Public Works to have a survey made from Lake Windermere to the boundary, and determine what was required, and the cost.

Some Thoughts on Training Apprentices.

By P. McLaren, Machinery Expert, Grand Trunk Railway.

Amongst the many questions that give the present day superintendents and master mechanics food for earnest thought and consideration, one which holds a very prominent place, is the technical education and training of apprentices. Having taken considerable interest in this matter, I have ventured to give you some of the impressions received from my study of the subject, both from personal observation and otherwise. The first thing that strikes the student of this subject is that nearly every technical school and machine shop in the country has a different system of education. In fact, there seems to be about as many different conceptions of what a machinist or an engineer ought to know as there are teachers trying to instil that knowledge. Therefore, although not a teacher, I suppose I am in order in giving my humble opinion.

I read somewhere once that the training of a machinist could be placed under three headings. First, cutting metals with intelligence; second, putting together the work out; and third, the laying out and inventing means of doing it. Now, although the first was the only division mentioned as requiring intelligence, I presume that it will be granted that there are degrees of it wanted in the two latter. But the thing which impressed this paragraph more especially upon my mind was the peculiarly broad divisions which were made of the whole education of a machinist.

As I take it, the machinist in his simple form is one who can manipulate the various classes of machines used in the average shop, with sufficient intelligence and understanding to make him a paying investment to his employer. Now, to do this, and do it well, it is not indispensable that he should have any training either in mathematics or drawing. I call to mind just now one of the best workmen I ever knew, one who could not sign his own name, yet in every way he was a thoroughly capable machinist. What he might have been had he had the present-day education I am curious to know. And that is the reason we who take an interest in this matter are so anxious to see some good form of technical education more generally adopted than stands at present.

It has been a great pleasure to me to see how many large corporations on this continent are going so seriously into the matter of education. I must say, however, that I think that several of the conditions under which this education is given by some of these companies are rather against my ideas of what should be. To begin with, I think that compulsory education right through is a mistake, and in many instances a waste of the company's money and the teacher's time and temper, as quite a proportion of the lads in a shop are not gifted with the ability or ambition to make satisfactory students, although they may make good workmen, and are quite content to be machinists and nothing more, which is very satisfactory in its way. As you know, "if we are all skippers, there will be nobody to row the boat ashore." But I would insist upon attendance at classes for the first year apprentice. Then if it is found that the lad has not the necessary mental equipment but is making fair shop progress, I would allow him to drop out of the classes and stick to his work. "You can bring a horse to water, but you cannot make him drink," and it is just as hard to make an apprentice stick to his mathematics and drawing if he has no heart in it. In the case of the lad who is not making good in the shops either, the best thing to do is to drop him, and to advise his parent or guardian to try him at something else.

W. A. James,
Division Engineer of Construction, Canadian Pacific Ry. Western Lines.

Again, I think that all classes should be held in the daytime, for I consider that when a lad has done ten hours solid work in the shops during the day he is not fit either mentally or physically to give his attention to the work at night, unless he is particularly anxious to improve himself. All those present of my generation remember that the way we imbibed our technical knowledge was through the medium of the evening classes, to all of which we went, not only voluntarily, but gladly paying for the same, and therefore we look with somewhat envious eyes on the opportunities which the present-day apprentice has of obtaining a first-class technical education. This is why I say that it is only the lad who is anxious to improve himself who gives his whole attention to the night class. But how much better attention he could give if he were not already bodily and mentally tired, those who have been through the mill know.

It used to be the pride and the pleasure of a mechanic to be able to handle any machine in the shop. With the coming of the specialist, however, this is not so much the case. He should have a fair knowledge of the working of all the various classes of machines, and for this reason in many shops the apprentice is first placed in the machine shop, and if he prove apt at machine work, is kept at it for a time considerably out of all proportion to the time he has to serve, and becomes a good deal of a machine himself. In my opinion, a lad should be sent first of all into the erecting shop for a few months, where, working with a journeyman or an older apprentice, he gets a general idea of where the various parts of the machine or engine go and how they are put together. Thus, when he starts his training in the machine shop, he brings more intelligence to bear on the job which he is machining.

Having arrived in the machine shop, it is of the utmost importance that his career should be closely followed and charted, so that he should, as we said before, get a general knowlege of the various classes of machines. I use the word "general" advisedly, as it is not to be expected that the average lad will become expert on any one machine in the time he can be kept there if he is to get a fair passage through the shop, although, in these days of contract prices and standard times, he is required to give pretty close attention to the work in hand if he is to earn any bonus. Here is where the necessity for charting and following up comes in, as two reasons combine to keep the bright youth stationary in the shop. One is, if he becomes proficient in any one class of work, he finds himself at the end of each month with a good bonus, which he is loth to give up for a problematical one on another or untried machine. In the second place, the foreman who is harassed with the necessity of keeping the other departments going with finished

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

work, finds that he is getting such good results from this particular machine that he just hates to let such a good producer go. But it must be done if this lad is to have his fair chance of training and another to have his chance. Therefore, the necessity of a chart showing the progress of the lad through the department, the time he was at each class of work, and his percentage of marks for progress made during the time he worked on each class or division of machines on which he was employed. These charts, I would say, by the way, should follow the lad from his first start until he becomes a journeyman, when a certified copy of same should be handed to him.

After passing through the machine shop, I would then send the lad to the fitting bench, there to be thoroughly instructed and practised in the arts of chipping and filing, for I consider nothing else is of so much importance to a mechanic as to be able to use his hammer, chisel and file well—an accomplishment which, in these days of air hammers and accurate milling machines, I am afraid is very apt to become obsolete in our large workshops. Of course you must not imagine that I am not aware of the value and profit to the shop in the use of the above-mentioned tools. At present, however, I am talking of the making of the mechanic and not of the making of money. We all assume that when the mechanic is made he represents a good investment, which he surely does, if not to the company which trained him, at least to the country at large.

We must always keep in mind that it is the man of hands and head that we want as a mechanic. The head without the hands is of little value, and while the pneumatic tools and accurate machines are what we want, and must have, to run the shop, still I have seen more time wasted waiting to get a hammer, or the hose, or perhaps to hunt up a special chisel, than would have done the work two or three times over by hand. The same applies to taking a job back to the machine shop to have it eased a bit, while a man who can use a file well would have it finished and up into place in the time that was consumed in carrying it out and back. It is a bit like the Mexican who will spend half an hour to catch a pony to ride half a mile.

During his progress through the fitting shop the lad gets a good insight into the motion work, air brakes, tool-room practice; and a particularly useful school is a spell with the millwrights, after which he may be handed over to the erecting shop foreman as a good, useful member of his staff to complete his time. With regard to patternmakers' apprentices, I would have them serve at least one year in the foundry.

So much for the mechanical part of the training. Let us now look at the theoretical side, where there is room for a great diversity of opinion. With the G.T.R. Co., the first thing a would-be apprentice is required to do is to show that he is physically and mentally equipped, the former being decided by the company's medical officer, while the latter is attended to by an examination held in the master mechanic's office. This examination is usually conducted by the chief clerk, and consists of reading and writing, also a few examples from the first three rules in arithmetic. Having satisfactorily passed these tests, he is eligible for a probationary term of one month in the shops, after which he is indentured as an apprentice. In this indenture he agrees "to attend such classes for instruction in mechanical drawing and practical mechanics as the company may arrange for." These classes have been very successful indeed, and the development of the boys, from year to year, is most satisfactory. The company has been most happy in its choice of instructors, the results obtained being ample evidence of this. The classes extend from Oct. to April inclusive, two per week of two hours each—one in mechanical drawing, the other in practical mechanics. Both are carried out under lines and from books prepared by the company's Chief Draughtsman at Montreal. For the drawing classes, the boys are provided with drawing board and T and set squares. The class of work is very carefully graded according to the year of the apprentice, and the same with the practical mechanics. The first year boys, commencing at addition, proceed by easy stages as far as square root, the second year, in addition, taking levers, pullies, uniform motion, and centrifugal force. Third and fourth year students take extra work to the extent of a thorough grounding in work and horsepower, whilst the fifth, or last year apprentices' studies include properties of metals and a general lot of problems on useful subjects. You will thus see that when a lad has taken in the whole course properly he has got a first-class groundwork, supposing he wishes to qualify himself for the higher positions. At the termination of each year of the lad's time, he goes up for an examination in mechanical drawing and the theory of shop tools and practice. After passing this, he receives his advance in pay. In this examination, the first, second, and third year boys draw from small blue prints, making their drawings either to a full or half size scale as may be required, while the fourth and fifth years are required to sketch from the part of an engine which is brought in from the shop for the purpose, and then lay it down to scale with all the necessary dimensions on. In every instance the drawing is inked in and fully finished. The marks for this examination are divided into three equal divisions: drawing, theory, and practical or shop work. The two former are awarded by the examiner, and the latter by the foreman under whom the lad is working at the time. By these means a fair average of the boy's ability and industry is arrived at.

The system is working very well, and the company is very liberal in its prizes to the most proficient in each year at each centre where the classes are held. At the close of the term, when the examinations are all finished, the boys gaining the highest percentage of marks in each centre are brought together at one point and compete for the company's system prizes of $25 for each subject. By this means a good, healthy rivalry is set up between not only the boys individually as classmates, but also between them and their teachers as representing one centre against the system at large. This gives an added interest to the examinations.

There is still a side of the apprentice question which is not to my idea sufficiently taken care of. His work hours are well looked after and his play hours partially. I expect to be considered Utopian in my ideas, but I am sure that we have always a larger percentage than we give credit for of seriously minded and smart lads who would, if they had the opportunity, make very extensive use in their spare time of what I might term an experimental workshop or laboratory, fitted with several small machines, forge, etc., in which they could try out their many ideas. Which of us has not had the idea at one time or another that he would be another Stephenson if he only had the opportunity to work out his ideas? But it is only given to very few lads to possess even a lathe of his own, and, assuming he has one, he is groping along in the dark, and just for want of a little guidance here or there finds himself at a standstill, and eventually throws the thing up in disgust and drops off into idle habits. Now, if this experimental workshop were placed at the disposal of such for one or one and a half hours two or three nights a week, under the care of a capable instructor—who would also require to be a man of tact and patience—I am sure we would foster the taste for the work to a high extent. I would provide the boy with the raw material at cost price, and have him make his design first, and submit what he proposed to make to the instructor, who, on examining it, would be able to point out the weak spots to the lad or help him over any difficulties in his design. This would teach the lad how to use his brains in designing work and make him much more useful in the shops in the way of reading and understanding any drawings he might be called upon to work from. The opportunity to do drawing alone would be of no use unless he could manufacture the model and see it going for himself, because he would not be quite satisfied that what was told him was right until he had encountered the practical difficulties in the making. Besides this he would be able to gratify his desire to make things in a legitimate way, instead of, as we all have seen, dodging the foreman whilst doing a bit of private work, which he has to smuggle out of the gate under his coat, and feel mean and lose his self-respect in so doing.

The foregoing paper was written for presentation before the Canadian Railway Club.

Duluth, South Shore and Atlantic Ry.

The report for the year ended June 30, shows the following results, as compared with those of the previous year:

Railway operations:	1910.	1909.
Operating revenue	$3,302,147.03	$2,719,337.86
Operating expenses	2,269,247.84	1,979,518.07
Net oper. rev'e.	$1,032,899.19	$ 739.819.79
Outside operations:		
Revenue	$ 69,942.62	$ 66,248.97
Expenses	61,351.79	58,382.76
Net revenue	$ 8,590.83	$ 7,866.21
Total net revenue	$1,041,490.02	$ 747,686.00
Taxes accrued	225,917.63	203,599.70
Operating income	$ 815,572.39	$ 544,086.30
Other income	61,322.44	146,208.67
Gross income	$ 876,894.83	$ 690,294.97
Int. on bonds	$ 876,219.17	$ 862,805.00
Other deductions	352,390.62	28,936.81
Total deductions	$1,228,609.79	$ 891,741.81
Net loss	$ 351,714.96	$ 201,446.84

The general balance sheet shows assets of $49,270,144.66, and liabilities of $52,880,840.84. The charges to additions and betterments during the year were $381.401.12, including additions to rolling stock, which covered three locomotives, 400 box cars, 310 ore cars, five charcoal cars, two cabooses, one boarding car, and air brake equipment. The rolling stock owned by the company includes 85 locomotives, 65 passenger cars, 3,092 freight cars, and 93 miscellaneous cars. The company, which is controlled by the C.P.R., owns 517.44 miles of main line, 67.54 miles of branch lines, and has trackage rights over 20.83 miles of other companies' lines.

There were 3,695,469 tons of freight carried during the year, with an average of $3.546.91 per mile of road, and $1.9659 per train mile, and 719.169 passengers were carried, with an average of $1,850.65 per mile of road, and $1,225.18 per train mile.

The first locomotive taken by the C.P.R. to Winnipeg—the Countess of Dufferin—now restored to its original condition, has been placed on a pedestal in the William Whyte park, opposite the C.P.R. station on Higgins Ave., Winnipeg. An illustration, and some notes as to the history of the locomotive have already appeared in our columns. A tablet is to be affixed to the pedestal and it suggested that the names of the crew of the first train be recorded on it. They are Geo. Lindoff, engineer; Harry Redpath, fireman; Jas. Doig, conductor; Jas. Trotten, assistant conductor; Robt. Kirkruff and Wm. Thorton, brakemen. The latter is the only one now resident in Winnipeg.

Improvements in Locomotive Boilers.

By H. H. Vaughan, Assistant to the Vice President Canadian Pacific Ry.

(CONTINUED FROM OCTOBER ISSUE.)

B.—Boilers with water tubes.—Steam superheaters and valve gear for superheated steam.—Feed water heaters.

WATER TUBES.—None of the replies received indicate that any water tube boilers are in use.

STEAM SUPERHEATERS.—The replies received from the various administrations with respect to the use of superheated steam are extremely meagre and with one exception those roads which have equipped engines with superheating appliances have done so as an experiment only. The C.P.R. has, however, adopted it extensively and has at present about 475 engines using superheated steam. In 1901 this road applied a Schmidt smoke-box superheater to an 18 by 24 in. cylinder, 4-6-0, freight engine with 62 in. wheels, and the results obtained from this experiment being satisfactory, two years later, two 4-6-0 compound freight engines were equipped with superheaters of the Schmidt smoke tube type. These engines also showed a substantial economy over similar engines without superheaters, and in 1904, 41 simple 2-8-0 freight engines were constructed, 20 of which were equipped with Schmidt smoke tube type of superheater and 21 with the Cole superheater of the Field tube type. The Cole superheaters did not prove satisfactory and were removed after about a year's service, but the engines with the Schmidt smoke tube superheaters were entirely successful and during their first six months service showed a saving of 18% in fuel compared to compound 2-8-0 engines of a similar though slightly smaller type which had been constructed two years previously. This economy was not entirely due to the use of superheated steam, as the compounds were not in as good condition as the newer engines, but it was regarded as showing that the superheated steam engines were more efficient, and that they could with economy be used in place of compound engines which had proved expensive to maintain.

Following these engines the C.P.R. constructed fifty 4-6-0 simple freight engines, 10 of which were equipped with the Schmidt smoke tube, 30 with the Cole return bend smoke tube and 10 with Vaughan-Horsey smoke tube superheater, which is a design developed on that road. Since that time, with the exception of 25 engines equipped with the Cole return bend superheater, all new freight and passenger engines constructed have been equipped with the Vaughan-Horsey smoke tube superheater and 55 engines with the Cole return bend design have also been converted to that type. In addition this superheater has been applied to twelve 4-6-0 simple passenger engines and one 4-4-2 passenger engine. A list of the engines now equipped is as follows:

Number.	Type.	Cylinders.	Driving wheels.	Boiler pressure.	Weight on drivers.	Total Weight	Type of superheater.
1	4-6-0	18×24	62. inches.	180	95,425	119,225	Schmidt Smoke Box.
1	4-6-0	22 and 35×26	63 "	200	128,000	169,000	" " Tube.
1	4-6-0	22 and 35×30	63 "	200	147,075	192,150	" " "
10	4-6-0	21×28	63 "	200	141,000	190,000	" " "
105	4-6-0	21×28	63 "	200	141,000	190,000	Vaughan-Horsey.
115	4-6-0	22½×28	63 "	180	141,000	190,000	" "
12	4-6-0	20×26	69 "	200	129,450	166,000	" "
1	4-4-2	20×26	84 "	200	97,310	170,250	" "
17	4-6-2	21×28	75 "	200	139,000	212,600	" "
83	4-6-2	21×28	69 "	200	139,300	214,300	" "
20	2-8-0	21×28	57 "	200	168,150	192,350	Schmidt Smoke Tubes
110	2-8-0	22½×28	57 "	180	171,900	195,500	Vaughan-Horsey.

The results obtained have been on the whole exceedingly satisfactory. Figures derived from extensive service on all sections of the road, and based on the total quantity of fuel delivered to the engines have shown an economy in fuel of from 10 to 15% in passenger service.

A noticeable difference between simple engines using superheated steam and two cylinder compound engines using saturated steam is also found in the greater flexibility of the simple engine. Under conditions favorable to the compound engine when it is working on a level road or otherwise uniformly worked at slow or moderate speeds, its efficiency is equal or but slightly below that of the superheater engine, but when on a undulating road or when worked at high speeds the economy of the superheater engine is decidely superior. No opportunity exists on the C.P.R. of comparing simple superheater steam engines with four cylinder compound engines in passenger service, but as compared with simple saturated steam engines, in addition to the economy above mentioned, superheated steam engines of identical design develop at least 10% greater sustained power and also run more freely and faster.

The figures for economy given above are not for the purpose of showing the best results that have been obtained, but rather a conservative estimate of the average saving that has been effected on a large number of engines working under average conditions, and on which no effort was made to obtain good results from engines using superheated steam rather than from other engines and it is fairly representative of the saving that may be expected.

Experiments to determine the amount of superheat obtained show that with the Schmidt superheater on a 2-8-0 freight engine, having a boiler pressure of 200 lbs. per square inch corresponding to a temperature of 388 deg. Fahr., the temperature of the steam in the steam chest averaged from 440 deg. Fahr., to 480 deg. Fahr., according to the way in which the engine was worked, the higher temperature occurring when the engine was worked to a greater capacity.

Tests of the Vaughan-Horsey superheater in passenger service with the same boiler pressure showed an average temperature in the steam chest of 540 deg. Fahr., averaging from 520 deg. Fahr., to 560 deg. Fahr., according to the way in which the engine was worked

and in some instances a temperature of 580 deg. Fahr., was slightly exceeded. The Vaughan-Horsey superheater in freight service showed a temperature in the steam chest of 500 deg. Fahr., averaging from 480 deg. Fahr., to 520 deg. Fahr., according to the working of the engine. Experiments that have been made appeared to show that with this style of superheater a rather higher degree of superheat is obtained with a corresponding number of superheater tubes than with the Schmidt superheater, probably due to the form and arrrangement of the headers, but it has been found that no increase in the temperature of the superheated steam is obtained when four superheater pipes are included in one element, or in other words, when the steam is caused to travel through four superheater pipes in its passage from the superheated steam header to the saturated steam header. With the Schmidt superheater, this increase takes place and the superheat obtained is practically the same as with the Vaughan-Horsey arrangement.

Fourteen administrations in the U.S. have experimented with engines using superheated steam, the number of engines reported being 70 in all. The majority of these are equipped with the Vauclain superheater which is somewhat similar to the Schmidt smokebox superheater, with the exception that the large flue used in the latter design by which a high temperature is obtained in the superheater is not used. Information is not available as to the actual result obtained by this superheater, but the tests reported would indicate that the temperature of the steam in the steam chest is from 25 deg. to 40 deg. Fahr.; above that corresponding to the pressure of the steam in the boiler. This test also showed a saving in coal consumption of 11% as compared to a corresponding simple engine. Results reported by other administrations using superheaters of the Schmidt or Cole return bend type are universally favorable to a more extensive use of this device.

Accurate figures are not obtainable but the saving reported in fuel varies from 10 to 28% as compared to corresponding simple engines. Neglecting the extreme figures given it would appear that the experience on these roads very well confirms the average results reported for the C.P.R.

An extensive series of tests was conducted at Purdue University by Prof. Goss for the Carnegie Institute, Washington, D.C., the results of which were presented by him in a paper read before the American Railway Master Mechanics Association in 1909. The economy in fuel obtained with a temperature of the superheated steam of about 150 deg. Fahr., above that corresponding to saturated steam at the boiler pressure averaged from 10 to 15%, and deductions were drawn to show that with a boiler pressure of 180 lbs. per square inch and steam superheated 200 deg. a saving of 19% should be anticipated. This report was criticised at the convention as possibly under-estimating the saving that could be obtained. In the first place, on account of the boiler of the engine on the testing plant being comparatively small, the application of a smoke tube type of superheater reduced the amount of evaporating surface to a greater extent than is the case when the same apparatus is applied to a larger boiler. In the second place the comparisons at high pressures were made against the saturated steam engine under testing plant conditions in which steam leaks of every description were as far as possible eliminated thus obtaining better results on the high pressure saturated steam engine than would be possible in actual service. The results obtained on the testing plant, were also compared upon the basis of equal rates of evaporation,

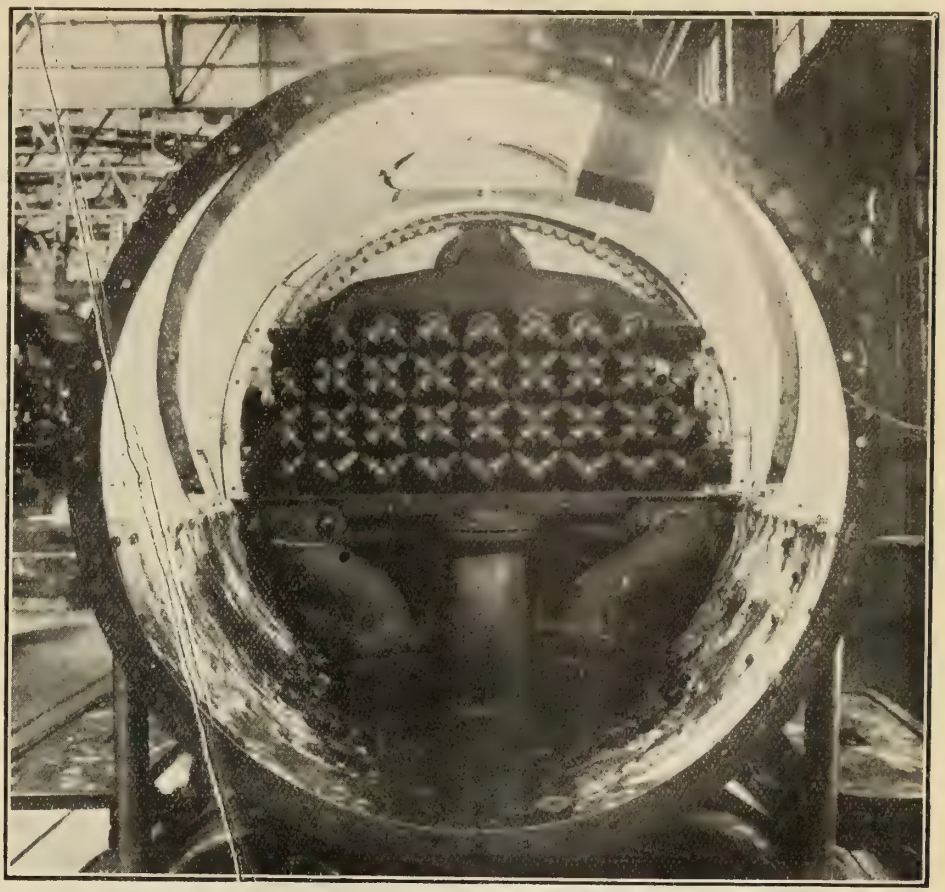

Fig. 41.

while under service conditions, in which an engine using superheated steam is worked in comparison with one using saturated, the comparisons are actually referred to equal amounts of power developed. This leads to two possible explanations of the greater economy reported in road service than that obtained in a testing plant. The first is that whereas with the smoke tube type of superheater, in which steam of a greater thermal value is delivered to the engine, and a portion of the products of combustion are ejected at the front end of the boiler at a higher temperature than would be the case in an engine using saturated steam, it would be expected that the economy in water consumption would be greater than that in fuel, it is universally reported that actual experience shows the reverse. This would at first appear contradictory but consideration will show that as the efficiency of the boiler varies with the rate at which it is worked, any saving in the steam consumption will lead not only to a corresponding saving in fuel consumption, but to a greater saving, in proportion to the decrease in the rate of combustion. Thus, assuming a decrease in the steam consumption when an engine is exerting a given amount of power of 20% and neglecting the difference in the evaporative efficiency of a boiler delivering superheated steam from one delivering saturated steam, a decrease of 20% in the steam evaporated will lead to a decrease in the coal consumed of from 25 to 30%, on account of the lower rate of combustion and the more efficient transfer of the heat from the products of combustion to the water in the boiler. This increase in efficiency is evidently more than sufficient to balance the decreased efficiency of the superheated steam boiler as compared to the ordinary boiler, and the anomaly of the greater saving in coal than in water is thus explained. In the second place any cause leading to a reduction in the demand on the fireman enables him to fire more carefully and by doing so obtain better results than when his energies are over-taxed. On a test plant this condition does not exist as the firing is uniformly performed with the greatest care in order to obtain comparative results, but in road service the reduced consumption of steam of a superheater engine may lead to a greater economy than anticipated owing to more economical firing.

The general experience in Canada and the U.S. therefore with regard to the use of superheated steam may be summarized by the statement that a substantial economy in coal has been effected, that on account of conditions this economy is not as great in freight service as in passenger service, and in the latter a considerable benefit is obtained from the increase in the capacity of the engine. As against this advantage there are two possible disadvantages, viz., an increase either in the cost of maintenance or in the number of failures or breakdowns on engines when hauling trains.

With reference to the cost of maintenance no figures are available except on the C.P.R. and on this road comparisons are made difficult, by the fact that for some years previous to the introduction of the simple engine using superheated steam, the engines constructed had been of the two cylinder compound type which have proved exceedingly expensive to maintain. It is therefore impossible to present accurate figures comparing an ordinary simple engine with those of a corresponding type using superheated steam, but it may be stated, that a careful study of the cost of repairs on this road shows that the cost of maintenance of superheaters is little, if any greater than that which would be expected from an ordinary engine. The addition of any de-

vice of this nature must necessarily entail some increased cost of maintenance. This additional cost would be offset to a certain extent, or possibly entirely by the elimination of the damage occasionally caused by the presence of water in the cylinders, and the engines have, on the whole, proven exceedingly economical in maintenance, and it is not felt that in this respect the addition of a superheater is likely to prove at all serious.

The increase in engine failures on account of the application of a superheater was at first very small. As the number of engines in service increased, it became more serious, which led to steps being taken to remedy such trouble as developed, and during the last year or more, difficulties have been almost entirely overcome. Most of the troubles occurred through leaking at the connection of the superheater pipes to the headers. This developed on both the Schmidt and the Vaughan-Horsey types, but especially with the latter. With the Schmidt superheater, leaks would occasionally develop between the flanges into which the superheater pipes are expanded and the face of the header; if neglected, and experience showed that these leaks might easily be neglected as they did not appear to at first affect the steaming quality of the engine, the face of the header became eroded and the work of remaking the joints would be rendered difficult and expensive. This difficulty was entirely overcome by the fastening of each flange to the header by four studs in place of the clips used in the original design, and with this alteration the trouble from leakage at this point has practically disappeared. In the Vaughan-Horsey superheater, considerable trouble has occurred through the nuts getting slack, which connect the superheater pipes to the header fittings. This was found to be largely due to their not being of a sufficiently good fit, and has been overcome by better workmanship, a heavier design of nut, and the application of a simple type of lock nut which prevents any movement taking place.

Both designs of superheater are liable to one other and very annoying trouble, the occasional burning out of the return bends which connect the superheater pipes to the fire-box end. This is caused entirely by not properly maintaining the dampers which prevent the heated gases passing through the superheater tubes when steam is not being used by the engine and the superheater pipes are empty. The difficulty does not develop immediately, and if the dampers are not kept in proper operating condition, some time may elapse before any effect is shown. When the failure of a return bend occurs the superheater pipes or return bends are found to have been badly damaged by exposure to high temperature for a considerable length of time. The remedy for this class of failure is of course the proper maintenance of the dampers, and this in turn is largely affected by their proper design, so that it is important that they be arranged so as to work properly, and the possibility of their binding or becoming stuck in an open or shut position must as far as possible be avoided.

Reference has been made to various designs of superheater. The Schmidt smoke box and smoke tube superheaters used in the U.S. and Canada are of practically the same design as those which have been extensively used in Europe. The Cole superheaters are not now used, but have been superseded by a design of smoke tube superheater which has recently been developed by the American Locomotive Co., and is illustrated in figs. 40 and 41. The superheated and saturated steam headers are arranged on either side of the smoke-box and the

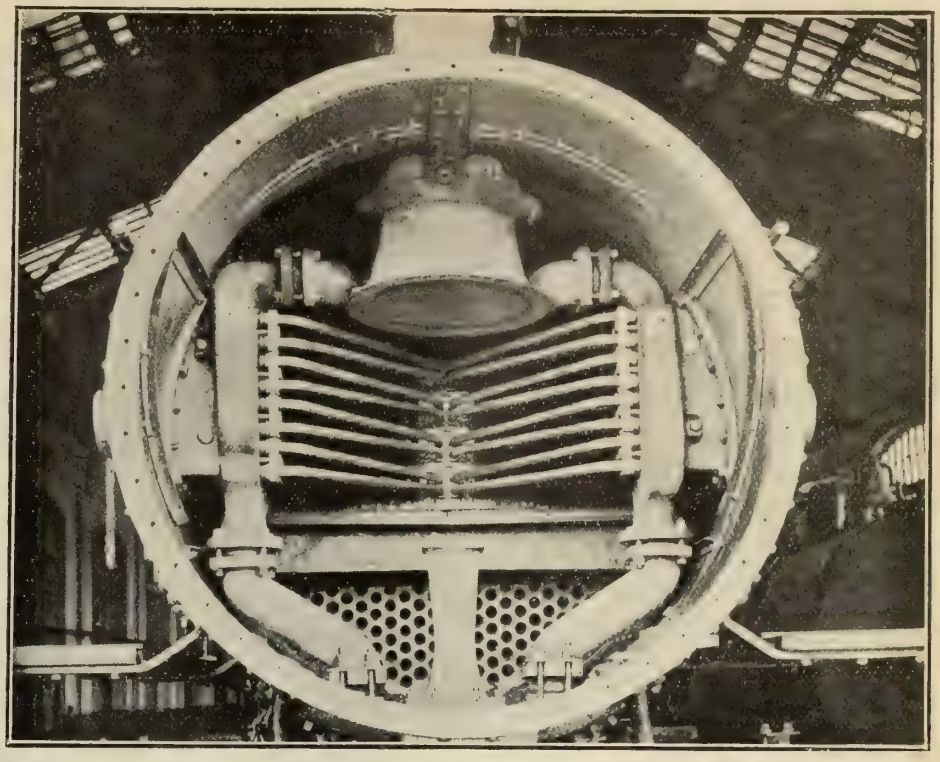

Fig. 42.

superheater pipes are bent to these headers, the connections being made by ground rings having a flat face on one side and a spherical face on the other, similar to those used for making steam pipe joints in American practice. The superheater pipes pass through a diaphragm plate in the front of the tube sheet, and small malleable iron fittings are used to fill up the spaces around the tubes and support the popes where they pass through the diaphragm plate. The arrangement of this superheater is clearly shown in the drawing, and does not call for any explanation. It has been applied, or is being applied, to 25 engines on 10 different railways and should apparently prove entirely successful, as it combines the requirements of flexibility in the superheater pipes to allow of expansion, together with ease of accessibility to the joints and superheater pipes.

The Vaughan-Horsey superheater which has been referred to, is illustrated in figs. 42 and 43. In this superheater, the headers are placed directly in front of the tube sheet, and each header is provided with a number of sub-headers. The sub-headers attached to the saturated and superheated steam headers respectively being disposed alternately in vertical rows. To each sub-header superheater pipes are connected, passing through the superheater tubes on each side of the sub-header, while the connections between the superheater pipes and the sub-headers are made by union nuts and fittings, shown in detail in fig. 44. It will be seen that these two designs of superheaters, the American Locomotive Co.'s and the Vaughan-Horsey, are in many respects similar to the Schmidt smoke tube superheater, but vary from it in the design and arrangement of the headers and superheating pipe connections.

In American practice, no advantage is gained by exposing the ends of the large superheater tubes at the smoke-box end, for the purpose of cleaning, as tubes are invariably cleaned from the fire-box end, and the chief objects desired have been found to be ease of accessibility to the joints between the superheater pipes and the headers for the purpose of inspection and tightening of joints, and the possibility of removing one element or pair of superheater pipes without disturbing any others.

With the later design of Schmidt smoke tube superheater, this can easily be effected, but with the earlier designs the removal of one element of superheater pipes from one of the top rows of superheater tubes, necessitated the removal of two or three sets of joints, and possibly loosening and disturbing others. With the short time available for repairs on engines in America, on account of the large amount of mileage they are expected to make, any device causing delays at terminals for repairs is strongly objected to. With the Vaughan-Horsey type of superheater, any pair of superheater tubes may be easily removed without disturbing others, and this advantage is also found to an almost equal extent in the American Locomotive Co.'s superheater. In both cases also, if superheater pipes are defective they can be removed and blank joints applied to the headers in their place, and the pipes replaced at the first convenient opportunity.

With the exception of the original engine referred to as having been equipped with the Schmidt smoke-box superheater all engines equipped with superheaters in the U.S. and Canada have used the ordinary type of piston packing, piston rod packing, piston valve and piston valve packing rings, commonly used in the U.S. for saturated steam. The practice varies slightly on different roads but fig. 45 shows the design of these various details used on the C.P.R., which may be accepted as fairly representative. The only detail in which any difficulty is experienced is with the packing rings in the piston. These are found to wear considerably more quickly in engines using superheated steam than in those using ordinary saturated steam, the average life in the former case being about two months against eight to ten months in the latter. It is not due to any absence of lubrication as the cylinders and pistons when examined appear to be thoroughly well lubricated and it is affected considerably by the

Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending the skidding sheaves. They are hung from a vertically hinged jib or triangle the outer end of which is guyed by two lines, one on each side, which are power tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading.

The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from the tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines with stiff or swinging boom. Constructed entirely of steel, except loading boom.

IS WITHOUT QUESTION THE STRONGEST AND FASTEST MACHINE OF THE DAY

LOGGING CARS AND DUMP CARS

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

quality of the material used in the rings. If the latter are of hard, close-grained cast iron considerably better service is obtained, but the wear becomes exceedingly rapid if the quality of the iron is soft, and this is noticeable to a greater extent than in engines using saturated steam.

It has been found that the best lubrication is obtained by the use of an ordinary type of sight feed lubricator in which the oil is carried into the cylinder and steam chest by a small jet of steam. A number of lubricators of the forced feed or pump type have been used, but have not on the whole given good satisfaction. The rate at which they feed the oil does not correspond to the requirements, as it is in proportion to the number of revolutions of the engine, in place of a uniform rate per minute, whereas the greatest amount of lubrication is required per minute when the engine is working slowly up heavy grades at a small number of revolutions. The sight feed lubricator is quickly and easily adjusted to give an increased amount of oil per minute, but under these conditions pump feed lubricators work exceedingly slowly and require constant adjustment to deliver proper amount of oil. On account also of the loss of pressure in the steam passing through the superheater, there is always a sufficient difference in the pressure between the boiler and the steam chest to ensure a regular amount of oil being fed to the cylinders with the sight feed lubricator, so that it has given more satisfactory results on superheater engines than on those using saturated steam, in which the steam chest pressure is frequently very closely equal to that of the boiler.

The packing for piston rods and valve stems shown in these illustrations is to a certain extent special in form. The type of packing previously used, in which a plastic ring of metal was pressed into a cone shaped collar fitting over the rod, proved at first unsatisfactory when using superheated steam on account of the melting point of the plastic metal used not being sufficiently high. Subsequent experiments have, however, shown that when the latter contains approximately 40% of lead, 50% of copper, and 1% tin, this form of packing gives satisfactory results. In general, no special difficulty has been experienced with forms of packing successful on saturated steam engines, except the occasional necessity of using a metal having a higher melting point.

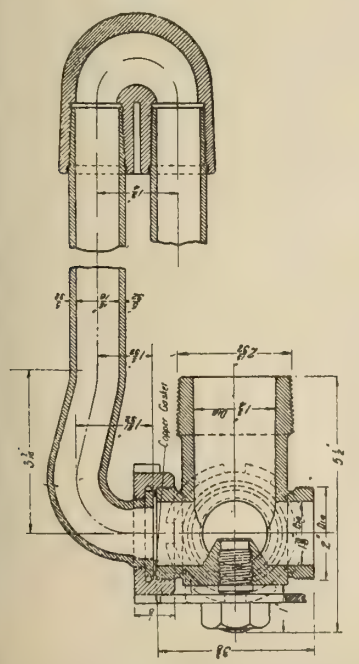

Fig. 44.

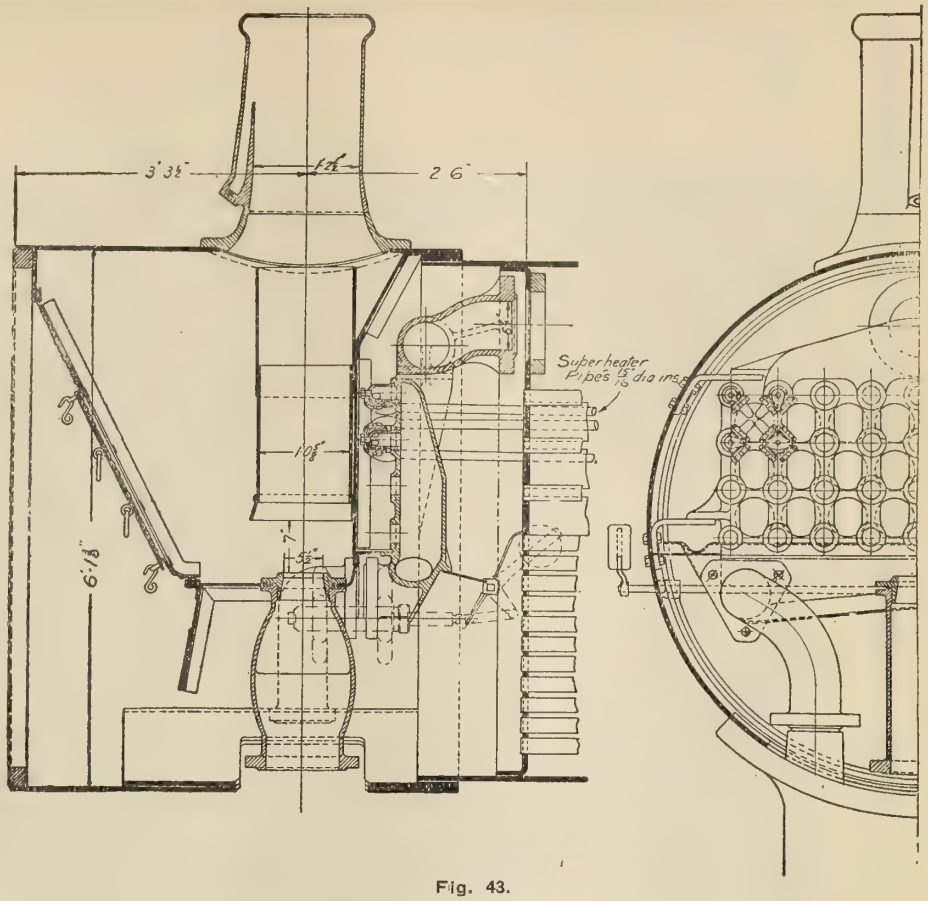

Fig. 43.

FEED WATER HEATERS have only been used to a slight extent, in an experimental way. No information has been furnished by any of the administrations replying with reference to the results obtained, and your reporter is therefore unable to present any information with reference to them. The saving in fuel consumption is, as is well known, 10% for every 10 deg. Fahr. increase in temperature of the water passing through the heater, and some economy has been obtained on certain roads by passing the exhaust from the air pump into the tender. This practice has proved satisfactory, with the exception that the enginemen are obliged to watch the temperature of the water in the tender closely in order to prevent its becoming too hot to be lifted by the injectors. Roads using this practice frequently use the non-lifting type of injector which will work when the water is at a temperature of 130 deg. Fahr.

Lake Superior Corporation.

The report of the Lake Superior Corporation for the year ended June 30, states that the result of the year's operations of all the subsidiary companies shows a surplus, subject to depreciation and other charges, of $1,194,735.22, which has been applied as follows: Losses on assets realized and bad and doubtful debts written off, $159,031.49; written off in respect of discount on securities sold, $160,000; reserved for renewals, doubtful debts, etc., $90,232.54; to be paid to the trustee of the mortgage and deed of trust securing the note issue of the Lake Superior Iron and Steel Co., as a sinking fund for the payment of notes at maturity, in accordance with the provisions of the deed of trust, $220,752.27; paid by the subsidiary companies to the Lake Superior Corporation as interest and dividends, $564,718.92. The directors have given special attention to the accounts of the subsidiary companies with a view of clearing up all outstanding accounts, many of which extend over a period of several years, and should have been attended to before. They have also similarly given attention to the investigation of the assets of the subsidiary companies, and the auditors say: "Large sums have been written off for losses found to exist in inventories of material, etc. . . . . Taken as a whole, we think there has been an earnest endeavor to clear up a large number of matters which should have been cleared up years ago." In consideration of the present position of the company's affairs, and the future prospects, the directors have felt justified

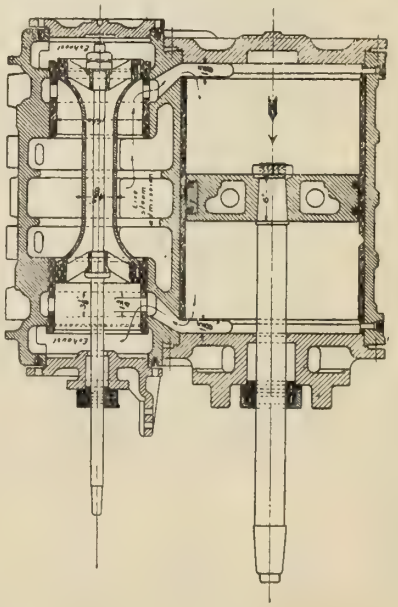

Fig. 45.

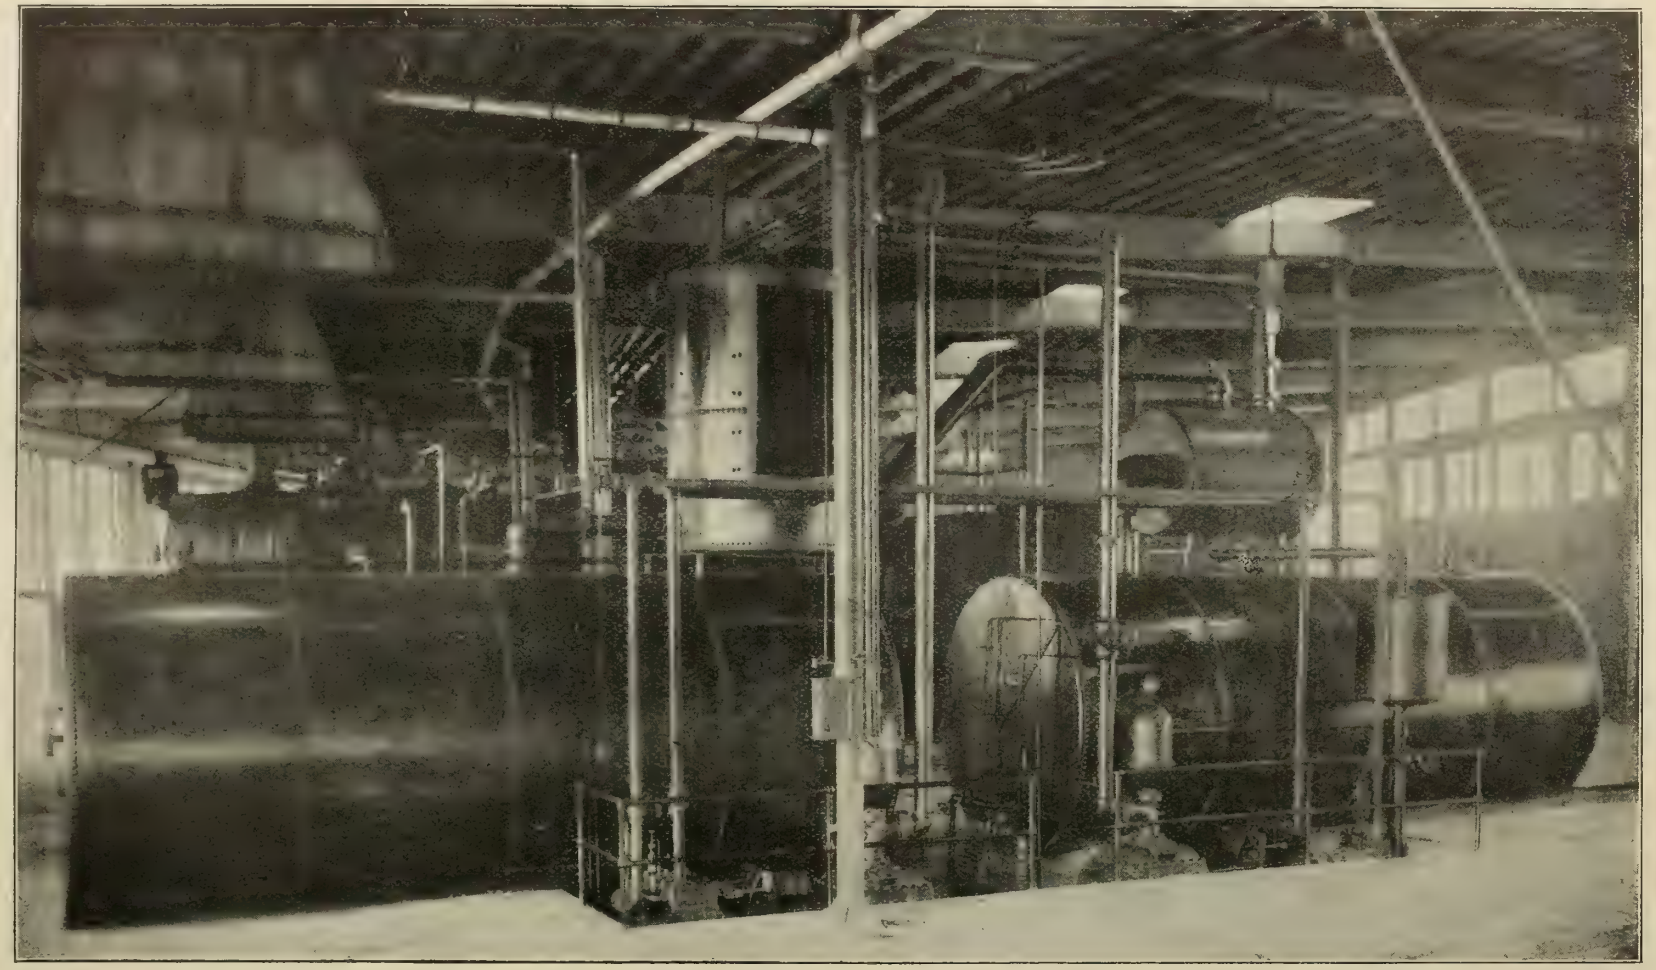
NATIONAL



NATIONAL

NATIONAL BOILER WASHING SYSTEM

installed at the

ROUNDHOUSE OF THE CHICAGO & EASTERN ILLINOIS R.R.

DANVILLE, ILL., U.S.A.

This system saves 900 hours boiler washing labor, 537,600 lbs. of coal, 1,024,000 gallons water and 2,048 engine hours per month. Engine hours saved equals three engines per day, filling water averages 190°. This system saves and utilizes the heat units blown out of locomotive boilers and reduces trouble of leaking flues, cracked side sheets and broken staybolts. Washing water automatically maintained 140°. Estimates and blueprints furnished upon request.

The National Boiler Washing Company, Limited, Montreal

in paying interest on the income bonds at the rate of 2½% out of the surplus earnings of the corporation. The output of steel rails was 201,615 tons against 158,465 in the year ended June 30, 1909.

Referring particularly to the corporation's transportation interests, the directors say:

"THE ALGOMA CENTRAL AND HUDSON BAY RY'S earnings for the year have increased, and show an excess over the previous year. The operation of this railway has been conducted under similar conditions to those prevailing during the preceding year. On the assurances tendered to the Dominion and Ontario Governments, the railway legislation affecting this company was, last session, put on a satisfactory footing, to the extent that its land grants and subsidies were renewed, and the company is now proceeding with the construction of its road to a junction with the C.P.R. The complete project, and the entire financial proposals involved in the building of the railway were laid before the stockholders of the corporation, and the scheme was unanimously approved by them, in its entirety, at a meeting held May 6. Towards the end of the financial year the company brought into service a new steamship, especially built for the purpose of carrying steel rails, and the operation of this vessel should add to the company's earnings.

"MANITOULIN AND NORTH SHORE RY.—The operations of this railway for the year have resulted in a material increase. The extension of the road to Crean Hill was duly completed on the schedule date, and on July 20 last the company commenced carrying ore from that point. The entire construction of this line to Manitoulin Island is, at the moment, receiving consideration, and in accordance with our understanding with the Ontario Government, construction is being proceeded with from Little Current towards the C.P.R.

"THE INTERNATIONAL TRANSIT CO. AND THE TRANS-ST. MARY'S TRACTION CO. own and operate the street railways on the Canadian and the U.S. sides, respectively, of the St. Mary's River, and the International Transit Co. owns and operates the ferry across the river. During the year the directors have been able to place the finances of both companies on a satisfactory footing, and the outlook, in consequence, is hopeful. The result of the year's operations shows increased earnings for all branches of operation."

At the annual meeting held in Camden, N.J., Oct. 5, the report was adopted and the retiring directors re-elected. Following are the officers and directors for the current year: President, T. J. Drummond, Montreal; Vice Presidents, J. T. Lea, Philadelphia, Pa.; J. F. Taylor, Toronto; W. K. Whigham, London, Eng.; Secretary-Treasurer, T. Gibson, Toronto; other directors, H. M. Price, Quebec; H. Coppell, J. S. Dale, J. T. Terry, New York; F. McOwen, Philadelphia, Pa.; L. N. Lovell, Plainfield, N.J.

Intercolonial Ry. Operations.—We are advised, in respect to the proposed changes in the operation of the eastern division, by which a portion of the existing line would be cut out, and the traffic operated over the 20 miles from Blackville to Chatham Jct., that the matter has been discussed, but nothing has been decided.

The Ontario Railway and Municipal Board has confirmed the assessment made by the Sault Ste. Marie, Ont., town council on the C.P.R. property in the town. The assessment was fixed in 1905 at $50,000 for five years, and that term having expired, the town put a value of $128,000 on the property.

November Birthdays.

Many happy returns of the day to—

J. O. Apps, General Baggage Agent C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

A. B. Atwater, Assistant to President, lines west of Detroit and St. Clair Rivers, G.T.R., Detroit, Mich., born at Sheffield, Ohio, Nov., 1845.

W. F. Brougham, Local Right-of-Way and Lease Agent C.P.R., Vancouver, B.C., born in Westmoreland, Eng., Nov. 25, 1865.

G. B. Burchell, General Manager Maritime Coal, Ry. and Power Co., Joggins Mines, N.S., born at Sydney, N.S., Nov. 1, 1877.

J. R. Cameron, General Superintendent Canadian Northern Ry., Winnipeg, born at Truro, N.S., Nov. 5, 1865.

L. D. Chetham, City Ticket Agent C.P.R. and District Passenger Agent Esquimalt and Nanaimo Ry., Victoria, born at Matlock, Eng., Nov. 5, 1869.

F. H. Clendenning, Assistant General Freight Agent C.P.R., Pacific Division, Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, acting General Superintendent Kingston and Pembroke Ry., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Crighton, Advertising Agent Intercolonial Ry., Moncton, N.B., born at Derby, Eng., Nov. 9, 1871.

W. Cuthbert, Fuel and Tie Agent G.T.R., Montreal, born at Longueuil, Que., Nov. 9, 1856.

W. Downie, General Superintendent C.P.R. Atlantic Division, St. John, N.B., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, Jr., Manager Canadian Pacific Car and Passenger Transfer Co., Prescott, Ont., born at Spencerville, Ont., Nov. 14, 1872.

R. L. Fairbairn, District Passenger Agent Canadian Northern Ry., Saskatoon, Sask., born at Stillwater, Minn., Nov. 24, 1880.

Grant Hall, Superintendent Motive Power and Car Department, C.P.R. Western Lines, Winnipeg, born at Montreal, Nov., 1863.

C. R. Hosmer, director C.P.R., born at Coteau Landing, Que., Nov. 12, 1851.

J. McGillivray, Superintendent Inverness Ry. and Coal Co.'s lines, Inverness, N.S., born at Nairn, Scotland, Nov. 13, 1867.

T. E. Martin, Local Freight Agent C.P.R., Quebec, Que., born at Beauharnois, Que., Nov. 23, 1852.

C. Murphy, General Superintendent of Transportation Eastern Lines, C.P.R., Montreal, born at Prescott, Ont., Nov. 20, 1865.

F. Nicholls, Vice President Toronto Ry., director Canadian Northern Ry., born in England, Nov. 23, 1856.

H. P. Sharpe, General Agent Dominion Express Co., Toronto, born at Brockville, Ont., Nov. 24, 1864.

G. H. Shaw, Traffic Manager Canadian Northern Ry., Winnipeg, born at Smith's Falls, Ont., Nov. 25, 1859.

J. S. Sheppard, Contracting Freight Agent C.N.R., Winnipeg, born at Teeswater, Ont., Nov. 27, 1881.

F. M. Spaidal, General Superintendent Canadian Northern Quebec Ry., and Quebec and Lake St. John Ry., Quebec, born at Gananoque, Ont., Nov. 13, 1858.

J. Sparks, Assistant General Baggage Agent C.P.R. Western Lines, Winnipeg, born in London, Eng., Nov. 25, 1874.

H. P. Timmerman, Industrial Commissioner C.P.R. Eastern Lines, Montreal, born at Odessa, Ont., Nov. 6, 1856.

H. E. Whittenberger, Superintendent Eastern Division G.T.R., Montreal, born at Peru, Ind., Nov. 9, 1864.

Minneapolis, St. Paul and Sault Ste. Marie Ry.

The report for the year ended June 30, shows gross earnings, $24,335,403.98; operating expenses, $14,014,269.81; net earnings, $10,321,134.17. The other earnings, $921,283.34, brought the income up to $11,242,417.51, out of which was met the fixed charges, taxes, etc., $6,004,830.59, leaving $5,237,586.92 surplus. The accounts of the M., St. P. and S.S.M. R., together with the various statistical tables, are shown separately from those of the Wisconsin Central Ry., which is operated as the Chicago Division. During the year the company acquired the Cuyuna Iron Range Ry., 37 miles, connecting with the main line at Lawler, Minn., on the new Bemidji and Cass Lake Division, paying for it out of the proceeds of the issue of $2,200,000 of first consolidated mortgage bonds. The Wisconsin Central Ry. for years owned and operated the Abbotsford and Northeastern Rd., 15.16 miles, and this was on Jan. 29 amalgamated with the W.C.R., the entire stock and bond issue being retired. The W.C.R. terminal property in St. Paul and Minneapolis has been sold to the Chicago Great-Western Rd., and the business is now handled through the Sault line terminals under a 99-year lease. So far as can be ascertained, the directors state, the consolidation of management of the two lines brought about by the lease of April 1, 1909, will be highly beneficial. The full benefit of the consolidation will be more apparent when the several lines entering Duluth are in operation.

The general balance sheet shows assets of $109,315,706.06 to the credit of the M., St. P. and S.S.M.R., with liabilities of $98,977,680.49, leaving $10,338,025.57 at the credit of profit and loss account; and assets of $71,499,642.08 to the credit of the W.C.R., with liabilities of $69,252,806.67, leaving $2,246,835.41 to the credit of profit and loss account.

The Wisconsin Central Ry. owns 986.67 of main lines, has 90.91 miles of trackage rights over the lines of other companies, and 402.66 miles of side tracks and spurs, making altogether 1,480.24 miles of line over which its trains are operated. The Minneapolis, St. Paul and Sault Ste. Marie Ry. owns 2,476.15 miles of main and spur lines, and has trackage rights over 18.94 miles of other companies' lines. Adding to these figures the net mileage of the W.C.R. (1,037.96 miles), the company operates its trains over 3,533.06 miles of track. The 83.37 miles of track land on the Bemidji-Cass Lake line, and the Cuyuna Iron Range Rd. are not included in the figures given.

It was reported at the annual meeting, at which the retiring directors were re-elected, that an issue of $3,600,000 of 4% bonds had been sold.

Following are the officers and directors for the current year: President, E. Pennington; Vice President and Traffic Manager, W. L. Martin; other directors, W. D. Washburn, C. H. Pettit, H. Lowry, A. H. Bright, G. R. Newell, all of whom are at Minneapolis; E. A. Young, St. Paul; Sir Thos. G. Shaughnessy, R. B. Angus, I. G. Ogden, Montreal; Treasurer, C. F. Clement; Secretary, G. W. Webster; General Manager, G. R. Huntington; Comptroller, C. W. Gardner; these officers reside in Minneapolis.

H. W. McAll, Resident Engineer, Northern Division, G.T.R., Allandale, Ont., writes: "Herewith I remit renewal subscription for your excellent paper, which is one of the most useful I know."

The County Court judge at Sault Ste. Marie, Ont., has fixed the assessment on the right of way of the old Ontario and Sault Ste. Marie Ry., a G.T.R. charter, at $28,000, an increase of $17,000 on the old assessment.

Repairing C. P. R. Boiler Tubes.

In the method of repairing boiler tubes, as done at the C.P.R. shops, West Toronto, there are several features of particular interest, which are worthy of note. In old boilers, the tube ends sometimes become so rusted and corroded, that they must be removed, the ends cut off, and new ones welded on. As a large number of tubes require this treatment, several labor-saving devices have been improvised at the shops with the object of reducing expense, and at the same time improving the quality of the work.

In many shops where new ends are welded on, it is quite customary to merely expand the end, introduce the new piece, and weld in that position, without tapering the ends to fit each other. This method, owing to the sharp ends coming on the flat of the other part of the tube, always leaves a seam around the tube, which tends to weaken it, often producing fracture. The C.P.R. always reams out the end of the tube with a taper reamer to a sharp edge at the end, and the new end is tapered down similarly to fit in.

In reaming out the ends, an improvised machine, fig. 1, is used, unique in some respects. Essentially it is a lathe, the original idea being the feed, which consists of an air cylinder which shoves forward the reamer. Air is controlled by a two-way valve, which allows air out of another passage as desired, to a piece of rubber hose, used to blow the chips away. When the cylinder is released, the piston resumes its initial position by the spring expanding. The make-shift construction of the lathe is interesting. It is formed of two 7 x 7 in. scantlings, on which are attached several wrought iron straps for securing the cylinder, etc. The reamer has a square shank which works in square holes in the cross-sectioned cross-pieces, which prevent it turning. The tubes are rapidly reamed by this method, a greater pressure being given than if fed by hand.

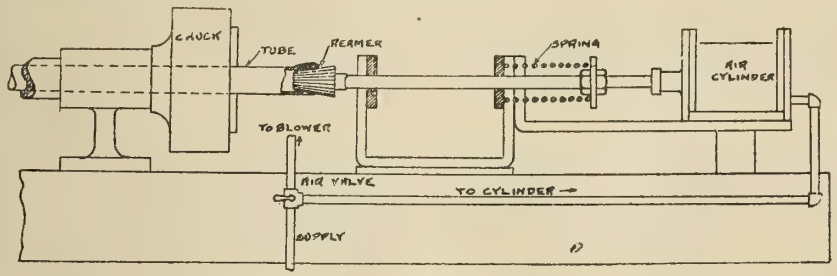

Figure 1.

When ready to be welded, the two parts are placed together, and shoved into a furnace as in fig. 2. The heat has a tendency to loosen the pieces which were lightly placed together, so, if removed when heated without precautions, they would probably part. A simple expedient prevents this. When ready to remove, a tread A, some 4 or 5 ft. back from the furnace, is pressed which slides bar B in its guides, the plate on the end striking the short piece of tube sharply, driving it further into the tube to be repaired, for the pieces are soft from the intense heat. This act in itself practically welds the pieces together, as well as doing what was originally intended, i.e., preventing the pieces falling apart before welding.

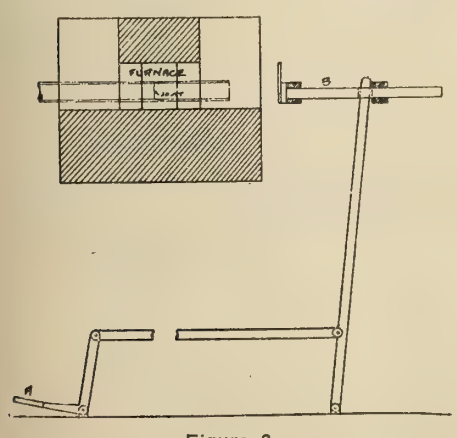

Figure 2.

The welding is done under a quick-acting air hammer, the tube being slipped over a mandrel during the operation.

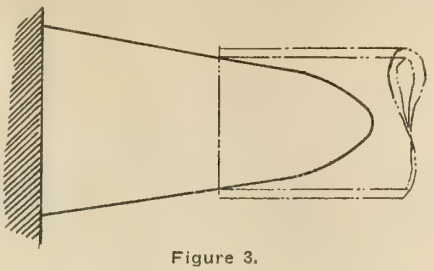

Figure 3.

The process insures a very nearly perfect joint, without mark, the size of the pipe being but slightly below the standard.

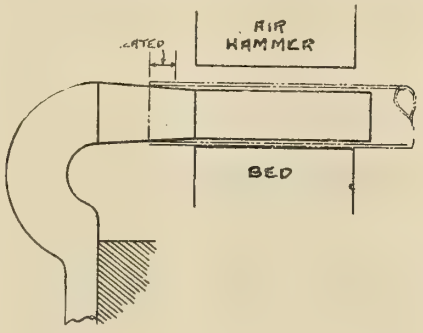

Figure 4.

Before putting into the boiler the back end must be expanded slightly so as to fit the tube sheet better. Formerly, this was done as in fig. 3, by first heating the end of the tube for about an inch, and driving the tube up on a tapered pin, by a couple of men swinging back and forth on to the pin, driving it further each swing till expanded the proper amount, a very slow job.

Fig. 4 shows the method used now for expanding the end. As before, the end is heated, but with the difference that it is now placed on a mandrel, tapered at one end, and under an air hammer. The oscillations set up in the pipe by the quick acting hammer striking the cold part, back from the heat, causes the end to swell, the operation being practically instantaneous, the blows being so rapid. The method is very much quicker and better than the old way, and the production is greatly increased.—Canadian Machinery.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

L. M. Booth Co., 136 Liberty St., New York, is distributing a leaflet describing its new type of Booth water softener.

In an article in our last issue on G.T. P.R. machine repair cars, it was stated that the power used is a Fairbanks 6 h.p. gasoline engine. The engines are of Fairbanks-Morse manufacture and supplied by the Canadian Fairbanks Co.

The Goldschmidt Thermit Co.'s quarterly, Reactions, contains a number of well illustrated articles on the use of thermit for the welding of rails and for welding repairs on steamships, etc., in addition to a discussion on the welding of locomotive frames.

W. C. Cuntz, for 18 years with the Pennsylvania Steel Co., has been appointed Vice President and General Manager of the Goldschmidt Thermit Co. of New York, which has a Canadian branch in Toronto. He succeeds E. Stutz, who has retired from the company.

G. McAvity, President T. McAvity and Sons, Ltd., St. John, N.B., is reported to have stated, recently, that it was absolutely necessary for the company to increase its plant, and it was probable that a brass or iron foundry would be established at Port Arthur, Ont., and possibly a branch works at Montreal.

The Safety Car Heating and Lighting Co. has commenced the publishing of a house journal under the name of the Safety Heating and Lighting News. The first number is well illustrated, and contains a lot of useful information regarding the heating and lighting of railway cars, one article being devoted to postal cars, with opinions as to the adaptibility of gas over electric light, by various railway officials, amongst whom is H. H. Vaughan, Assistant to the Vice President, C.P.R.

The Galena-Signal Oil Co. has introduced a new locomotive headlight oil, "Galena Railway Supply Oil B." We are advised that recent government tests, made by the Bureau of Standards at Washington, show this oil to produce, with headlights of ordinary construction, a minimum of 1,800 candle power, and with a headlight equipped with 16 inch optical lens, costing no more initially than the ordinary reflector, and much less for maintenance, a minimum of 2,400 candle power; and exhaustive service tests on a prominent railway have proven its adaptation to this purpose. The high fire test of this oil enables it to withstand the great heat generated by headlight burners without becoming gaseous, a condition developing with inferior oils and resulting in the consumption of much more oil than is necessary. The use of this oil insures immunity from danger resulting from smoked chimneys, damaged reflectors and the frequent burning up of headlights, and reduces, to a great extent, the labor necessary in caring for headlights.

Railway Lands Patented.—Letters patent were issued, during August, for railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Canadian Northern Ry.	184.13
Canadian Pacific Ry.	2.77
Total	186.90

STUDY VANADIUM

Specify Type "A"

For all general purposes where great static strength, ductility and high resistance to shock are needed. It works like soft open hearth steel under hammer or dies. Fine for drop forgings; withstands high temperatures and takes excellent finish. Machines easily.

Specify Type "D"

For springs, gears in constant mesh, rifle barrels, high tensile wire, and similar work. Particularly good for severest service conditions.

Specify Type "E"

For case hardening. Makes strong case; has powerful resistance to abrasion; close cohesion of case to softer core; case doesn't flake or powder away; exceedingly ductile core, with great strength and resistance.

Specify Type "G"

For locomotive tires. High static strength, stands 1,260 alternations before fracture under alternating impact test, which is more than twice as great as test on regular tire steel. This type is very homogeneous, machines readily and has splendid wearing qualities with fine tractive surface.

Specify Type "H"

For cutting tools, rotary cutters, saw blades, etc. Tempers accurately and evenly; although hard, is extremely tough. Retains edge more than twice as long as carbon steel.

Specify Type "J"

For steel castings, locomotive frames, mill pinions, etc. Extremely tough, close in structure, strong as ordinary forgings, twice as strong as ordinary steel castings.

Specify Vanadium Steel Everywhere

In preference to ordinary steel. Use smaller sections and get greater strength and vitality. All good steel makers make Vanadium Steel. We make the alloy only.

Specify the product of the American Vanadium Company, which is the only standard, guaranteed, free from impurities and correct in every particular. Write us for illustrated booklets and information.

Our Department of Engineering and Tests

is always ready to help you.

American Vanadium Company

324 Frick Building

Pittsburgh, Pa.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—The report of F. J. P. Crean, C.E., of an exploration which he made for the Department of the Interior, in northern Saskatchewan and Alberta, during 1909, has been issued. He reports generally favorably of the land and climate, and in conclusion says the difficulties of reaching a large section of the area explored will no longer exist "when the railway to McMurray, which is now proposed to be built, is completed." Numbers of papers continue to be filed in the courts at Edmonton arising out of the company's affairs. (Oct., pg. 825.)

The Alberta and Saskatchewan Central Ry. Lines was incorporated last session of the Alberta Legislature, to build the lines mentioned in our April issue. The provisional directors are: J. F. Ashe, J. Archer, Edmonton, Alta.; N. F. Hagel, H. W. Adcock, Winnipeg. The bonding power is fixed at $18,000 a mile of railway built. (April, pg. 271.)

Alberta Boundary to Peace River Landing.—A recent dispatch from Edmonton, Alta., states that W. C. Teter, a New York banker, has been in the city in connection with a project to build a line from the U.S.-Alberta boundary, through Calgary and Edmonton, with an outlet to the Pacific coast, via the Pine River Pass. He is quoted as stating that New York capitalists are ready to finance the enterprise.

Alberta Central Ry.—Application was made to the Minister of Railways, Oct. 5, for the approval of the route map of this projected railway from mileage 40 to Sounding Creek, and from Sounding Creek to Moose Jaw, Sask. From Moose Jaw the map shows a line westerly close beside the C.P.R., as far as Caron, where it strikes northerly, following close to the western side of Pelican Lake, crossing the Saskatchewan River almost directly north of Morse, and then westerly via Sounding Creek to mileage 40. The Board of Railway Commissioners has approved of the location of the company's projected line from Red Deer easterly, for 40 miles.

Construction is being pushed forward rapidly on the section from Red Deer to Rocky Mountain House, Alta., about 75 miles. Two camps are at work between Red Deer and Medicine River, and an additional grading outfit has been started west of Medicine River. Gangs are at work at Sylvan River and further west, clearing the right of way. The company is letting its contracts direct, and the grading is being done up to the specifications of a main line, the work being under the supervision of the Chief Engineer, J. Grant MacGregor. It is said that the cement piers for the bridge across the Red Deer River will be built during the winter and the steel superstructure, 1,000 ft. long, will be erected in the spring, by which time it is expected track will have been laid from Red Deer to the bridge site. It is reported in Red Deer that the company will build through to the Pacific Coast, via the Yellow Head Pass. (Oct., pg. 825.)

Alberta Ry. and Irrigation Co.—The Dominion Parliament will be asked to extend the time within which the following lines may be built:—From Cardston to some point in range one, west of the fifth meridian; from between Springcoulee and Mountain View, westerly to the C.P.R., between range two, west of the fifth meridian, and range 27, west of the fourth meridian; from Sterling easterly to range four, west of the fourth meridian, between the C.P.R. and the International boundary; and from between Lethbridge and Sterling to the International boundary between ranges 24 and 30 west of the fourth meridian.

Alberta Railways.—In a recent speech at Macleod, Alta, the Alberta Premier, dealing with the policy of railway extension, said the Government would insist on the completion of work for which bonds had been guaranteed, and would not tolerate a policy of renewing bonuses from year to year.

Algoma Central and Hudson Bay Ry.—T. J. Drummond, President Lake Superior Corporation, has recently completed an inspection of the A.C. and H.B.R., owned by the Corporation. The work at present being done on the line includes the building of the main line to a junction with the Michipicoten branch, an extension to Hobon, on the C.P.R. transcontinental line, and a branch to reach the Magpie iron mines, now being developed. (Oct., pg. 825.)

Atlantic, Quebec and Western Ry.—A receiver has been appointed for the Charing Cross Bank, London, Eng. The assets were stated in a recent report to be £1,607,000, with liabilities to depositors at about £1.000,000. The bank was owned by a private partnership, a Mr. Carpenter being the principal owner. The Carpenters have large interests in the Gaspe peninsula, of which the most important is the A., Q. and W. Ry., now under construction by the New Canadian Co. The Managing Director of this company is C. B. K. Carpenter, and its head offices are in Montreal.

A London cablegram of Oct. 18 says that Carpenter, who filed his own petition, denies insolvency and says he took the step in consequence of threats of certain persons to institute criminal proceedings against him in relation to the investment of the bank's money in a Canadian railway scheme.

Bangor and Aroostook Ry.—Grading is practically completed on the extension of the line along the valley of the St. John River, for 29 miles, ending at Fort Kent, Me., just south of Clairs, N.B. Track has been laid for a considerable distance, and it is expected to have the line completed by Dec. 31. (May, 1908, pg. 328.)

The Bow River Collieries Ry. was authorized by the Alberta Legislature last session to build a line from tp. 17, r. 17, 4 m., southerly to Taber, and to the International boundary at Coutts, in addition to lines previously authorized. (April, pg. 271.)

British Columbia and Alaska Ry.—Application will be made to the Dominion Parliament for the incorporation of a company with this title to build from near Lytton, B.C., along the Fraser River to Fort George, thence to a crossing of the Nechaco River at the mouth of Stewart River, following the same by way of Stewart Lake, Thatcher River, Trembleur Lake, Middle River, North Tacla Lake, Driftwood River, Bear Lake, passing through Fort Conley, along the valley of the Skeena River to a summit between the Skeena and the Stickine Rivers, down the Stickine River to Telegraph Creek, and thence up Telegraph Creek to the headwaters of Teslin River, following the same to the northern boundary of British Columbia, and from there by the most practicable route to Dawson, Yukon. A. T. Thompson is solicitor for the applicants.

A company with this title was incorporated by the B.C. Legislature last session, to build the line above described from Lytton to the B.C.-Yukon boundary. This charter has been acquired by the B.C. Railway and Development Co., which has been incorporated under the laws of the State of Delaware, with offices in New York, and a capital of $12,000,000. The company states that its plans contemplate the building of about 850 miles, from Vancouver to the Alaskan boundary. The route, for which reconnaissance surveys have been made, is stated to be the most feasible and forms the shortest link between the main U.S. territory and Alaska. Two survey parties are said to be in the field, locating the line between Vancouver and Fort George, B.C. The cost of construction of the line is estimated at $25,000 a mile. Application will be made, the prospectus states, to the Dominion and the Provincial Governments for subsidies. The officers and directors of the B.C.R. and D. Co. are: President, H. G. Villard; Vice Presidents, W. G. Conklin, J. Wolkenstein; Treasurer, J. W. Howie; Secretary, W. C. Pratt; other directors, E. Ashforth, S. D. Townsend, F. M. Van Horn. All these reside in New York. The consulting engineers are L. M. Rice & Co., Seattle, Wash. Recent press reports state that location surveys have been completed from Fort George down the Fraser River to Lytton, on the C.P.R., and that a gradient of 0.6% has been secured. The engineers in charge of the parties were J. Early and W. Simpson. (Oct., pg. 825.)

British Columbia and Dawson Ry.—Application will be made to the Dominion Parliament to incorporate a company with this title to build a railway from near Lytton, B.C., along the Fraser River to Fort George, to a crossing of the Nechaco River at the mouth of Stewart River, following this river by way of Stewart Lake, Thatcher River, Trembleur Lake, Middle River, North Tacla Lake, Driftwood River, Bear Lake, passing through Fort Conley and along the Skeena River valley to a summit between the Skeena and the Stickine rivers, along the valley of the latter river to Telegraph Creek, and along this creek to the headquarters of the Teslin River, following the same to the northern boundary of British Columbia, and thence to Dawson, Yukon; also a line from Ashcroft to the confluence of the Big Bear and the Fraser rivers, and also from Lillooet along the south side of Seaton and Anderson lakes, and via Lillooet Lake and river, and Harrison Lake to Vancouver. It is also desired to have power to amalgamate with the British Columbia and Alaska Ry. A. T. Thompson, Parliamentary Agent C.P.R., Ottawa, is solicitor for applicants. See British Columbia and Alaska Ry.

Burrard Inlet Tunnel and Bridge Co.—The Vancouver, Westminster and Yukon Ry. and the city of Vancouver opposed the B.I.T. & B. Co.'s application for approval of route maps, before the Minister of Railways, at Ottawa, Oct. 4, and the matter was adjourned. (Sept., pg. 725.)

Canada and Gulf Terminal Ry.—The first section of this railway, extending from Mount Joli, near St. Flavie, on the Intercolonial Ry., to Matane, Que., 35 miles, is expected to be opened for traffic Nov. 1. (Oct., pg. 825.)

Detroit River Tunnel. — Although freight trains were run through this tunnel between Detroit, Mich., and Windsor, Ont., Sept. 17, it was not until Oct. 15 that passenger trains were run and the ferry service discarded. The gradient is a 2% one on the U.S. side, and a 1.5% one on the Canadian side. A good deal of work has yet to be done in the yards at each side of the tunnel before everything is complete.

The regular operation of passenger trains through the tunnel was begun Oct. 15.

Diamond Coal Co.—The Alberta Legislature last session authorized the company to build a railway to connect its mines with the C.P.R. Crow's Nest branch, and approved the work then done. The line has been built and operated by the company for over a year. (May, pg. 349.)

Durham Collieries.—Six thousand acres of coal lands on the Little Bow River, 36

MUSSENS LIMITED

MONTREAL	TORONTO	COBALT	WINNIPEG	CALGARY	VANCOUVER
318 St. James St.	73 Victoria St.	Opp. Right of Way Mine	259-261 Stanley St.	Crown Bldg.	Mercantile Bldg.

miles north of Lethbridge, Alta., are being developed by a company with this title. A. Laidlaw, Spokane, Wash., and H. W. Galor, Vancouver, B.C., are reported to have sold a half interest in the property to Duluth, Minn., capitalists, who are providing money for development. As soon as the property is sufficiently developed it is proposed to build a railway from the collieries to the C.P.R, for the shipment of the output.

A press dispatch from Carmangay, Oct. 4, states that the company is proceeding with development about 15 miles from there and that a spur line will be built almost immediately.

Halifax and Eastern Ry.—We were recently advised that nothing definite had been done in the way of letting contracts for building this projected railway. (Oct., pg. 825.)

Hudson Bay and Pacific Ry.—Prince Albert, Sask., dispatches state that G. Atwood, Chief Engineer, has received instructions to proceed with the grading of the line from Prince Albert towards Hudson Bay, and to have a survey made southerly from Prince Albert to Pacific Jct., a station on the Great Northern Ry. near Havre, N.D. The Prince Albert-Hudson Bay line will be built, said Mr. Attwood recently, if not by this company, by another one. A dispatch dated Oct. 7, stated that the Canadian Northern Ry. was negotiating for the purchase of a controlling interest in the company, and had secured control of another charter authorizing the building of a line from Prince Albert to Port Nelson. This latter charter is controlled by Senator Davis and other Prince Albert people. (Sept., pg. 727.)

Intercolonial Ry.—The Halifax, N.S., Board of Trade has been informed by the Government Railways Managing Board, that plans are under consideration with a view of increasing the facilities at the piers for the coming winter.

New cattle sheds are being built at Marsh Road, St. John, N.B., and they are expected to be ready for the winter traffic. It is said that the present sheds at Gilbert's Lane will be abandoned as soon as the new sheds are completed.

The Halifax Board of Trade was informed by letter, Oct. 13, that it was expected to begin work shortly on the enlargement of the shed, and the other improvements at no. 4 pier.

The land valuers have completed the work of putting prices on the land and other property through which the proposed new line will pass, from Nelson station to the point where it will join the present Loggieville line. W. B. McKenzie, Chief Engineer, was in Chatham, N.B., recently looking over the route in Chatham, and inspecting the progress of the work on the portion of the line being built. The right of way has been cleared and fenced as far as the cemetery, and the contractor's camp has been moved to Bacon road, where grading is in progress. (Oct., pg. 825.)

Kettle Valley Lines.—Reports from Merritt, B.C., state that the grading of the new line in the Nicola Valley is being pushed forward rapidly. The work of clearing the right of way is well advanced over the mileage under contract, and grading is in progress. Murchison and McMillan are the subcontractors on the first 17 miles, Holley and Owens the next 4.5 miles, Bright and McDonald the next 4.5 miles, and Lungo and McDonald the next four miles. About a mile and a half from Merritt the course of the river is being diverted to do away with the necessity of bridge construction. The company's officials are said to be arranging for starting up construction work at Penticton and Midway. The survey parties have been reinforced by the engineers freed from the Merritt end of the line. It is expected that a tunnel of some length will have to be bored between Wilkinson Creek and Penticton Creek, so as to avoid heavy gradients.

The Spokane and British Columbia Ry., which is the extension of the line from Grand Forks into the U.S., now terminates at Republic, Wash. The company has power to extend this line to Spokane, and a contract for building a section is reported to be let to L. M. Rice & Co., Seattle, Wash. (Oct., pg. 827.)

The Lacombe and Brazeau Ry. Co. has been incorporated by the Alberta Legislature to build from Lacombe, where connection may be made with all lines entering the town, westerly to Bentley, thence northwesterly to Rimbey, and to the Brazeau River, and along its valley to its headwaters, with a branch to Edmonton or Strathcona. The provisional directors are: E. R. C. Clarkson, D. W. Alexander, C. Miller, Toronto. (May, pg. 351.)

Lethbridge Collieries.—Extensive development work has been done by the company on the coal lands owned in the vicinity of Lethbridge, Alta. It is proposed to build a spur line from the C.P.R. Lethbridge-Macleod line to the collieries opened in sec. 21, tp. 3, range 22, about 2½ miles from Kipp, and about a mile from the line of the Diamond Coal Co. The principal officers of the company are: President, E. B. Greenshields, Montreal; Chief Engineer and Managing Director, C. Fergie; Manager, W. Maxwell; Construction Engineer, N. C. Pitcher; Accountant, G. B. Saunders; construction foreman, A. Morrison.

Manitoulin and North Shore Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the line from about 13 miles west of Sudbury to Krean Hill, Ont., 10 miles. (Oct., pg. 827.)

The Michigan Central Rd. is making considerable improvements to its tracks, bridges and trestle work at Niagara-on-the Lake, Ont.

The company's electrical experts had a conference with the St. Thomas, Ont., city officials, Oct. 13, with reference to the use of hydro-electric power for driving the machinery at its roundhouse, shops, and turntable there.

New Brunswick Coal and Ry. Co.—Tenders are under consideration for building a two-stall engine house at Minto, N.B. P. S. Archibald and J. R. Stone are the commissioners in charge of the line for the New Brunswick Government. (Oct., pg. 827.)

Pincher Creek, Cardston and Montana Ry.—Application will be made next session of the Alberta Legislature to change the name of the company to the Alberta Pacific Ry.; to extend the time for building the lines already authorized; to increase the bonding powers from $15,000 to $30,000 a mile; and to give power to build the following additional lines: from the previously authorized line at tp. 6, r. 1, w. 5 m., generally northerly, west of the Porcupine Hills to Calgary, continuing northerly, west of Snake, Gull and Pigeon Lakes to Edmonton, thence northwesterly to the western boundary of the province between latitude 55 and 56; and a line from the said line near Edmonton northeasterly and easterly to the eastern boundary of the province. O. E. Culbert, Pincher Creek, is solicitor for the applicants.

J. A. Taylor, in a recent interview in Calgary, is reported to have said arrangements had been made to build some 15 or 20 miles this year in the vicinity of Pincher Creek. The line will run from near Coutts, at the International boundary, to Pincher Creek, and on to Calgary, through the pass between the foothills of the Rocky Mountains and the Porcupine Hills, and along the Upper Sheep Creek. The company has a charter to build a line through the North Kootenay Pass in B.C. The projected line between Pincher Creek and Cardston will, it is said, cross the south fork of the Old Man River, by a steel bridge 1,100 ft. long and 170 ft. above high water.

The plans for 100 miles of the line from the International boundary to the west side of sec. 34, tp. 6, r. 2, w. 5 m., are said to have been approved by the Alberta Premier on behalf of the Government. The route shown is that followed by the engineers in making surveys for the line referred to as the Calgary, Alta., to Butte, Mont., railway. This survey from Calgary south runs west of the Macleod branch of the C.P.R., crossing Highwood River 25 miles west of High River and south through the valley between the Porcupine and Livingstone ranges. After crossing the C.P.R. Crow's Nest branch between Pincher Creek and Cowley, the projected line passes through Pincher Creek, through the Fishburn valley to Cardston, crossing the International boundary at Whiskey Pass. It is proposed to connect with the Great Northern Ry. at or near Shelby Jct., Montana. (Oct., pg. 829.)

Portland Canal Short Line.—A recent press dispatch from Stewart, B.C., states that Engineer Lewis has found an easy pass through the divide leading to the Naas Valley. The engineering difficulties are reported to be small, and include a short tunnel and one snow shed.

Notice has been given that application will be made to the British Columbia Legislature for authority to extend the line from the present proposed terminus generally easterly to the eastern boundary of B.C., where the Peace River intersects the boundary, by way or Pine River pass, with power to build a branch line down the valley of the Naas River to the Pacific coast; a branch line from near Stuart Lake to connect with the G.T. Pacific Ry., and a branch to the northern boundary of B.C.

A Victoria, B.C., dispatch of Oct. 7, states that in addition to the application for additional powers in B.C., the Alberta Legislature will be asked to authorize the building of lines from the boundary to a junction with the Canadian Northern Ry. near Edmonton, and that the Dominion Parliament will be asked to grant incorporation to a company for the building of the whole of the lines in the two provinces. Another report states that it is proposed to locate the eastern terminus of the line on Hudson Bay, with a view of establishing a trade route between western Europe and eastern Asia. Such a water and rail route would be exceptionally direct and economical.

G. G. S. Lindsey, who has returned to Toronto, after a visit to the mining camps in northern British Columbia, stated in an interview Oct. 15 that track was expected to be laid on this line from Stewart to Bitter Creek, about 10 miles, this year, and that the whole line to Bear Creek would be completed early in 1911.

A machine shop is being erected at Stewart for the line, and F. W. McLeod is Master Mechanic in charge of its erection and fitting up. (Oct., pg. 829. See also Canadian Northern Western Ry., in C.N.R. Construction, etc., on another page.)

Reid Newfoundland Co.—W. D. Reid, President, is reported to have stated in an interview at St. John's, Nfld., Oct. 1, that on Sept. 30, track had been laid for 50.5 miles on the Bonavista branch, and would be in Trinity within a few days thereafter. The grading gangs had completed 62.5 miles and were then working within five miles of Catalina, where there were several very heavy rock cuts. A steel trestle, 400 ft. long and 40 ft. high has been com-

MINE HOISTING ENGINE

Cylinders 22 inches in diameter, stroke 42 inches, about 900 horse power; double drums 8 feet diameter, 5 feet wide.

Corliss valves, steam actuated clutches and brakes. The reversing gear, thro tle, brake and other levers are grouped at a central platform.

This engine was completed within the past few months and is thoroughly modern. Write for drawings, specification and photographs.

pleted near the first pond going into Goose Cove, Southwest Arm, Trinity. By the erection of the trestle a loop of over a mile is formed, the trains going under the trestle and then gradually ascending, leaving it at a higher level. (Oct., pg. 831.)

Roberval and Saguenay Ry.—Application will be made to the Quebec Legislature for the incorporation of a company with this title to build from Roberval westerly and northwesterly to Peribonka, thence north of Lake St. John and the Saguenay River to a deep water port on the river, with branches to connect with the Quebec and Lake St. John Ry. at Hebertville and with the Ha Ha Bay Ry. at its junction with the Q. and L. St. J. Ry. in the Jonquieres district. The application is being made on behalf of J. E. A. Dubuc, J. E. Grenon, J. E. Cloutier, S. Lapointe, Chicoutimi, Que.; A. Pelletier, J. B. Carbonneau, Roberval, Que.; B. A. Scott, Quebec; W. Low, Brooklyn, N.Y.; by Lapointe and Langlais, attorneys, Chicoutimi. Of the applicants named above, J. E. A. Dubuc is Vice President, B. A. Scott is a director, and J. E. Grenon is Chief Engineer of the Ha Ha Bay Ry.

St. John River Valley Ry.—Field work on the surveys for this projected railway from St. John to Grand Falls, was expected to be completed by Oct. 31, and it is said that the plans and estimates will be ready for submission to the New Brunswick Government by Dec. 31. —. Maxwell is Chief Engineer in charge of surveys. (Aug., pg. 631.)

South East Kootenay Ry.—A press report from Hosmer, B.C., quotes T. Davis, President, as saying that construction will be started on this line from McGillivray to the International boundary in the spring. Twelve mining companies are reported to be developing coal areas in the territory through which the line will pass, and a wagon road has already been built to get in machinery, etc. The company was incorporated by the B.C. Legislature in 1906, and in 1909 obtained an extension of time for construction. (April, 1909, pg. 249, and Aug., 1906, pg. 457.)

Temiskaming and Northern Ontario Ry.—The branch line from Cobalt to Kerr Lake, Ont., five miles, has been opened for traffic. The question of a line to the Elk Lake country from Charlton is still in abeyance. Those interested in the development of the country express themselves strongly in favor of the Government building the line at once.

Engineers who have been making surveys from North Bay with a view of securing a route which would give better gradients and shorten the line to Liskeard, have almost completed their work, and their report was expected to be ready for presentation to the Commissioners by Nov. 30. During the year a good deal of work has been done on the line in the way of strengthening bridges and spreading additional ballast, to permit of heavier trains being run over it. (Oct., pg. 831.)

Toronto.—Work is being proceeded with on the spur line which the Toronto city council is building along the east bank of the Don River to the Ashbridge's Bay manufacturing district. The line will connect with the C.P.R. at Winchester St., and with the G.T.R. south of Eastern Ave., and will be about 6,000 ft. long. The work is ordinary cut and fill. The heaviest cut is north of Gerrard St., opposite the Isolation Hospital, where there is a heavy bank of blue clay. It is expected to have the work completed this fall, except the portion at the proposed Queen St. high level bridge. The work is being done by day labor, under the direction of E. L. Cousins, of the Engineer's staff. (Oct.,

The Board of Control passed a resolution Oct. 18, authorizing an application to the Board of Railway Commissioners for permission to connect the line with the C.P.R. and G.T.R.

Vancouver North to Grouse Mountain.—Application will be made to the British Columbia Legislature to incorporate a company with this title, to build a line, to be operated by steam, electric or other power, from North Vancouver to the summit of Grouse Mountain. W. A. Macdonald, Vancouver, is solicitor for the applicants.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses and net profits from July 1, 1910, with increases over, or decreases from, those of 1909-10:

	Earnings.	Expenses.	Net Earnings.	Net Increase
July	$ 1,225,100	$876,900	$348,200	$118,600
Aug.	1,093,000	830,000	263,000	58,600
	$2,318,100	$1,706,900	$611,200	$177,200
Inc.	$ 667,500	$ 490,300	$177,200	.....

Approximate gross earnings for Sept., $1,279,900, and for two weeks ended Oct. 14, $667,700, against $1,076,800, and $598,800 for same periods, 1909.

C.P.R. Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases over 1909-10, from July 1, 1910:

	Earnings.	Expenses.	Net Profits.	Net Increase
July	$9,869,214.32	5,384,594.73	3,484,619.50.	1,001,748.86
Aug.	9,255,331.67	5,563,659.34	3,691,672.33	727,614.46
	$ 18,124,545.99	$10,948,254.07	$7,176,291 92	$1,732,363.32
Inc.	$3,557,531.44	$1,825,168.12	$1,732,363.32	.....

Approximate gross earnings for Sept., $9,115,000, and for two weeks ended Oct. 14, $4,577,000, against $8,148,000 and $4,313,000 for same periods, 1909.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for Aug., $336,479.15; operating expenses, $209,892.08; net revenue, $126,587.07, against $308,439.92 operating revenue; $197,844.73 operating expenses; $110,595.19 net revenue for Aug., 1909. Aggregate operating revenue for two months ended Aug. 31, $648,462; operating expenses, $405,350.54; net revenue, $243,111.46, against $593,674.10 aggregate operating revenue; $401,133.43 operating expenses; $192,540.67 net revenue for same period, 1909. Approximate gross earnings for Sept., $310,331, and for two weeks ended Oct. 14, $139,948, against $321,45 and $147,045 for same periods, 1909.

MINERAL RANGE RY.—Operating revenue for Aug., $64,366.60; operating expenses, $59,075.02; net revenue, $5,291.58, against $76,301.05 operating revenue; $60,392.78 operating expenses; $15,908.27 net revenue for Aug., 1909. Aggregate operating revenue for two months ended Aug. 31, $122,500.33; operating expenses, $131,627.55; net expenses, $9,127.22, against $149,966.38 aggregate operating revenue; $123,242.78 operating expenses; $26,723.60 net revenue for same period, 1909. Approximate gross earnings for Sept., $69,506, and for two weeks ended Oct. 14, $32.842, against $75,766 and $31,548 for same periods, 1909.

MINNEAPOLIS, ST. PAUL AND SAULT STE. Marie Ry.—Operating revenue for Aug., $1,183,408.68; expenses and taxes, $742,146.61; operating income, $441,262.07, against $1,204,104.17 operating revenue; $714,493.84 expenses and taxes; $489,610.33 operating income, for Aug., 1909. Aggregate operating revenue for two months ended Aug. 31, $2,412,063.77; expenses and taxes, $1,518,963.51; operating income, $893,100.26, against $2.348 625.99 aggregate operating revenue; $1,451,658.42 expenses and taxes; $896,967.57 operating income for same period, 1909. Approximate gross earnings for Sept., $2,053,512, and for two weeks ended Oct. 14, $ 1,039,132, against $2,504,701 and $1,169,176 for same periods, 1909.

CHICAGO DIVISION.—Operating revenue for Aug., $811,065.16; expenses and taxes, $585,085.56; operating income, $225,979.60, against $729,866.95 operating revenue; $462.482.02 expenses and taxes; $267,384.93 operating income for Aug., 1909. Aggregate operating revenue for two months ended Aug. 31, $1,617,726.23; expenses and taxes. $1,130,680.81; operating income, $487,045.32, against $1.448,279.03 aggregate operating revenue; $926,712.08 expenses and taxes; $521,566.95 operating income for same period, 1909.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings, expenses, etc., of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. & M.R. for Aug., 1910 and 1909, respectively:—

GRAND TRUNK RAILWAY.

	1910.	1909.
Earnings	$3,067,600	$2,939,400
Expenses	2,213,700	2,092,800
Net earnings	$ 853,900	$ 846,600

CANADA ATLANTIC RAILWAY.

	1910.	1909.
Earnings	$ 162,500	$ 190,300
Expenses	157,900	168,700
Net earnings	$ 4,600	$ 21,600

GRAND TRUNK WESTERN RAILWAY.

	1910.	1909.
Earnings	$ 498,200	$ 576,700
Expenses	399,500	370,300
Net earnings	$ 98,700	$ 206,400

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1910.	1909.
Earnings	$ 156,600	$ 172,900
Expenses	144,700	130,900
Net earnings	$ 11,900	$ 42,000

Approximate gross earnings for Sept., $4,107,955, and for two weeks ended Oct. 14, $1,843,722, against $3,949,004 and $1,817,637 for same periods, 1909.

TRAFFIC RECEIPTS OF THE SYSTEM.

	1910.	1909.
Grand Trunk	£1,813,107	£1,791,456
Canada Atlantic	95,403	108,744
G. T. Western	292,226	322,331
D. G. H. & M. R.	95,064	103,414
Totals	£2,295,800	£2,325,945

Quebec Public Utilities Commission.

The following orders have been passed:—

16. Oct. 4.—A. P. Robitaille vs. Quebec and Lake St. John Ry.—Complaint is made of the company having increased its rates illegally and without proper notice in respect of Charlesbourg station, as follows:—Return 1st class from 15c. to 20c.; series of 10 tickets from 75c. to $1.00; series of 55 tickets from $2.75 to $5. That the company does not maintain a blackboard at Charlesbourg and announce thereon the time of passing of its various passenger trains. That the extra train leaving Quebec at 6.20 p.m. and leaving Charlesbourg to return at 7.30 p.m. has not been put on, and that the platforms of the cars are crowded for lack of seating accommodation. That near Charlesbourg station is a dangerous crossing, protected by gates, properly attended during the day, but left open in the evening and at night.

Considering that in respect of rates the charge respecting 55 trips has been dealt with in the case of Hamel vs. the Q. & L. St. J. Ry. and the Canadian Northern Quebec Ry., and the order therein is applicable to the present case. That the single rate and return fare are not excessive, but that the charge for a series of 10 trips should be reduced to 75c. As regards the maintenance and use of a blackboard for notifying the time of trains, Charlesbourg, not being a station where a regular telegraph operator is employed, the complaint is unfounded and is dismissed. The complaint respecting the extra train and overcrowding having been withdrawn, no order is made. Considering that it appears the crossing near Charlesbourg station is dangerous and should be protected at all times, the Q. & L. St. J.R. is directed forthwith to instal an automatic electric alarm bell, subject to the approval of the Commission's Engineer, and keep the same in proper operation.

17. Oct. 4.—Authorizing Turner Lumber and Pulpwood Co. to erect electric wires over the Quebec & Lake St. John Ry.

Fort William Union Station

The C.P.R. has erected a new station building at Fort William, Ont., which will be used as a joint station with the G.T. Pacific Ry. It is of fireproof construction, the main portion being three stories high, with extensions at each end, one for baggage and the other for express. The main building has a frontage of 105 ft. and a depth of 50 ft. Entrance is obtained by granite steps to a vestibule, which leads into a general waiting room 71½ by 32 ft., and from this granite steps lead out to the train shed, 167 by 34 ft. To the right of the vestibule are women's waiting room, retiring room, and toilet room, the three rooms having a total length of 42 ft. and a depth of 16 ft. 8 in.; to the left of the vestibule is a waiting room for men, 33 ft. by 16 ft 8 in., and a lavatory. Adjoining the women's waiting room is the telegraph office, and right across from this is the joint ticket office, 14 ft. 7 in. by 18 ft., and on the left is the news office and parcel room. Adjoining the men's washing room is the stairway leading to the operating, divisional and other offices on the second and third floors. The baggage annex on the left of the main building is 104 by 34 ft., and contains offices for the station agent, baggage master, baggage checkers, a public office, and a section for valises. It is equipped with a suction scale, and an elevator to take baggage for storage to the basement.

Fort William Union Station, C.P.R. and G.T.P.R. Front elevation.

Fort William Union Station, C.P.R. and G.T.P.R. Track elevation.

The express annex is to the right, and is approached from the general waiting room, between the telegraph and ticket offices. It is 63 by 34 ft., and is divided into two by a partition. The G.T.P. section immediately adjoins the main building, and is 16 ft. 3 in. by 34 ft.; the C.P.R. section being 45 by 34 ft. There are three entrances to the baggage room and one to each express room from the street, and a similar number from each annex to the station platform.

The excavation for the foundation was commenced in Aug., 1909, and a contract for the superstructure was let in Nov. to J. McDiarmid & Co., Winnipeg. The estimated cost of the building was $100,000.

G. T. R. Construction, Betterments, Etc.

Shops at Richmond, Que.—The building of the new shops at Richmond, Que., is being rapidly pushed forward.

Montreal Grade Elimination.—We are advised that the matter of the elimination of the grade crossings in Montreal is still in the hands of the engineers, and it is not yet possible to give out any details as to the plans.

Ottawa, Rideau Valley and Brockville Ry.—The power behind this company was disclosed at a meeting held at Ottawa, Oct. 5, when W. Wainwright, Second Vice President G.T.R., and W. H. Biggar, G.T.R. counsel, were present. It is said to have been decided that the line should be built at once, the work to be done by the O.R.V. and B. Ry., and then operated by the G.T.R. A decision was also reached that the final surveys would be gone on with at once. The line will, it is said, be built from Ottawa through the southern parts of Carleton and Leeds counties to Brockville, connecting with the G.T.R. at both ends.

Following are the directors and officers, as recently elected:—President, Andrew Haydon; Vice President, D. H. Maclean; other directors, G. E. Kidd, W. C. Greig, S. Rosenthal; Secretary-Treasurer, H. W. Cooper, of the G.T.R. Treasurer's Department, Montreal.

Roundhouse at Belleville, Ont.—The new roundhouse at Belleville, Ont., which has been under construction since Aug. 10, is expected to be finished by Nov. 1. The building, which will have a capacity of 42 locomotives, is of reinforced concrete, with steel roof, covered with asbestos. The walls are 19 ft. high, 22 inches thick at the bottom, and 9 in. at the top. Adjoining the roundhouse is a machine shop 50 by 200 ft., and a store room 30 by 80 ft. A large number of new sidings have been laid in the yards.

Toronto Union Station.—E. H. Fitzhugh, First Vice President, in an interview at Toronto, Oct. 6, said the plans for the new Union Station were all prepared, and the company was ready to go ahead with the work. He could not say when a start would be made, but it was not contemplated to do anything at present.

Shops at Allandale, Ont.—E. H. Fitzhugh, First Vice President, is reported to have told the Mayor of Barrie, Ont., recently, that the delay in beginning the erection of the new shops at Allandale was due to the fact that the plans originally prepared were found not to be on a sufficiently large scale for the work contemplated to be done, and the company's engineers had been looking over the ground with a view to the building of more extensive works than were promised in the agreement with the town. The plans for the new shops were in preparation, and if they were adopted work would be started in the spring. There was no idea of removing the works elsewhere.

London Improvements.—Certain properties acquired by the G.T.R. in connection with its projected improvements in London, Ont., have been ordered to be cleared, and it is believed locally that this is preparatory to beginning work on the rearrangement of the tracks, and the building of new passenger and freight station. It is said that the new station will be built on the site of the present one, but that it will have a frontage on Bathurst St.

Tillsonburg-Brantford Line.—On the occasion of his recent visit to Brantford, Ont., E. H. Fitzhugh, First Vice President, had an interview with the city council in reference to a proposed change of the route of the Tillsonburg-Brantford line, so that it might serve the Holmedale manufacturing district. He promised to consider the suggestion and to make a proposition to the council at an early date. (Oct., pg. 835.)

During August, 18 employes were killed and 21 injured, in the course of their work on Canadian railways. Of the fatalities, 11 were due to being run over, two each to flying material and to collisions, and one each to falling material, to being caught between cars and to drowning, while of the other accidents, seven each were due to falls and to being caught between cars, three to being run over, two to collisions, and one each to being struck by an object in passing, to a fall and to flying material.

WIRE ROPE

Why experiment continually with wire rope you know is not up to "**Dominion**" quality—quality that means better material, better construction and better service?

Material—All our ropes are made from the best quality of wire specially drawn to our rigid specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

Construction—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years' experience in manufacturing wire, ropes enables us to offer the best to be had anywhere.

Service—Every length of "Dominion" Rope gives satisfaction, because it is serviceable and dependable.

All Lengths and Sizes Carried in Stock for Immediate Shipment

The Dominion WIRE ROPE Company Ltd., MONTREAL

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

WHITE PASS & YUKON RY. ORE RATES.

11819. Sept. 7.—Re complaint of J. H. Conrad, alleging excessive freight rates charged by the White Pass & Yukon route on ores from Carcross to Skagway and on mining machinery and camp supplies from Skagway to Carcross. Upon hearing the complaint in presence of complainant and S. H. Graves, representing the White Pass & Yukon Route, it is ordered:

1. That the British Yukon Ry. Co., the British Columbia Yukon Ry. Co., the Pacific and Arctic Ry. and Navigation Co., and the White Pass and Yukon Ry. Co. forthwith cease and desist from discriminating against the applicant and in favor of the Atlas Mining Co., R. R. Neil and W. D. Greenough, and any and all of the said parties.

2. That the said railway companies cease and desist from discriminating in favor of the locality in which the Atlas Mining Co.'s properties are located and against the locality in which the applicant's mines are located.

3. That the said railway companies file with the Board tariffs showing the rates granted to the Atlas Mining Co., pursuant to the contract entered into between the Pacific and Arctic Ry. and Navigation Co. and the British Yukon Ry. Co. and the Atlas Mining Co., dated March 21, 1910.

4. That the said railway companies file with the Board a tariff amending, or supplemental to C.R.C. 9, issued Sept. 16, 1909, by the Pacific and Arctic Ry. and Navigation Co., the British Columbia Yukon Ry. Co., and the British Yukon Ry. Co., forming, as appears from the said tariff, "The White Pass & Yukon Route," giving carload rates of $1.75 a ton on ore and concentrates from Caribou to Skagway.

5. That the said railway companies grant to all shippers of ore and concentrates upon their line or lines of railway, proportionate rates and privileges at least as favorable as those granted to the Atlas Mining Co. under the said contract.

6. That the said railway companies, in due course, obtain for the applicant, if he notifies them in writing that he requires them so to do, the same or as favorable ocean rates as they have obtained for the Atlas Mining Co.; or, in the event of the said railway companies being unable to obtain the same or as favorable ocean rates for the applicant, then they are to cease and desist from obtaining discriminating ocean rates for the Atlas Mining Co.

7. That the said railway companies grant to the applicant exactly the same treatment as to wharfage at Skagway as that granted by the contract to the Atlas Mining Co., and handle the applicant's ore, and that of all other shippers over their lines, upon terms and conditions as to wharfage and otherwise exactly similar to that granted by the contract to the said Atlas Mining Co.

8. That the tariffs referred to in paragraphs 3 and 4 be filed on or before Nov. 1, 1910.

9. That the other matters covered by the applicant's complaint stand for disposition in connection with the complaints of the Dawson Board of Trade against the White Pass and Yukon Route.

CANADIAN CLASSIFICATION CHANGES.

11866. Oct. 4.—Re order 11599, Sept. 2, 1910, approving, subject to certain exceptions and additions, the proposed Supplement 3 to Canadian Classification 14; and re application of Canadian Freight Association for order approving a revised rule 6 to replace rule 6 as it appears in the present Canadian Classification 14, the said revised rule to be incorporated in the new Canadian Classification 15, to be published forthwith; and re the matter of the application of the Canadian Freight Association for an order approving a revision of the classification of asphalt and asphaltum; upon considering the oral representations made to the Board by the Canadian Freight Association's Advisory Committee, Sept. 20, and upon reading the letter dated Sept. 22 from the chairman of the committee with respect to the proposed revised rule 6 to Canadian Classification 14, the said revised rule being more favorable to the shipper than the old one, and the Board having this day rescinded its orders 11463 and 11631, dated Aug. 3 and Sept. 12, 1910, respectively, it is ordered that the revised rule 6, to appear in the forthcoming Canadian Classification 15, be approved, to read as follows:

(a) Unless otherwise specified in this Classification, or subsequent amendments thereto, articles too long or too bulky to be loaded in a box or stock car through the side door thereof, and which are loaded on a flat or gondola car, will be carried at actual weight and tariff (class or commodity) rate, subject to a minimum of 5,000 lbs. for each car used, at first class rate for each consignment from one shipper to one consignee; except that when the Classification provides for any article a lower minimum weight than 5,000 lbs. when loaded on a flat or gondola car, such lower minimum weight will apply, instead of the minimum of 5,000 lbs. referred to, for each car used.

(b) Articles too long to be loaded in a box or stock car through the side door, and which are loaded through the end door or end window thereof, will be carried at actual weight and tariff (class or commodity) rate, plus 50%, but subject to a minimum charge of 1,000 lbs. at first class rate for each shipment.

(c) Articles too bulky to be loaded in a box or stock car through the side door, and which are loaded through the end door thereof, will be carried at actual weight and tariff (class or commodity) rate, plus 50%, but subject to a minimum charge of 1,000 lbs. at first class rate for each shipment, except that when articles are provided with specific minimum weights in this Classification they will be carried at such minimum weights and at the class ratings specified therefor.

And upon considering the letter dated Sept. 30, 1910, from the chairman of the Canadian Freight Association's Advisory Committee, proposing a revision of the classification of asphalt and asphaltum, and it appearing to the Board that the said proposed revision is more favorable to the shipper than the present ratings of the said articles, it is ordered that the following be stricken out, viz.: The words "except the product of petroleum as shown on pg. 53," relating to asphalt or asphaltum, from the amendments to the hardware list, pg. 10 (index no. 9), and the ratings of japan, or liquid asphaltum, pg. 2 (index no. 4), from Supplement 2 to Canadian Classification 14; also "asphaltum" from the list of petroleum and petroleum products, pg. 18 (index no. 4) of the proposed Supplement 3 to the said Classification, approved (with certain exceptions and additions) for publication and filing by 11599, Sept. 2, 1910. And it is further ordered that the following additional ratings be incorporated in the new Canadian Classification 15, to be published forthwith:

Asphaltum, liquid (see note)—
In bulk in barrels .....l.c.l. 4 c.l. 7
In tank cars (to be furnished by shippers), subject to section (g) of rule 1 ..... c.l. 7
Note.—These ratings will not apply on black asphaltum varnish (japan).

PAINTS AND VARNISH.

Varnish:
Black asphaltum (japan):
In cans, not boxed, crated, or jacketed .....l.c.l.d. 1
In cans, jacketed .....l.c.l.d. 1
In wood, o.r. pkge., or in cans, crated or boxed.....l.c.l.d. 3 c.l. 5

and that the letters "n.o.s." be added after "varnish," as the ratings therefor appear in the present Classification 14, pg. 55, item 7.

O. & N.Y. RY. INTERSWITCHING CHARGES.

11883. Re application of F. J. Balch, General Freight Agent Ottawa and New York Ry., for permission to reduce the company's interswitching charge from 2c. to 1c. per 100 lbs. on 17 carloads of cement used in April last in the construction of a canal wall at Cornwall, said shipments having originated at Hull, Que., and moved over the C.P.R. and G.T.R. to a connection of the G.T.R. with the applicant company's railway at Cornwall Jct., Ont., and from there switched by the applicant company. It is ordered that the terms of order 4988, July 8, 1908, prescribing an interswitching toll of 1c. per 100 lbs., and not more than $3 as a minimum and $8 as a maximum per carload, were applicable to the traffic in question at the time it was moved, and that the amount charged by the applicant company in excess thereof was unlawful.

A Railway to Hudson Bay.

It is said that at a conference between W. Mackenzie, D. D. Mann, and W. H. Moore, of the Canadian Northern Ry., and the Minister of Railways, at Ottawa, Sept. 23, the question of the railway from The Pas, Sask., to Hudson Bay was under discussion. Press reports state that a proposal for the leasing of the line, when built by the Dominion Government, to the Canadian Northern Ry. on an agreement similar to that with the G.T. Pacific Ry., for the operation of the National Transcontinental Ry., Eastern Division, was proposed, but the Minister of Railways said there was nothing of a definite character suggested or considered in regard to the line.

T. Turnbull, C.E., has recently returned to Winnipeg from Port Nelson, where he had been making surveys for the location of a suitable townsite. He is reported to have said that there is not much choice, but if the south side of the Nelson River were selected there would not be any necessity for building a bridge. That point, however, could not be finally settled until the surveys now in progress under J. P. Gordon, and the hydrographic surveys were completed.

In an interview at Norway House, Oct. 13, W. Ogilvie stated that there was sufficient water power on the Saskatchewan and Nelson rivers to develop all the electricity required for the operation of a railway twice the length of the proposed railway to Hudson Bay. On the Nelson River the chief falls are at White Mud falls, where he estimates 350,000 horse power could be developed; Bladder rapids, where 100,000 h.p. could be developed, and at Manitou falls, where the line is planned to cross the river, he estimates that 200,000 h.p could be developed. At the Grand Rapids on the Saskatchewan River he estimates that 350,000 h.p. could be developed. There are other smaller falls and rapids on the two rivers, in addition to falls on a number of swift flowing tributaries to both rivers.

The Countess of Antrim, sister to Earl Grey, the Governor General, sailed from Montreal for England recently, having spent the summer with her son, Hon. Angus MacDonnell, who is engaged in contracting on the Esquimalt and Nanaimo Ry. on Vancouver Island.

National Transcontinental Railway.

Judge Cassels has decided in the Court of Exchequer that, the Crown is not liable to be sued on contracts made by the National Transcontinental Ry. Commissioners, and that actions on such contracts should be brought directly against the Commissioners.

An inspection of the line in New Brunswick was completed by C. O. Foss, District Engineer, Oct. 5, and in an interview at St. John, he is reported to have stated that section 1 would be ready for acceptance by Oct. 31; section 2 was ready for operation; section 3 could be taken over at any time, and section 4 would be completed by the end of the season. There was more delay in section 5 between the Tobique River and Grand Falls, the viaduct over the gorge of the Little Salmon River, and some other viaducts not having been completed. These would be completed in the spring, by which time section 6, which included the terminals at Edmundston, would be completed. The line in the province would be ready, and fully equipped for operation by the end of the summer of 1911.

The last day for receiving tenders for the erection of the superstructure of the bridge over the St. Lawrence River, at Quebec, was Oct. 1, when it was reported that four tenders were handed in by Canadian, British and other bridge builders. It will take some time to figure out the tenders, as they are made on the various shapes which enter into the construction of the bridge. The tenders have been turned over to the commission of engineers which prepared the plans for examination and report. With regard to the work going on at the piers, it was stated Oct. 10 that the caisson was being raised and would be examined to ascertain the extent of the damage sustained.

The plans of the union station which it is proposed to erect on the site of the Champlain market, Quebec, have been prepared by G. E. Tanguay, and have been submitted to the Commissioners.

S. R. Poulin, District Engineer, Winnipeg, completed an inspection of the work in progress in his district, extending easterly from Winnipeg, Sept. 30. He reports that work is progressing satisfactorily, considering the shortage of labor at all construction points. He expected to see the track laid from end to end of the district by Dec. 31, 1911. Track has already been laid for 25 miles easterly from Lake Superior Jct., and it is expected to add from 40 to 50 miles more by the end of the year.

The Commissioners have approved of standard plans for freight sheds, and storehouses, to be erected at different points on the line, and contracts have been let for the erection of such buildings at Lake Superior Jct., Ont., Redditt and Springfield, Man. The plans for the freight sheds show a frame structure, 28 by 60 ft., on posts, with a flat roof. One end of the building is arranged as an office, while the remainder, 50 by 28 ft., is devoted to a freight room. Two sets of sliding doors are provided on the track side, and an equal number on the opposite side, while there is a single sliding door leading into the freight room from a 9 ft. platform at the end. A room 10 by 14 ft. is built adjoining the office for perishable freight. A coal bin to hold 30 tons of coal is to be built under the office part of the building. The plans for the storehouse show a building 74½ ft. by 20 ft. 2 in. The casement is to be built of concrete, with an 8 in. concrete floor, and the rest of the building is to be of brick, with a tar and gravel roof. The basement store will be divided into two, the general store, 45 by 16 ft., containing the furnace and heating plant, and the second compartment being the oil vault, 25 by 16 ft. The main floor is divided into three sections, public office, foreman's office and store room. The basement store room is to be equipped with shelves, while the main store and foreman's office have shelves, drawers, plan cabinets, drawing tables, etc. This part of the building is heated by hot water from the boiler in the basement. The oil tanks, pumps and piping for the same, heating and lighting systems are to be installed under separate contracts.

Tenders were received to Oct. 18 for the machinery required for the equipment of a roundhouse at Lake Superior Jct., Ont., and for the centrifugal pumps and motors required for the sewage pumphouse at the Winnipeg shops. The specifications for the latter provide for the supply of one centrifugal pump, volute pattern, with a capacity of 16,000 galls. a minute, against a head of 48 ft., to be direct connected to a vertical motor of sufficient capacity; one centrifugal pump, volute pattern, with a capacity of 2,000 galls. a minute, against a head of 15 ft., to be direct connected to a vertical motor of sufficient capacity.

The arrangement for the temporary operation of the line from Winnipeg to Lake Superior Jct. was put in effect Oct. 6, when G.T. Pacific Ry. trains were run over the C.N.R. line in Winnipeg to the N.T.R., coming from the east, and so on to the G.T. Pacific branch line from Lake Superior Jct. to Fort William, Ont.

The members of the N.T.R. Commission arrived in Winnipeg, Oct. 13, from Fort William, Ont., having made their first official inspection of the newly opened line.

GRAND TRUNK PACIFIC RAILWAY.

Speaking at Montreal, Oct. 3, Senator J. P. Casgrain advocated the building of a line from Montreal to the National Transcontinental Ry. by the Provincial Government, and leasing it to the G.T. Pacific Ry. The G.T.P. Branch Lines Co. has charter powers to build such a line.

It was expected that the G.T. Pacific Ry. would be able to enter into possession of some part of the new union station at Winnipeg towards the end of Oct.

The arrangement between the G.T.P. R. and the Canadian Northern for the building of a loop to connect with the National Transcontinental Ry. at St. Boniface, Man., was not carried out, but a temporary arrangement was made, Oct. 4, by which the G.T.P.R. trains could connect with the N.T.R. over C.N.R. tracks.

In regard to the proposed lines from Regina to Moose Jaw, Sask., we were recently advised that the company was waiting to have the location maps approved by the Government. Since this information was received the plans have been approved, an arrangement having been made between the C.N.R., the C.P.R. and the G.T.P.R., by which the difficulties have been avoided, and satisfactory routes found for the two new lines without interfering with the C.P.R.

The Board of Railway Commissioners has approved of the location of the projected branch line from sec. 31, tp. 40, range 26, west second meridian, mileage 55.148 to mileage 111.536. The branch will start at Young, mileage 422.3, on the main line, and will terminate in Prince Albert. The question of the route into that place was under consideration at a meeting of the Prince Albert Board of Works, Oct. 11.

Reports from the construction camps Oct. 9, state that the grading gangs are working within 16 miles of Calgary, on the branch line from Tofield, Alta. The route was deflected to the east of Irricana, so as not to interfere with a C.P.R. spur. Contracts have been let for the building of a bridge across the Red Deer River. The bridge will be about 1,100 ft. long and about 170 ft. above high water, and is expected to be completed in about a year. Track has been laid to the site of the bridge at Red Deer, but it is doubtful if any further tracklaying will be done until the bridge is completed.

Construction on the line west of Edmonton, towards the Yellowhead Pass, is being proceeded with rapidly. A 12-stall roundhouse, with an addition for a repair shop, is being built, and a large acreage is being laid out for yard accommodation at Edson, the first division terminal point west of Edmonton.

At the Prince Rupert end of the line, according to an interview with G. G. S. Lindsey, who returned to Toronto Oct. 13, from a trip through Northern British Columbia, "The Hazleton section of the G.T.P.R. is progressing. Steel is laid, or will be, before the end of Oct. to Kitselas, 104 miles up, and grading is fast finishing to Hazleton, 81 miles farther on, and even to Aldermere, another 55 miles still farther east, to which point the rails will be down, it is said, early next year." A train service is in operation to mileage 65 for freight purposes, and the construction trains run for some miles further.

Resulting from the recent trip of inspection over the line by President Hays and Chairman Smithers, of the G.T.R., application was made to the British Columbia Government, Oct. 11, for an order-in-Council to permit the employment of Asiatic labor on the building of the line in the province. After hearing D'Arcy Tate, the company's solicitor, fully on the question, the Government decided not to grant the application.

The surveys for the branch from near Fort George to Vancouver are being proceeded with. A party under W. I. Bassett, is working from Agassiz north via Harrison River, Harrison Lake and Lillooet River to Lillooet. The trial lines from Lillooet to Lytton run early in the season are not considered satisfactory as to gradients, and the heavy rock work involved. It is expected that a low gradient will be secured by the new survey, and if this should prove to be the case, the line will parallel the C.P.R. from Agassiz to Vancouver, unless it is decided to adopt a line into North Vancouver. (Oct., pg. 845.)

Subway at Brock Ave., Toronto.—The Board of Railway Commissioners has ordered the construction of a subway under the railway tracks at Brock Ave., Toronto, plans to be submitted at once. The work is to be completed within six months of the approval of the plans, and an order will be made later on apportioning the cost. The tracks crossing Brock Ave. are G.T.R. line to North Bay, G.T.R. line to Stratford, etc.

The C.P.R. ran an immigrant train from Montreal to Winnipeg, via North Toronto, passing through that station Oct. 13. The immigrants for Toronto changed at Leaside Jct., for Toronto union station.

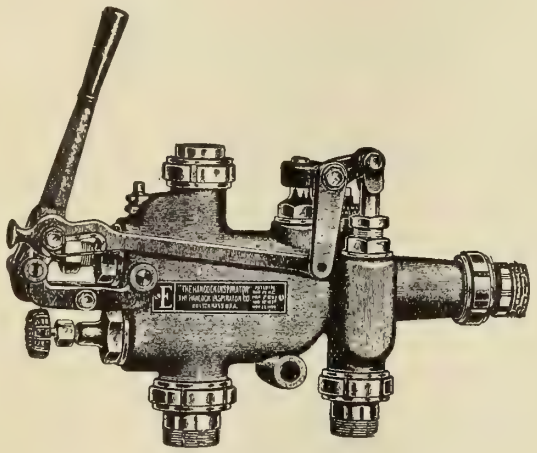
J. Arbuthnot, Winnipeg, Man., President of the Pacific Coast Coal Mines Co., stated Oct. 6 that there was no truth in the reports that the C.P.R. was about to purchase the company's collieries at South Wellington, Vancouver Island, for $4,000,000.

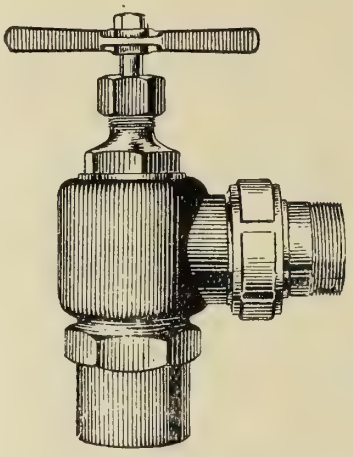
Boston & Maine Rd. officials confirm the report that the Hoosac tunnel is to be electrified. It is stated that the preliminary estimate of the cost of the change, including the cost of the electric locomotives, will be $1,000,000. Passenger and freight trains will be taken through the Hoosac mountain by electric locomotives between Tunnel station on the east and North Island on the west.

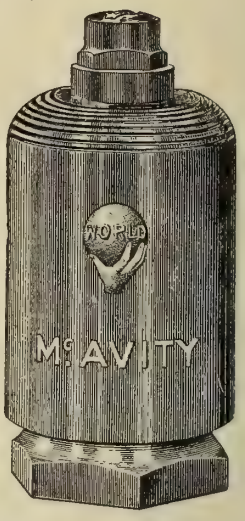
T. McAVITY & SONS, Ltd., St. John, N.B.

MANUFACTURERS OF

Locomotive Boiler Fittings, Car Heater Fittings, Hancock Inspirators, Injector Main Steam Valves,







Pop Valves, Standpipes, Electric Semaphores, General Railway Supplies, Brass and Iron Body Globe, Angle and Gate Valves, Hydrants and Corporation Supplies.

WAITING ROOM

21½ inches long, 3 inches deep.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them

Orders 11616 to 11631 were omitted from our Oct. issue, the summaries of them not having been dispatched from Ottawa in time.

11616. Sep. 7.—Dismissing application of city of Toronto for order directing G.T.R. to allow applicant to carry its transmission line on lands expropriated by it under by-law 5433, passed March 14.

11617. Sept. 9.—Authorizinz C.N.R. to erect wires under Kaministikwia Power Co.'s wires near Kakabeka, Ont.

11618. Sep. 8.—Authorizing F. J. Ure, Woodstock, Ont., to lay drain under G.T.R. on county road, between Cons. 11 and 12, East Zorra tp., Ont.

11619. Sep. 7.—Authorizing G.T.R. to take additional lands in Toronto, to enable it to comply with orders 8487 and 10169, Oct. 15, and Dec. 8, 1909, re Toronto grade separation.

11620. Sep. 8.—Authorizing G.T.P. Branch Lines Co. to build across highway on its Prince Albert branch, between secs. 20 and 29, tp. 37, r. 26, w. 2 m., Sask.

11621. Sep. 8.—Approving C.N.O.R. location of part of its Sudbury-Port Arthur Division through unsurveyed territory in Sudbury mining division, Algoma District, mileage 200 to 220, from Sudbury Jct.

11622. Sep. 13.—Authorizing C.P.R. at expense of B. C. Public Works Department, to build two level crossings about 5,000 ft. apart, east of Kault station, B.C.

11623. Sep. 9.—Authorizing C.P.R. to build spur for Overbrook wheat farms, Eyebrow, Sask., on its Moose Jaw North Westerly branch.

11624. Sep. 13.—Authorizing C.N.R. to cross C.P.R. Forward branch with its Moose Jaw extension, near Forward, Sask.

11625. Sep. 12. — Authorizing Chatham, Wallaceburg and Lake Erie Ry. to open for traffic that portion of its branch line to Pain Court, Ont.

11626. Sep. 9.—Authorizing Ontario Hydro-Electric Power Commission to use transmission wires erected across G.T.R. at lot 114, Thorold tp.

11627. Sep. 9.—Authorizing G.T.P. Branch Lines Co. to cross at grade C.P.R. Pheasant Hills Branch, in s.w. ¼ sec. 33, tp. 34, r. 27, w. 2 m., Sask.

11628. Sep. 9.—Authorizing Manitoulin and North Shore Ry. to open for traffic that portion of its line from about 13 miles west of Sudbury to Krean Hill, Ont., about 10 miles.

11629. Sep. 12.—Authorizing G.T.P.R. to build between secs. 11 and 12, tp. 53, r. 4, w. 5 m., Alta.

11630. Sep. 12.—Certifying correction of error in plan approved by order 10323, Apr. 23.

11631. Sep. 12.—Amending order 11463, made upon application of Kingston, Portsmouth and Cataraqui Electric Ry.

11763. Sep. 9.—Dismissing application of Burnaby District Board of Trade, B.C., for relief respecting G.N.R. freight rates between Vancouver and New Westminster.

11764. Sep. 22.—Extending to Dec. 31, time within which G.T.R. was authorized, by order 9344, to build branch in Goderich, Ont.

11765. Sep. 13.—Approving proposed separation of grades by C.P.R. over Yonge St. and Avenue Rd., Toronto.

11766. Sep. 22.—Ordering C.P.R., within 90 days, to install an electric signal bell at public road crossing, between Moffatt and Corwhin stations, Ont.

11767. Sep. 23.—Limiting speed of C.P.R. trains over its Kipp-Aldersyde Branch, Alta., from mileage 0 to 28.2, to 20 miles an hour.

11768. Sep. 22.—Authorizing town of Paris, Ont., to erect wires across G.T.R. on Broadway St. from south to north of the depot at east end of station.

11769. Sep. 21.—Authorizing Ontario Power Co. to erect wires across M.C.R. Buffalo branch, between lots 22 and 23, con. 7, Crowland tp., Ont.

11770. Sep. 23.—Approving Alberta Central Ry. location from Red Deer easterly, 40 miles.

11771. Sept. 23.—Authorizing Niagara, St. Catharines and Toronto Ry. to build spur on Pine and Water Sts., Thorold, Ont., through Montrose Paper Mills' property.

11772. Sep. 24.—Authorizing Canadian Niagara Power Co. to erect wires across Bell Telephone Co.'s wires at Courtwright and Robinson Sts., Bridgeburg, Ont.

11773. Sep. 24.—Extending to Nov. 1 time for publishing and filing C.P.R. revised westbound tariff on coal and coke.

11774. Sep. 23.—Authorizing Simcoe Ry. and Power Co. to erect wires across Bell Telephone Co.'s wires, between cons. 2 and 3, opposite lot 17, Tay tp., Ont.

11775. Sep. 23.—Authorizing London, Ont., Water Commissioners to erect wires across G.N.W. Telegraph Co.'s wires at Colborne and York Sts.

11776. Sep. 23.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.T.R. at lot 32, con. 1, Saltfleet tp.

11777. Sep. 23.—Authorizing Simcoe Ry. and Power Co. to erect wires across Bell Telephone Co.'s wires between cons. 4 and 5, opposite lot 15, Tay tp., Ont.

11778. Sep. 23.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.T.R. wires in New Hamburg tp.

11779. Sep. 23.—Relieving C.P.R. from providing further protection at crossing two miles east of Methven Man.

11780. Sep. 23.—Approving Algoma Central and Hudson Bay Ry. standard passenger tariff C.R.C. 41, providing maximum passenger toll between stations on its line of 4c. a mile or fraction thereof.

11781. Sep. 23.—Authorizing the building of drain under G.T.R., con. 7, Malahide tp., Ont.

11782. Sept. 24.—Authorizing G.T.R. to build siding on Mowat Ave., Toronto, according to new plan filed, instead of as shown on the plan in connection with order 4816, May 19, 1908.

11783. Sep. 24.—Authorizing G.T.R. to build siding from siding on Mowat Ave., Toronto, which it was authorized to build by order 4816, upon and across Mowat Ave., and on lots 44 to 37, inclusive, to H. Disston and Sons' premises, and that C.P.R. has right to use it on equal terms, and that it be completed within three months.

11784. Sep. 24.—Authorizing town of Swift Current, Sask., to lay pipe under C.P.R.

11785 and 11786. Sep. 24.—Authorizing Burroughs Falls Power Co. to erect wires under Boston and Maine Rd. at crossings south and north of Ayer's Cliff station, Ont.

11787. Sep. 24.—Authorizing M. Richardson to lay pipe under G.T.R. between Brant and Haldimand counties, Seneca tp., Ont.

11788. Sep. 24.—Authorizing London, Ont., Water Commissioners to erect wires across Bell Telephone Co.'s wires at Beaconsfield Ave. and Wharncliffe Road.

11789. Sep. 26.—Approving C.N.O.R. standard building plans for signal cabin 12x14, freight house 23x35, freight house 30x70, section dwelling house, section tool house, 40,000 gallon tank, station no. 2, station no. 3, single and double closets, on its Toronto-Ottawa section.

11790. Sep. 26.—Approving Niagara, St. Catharines and Toronto Ry. Standard Passenger Tariff C.R.C. 13, between all points on its railway, at 3c. a mile, or fraction thereof.

11791. Sep. 24.—Approving C.N.R. location between Edmonton and Camrose, Alta., mileage 0 to 44.40, through tps. 47-52, r. 20-24, w. 4 m.

11792. Sep. 24.—Amending order 11228, which authorized building of a spur at Medicine Hat, Alta., by substituting "Medicine Hat" for "Lethbridge," where it occurs in the order.

11793. Sep. 26.—Approving C.N.O.R. plans for station building at Port Hope, Ont.

11794. Sep. 26.—Authorizing C.N.O.R. to build across Quetton St., Washago, North Orillia tp.

11795. Sep. 26.—Approving C.N.O.R. location of part of its Sudbury-Port Arthur Division through unsurveyed territory in Sudbury mining division, Algoma District, mileage 220 to 240, from Sudbury Jct.

11796. Sep. 26.—Approving C.N.O.R. plans for station building at Cobourg, Ont.

11797. Sep. 26.—Relieving G.T.R. from providing further protection at crossing at Park Hill, Ont., con. 21, West Williams tp.

11798. Sep. 26.—Authorizing C.N.O.R. to build across G.T.R. spur to Lehigh Valley cement works, subject to certain conditions.

11799. Sep. 26. — Authorizing Toronto, Hamilton and Buffalo Ry. to change signalling system where its main line crosses G.T.R. east of Victoria Ave. South, Hamilton, Ont., and that the speed of its trains over the crossing be limited to 10 miles an hour.

11800. Sep. 26.—Authorizing C.N.O.R. to build across G.T.R. spur to Belleville cement works, Point Anne, subject to certain conditions.

11801. Sep. 24.—Amending order 9900, which authorized C.P.R. to open for traffic the portion of its Langdon North branch from mileage 0 to 38.88, Alta., by deleting clause limiting speed of its trains.

11802. Sep. 13.—Authorizing G.T.R. to build branch from the siding on Mowat Ave., Toronto, which C.P.R. was authorized to build by order 4816, to H. Disston and Son's premises, and that C.P.R. has the right to use it jointly with G.T.R., the G.T.R. to complete branch within three months from date, and that order 11783 be rescinded.

11803. Sep. 28.—Relieving G.T.R. from providing further protection at first highway crossing north of Langford station, Ont.

11804. Sep. 27.—Authorizing C.P.R. to build spurs for Metals Limited, Tees and Persse, and Campbell and Griffin, Calgary, Alta.

11805. Sep. 28.—Authorizing C.P.R. to build under Orillia municipality's wires between cons. 4 and 5, North Orillia tp.

11806. Sep. 13.—Authorizing C.P.R. to use jointly with G.T.R. the branch authorized by order 11802; that C.P.R. pay half cost of the construction, and half-yearly, half cost of maintenance; that the cost of construction and maintenance be established by G.T.R. Division Engineer's certificate, subject, in case of dispute, to Board's Chief Engineer, and rescinding order 11741, Sept. 13.

11807. Sep. 29.—Authorizing London, Ont., Water Commissioners to erect wires across G.N.W. Telegraph Co.'s wires at Beaconsfield Ave. and Wharrencliffe Rd.

11808. Sep. 19.—Authorizing G.T.P.R. to complete building of bridge in East Clover Bar District, about two miles west of Ardrossan station, between sec. 4 and 5, tp. 53, r. 22, w. 4 m.

11809. Sep. 19.—Authorizing Local Improvement District 24-S-4 to extend Alexandra St. across Calgary and Edmonton Ry. (C.P.R.), and authorizing Calgary and Edmonton Ry. to remove the switch outside the limit of crossing.

11810. Sep. 17.—Authorizing city of Calgary, Alta., to build overhead bridge across C.P.R. Macleod branch.

11811. Sep. 19.—Adding Clover Bar Sand and Gravel Co. as party to application of W. Humberstone, Edmonton, Alta., for order directing G.T.P.R. to build branch to his mine, in n.w. ¼ sec. 7, tp. 53, r. 23, w. 4 m.

11812. Sep. 19.—Authorizing G.T.P.R. to expropriate lots 36, 37, 38 and 46 in Dwyer subdivision, Edmonton, Alta., and within 10 days file plan for carrying its line over Norton St., and on approval, to complete all work necessary for the crossing on or before July 1, 1911, and to complete all necessary work to connect Nanton St. and Fort Saskatchewan trail in accordance with the standard regulations affecting highway crossings, as amended May 4, within one month from date; the Saskatchewan trail not to be closed for public travel until completion of Norton St. bridge.

11813. Sep. 19.—Adding C.P.R. as party to North Battleford Lumber Co.'s complaint on behalf of the retail lumbermen of North Battleford, Sask., alleging discrimination in lumber rates between Warman and Lloydminster, by C.N.R., and postponing hearing of application until C.P.R. answer is filed or time for filing has elapsed.

11814. Sep. 8.—Authorizing C.N.R. to extend siding from station 277-46, Vancouver, B.C., south for 300 ft. for the Prudential Builders.

11815. Sep. 12.—Dismissing application of Greenwood, B.C., board of trade, and O. McKay, for operation by V. V. and E. Ry. and Nav. Co. of branch near Myncaster.

11816. Sep. 19.—Ordering G.T.P.R. within 30 days to build highway crossing between secs. 25 and 30, Kirk, Alta.

11817. Sep. 1.—Dismissing Esquimalt and Nanaimo Ry.'s application to maintain in its present condition passage for foot passengers only, at crossing of old Esquimalt road, or to divert old Esquimalt road between William and Dalton Sts., Victoria, B.C.

11818. Sep. 6.—Dismissing C. J. Piper's application for order directing C.N.R. to build siding at Piper siding, B.C.

11819. Sep. 7.—Re ore rates, etc., on White Pass and Yukon route. This order is given in full on another page.

11820. Sep. 19.—Authorizing Alberta Government to cross Calgary and Edmonton Ry., according to plan on file, and ordering that if old crossing was one which C. & E. Ry. was bound to maintain, it shall maintain new crossing; if any dispute as to maintenance arises, either party may submit evidence to the Board as to company's liability.

11821. Sep. 16.—Authorizing C.P.R. to file plan showing location of spur to S. Houlton's premises, Calgary, Alta., and after ap-

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

proval to build spur, and if it becomes necessary, to protect the crossing at Fourth St., S. Houlton to bear such portion of the expense as Board may determine.

11822. Sep. 17.—Postponing question of subway under C.P.R. on Fourth St. west, Calgary, Alta., and ordering C.P.R. to file plan within 30 days, showing location of gates on Fourth St. west; and within 60 days after the approval to erect them and to operate them day and night, the erection of gates not to prejudice rights of parties under agreement of Sept. 14, 1906.

11823. Sep. 19.—Authorizing G.T.P. Branch Lines Co. to file within 30 days, plan of overhead bridge over its line, n.e. ¼ sec. 34, tp. 45, r. 21, w. 4 m., the local improvement district, and the Alberta Government to deposit $200 and $500 respectively on or before Dec. 1 towards the work, to joint credit of the district council, the Alberta Government, and G.T.P. Branch Lines Co.; the company to complete the work on or before June 15, 1911; the local improvement district to complete approaches at both ends, and upon completion $700, together with accrued interest, be paid to the G.T.P. Branch Lines Co.

11824. Sep. 16.—Ordering C.P.R. to file, within 30 days, plan showing location of gates where Main St., Medicine Hat, Alta., crosses its right of way, and within 60 days after approval to erect gates, the cost to be apportioned: C.P.R. 40%, city of Medicine Hat, 40%, Railway Grade Crossing Fund, 20%.

11825. Sep. 26.—Amending order 11605, which provided for installation of interlocking plant where National Transcontinental Ry. crosses C.N.R. Dundee branch at mileage 246, near St. Boniface, Man., by providing that interlocking plant be installed, maintained and operated at expense of National Transcontinental Ry., by C.N.R., and rescinding order 11735, Sept. 20.,

11826 to 11829. Sep. 29.—Temporarily approving Bell Telephone Co.'s agreements with Manitoulin and North Shore Ry.; Sandwich South tp., Ont.; Kitley Rural Telephone Co., and H. H. Coffey and J. A. M. Armstrong, for interchange of service, provided it does not authorize higher tolls than were authorized previous to May 13, 1906.

11830. Sep. 1.—Ordering British Columbia Government to build a level crossing over Esquimalt and Nanaimo Ry., according to plan.

11831. Sep. 30.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Toronto, Hamilton and Buffalo Ry. at Hunt St., Hamilton.

11832. Sep. 30. — Authorizing Montreal Light, Heat and Power Co. to lay pipe under C.P.R. on St. Denis St.

11833, 11834. Sep. 30.—Authorizing Shawinigan Water and Power Co. to erect wires across C.P.R. near Three Rivers, and across St. Maurice Valley Ry. at Mont Carmel, Que.

11835, 11836. Sep. 30.—Authorizing Erindale Power Co. to erect wires across Bell Telephone Co.'s wires at Birmingham Ave. and Sixth St., New Toronto, Etobicoke tp., and at Middle and Centre Roads, Toronto tp., Ont.

11837. Sep. 30. — Authorizing Shawinigan Water and Power Co. to erect wires across St. Maurice Valley Ry. at Marchand's station, Que.

11838 to 11841. Sep. 30.—Authorizing Erindale Power Co. to erect wires across Bell Telephone Co.'s wires at intersection of Evans Ave. and Church St., Mimico, at New Toronto and Sixth Sts., New Toronto; at Church and New Toronto Sts., and at Evans and Mimico Aves., Mimico, Ont.

11842. Sep. 30.—Relieving G.T.R. from providing further protection at first highway crossing south of St. Jacob's station, Ont.

11843. Sep. 27.—Authorizing C.N.O.R. to divert Princess St., Orono.

11844. Sep. 30. — Temporarily approving Bell Telephone Co.'s agreement with McKillop tp., Ont., for interchange of services.

11845. Sep. 30.—Relieving G.T.R. from providing further protection at highway crossing at Mitchell, Ont.

11846. Sep. 27.—Dismissing application of G. N. Smith, Clarke tp., Ont., for order directing C.N.O.R. to build overhead bridge on lot 3, con. 4, Clarke tp.

11847. Sep. 30.—Approving location of G. T.P.R. Alberta coal branch, mileage 0 to 37, from sec. 6, tp. 53, r. 18, to tp. 48, r. 21, w. 5 m., North Alberta District.

11848. Sep. 30.—Amending order 9980, made upon application of C.P.R., authorizing it to open for traffic the extension of its Lacombe Branch from Stettler to Castor, Alta.

11849. Sep. 30.—Authorizing C.P.R. to build bridge over South Saskatchewan River, near Outlook, Sask.

11850. Oct. 1.—Authorizing C.P.R. to reconstruct bridge 42.1 on its London subdivision, Ontario Division.

11851. Oct. 1.—Authorizing C.P.R. to build spur across Tucker St., Arthur, Ont.

11852. Oct. 1.—Amending order 11224 authorizing C.P.R. to build across and divert highways on the Macleod division of its Crow's Nest Branch, from mileage 0 to 30.7.

11853. Oct. 3.—Authorizing Ste. Cecile de Levrard municipality to construct highway across Quebec, Montreal and Southern Ry. in lot 258, cadastral 450, con. 4, Nicolet co., Que.

11854. Oct. 3.—Approving Esquimalt and Nanaimo Ry. revised location between Duncans and Cowichan Lake, B.C., from station 893-31 to 967.

11855. Sep. 27.—Amending order 9652, authorizing C.N.O.R. to build between lots 2 and 3, con. 4, Clarke tp.

11856. Oct. 3.—Authorizing town of Orillia, Ont., to lay pipe under G.T.R. about 1300 ft. west of road allowance between cons. 5 and 6.

11857. Oct. 3.—Authorizing Guelph, Ont., Water Works Department to lay pipe under G.T.R. on Dufferin St.

11858. Oct. 4.—Authorizing G.T.P.R. to divert highway between secs. 28 and 33, tp. 23, r. 8, w. 2 m., Yorkton District, Sask.

11859. Oct. 4.—Approving C.N.O.R. revised location between stations 617-65 and 696-15, St. Andrew's village.

11860. Sep. 27.—Authorizing C.N.O.R. to build a subway carrying Choate Road under its line from lot 5, con. 2, to and under crossing at Cavan St., lot 5, con. 1, Hope tp.

11861. Oct. 3.—Authorizing G.T.R. to build steel bridge across highway where its line crosses south of Chesley, Ont.

11862. Oct. 4.—Authorizing C.P.R. to use bridges 8.05, 14.2 and 15.6 on its Tobique section, N.B.

11863. Oct. 4.—Rescinding order 11463, Aug. 3, made upon application of Kingston, Portsmouth and Cataraqui Electric Ry., and rescinding order 11631, Sept. 12, amending same, re loading of long or bulky articles through side doors of box cars, upon application of Canadian Freight Association.

11864. Oct. 4.—Authorizing C.P.R. to use bridge 10.6 on its Fredericton section, N.B.

11865. Oct. 4.—Approving G.T.R. plan showing remodelling of passenger station at Windsor, Ont.

11866. Oct. 4.—Approving revised rule 6 in Canadian Classification 15, respecting articles too long and bulky to be loaded in box cars through side doors, also providing additional ratings for asphaltum, paints and varnish. This order is published in full on another page.

11867. Oct. 4.—Authorizing C.P.R. to build a Y and make connection with British Columbia Electric Ry. in n.w. ¼ sec. 2, tp. 16, r. 3, w. 7 m.

11868. Oct. 4.—Approving C.P.R. location sec. 12, tp. 33, r. 22, w. 3 m., to sec. 3, tp. 39, r. 28, w. 3 m., Sask.

11869. Oct. 5.—Authorizing Ontario Minister of Public Works to build a highway crossing over C.P.R. on lot 5, con. 3, Dowling tp., Sudbury District.

11870. Oct. 5.—Ordering C.P.R. to install gates and maintain day and night watchman at intersection of Westminster Ave., Montreal West.

11871. Sep. 26.—Ordering G.T.R. to build subway at level crossing at Brock Ave., Toronto.

11872, 11873. Oct. 4.—Approving G.T.R. diversion of line as constructed between lot 25, con. 1, Brighton tp., Ont., and lot 29, con. B, and to cross C.N.O.R. by a bridge.

11874. Oct. 5.—Authorizing C.P.R. to close two crossings between Churchville station and Eldorado Park, Ont., and to build a roadway in lieu of same.

11875. Oct. 5.—Authorizing C.P.R. to build spur for Standard Lumber Co., near Cranbrook, B.C.

11876. Oct. 5.—Approving Kootenay Central Ry. location from mileage 24.9 at Fort Steele, to 35.9 at Wasa, B.C.

11877. Sep. 27.—Rescinding order 11392, Aug. 9, authorizing C.N.O.R. to cross at grade between lots 10 and 11, con. 4, Clarke tp., the company to submit within 30 days detail plan of subway authorized by order 9562, Feb. 15, for approval of Board's Engineer, the work to be completed by May 1, 1911.

11878. Oct. 4.—Rescinding order 11736, dated Sept. 20, authorizing C.P.R. to operate branch from mileage 9.56, lot 6, con. 4, Etobicoke tp., to connection with G.T.R. in lot 7, con. 1, Etobicoke tp., and permitting it temporarily to put in switches and semaphores to be operated by hand.

11879. Oct. 5.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across C.P.R. telegraph wires at Strange St., Waterloo.

11880. Oct. 5.—Approving G.T.P.R. Standard Freight Mileage Tariff, C.R.C. 7, for mileage 1 to 200, inclusive, to enable it to operate parts of its line between Prince Rupert, B.C., and Thornton, Alta., already completed.

11881. Oct. 5.—Authorizing C.P.R. to build under Erindale Power Co.'s wires between cons. 2 and 3, Etobicoke tp., Ont.

11882. Oct. 5.—Ordering C.N.R. to complete work required by order 9173, Jan. 6, which directed it to provide suitable accommodation for traffic between Rainy River and Fort Frances, Ont., by Nov. 15.

11883. Oct. 6.—Declaring that interswitching charges by Ottawa and New York Ry., in excess of 1c. per 100 lbs., and $3 and $8 as minimum and maximum per car load, respectively, as prescribed in order 4988, July 8, 1908, are unlawful.

11884. Oct. 6.—Ordering C.P.R. within 90 days to install improved electric bell at crossing at Mechanicsville, Ottawa.

11885. Oct. 6.—Extending for three months time within which G.T.R. was authorized to build branch to W. Knechtel and Son's premises.

11886. Oct. 5.—Authorizing C.P.R. to build spur for Dougall Varnish Co., Montreal.

11887. Oct. 6.—Authorizing C.P.R. to build spur to J. Hanbury's sawmill, Vancouver, B.C.

11888. Oct. 7.—Authorizing town of Berlin, Ont., to move Berlin and Waterloo Street Ry. tracks where they cross G.T.R. on King St.

11889 to 11893. Oct. 7.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across C.P.R. telegraph wires at five points.

11894. Oct. 7.—Authorizing Seymour Power and Electric Co. to erect wires across Bell Telephone Co.'s wires in Thurlow tp., Ont.

11895. Oct. 8.—Authorizing C.N.R. to build across certain highways as shown on profile approved by order 9722, Feb. 26.

11896. Oct. 7.—Authorizing G.T.R. to install, within 90 days, improved type electric bell at first highway crossing west of Wales, Ont.

11897. Oct. 7.—Authorizing C.N.R. to open for traffic that portion of its line from Ochre River to end of steel on Ste. Rose du Lac branch, 15 miles.

11898. Sept. 27.—Ordering C.N.O.R. to cut timber 200 ft. south of its track across public road between lots 4 and 5, con. 4, Clarke tp., to make a clear view 700 feet westerly from the highway.

11899. Oct. 7.—Ordering that a building material list be provided in the forthcoming new Canadian Classification 15.

11900, 11901. Oct. 8.—Approving location of C.N.R. Goose Lake extension through tps. 30-31, r. 11-15 and r. 16-20, w. 4 m., Alta., from junction with Qu'Appelle, Long Lake and Saskatchewan Ry. at Saskatoon, Sask.

11902. Oct. 10.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across C.P.R. telegraph wires at King and Sophia Sts., Hamilton.

11903. Oct. 10.—Authorizing C.N.O.R. to build between lots 13 and 14, con. 4, Hope tp.; to divert highway along the north side of right of way to connect with road between cons. 3 and 4; and divert highway between cons. 3 and 5 to cross its line at right angles, by a subway; and rescinding orders 10066 and 10357.

11904. Oct. 10.—Approving revised location of portion of C.P.R. main line as constructed from mileage 70.4, Thomson subdivision, near Spence's Bridge, B.C., to mileage 90; mileage 101 to 121.4, Thomson subdivision; and mileage 0 to 49.06, Cascade subdivision, at Ruby Creek.

11905. Oct. 10.—Authorizing C.P.R. to build additional track across first street east and first street west of Robert St., and across two intervening streets, in Hastings, B.C., and to build an extension to the undercrossing and bridge on which to carry the extra track.

11906. Oct. 10.—Extending, for six months, time within which C.N.R. was authorized by order 9072 to install interlocking plant at crossing near Midale, Sask.

11907. Oct. 10.—Approving G.T.R. plan of side track and location of building at Wyebridge, on branch line authorized by order 10514.

11908. Oct. 10.—Authorizing Toronto, Hamilton & Buffalo Ry. to build branch with spurs, from east of Harvey's Lane northwesterly to International Harvester Co.'s lands, Hamilton, Ont.

11909. Oct. 10.—Authorizing C.P.R. to build extension to spur for Hamilton Powder Co., near Barnet station, B.C.

11910. Oct. 10.—Authorizing C.N.R. to build branch across Alberta Ave., Lloydminster, Sask.

11911 to 11913. Oct. 10.—Authorizing C.P.R. to use bridge over highway at Bala, Ont.; Marion Ave. subway, Parry Sound; Little Bridge, St. Almonte; and bridges 82.1, 105.0, 105.3, and 123.9, on its Chalk River section, Ont.

11914. Oct. 10.—Authorizing Walkerton and Lucknow Ry. to use bridge 16.35.

11915. Oct. 10.—Authorizing C.P.R. to use four bridges on its Listowel branch, Ont.

ESPLANADE STREET EAST, TORONTO

11916, 11917. Oct. 10.—Authorizing Montreal Terminal Ry. to build extension to Dominion Light, Heat and Power Co.'s works and United Soap Co.'s works, Maisonneuve, Que.

11918 to 11921. Oct. 10.—Authorizing C.N.O.R. to build between lots 604 and 607, South River range, and across roads on lots 646 and 647, North Rouge River range; 596 and 597, South Rouge River range; 630, 631 and 632, Rouge River range, St. Andrew's parish.

11922. Oct. 10.—Approving location of C.P.R. Lauder extension from mileage 0 to 3.23, w. p. m., Man.

11923. Oct. 10.—Authorizing C.P.R. to use bridges 43.79, 84.9, 9.3, 35.4, 115.4, 71.2, 50.4, and 62.5, on its Chalk River section, Eastern Division.

11924. Oct. 10.—Authorizing W. J. Aikens, of Dunnville, Ont., to lay gas pipe under G.T.S. near Onondaga station.

11925. Oct. 10.—Authorizing Seymour Power and Electric Co. to erect wires across G.T.R. at lot 13, con. 1, Thurlow tp., Ont.

11926 to 11932. Oct. 11.—Temporarily approving Bell Telephone Co.'s agreements with Apsley Telephone Co., Nov. 3, 1908; Fingal Telephone Co., July 13, 1908; North American Telegraph Co., July 1, 1909; Camden Independent Telephone Co., Sept. 16, 1910; Houghton and South Walshingham Telephone Co., May 21, 1907; Little Nation Telephone Co., Dec. 28, 1905; and Hawthorne Hill Telephone Co., Aug. 18, 1908.

11933. Oct. 10.—Approving plan of drain to be built under M.C.R. in Harwich tp., Ont.

11934. Oct. 11.—Authorizing C.P.R. to build bridge 72.6 over Little Key River, on its Lake Superior Division.

11935. Oct. 11.—Authorizing C.P.R. to build spur for Saskatoon Brick and Supply Co. at Dunfermline, Sask.

11936. Oct. 11.—Authorizing G.T.R. to build branch with spurs, from C.P.R. district 16, Middle Division, near Waterdown station, to National Fire Proofing Co.'s premises, East Flamboro tp., Ont.

11937. Oct. 11.—Approving Western Union Telegraph Co.'s tariff of maximum tolls for messages between its offices in Nova Scotia, New Brunswick and Quebec, filed as Tariff C.R.C. 6.

11938. Oct. 11.—Temporarily approving agreement between Bell Telephone Co. and North Huron Telephone Co., Sept. 27, 1910.

11939. Oct. 11.—Authorizing town of Farnham, Que., to lay culvert under C.P.R., St. Guillaume branch.

11940. Oct. 11.—Authorizing city of Montreal to lay sewer under Montreal Park and Island Ry., at Sixth Ave., Notre Dame de Grace.

11941. Oct. 11.—Authorizing Chatham Gas Co. to lay pipe under G.T.R. at Lacroix St., Chatham, Ont.

11942. Oct. 11.—Authorizing Seymour Power and Electric Co. to erect wires across Bell Telephone Co.'s wires between Sidney and Thurlow tps., near Belleville, Ont.

11943. Oct. 11.—Authorizing Welland Electrical Co. to erect wires across G.T.R. on Major St., Welland, Ont.

11944. Sept. 22.—Ordering C.P.R. to place watchmen at Main and Tupper Sts., Portage la Prairie, Man., where its railway crosses; the C.N.R. to appoint watchman on said streets where C.N.R. and G.T.P.R. cross, each company to bear half the expense; that leave be reserved to the city to apply for additional protection where the C.N.R. and G.T.P. cross if it is found that one watchman for the two roads is insufficient.

11945. Oct. 12.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across C.P.R. telegraph wires at John St., Waterloo.

11946. Oct. 12.—Authorizing C.P.R. to use bridge over Wellington St., Ottawa.

11947. Oct. 12.—Approving Campbellford, Lake Ontario and Western Ry. location from near Toronto to western boundary of Port Hope, Ont., with the exception of portions through Whitby, Oshawa and Bowmanville.

11948. Oct. 12.—Approving bylaw 11, authorizing General Manager of British Yukon Ry. to prepare and issue tariffs of tolls.

The G.T. Pacific Ry. Co. has issued writs against a number of companies in Vancouver, B.C., to have them prohibited from using the words "Grand Trunk" as part of their titles.

The first of a series of actions involving altogether over $600,000, in which the C.P.R. is the defendant, is being heard in the U. S. Circuit Court, Portland, Me. It is alleged that extensive forest fires in northern Maine in 1908 were caused by sparks from C.P.R. locomotives, and that in the fires camps, machinery, bridges, cut timber, etc., were destroyed.

C. P. R. Annual Meeting.

The 29th annual meeting of shareholders was held in Montreal, Oct. 5. Sir Thos. G. Shaughnessy, President and Chairman of the Board, in moving the adoption of the report for the year ended June 30, which was published in our last issue, said:—In round figures the gross revenue of your railway lines, exclusive of ocean steamships, shows an increase as compared with the previous year of $18,600,000, working expenses an increase of $7,700,000, and net earnings an increase of $10,900,000. The actual result was somewhat better than this, because the directors thought it wise to create at the cost of working expenses an additional fund of about $3,700,000 to provide for maintenance works of one kind or another contemplated, but not completed in the current year. These figures furnish conclusive evidence of the growth and progress in Canada, and of the earning power of your property, and show in a most emphatic way that the large sums provided during the past seven or eight years for improvement and facilities of every description over the whole system are yielding handsome returns in the efficiency and economy with which your traffic is being handled.

Insufficient rainfall in some sections of Western Canada during the growing season had a damaging effect upon grain crops, with the result that the quantity of wheat to be moved during the next few months is considerably less than it would have been had normal weather conditions prevailed. Up to the present this has had no material effect upon the revenue, but it is not improbable that later on there will be some shrinkage in gross earnings.

At the meeting of directors in August it was decided to increase the dividend on common stock to 7% per annum, exclusive of the 1% paid from land revenue, making a total distribution of 8%. Your directors are aware of the feeling amongst the shareholders that, taking into account the income and financial position of the company, this is scarcely sufficient, and if last year's returns be taken as a basis, that feeling is not without reasonable foundation, but we must not lose sight of the fact that conditions may not always be so favorable, that we may have lean years, and that in such contingency a large cash reserve will be a source of convenience and strength. But then apart from surplus earnings you have extraneous assets in deferred payments, or land mortgages, cash proceeds of land sales, and other items of like character in process of realization, that may be roughly estimated at $50,000,000, without taking into account unsold lands, and in ordinary course this amount should be substantially augmented within the next few years. In the opinion of your directors the best interests of the company and its shareholders will be subserved by keeping intact a considérable portion of these assets instead of resorting to the policy ordinarily characterized as melon-cutting, which has not always proved a boon to the beneficiaries. At the same time there is every reason why shareholders of the present day should expect such advantage in the way of income from these assets as may be possible without unduly encroaching on principal, and it is the intention of your directors to determine during the coming year how this can best be brought about.

There has been a very striking expansion in passenger traffic between this continent and Europe through Canadian ports since your two steamships, Empress of Britain and Empress of Ireland, were put into service, and the time has now arrived when steamships of greater size and speed should be provided for the route in the interest of Canadian ports, the country generally and rail transportation lines. While there has not been the same increase of traffic on the Pacific, there has been a steady growth, and your steamship line has been securing at least its proper share. While your Pacific boats are still in excellent condition, they are now too small for the trade, and should be replaced. Plans for meeting the situation on both oceans are receiving attention, and your directors expect that, within the next few weeks, they will be able to complete an arrangement.

Among measures that will come before you for approval at this meeting is a bylaw amending existing bylaws, so as to remove the necessity for closing books in Montreal, London and New York, before payment of each dividend on common shares. This will make it practicable to deal with the dividend quarterly instead of half-yearly, and your directors propose to do this, commencing with the first quarter of the current year.

Quite recently Sir Wm. Van Horne, who since his resignation as President in 1899 has been Chairman of the Board, decided to retire from that office, but, of course, to retain his seat on the board. The directors, in common I know with all shareholders, have a keen appreciation of the splendid services rendered to the company by Sir William, first in the early days of construction, when there were physical and financial difficulties to overcome that seemed almost insurmountable, and later when the railway, having been completed to the Pacific coast, it became his duty to formulate a policy of branch line construction, to establish relations with connecting railways for the interchange of business, and to complete and perfect an organization for securing traffic and for handling it as economically as circumstances would permit. With the pessimism that then prevailed at home and abroad he might easily have been discouraged, and the location and building of branch lines with great rapidity in a territory so vast furnished ample opportunity for error, but he was not given to discouragement, and the soundness of his judgment, as well as the accuracy of his work, have stood the test of time and experience. When he surrendered the Presidency I am quite sure that he was actuated, not so much by the call of growing years or the desire for leisure as by the wish that his chief lieutenant and his friend might have scope and opportunity; and during the intervening 11 years that have marked the development of what might be called a new C.P.R. he has been among the foremost directors in support of every measure of progress and enlargement, and it is a source of great satisfaction to me, as I know it is to him, that after 30 years of intimate business association, nearly all of them with the C.P.R., we are still colleagues and co-workers in the promotion of the welfare of the great company in which we all take such pride. For the directors and shareholders I express the earnest hope that Sir William will be with us for many years to sit at our board and to share in our councils.

Sir Thomas then moved the adoption of the report which was carried. The following resolutions were also adopted:

That the lease of the New Brunswick Southern Ry. be sanctioned and approved, which lease, among other things, demises to this company for 999 years the whole of the railway now constructed from St. John to St. Stephen, N.B., about 83 miles, and its appurtenances, at an annual rental equal to the interest payable on its bonds at present outstanding amounting to $500,000 at 3% per annum, and on such bonds as may

be issued by the N.B.S.R. Co. to replace or redeem the said outstanding bonds at such rate as may be agreed upon by the two companies.

That the lease of the St. Maurice Valley Ry. be sanctioned and approved, which lease, among other things, demises to this company for 999 years the railways as now constructed from Three Rivers to Shawinigan Falls, thence to Grand Mere, Que., about 27½ miles, and all other railways or branches hereafter constructed by that company and their appurtenances at an annual rental equal to the interest payable on all bonds carrying interest at a rate not exceeding 4% per annum payable half-yearly it may issue at the request of this company expressed in writing under its corporate seal, the payment of such interest being guaranteed by this company, and the aggregate of all such bonds outstandings, not to exceed at any time $35,000 a mile of railway then either constructed or under contract to be constructed.

That the lease of the Kootenay Central Ry. be sanctioned and approved, which lease, among other things, demises to this company for 999 years the whole of the railways and branches which the Kootenay Central Ry. Co. has been by law authorized to construct, and whether constructed or to be constructed, including the railway from Fort Steele to about 5½ miles east of Wardner and from Fort Steele to Golden, B.C., and all other railways or branches hereafter constructed by that company and their appurtenances at an annual rental equal to the interest payable on all bonds carrying interest at a rate not exceeding 4% per annum, payable half-yearly, which it may issue at the request of this company expressed in writing under its corporate seal, the payment of such interest being guaranteed by this company and the aggregate of all such bonds outstanding not to exceed at any time $30,000 a mile of railway actually constructed and handed over to this company from time to time in sections for operation.

That the action of the directors in authorizing the construction of irrigation works for the purpose of irrigating the eastern block of the company's land grant in Alberta, east of Calgary, at an estimated cost of $8,500,000, be approved.

The directors are hereby authorized, whenever it is competent for the company to do so, to purchase the preference stock of the Dominion Atlantic Ry. Co., consisting of £270,000, at 60% of face value, and the ordinary stock, consisting of £230,000 at 20% of face value, and to acquire all or any portion of its securities at such prices and upon such terms as they may deem advisable, and to take a lease of the railway for such term as may be agreed upon, which lease shall, as nearly as circumstances permit, be in the form usually adopted by the company and may contain a clause providing for the guarantee of payment by this company by way of rental of the interest upon the existing securities and such other securities as it may issue with the consent of this company.

That whereas the branch lines and extensions set forth below have been constructed or are in course of construction, and it is deemed desirable that authority be given to the directors to issue consolidated debenture stock to meet the requisite expenditure in connection therewith, it is therefore resolved that the construction and equipment of the following branch lines and extensions of other branch lines which have been authorized be approved; an extension northwesterly of the Moose Jaw branch, now known as the Moose Jaw-Outlook branch, from the westerly end of the branch and extension heretofore authorized, to the Pheasant Hills branch at or near Macklin, about 118 miles. A branch westerly from Weyburn on the northwestern extension of the Souris branch, and now known as the Weyburn-Lethbridge branch, 50 miles. An extension northerly direction of the Stonewall branch, and known as the Teulon extension from Stonewall via Teulon to Icelandic River, about 56 miles. An extension westerly direction of the Lauder branch, now known as the Lauder-Griffin branch, from or near Broomhill, 20 miles west of Lauder on the Souris branch, 33 miles. A branch northerly and northeasterly from Regina via Craven to Colonsay on the Pheasant Hills branch, and known as the Regina-Colonsay branch, 134 miles. A branch northwesterly direction from Craven on the Regina-Colonsay branch, and now known as the Craven-Bulyea branch to or near Bulyea, about 21 miles. A branch northerly and northwesterly from or near Kipp on the Crow's Nest Pass branch, to be known as the Kipp-Aldersyde branch, 58 miles. A branch northerly from the main line at or near Langdon, to be known as the Langdon branch, 40 miles. An extension easterly of the Snowflake branch from Mowbray to Windy Gates, about 7 miles. A branch northerly direction from Virden on the main line to or near McAuley on the Pheasant Hills branch, and now known as the Virden-McAuley branch, about 36 miles.

And that for the purpose of aiding the construction and equipment of the said branch lines and extensions the directors may issue and dispose of consolidated debenture stock to such amount as they may deem expedient, not exceeding in the aggregate an amount equal to £6,000 a mile in respect of the Moose Jaw-Outlook branch extension, the Regina-Colonsay branch, the Langdon branch and the Virden-McAuley branch; £5,000 a mile in respect of the Weyburn-Lethbridge branch, the Stonewall branch extension, the Craven-Bulyea branch and the Kipp-Aldersyde branch, and £4,000 a mile in respect of the extensions of the Lauder-Griffin and the Snowflake branches.

Amendments to a number of bylaws as passed by the directors were approved.

Sir Wm. Van Horne, in moving the re-election of the retiring directors, took the opportunity to express his appreciation of the remarks respecting himself, made by the Chairman, and stated that he felt that the greatest service that he had been to the C.P.R. was in being instrumental in inducing Sir Thos. Shaughnessy to come to Canada, and that the shareholders may congratulate themselves in having at the head of affairs of the company in which they are so much interested, so able, so energetic and so upright a man as Sir Thomas.

The retiring directors, Lord Strathcona, Sir Thos. G. Shaughnessy, and T. Skinner were re-elected for a further term of four years.

At a meeting of directors held after the shareholders meeting, the following officers were re-elected for the current year:—President, Sir Thos. G. Shaughnessy; Vice President, D. McNicoll; Executive Committee, R. B. Angus, D. McNicoll, E. B. Osler, Sir Thos. G. Shaughnessy, Lord Strathcona, Sir Wm. C. Van Horne.

Damages of $13,500 were awarded at London, Ont., Oct. 3, in the case of a fireman against the C.P.R. for injuries sustained through coming in contact with a water column, while leaning from his locomotive at Ayr station. In evidence it was stated that the distance between the locomotive cab and the water column was 18 inches.

Great Northern Ry. Lines in Canada.

Midland Ry. of Manitoba.—The Mayor of Winnipeg informed Jas. Fisher, solicitor for the company, Oct. 3, that unless the company's representatives immediately signed the agreement to proceed with the erection of terminals in the city, the streets closed would be declared open, and all negotiations with the company would be at an end. Mr. Fisher appeared before the Board of Control, Oct. 4, and stated that the company, he understood, was prepared to go ahead with the work on its projected terminals at Ross Ave. in the spring. He was in communication with St. Paul, Minn., on the subject, and was awaiting instructions. The wording of the agreement had not been definitely settled, but everything could be arranged if he had his instructions. The Mayor said the city was anxious to have the matter settled, the agreement signed, and the work started as soon as possible.

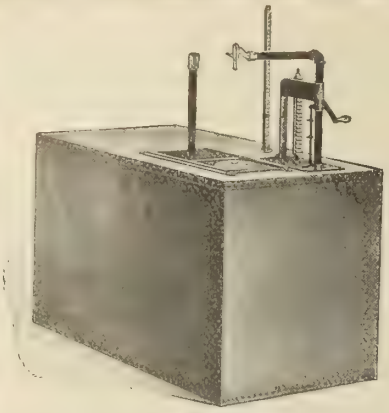
Projected Lines in Alberta.—A press report from Calgary states that Great Northern Ry. interests are planning to extend its railways through Alberta. The idea is to secure a line from near Sweet Grass, at the International boundary, which is a terminal point of the G.N.R., just south of Coutts, Alta., to Pincher Creek, to Calgary and Edmonton, and thence to the Peace River, with a branch through the Kootenay country to connect up with the Vancouver, Victoria and Eastern Ry. The report states that the Pincher Creek, Cardston and Montana Ry. charter will be acquired. This company is making surveys for a Coutts-Pincher Creek line, and applying to the Dominion Parliament for powers to build the additional lines named. The New York people at present interested in the P.C., C. and M. Ry. are said to be friendly to G.N.R. interests. (See Pincher Creek, Cardston and Montana Ry. under Railway Development.)

Vancouver, Victoria and Eastern Ry. and Navigation Co.—A spur line is being built from near Princeton, B.C., to the United Empire coal mine. No further construction is being gone on with at this end of the line, but the contractors are still pushing forward the work between Abbotsford and Chilliwack. Survey work from Chilliwack, through the Hope Mountains is still being proceeded with, and the engineers are hopeful of getting a route with a maximum gradient of less than 2%. Nothing has been announced as to when construction will be gone on with.

The improvements at False Creek, Vancouver, which are to be carried out under an arrangement between the company and the city council, have been held up by the Provincial Government declining to give its consent to certain parts of the plans. The matter is still under consideration and it is expected that something will be done, so that the work can be gone on with. The question of fixing a date for the voting on the bylaw has been postponed until this matter is settled. (Oct., pg. 845.)

The Reid Newfoundland Co. has offered to give a free site at Fort William, St. Johns, Nfld., to put in the foundation, and to subscribe $50,000 towards the capital of the projected tourist hotel there.

The application of Hon. W. Pugsley, Minister of Public Works, to have a special accounting made of the affairs of the New Brunswick Coal and Ry. Co. and the Central Ry. of N.B., has been dismissed by the New Brunswick courts. Mr. Pugsley subsequently criticised the action of the commission which investigated the railway's affairs, and Oct. 12 invited the commissioners or their solicitor to bring an action against him for libel.



To Insure Longer Life

to machinery and to save power, is one of the functions of the Bowser Battery Equipment, Cut No. 64. This is accomplished by keeping the lubricants in the cleanest condition, free from grit and dirt. The outfit consists of one or several rectangular steel tanks—one for each kind of oil used—fitted with self-measuring pumps. It is a practical example of how

Bowser Oil Storage Systems

have been adapted to meet all needs such as they exist, for railroad shops, roundhouses, engine rooms, etc.

The first stroke of the pump brings a rapid flow—a quart, pint or half-pint as desired—without the use of measures or funnels. The pumps can also be adjusted to fill different sized oilers. By this method much time or labor is saved in handling the oils, and there is no loss through leaky barrels, drip, overflow, or spilling. Every gallon bought can be checked against every gallon used. It is the only business-like method of handling lubricants and soon saves its own cost.

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—The Board of Railway Commissioners has authorized the building of a Y to connect the main line with the spur line to the St. Marc quarries in Grondines parish, Portneuf county, and the acquirement of certain lands for right of way.

A connection between the C.N.Q.R. and the National Transcontinental Ry. at River Charest, Que., has been authorized by the Board of Railway Commissioners.

Canadian Northern Ontario Ry.—An arrangement has been made, subject to sanction by the Board of Railway Commissioners, between the company and the Ottawa city council, by which the C.N.O.R. will be carried across Hurdman Road, temporarily. In a recent interview President Mackenzie stated that the company's Toronto-Ottawa line would be completed to Sydenham, within 90 miles of Ottawa, this year. In the spring the balance of the line would be taken in hand and rushed to completion. The route for this 90 miles has been approved by the Board of Railway Commissioners. As to the entrance into Ottawa, Mr. Mackenzie said the company had been terribly handicapped, but he hoped that by the spring everything would be straightened out.

Good progress is being made all along the sections of the line under construction between Toronto and Trenton, and in the vicinity of Belleville. Those in charge of construction at the latter point are said to have received instructions to get the work finished by Jan. 1. In consequence work will be rushed as fast as possible. Good progress is being made west and east of the city, and nearly all the property required in Sydney and most of that for the route in Belleville has been purchased. The Dominion Bridge Co., which has the contract for bridges over the Trent at Trenton and Moira at Belleville will commence operations immediately.

Track was reported, Oct. 14, to have been laid to near Cobourg, Ont. Station buildings at Grafton and Colborne are being built, and the preliminary work for the bridge over the Trent at Trenton is under way.

The Board of Railway Commissioners has approved of plans for station buildings at Port Hope and Cobourg, and of standard plans for various buildings to be erected on the Toronto-Ottawa line.

Representatives of Parry Sound, Ont., had an interview with President Mackenzie Oct. 11, and it is said that a proposition will shortly be submitted to the town for the establishment of repair shops, and the erection of a 500,000 bushel elevator.

The Board of Railway Commissioners has approved of the location plans of the line through unsurveyed territory in the Sudbury mining division, Algoma, mileage 200 to 220, and from mileage 220 to 240, from Sudbury, Ont.

Canadian Northern Ry.—M. H. McLeod, General Manager and Chief Engineer, recently completed an inspection of the betterment work done on the line between Port Arthur and Winnipeg during this year. The principal work done has been in the way of straightening out the track, and the building of a cut-off in the vicinity of Stanley, Ont. At the time of the inspection all the work had been completed, with the exception of about two miles of tracklaying, and this was expected to be finished by Oct. 31. Nothing more in the way of betterments would be undertaken, Mr. McLeod stated, this year.

In the course of some very extensive forest fires in northern Minnesota and the Rainy River district of Ontario, considerable damage was done to the railway at different points between Fort Frances, Ont., and Beaudette, Minn.

A permit has been granted by the Winnipeg city council for the erection of freight sheds, offices and cold storage plant, to cost about $87,000. The buildings will be situated near the new station on Main St., at the foot of Broadway. With the exception of the office, which will be of brick, the buildings will be of steel on concrete footings. They will cover an area of 664 by 60 ft., the freight shed taking up 542 ft. of the frontage. The architect is R. B. Pratt, and the contract has been let to Carter, Halls and Aldinger.

The ballasting on Oak Point extension was expected to be completed by Oct. 31. A train service is being operated for the accommodation of the settlers by the contractors.

In connection with the company's application to the Board of Railway Commissioners for approval of its plans for building a transfer railway along certain streets in Brandon, Man., Chief Commissioner Mabee, stated recently that the compensation to be paid to those whose property would be injuriously affected would have to be as the commissioners directed. The application was subsequently withdrawn.

The Board of Railway Commissioners has authorized the opening for traffic of an additional 15 miles from Ochre River to the end of steel, on the Ste. Rose du Lac branch, Man., and has also approved of the location of the Goose Lake extension through tps. 30-31, ranges 11-15 and ranges 16-20, west 4th meridian, Alta.

The Minister of Railways has approved of plans for the building of a line from Regina to Moose Jaw, Sask. The plans show a line running into sections 24, 3, 21, 20 and 19 in township 17, range 21, through the same sections in 17-22, through sections 24, 23 and 22, southwesterly into 15, 17 and 18 in 17-23, along 13, 14, 15, 9, 8 and 7, in 17-24, through 1, 2, 3, 4, 5, 6, in 17-25, between the borders of 16-26 and 17-26 into Moose Jaw. The line is about two miles distant from the route approved for the G.T. Pacific Branch Lines between the same places, and is very close to the C.P.R., particularly from the western boundary of range 25, between tps. 16 and 17. The question of the entry of the line into Moose Jaw has yet to be settled, not only with the city, but with the G.T. Pacific Ry.

The station at Saskatoon, Sask., illustrated on this page, and which was completed a short time ago, is located on First Ave., at the intersection of 23rd St., from which a good view of the central tower of the station, which is about 58 ft. high, can be seen. The total length of station is 218 ft., including a covered platform 40½ ft. long at the end. The width is 62 ft., including canopied platform at either side. The platform on track side is 20 ft. wide, and is reduced to 14 ft., extending along main line 250 ft. both ways from centre line of building, making a total length of 500 ft. The building has full basement, with ample rooms for boilers, fuel and storage, on which is built three floors forming the central main tower, having a two storied feature extending 52 ft. on either side, with stone facade in centre. The extreme ends are one story high, with foundation strong enough to allow of them being increased by an additional floor. The main entrance to building is from First Ave. into ticket lobby, located close to ticket office, and situated between general waiting room, 29 ft. 2 ins. by 29 ft. 2 ins., and ladies' waiting room, 20 ft. by 29 ft. 2 ins., with necessary toilet rooms attached. The parcel room and baggage room, 30 ft. by 30 ft., are located convenient to general waiting room, and the express room and offices are large enough to take care of the ever increasing express business. The exterior is built of Menomonie sand brick, moulded red brick, red mortar joints with trimmings of white Tyndall limestone, rock faced. The interior finishing throughout was selected, keeping in mind the necessity for a complete sanitary finish, as well as a good general appearance. The ticket lobby, general waiting room and toilet rooms have tile floors, base and dados, the remainder of the floors are polished maple floors. The baggage and express rooms have hardwood dados 7 ft. high. The remainder of the trim on this floor is hardwood finished mission style. From this floor are two stairs communicating with floor above, one for use of general offices of the executive and engineering staff, which occupy the north end of the first floor; the other stair to the superintendent's quarters in the south end. This floor is finished throughout in clear B.C. fir, natural finish. The superintendent's quarters are so arranged they can be turned into offices at any future date. The building is steam heated and electric lighted throughout. The toilet rooms are complete with the most up to date sanitary fittings. The canopy round the outside of the building has a complete system of fixtures to light platform, which is controlled by switches from ticket office.

Application was made Oct. 4, for the

Canadian Northern Railway Station at Saskatoon, Sask.

MONTREAL TORONTO WINNIPEG VANCOUVER

DUNTLEY MANUFACTURING COMPANY

CHICAGO, ILL., U.S.A.

approval of a revision of the location of the Prince Albert-Battleford, Sask., line. It was contended on behalf of those opposed to the plans that the company was building the line without having secured approval either of the general route or location plans. After considering the matter it was finally arranged that a revised location from near Prince Albert to the west side of Redberry Lake be approved. A press report states that the object of the diversion of this line is to run it westerly to connect up with the line northerly from Edmonton at St. Albert, and so open up a large area of farming land.

The work on the development of the coal fields on the Brazeau River Valley by the General Development Co., was reported to have been suspended Sept. 22, and D. D. Mann, Vice President, stated that this was brought about by the fact that the C.N.R. Co.'s plans for the building of its line had not been approved by the Board of Railway Commissioners, and the C.N.R. had to suspend construction work on the line it was building. Owing to the difficulty of taking in supplies, work on the mines had been suspended until the spring.

The location plans for the Edmonton-Camrose line from mileage 0 to mileage 44.40, through tps. 47-52 and ranges 20-24, west of the fourth meridian, have been approved by the Board of Railway Commissioners.

Canadian Northern Western Ry.—Application will be made to the Alberta Legislature to incorporate a company with this title to build a railway from Edmonton or Strathcona to the boundary between Alberta and British Columbia, near the Pine or Peace River passes or one of them; also a line from the Canadian Northern Ry. between Edmonton and Calgary, to Rocky Mountain House, thence to the Brazeau and Macleod Rivers, and along those rivers or either of them to a point on the C.N.R. main line west of Edmonton; with power to build branches to the various coal areas in the vicinity of the line, and such other branches within the province as may from time to time be authorized by the Lieut.-Governor-in-Council. Short, Woods, Biggar and Collisson, Edmonton, are solicitors for the applicants.

Canadian Northern Pacific Ry.—The agreement with the British Columbia Government for the building of this line did not make any provision for the granting of a right of way through Crown lands, consequently the company has made a further agreement by which the land necessary for right of way, station sites and yards may be acquired from the Government on the basis of $5 an acre for agricultural land, $2.50 an acre for upland, and $1 an acre for wild land.

On the line between the Alberta boundary and Port Mann, B.C., survey work, we are advised, is still being gone on with, and it is being closed up as between New Westminster and 100 miles above Kamloops. No further work has been done between Yellowhead Pass and 100 miles up the North Thompson River since the trial location was made last year. Plans have been filed for a 45 mile section reaching from the crossing of the North Thompson River west, showing a route crossing the river just above the Frankland's home farm, following the contour of Garde Lefferty, along the foot of which plateau yard limits a mile in length are laid out.

Tenders will, it is said, be asked for at an early date for building the line between Chilliwack and Lytton, at the junction of the Fraser and Thompson rivers, a distance of about 90 miles. A. R. Mann, President of the Northern Construction Co., went over the route recently, with a view of submitting a tender.

On the 60 miles from near Port Mann, let to the Northern Construction Co. sub-contracts have been let as follows:—C. Johnson, 29.5 miles; W. P. Tierney, 5.5 miles; C. Johnson, 1.5 miles; McDonald Bros., 20.5 miles. The work is being done under the direction of T. H. White, Chief Engineer, with W. G. Swan as Resident Division Engineer, and the following engineers in charge of sections:—D. A. Graham, F. H. Chesnut, J. H. Devey, R. M. Taylor, G. H. Reed. The construction headquarters are at Langley, and J. M. Mercer is manager for the Northern Construction Co. There are about 500 men at work grading and building culverts, trestles, etc. The three sub-contractors named have let out their sections into smaller mileages, and the following are reported to be engaged in grading contracts on different parts of the 60 miles:—F. C. Lane, Schacht & Co., D. Matheson, H. Noreen, Burress Bros. and McClure.

The Port Mann site is not yet laid out. It is situated about two miles above the Fraser River Bridge at New Westminster, on the south side of the river. Tenders for the clearing of the site were received to Sept. 26, and are under consideration.

A site of 30 acres has been acquired in Fort Langley, fronting on Main St., and running back a considerable distance parallel with the river. It is stated that a station will be built on the street, and a storage yard, with accommodation for about 1,400 cars laid out.

In a recent interview the Mayor of New Westminster said he had had long consultations with T. G. Holt, the company's Executive Agent in Vancouver, and T. H. White, Chief Engineer, who had assured him that New Westminster would be made the principal port of the railway, and that the shops would be located at Port Mann. Plans have been made of three possible entrances into New Westminster. One, over the Great Northern Ry. tracks, going no nearer the city than the Fraser River bridge; the second along the water front beside the C.P.R., and the third by a tunnel. The waterfront route appeared to be the most favored.

We were advised, Oct. 18, that the company's officers have no information with respect to the tenders for grading between Chilliwack and Lytton, which, press reports quoted above, stated were to be called for at once. A contract has been let for a wharf 1,000 ft. long by 100 ft. wide, with sheds, at Port Mann. The work is to be proceeded with at once.

Vancouver Island.—G. B. Hughes is Engineer in charge of surveys on Vancouver Island, with headquarters at Victoria. The plans for the location of lines on the island show one from Deep Cove, which will be the landing place of the car ferry from Port Mann, to Victoria. From Victoria the route located to Barclay Sound is by way of Goldstream to Mill Bay, then to the Cowichan River, along the valley of that river to Cowichan Lake, thence to Nitinat Lake, reaching Barclay Sound in the neighborhood of Coleman Creek. A route via Serito was also surveyed, but it involved considerable difficulties in the way of construction. A Victoria dispatch, Oct. 10, stated that a serious hitch had occurred in carrying out the agreement between the company and the Government as to construction, and that the agreement so far as Vancouver Island was concerned, was in danger of not being carried out. In an interview Oct. 12, D. D. Mann stated that the report had absolutely no foundation in fact. "There is no trouble nor unnecessary delay in construction of our road at all," he said emphatically. "The difficulties of locating and building a road in British Columbia are very great, and we have had engineers working for years in the country. And as for the construction of the road on Vancouver Island that is spoken of, we are awaiting the final report of our surveyors; that is all there is in it. We have had no complaints from anyone in connection with delays in actual work, and we have sent no message to Premier McBride refusing to carry out the contract we entered into with him." (Oct., pg. 855.)

Telephone Dispatching on the G. T. R.

The G.T.R. has recently put in on its Northern Division, two telephone train dispatching circuits. One between North Parkdale Jct. and Burlington Jct., via Allandale, 145 miles, and another between Allandale and Nipissing Jct., 165 miles. Train dispatchers on each of these circuits are located at Allandale. On the circuit between North Parkdale Jct. and Burlington Jct. there are 21 way stations, and on the circuit between Allandale and Nipissing Jct. 20 way stations. These circuits are constructed of no. 9 gauge hard drawn copper wire, transposed at intervals of every half mile through the open country and as much more frequently as is necessary in the vicinity of high voltage power lines, in order to avoid inductive influences and to render the telephone circuits absolutely quiet. The station equipment consists of a swinging arm transmitter and head band receiver for each way station, thus giving the operator free use of his head, hands and body while using the telephone; the apparatus is swung to one side out of the way while not in use. The train dispatching office is equipped with a selector system for calling offices and the duration of the ring in each way station is controlled by the dispatcher, who plainly hears the ring through his receiver. Any office on the line can be signalled within eight seconds, and as the signal bell in each office consists of a four inch gong there is little doubt that the operator will hear his call, even though outside of the office and at a distance from it. The dispatcher has absolute control of the circuits and way stations must obtain his co-operation when desiring to communicate with one another.

The telephone is considered as being superior to the telegraph as a medium for dispatching trains, both as a factor of safety and a saving of time. By telephone each station and numeral is first pronounced and then spelled out, letter by letter, by the dispatcher, for verification when an order is issued, and repeated in like manner by the receiving operator, while by telegraph stations and numerals can only be spelled out in Morse characters.

During the past three years the telephone has made rapid strides on trunk line railways in Canada and the United States for train dispatching purposes and to-day over 30,000 miles of railway is being so dispatched, the C.P.R. having a considerable portion of its mileage so equipped. While the expense for constructing and equipping telephone circuits greatly exceeds that of telegraph lines, the railways have obtained so much better results with the telephone that they feel justified in spending the money. It is the intention of the G.T.R. to extend the use of the telephone over its more important lines in the near future.

The new system has met with the immediate favor of the dispatchers and operators, the transmission being so excellent that the work is transacted in fully 50% less time and in a more personal and satisfactory manner than is possible with the telegraph.

OPEN

For Warehouse, Railroad and Factory Use

This truck is equipped with patent Extension Rack which can be quickly folded back out of the way when not needed. It was designed to do away with the innumerable boards, pieces of iron, etc., that every shop man is familiar with. Fairbanks Trucks are the Strongest and Most Durable Trucks on the market. They are built of carefully selected and seasoned hardwood, rigidly braced, and the wheels and axles carefully turned and fitted, making a well balanced truck. We build all types of Trucks to suit any class of service. Get our catalogue and particulars.

THE CANADIAN FAIRBANKS CO., LIMITED

Fairbanks Scales—Fairbanks-Morse Gas Engines, Safes and Vaults

MONTREAL TORONTO ST. JOHN, N.B. WINNIPEG SASKATOON CALGARY VANCOUVER

C.P.R. Betterments, Construction, Etc.

Developments in Nova Scotia.—D. McNicoll and G. M. Bosworth, Vice Presidents, having visited Halifax, N.S., recently, and made a trip of inspection over the Dominion Atlantic Ry., which will be taken over by the C.P.R. in the spring, Mr. Bosworth stated that a through freight service would be established between Montreal and Halifax over the Dominion Atlantic Ry., but for the present there would be no car ferry placed on the Bay of Fundy.

Improvements at St. John.—It was announced at a meeting of the St. John, N.B., city council, Oct. 4, that the certain shore lots on the west side of Courtenay Bay would be transferred to the C.P.R., upon which extensive terminal facilities would be established. This, according to a statement made by Vice President McNicoll, refers to an exchange of property which had been under consideration for some time past. The property which the company hands over has a frontage of 1,600 ft. and stretches out into the bay. This is the property referred to in the resolution recently passed by the city council authorizing the making of the necessary agreements in conjunction with the Dominion Government, with the C.P.R., for the surrender to the city by the company of certain lands, upon which there shall be erected a retaining wall for the reclaiming of the area so required. When the leases at Blue Rock are relinquished, and the land reclaimed, the C.P.R. will remove its tracks to the eastward, so as to allow the present right of way to be used as a public highway.

In connection with this transfer of property, Mr. McNicholl stated that the company had big plans, which would take some time to carry out, for the development of St. John as a winter port. He hoped shortly to be able to announce what those plans were.

Hotels.—Vancouver, B.C., papers quote G. Ham, of the C.P.R. head office staff, as having stated in an interview during a recent visit there, that the company proposed to build 12 hotels along its line during 1911. One of these would be at St. John, N.B., one at Ottawa, one at Toronto, one at Golden, B.C., and one at Nelson, B.C., while the remaining seven would be distributed along the line at suitable points.

The company is carrying out an extensive programme of additions to its existing hotels, and adding some new ones. It is said that another wing is to be added to the Chateau Frontenac, Quebec. At the Place Viger, Montreal, extensive alterations will be made as soon as the new building for station purposes down stairs and hotel purposes upstairs is ready. Enlargements are going on at Banff, Lake Louise and other places. A new hotel is being built at Balfour, a contract having been let to C. W. Sharp, Winnipeg. This hotel is situated on Kootenay Lake, opposite Proctor, B.C., and is to be completed by May, 1911. It is to be a frame structure 205 by 150 ft., and will be about 48 ft. high above the first floor, which is to be raised about 10 ft. above the ground on a foundation of boulders embedded in cement. The building will be three stories, and will accommodate about 100 guests.

At Vancouver, the foundations for the first addition to the present hotel have been completed for some time, and W. S. Painter, architect, stated recently that the active construction of the building may be looked for at an early date.

St. Lawrence Boulevard, Montreal.—The C.P.R. has the tunnel carrying its tracks over the boulevard well advanced, but the contractor for other parts of the work has not got on as well as was anticipated, owing to unforseen delays. The Board of Railway Commissioners has granted an extension of time to Dec. 30 for the completion of the work.

Lachine Bridge.—A good deal of work is being done in the way of preparing foundations for widening existing piers and new piers for the double track bridge across the St. Lawrence River at Lachine.

The Montreal city council is asking the company to consider an arrangement by which a separate road can be constructed for vehicles, and foot passengers. The present bridge carries only a single railway track, and the plans for the new bridge provide only for a double railway track. The city is extending in the direction of the bridge, and the opinion is expressed that the Dominion and the Provincial Governments should be asked to bear a portion of the cost of providing a roadway on the bridge for general traffic.

Ottawa Tunnel Proposals.—A resolution has been passed by Ottawa real estate men favoring the adoption of the C.P.R. plans for a tunnel through the city. The proposal is to close up the Rideau canal from the deep cut, using the bottom of the canal as a roadbed, and tunneling under Wellington St.

Ottawa, Northern and Western Ry.—Application will be made to the Dominion Parliament to extend the time within which the company may extend its line from Maniwaki to James Bay, and to Lake Timiskaming, Que.

Campbellford, Lake Ontario and Western Ry.—In connection with the approval of the route plans of the Toronto and Eastern Ry., Oct. 12, the Minister of Railways intimated that unless the C.P.R. began the construction of the line surveyed along the lake front within 18 months, he would confer with the Board of Railway Commissioners with a view of having the approval of the route cancelled.

Application will be made to the Dominion Parliament to authorize the company to build from the C.P.R., between Sharbot Lake and Smith's Falls, southwesterly to Cobourg, thence westerly and northwesterly to between Locust Hill and Leaside Jct., instead of the line authorized by sec. 8, chap. 54 of the statutes of 1904.

Toronto Grade Separation.—An order has been issued by the Board of Railway Commissioners approving of the proposed separation of the grades of the C.P.R. over Yonge St. and Avenue Rd., Toronto.

Toronto Terminals.—In an interview at Toronto, Oct. 7, Sir Thos. G. Shaughnessy, President, is reported to have said that while the company was planning the best possible facilities for itself, it was at the same time considering the needs of the citizens. The C.P.R. had spent hundreds of thousands of dollars in buying property in Toronto, and would spend millions in laying out terminal facilities. The contract for using a union station with the G.T.R. had still 40 years to run, and it could only be broken by mutual consent. Some other understanding, apart from a union station at the waterfront might be arrived at. While the company had prepared very elaborate plans for Toronto, it must proceed gradually in carrying them out.

West Toronto Yards.—For some years past the C.P.R. has been steadily acquiring areas of land westerly of its original yards at West Toronto, on the south to Dundas St., and also on the north, and has been laying down additional tracks, so that the yards, as they now exist, extend up to Lambton station and a considerable distance north of the through line. A large area of land owned by the company has not been touched, but some gangs were set at work Oct. 14, grading outside the existing yard tracks. Press and other statements are to the effect that the yard accommodation is to be largely increased, trackage being laid for an additional 400 cars. The company has been negotiating for some time past with the York township council for permission to close up Jane St., and put in an 8 ft. subway. The matter came up before the council Oct. 3, but was not finally disposed of.

At a meeting of the York township council, Oct. 17, an arrangement was made for the construction of a 26 ft. subway at Jane St., and a 30 ft. subway, with a deviation of St. Clair Ave., instead of the closing up of Jane St. and Scarlett road, as originally proposed.

In connection with the proposed developments at West Toronto, the matter of the subway under Elizabeth St., which is within the city limits, was considered by the Board of Railway Commissioners, Oct. 14. The C.P.R. proposed a 40 ft. subway, while the city asked for a 60 ft. one. After hearing evidence, the Board made an order for one having a roadway 56 ft. wide, the C.P.R. to bear the total expense.

New Freight Route.—As soon as the connection has been completed with the G.T.R. tracks at Mimico, Ont., the C.P.R. will run its freight trains, which now run over the G.T.R. Toronto-Hamilton line, via the Mimico-Islington cut-off, direct into its own yards at West Toronto. This will considerably reduce the traffic in and out of Parkdale station.

Islington-Mimico Branch.—The Board of Railway Commissioners' Chief Engineer inspected the line from Islington to Mimico, Ont., Oct. 18, and approved of its being opened for traffic. J. Oborne, General Superintendent, stated that the spur would not be opened for some time owing to the delay in the installation of the interlocking plant at Mimico by the G.T.R.

Liskeard, Ont.—At a meeting of the Timiskaming Board of Trade, at Liskeard, Ont., Oct. 10, a resolution was passed in favor of increased railway accommodation, and suggesting the opening up of negotiations with the C.P.R., which, through a subsidiary company, has power to build an extension of its Lake Temiscamingue Colonization Ry. from Timiskaming or Kippewa, Que., to Ville Marie and other points north, and a branch could be built round the head of the lake to Liskeard.

Thessalon Station. — Reports from Thessalon, Ont., state that work has been started on a new station at the junction of the Thessalon and Northern Ry. with the C.P.R. Algoma branch, and that the old station is to be abandoned.

Guelph and Goderich Ry.—Application will be made to the Dominion Parliament to extend the time within which the company may build the branch lines authorized by sec. seven, chapter 81 of the statutes of 1904.

Walkerton and Lucknow Ry.—The Dominion Parliament will be asked to extend the time within which the company may build its authorized line from Walkerton to Lucknow, via Teeswater, Ont.

St. Mary's and Western Ontario Ry.—Toronto papers of Oct. 12 stated that the C.P.R. has taken over the St. M. and W.O. Ry. charter, thereby gaining the right of entrance to Stratford and surrounding country, and the right to build a line to Grand Bend, Ont. The line from Stratford to Grand Bend was originally intended to be an electric one, but it is now said that it will be built as a steam road, and that a line will be built from Stratford to Linwood, a station on the Guelph and Goderich Ry. There is a good deal of truth, a good deal of error, and some omissions in these reports.

The St. M. and W.O. Ry. was incor-

WILLIAMS & WILSON

MONTREAL

porated by the Dominion Parliament in 1905, to build from near Woodstock to Sarnia, via St. Mary's and Exeter, and in 1909 it was given power to build additional lines, including one from St. Mary's to Stratford and Linwood, and one from St. Mary's to Grand Bend via Exeter. Under the original act a line was built from St. Mary's to Exeter in 1907-08, where connection was made with the C.P.R., Tillsonburg, Lake Erie and Pacific Ry., and other connections are now being built, so as to make the connection between those lines and the Toronto-Windsor line more perfect. From the first the line has been operated under a 99-year lease by the C.P.R., at a rental equal to 4½% on the bonds issued with the consent of the C.P.R., which also has power under the lease to purchase the entire capital stock of the company at any time within 12 years, for the sum of $25,000.

The Linwood-Stratford line was surveyed as a branch of the Guelph and Goderich Ry., and the St. Mary's-Stratford line as a branch of the St. M. and W.O. Ry., in 1907, but the negotiations for a right of way through Stratford did not result satisfactorily and the matter has been in abeyance. The Tillsonburg, Lake Erie and Pacific Ry., which is now part of the C.P.R. system, has power under its act to extend its line from Ingersoll to the Georgian Bay, proceeding either via Stratford or Berlin.

Collingwood Southern Ry.—Application will be made to the Dominion Parliament to extend the time within which the company may build the line authorized in 1907 from Collingwood to Baxter, on the Sudbury branch of the C.P.R., and from Collingwood to Orillia, Ont., also on the C.P.R.

Georgian Bay and Seaboard Ry.—Construction is reported to be progressing rapidly on the extension from Coldwater Jct., where it crosses the C.P.R. Toronto-Sudbury line, via Atherly Jct. to Orillia, Ont. Survey work is being gone on with from Orillia easterly, C. W. P. Ramsey being in charge.

The Dominion Parliament will be asked to increase the company's bonding powers and to authorize it to connect with the C.P.R. Toronto-Montreal line between Burketon Jct. and Havelock, Ont.

London Improvements.—Nothing definite has been announced as to the work to be undertaken at London, Ont., but we understand that the company has acquired the necessary property and proposes in the near future to erect a roundhouse, shops, stores, coal chutes, the necessary tracks for the same, some additional sidings, a yard office, and probably a local station in the vicinity of Quebec St.

South Ontario Pacific Ry.—Application will be made to the Dominion Parliament to authorize the company to build a line from near Guelph Junction to Hamilton, Ont.

The Sault Ste. Marie, Ont., Station is being moved a short distance north of its present site, and some new buildings added for baggage, express and immigration detention rooms. The present curve in the track is to be eliminated and an additional track laid.

Rossport—Pays Plat—Port Arthur.—Considerable work has been done during the season on the track between these points. A number of trestle bridges have been filled in, and concrete and steel bridges have been built at several places. New station buildings are in course of erection at Loon Lake and Dorion.

Fort William Terminal and Bridge Co.—Tenders have been asked by the C.P.R. Assistant Chief Engineer at Winnipeg for the construction of piers and abutments for a bridge across the McKellar River at Fort William, authorized to be built by the F.W.T.R. & B. Co.

Parliamentary Powers.—Notice is given of application to the Dominion Parliament for an act increasing the company's bonding powers in respect of its Toronto-Sudbury branch; authorizing it to make the terminus of its Lauder branch at Weyburn, Sask., and extending the line for building the following lines:—From north of Teulon to between Marsh Point and the north boundary of tp. 25, Manitoba; from Estevan northwesterly, with power to terminate at Forward, Sask., on the Weyburn branch; from tps. 6, 7, 8 or 9, range 30, west of the second meridian, westerly with power to terminate at Lethbridge, Alta.: from Outlook, Sask., to a junction with the Lacombe branch of the Calgary and Edmonton Ry.; from Lanigan to Prince Albert, Sask., and from Wilkie northerly and westerly towards the Battle River, thence southerly to a junction with the Lacombe branch of the Calgary and Edmonton Ry.

Power will also be asked to build the following additional lines:—From near Boissevain, on the Manitoba and South Western Colonization Ry, to near Lauder, Man.; from near Wilkie, on the Pheasant Hills branch, southerly to a junction with the Moose Jaw branch, in tp. 32, 33 or 34, ranges 22 or 23, west of the third meridian, Sask.; from near Wilkie southerly to a junction with the Moose Jaw branch in tps. 31, 32 or 33, ranges 18 or 19, west of the third meridian, Sask.; from near Conquest, on the Moose Jaw branch to near Asquith or Dunfermline, on the Pheasant Hills branch; from the Crow's Nest branch in sec. 12, tp. 9, range 26, west of the fourth meridian, westerly along the north side of Old Man River, to sec. 36, tp. 7, range four, west of the fourth meridian, 55 miles.

Manitoba and Northwestern Ry.—The Dominion Parliament will be asked to extend the time for building the following lines:—From Yorkton to Prince Albert, Sask.; from Russell to the northern or western boundary of Manitoba; from between Portage la Prairie and Arden to the northern or western boundary of the province; from between Westbourne and Beautiful Plains northwesterly in the direction of Lake Dauphin or Duck mountains; from between Theodore and Insinger to tp. 32, range 18 or 19, west second meridian, with power to terminate in range 16 or 17, and from Bredenbury to Kamsack.

Winnipeg-Brandon Second Track.—The second track between Winnipeg and Portage la Prairie, Man., 55 miles, was handed over to the operating department Oct. 4, and that portion of the line is now being operated as a double track line. The contractors are continuing the grading for a second track from Portage la Prairie to Brandon, but, as we have previously stated, no track will be laid on it this year. A press report from Brandon states that the grading for a second track will be continued from Brandon to Regina, and that the work will probably be completed next year.

Brandon, Man.—Local press reports state that the C P.R. is preparing plans for a new station for Brandon, Man., and that the building will be gone on with next year. The report also states that it is possible that the company will build a hotel in the city, for which purpose options on certain properties have been secured.

British Columbia Southern Ry.—Application will be made to the Dominion Parliament to extend the time within which the following lines may be built: —From near Michel to Kananaskis, B.C.; from the Elk River and the Kootenay River to the 49th parallel and the Tobacco Plains, B.C.; from the Lower Kootenay River to New Westminster and Burrard Inlet, with a branch to Nelson, via Salmon River, B.C.; from Michel Creek to Martin Creek, B.C.; from the main line 36 miles west of the eastern boundary of B.C., southerly and easterly, not exceeding 10 miles, and such branch lines from its main line and from the line between Fort Steele and Golden, as may hereafter be authorized by the Governor-in-Council.

Subway at Regina, Sask.—The Board of Railway Commissioners has ordered the C.P.R. to immediately file plans for a subway under its tracks at Broad St., Regina. The subway will carry 19 tracks, and will be 400 ft. long. J. E. Schwitzer, Assistant Chief Engineer, Winnipeg, is reported to have stated that the superstructure will require about 950,000 lbs. of steel, and that that subway will cost altogether about $1,000,000. The Board of Railway Commissioners will make a further order apportioning the cost of the subway between the company and the municipality.

Estevan Westerly.—In reference to the grading going on north-westerly from Estevan, Sask., we are advised that no track laying will be done this year. It is intended to connect up the mileage thus graded with the line projected from Weyburn to Lethbridge. The reason the work was undertaken was that there was some damage to the crops in the southern portions of Alberta and Saskatchewan, due to lack of rain, and in order to tide the farmers over the winter with cash, the company made an arrangement with J. D. McArthur to do 15 or 20 miles of grading. The company gave a reduced rate from points as far west as Gull Lake, and Mr. McArthur advanced the freight on outfits, holding the teams as security until the money advanced was repaid out of earnings.

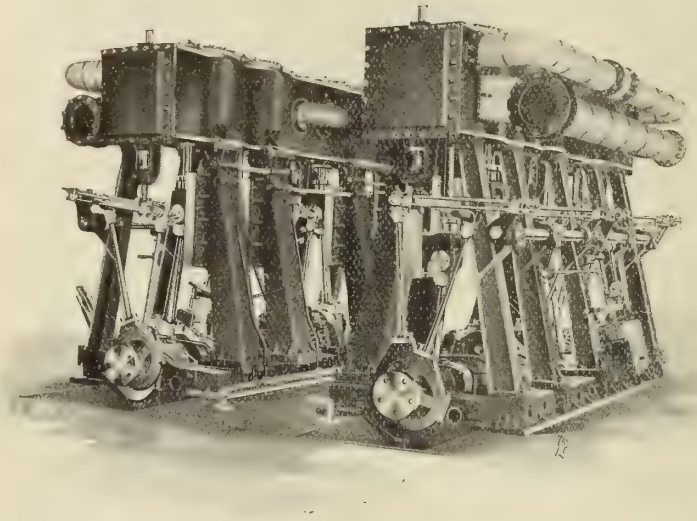
Kipp Jct.—Cassills or Brooks.—Press reports state that C.P.R. engineers are making surveys for a line from near Kipp Jct. to near Cassills or Brooks, Alta., on the main line, and that the survey will be continued through to Saskatoon or some other point in Northern Saskatchewan. The route being surveyed follows the Little Bow River till the Durham Collieries are reached, then strikes north easterly to Bow City, and then on to the main line between Cassills and Brooks.

Wetaskiwin, Alta.—Three new through sidings have been laid in the yards at Wetaskiwin, Alta., and two others are being laid. This will give accommodation for about 200 cars beyond the old facilities. It is reported that four stalls will be added to the roundhouse, making it a 10-stall one. The present one is too small, and to meet the requirements for repairing engines, a quantity of new machinery has been installed in the repair shop.

A press report from Wetaskiwin states that the company proposes to build another dam at Bigstone Creek in the spring, so as to make an additional storage reservoir for 1,000,000 galls., connected up to the local water tank. Some time ago the company made a proposition to the town council with a view of a joint pipe line to Pigeon Lake to provide a water supply for the railway and the town, but after some negotiations the matter was dropped.

Strathcona - Edmonton High Level Bridge.—The bylaw confirmed last session of the Alberta Legislature respecting the contribution to be made by the city of Edmonton towards the building of the high level bridge across the North Saskatchewan River, to connect Strathcona with Edmonton, by the Calgary and Edmonton Ry. (C.P.R.) provides for the raising of $154,000 by means of debentures for the provision of

Marine Engines



Now is the time to go over your plant carefully and place your order for new machinery or repairs. We have special equipment for building all types of Marine Boilers and Engines. We also handle repair work.

Specifications and quotations on request.

a traffic deck and other attachments. The agreement attached to the bylaw grants the C. and E. Ry. the right to lay its track along certain streets from the south side of Saskatchewan Ave. to Mackenzie Ave., and westerly to the west limit of Sixteenth St., but this street is not to be crossed until the company is ready to extend the line to the western limits of the city. The city has the right within four years to apply to the Board of Railway Commissioners for an order for an under or overhead crossing of the railway at Sixteenth St. The city further agrees to stop up and close certain streets, and to extend certain avenues across the track by means of overhead bridges. and to carry Jasper Ave. by a subway under the tracks, while the railway company is to build a bridge to carry the track across Saskatchewan Ave. The agreement also contains a great deal of detail as to the dimensions of the bridges to be built, the subways to be constructed, etc., the most important being that the Jasper subway is to be 80 ft. wide, the city to pay $5,500 for the extra 20 ft. of the right of way.

Improvements at Fernie.—The yard tracks at Fernie, B.C., are being extended northward to the towerhouse at the crossing of the Great Northern Ry. tracks, and to the south as far as the site of the new roundhouse. This will nearly double the yard capacity. The new roundhouse will be built near the site of the old coal chutes, at an early date. A steel bridge has been erected in place of the old wooden one at Coal Creek, just south of the yards. All along the line from Lethbridge to Wardner, heavier steel rails have been laid.

Kootenay and Arrowhead Ry.—Application will be made to the Dominion Parliament to extend the time within which the company may build its projected line from Gerrard to Arrowhead, B.C.

Kootenay Central Ry.—Reports from Wardner, B.C., state that grading is being proceeded with on this line northerly from that point; that another grading gang has been working out of Fort Steel for some time, and that about 15 miles of grading has been completed southerly from Golden. It is not likely that any steel will be laid before spring.

Donald Forest Reserve.—An order-in-Council has been passed by the Dominion Government granting the company a lease for 21 years of 6.70 acres of land in the Donald Forest Reserve, B.C., at $1 a year, for use as a ballast pit.

New Bridge at Cisco.—A new three-span bridge, which has been built at Cisco, B.C., by the Canadian Bridge Co., to replace the old cantilever bridge, was inspected and approved by F. F. Busteed, General Superintendent British Columbia Division, Oct. 1.

Port Moody and Indian River Ry.—After being held up for some days until the Board of Railway Commissioners had settled some difficulties as to the route, construction has been restarted on this line. The commissioners have decided that the line must be moved for some distance, about 70 ft. back from the right of way previously staked.

Vancouver and Lulu Island Ry.—The Dominion Parliament will be asked to extend the time within which the company may build the branch lines authorized by sec. 3, chap. 86 of the statutes of 1901.

Esquimalt and Nanaimo Ry.—The first 30 miles of the extension of the line from Wellington to Alberni, Vancouver Island, was not opened for traffic Oct. 1, as was anticipated. The necessary authority was subsequently received, and Oct. 19 fixed as the day for putting on a regular service. The section of the line opened extends from Wellington to Cameron Lake.

A recent press report stated that a contract had been let to Janse, Macdonald and Timothy, for clearing the right of way and grading on the projected branch line to Cowichan Lake. This branch is to be built for the development of the 54,000 acres of timber lands recently purchased by the Empire Lumber Co. of New York, out of the E. and N.R. land grant. While the press dispatches state that the contract has been let, we understand that the matter is not definitely settled, and also applies to the invitation for tenders for the building of the branch line to Comox. (Oct., pg. 859.)

Machinery for N. T. Ry Shop.

The specifications for the supply of the machine equipment for the National Transcontinental Ry. repair shop at the 18-stall roundhouse, at Lake Superior Junction, Ont., as the place is called in the advertisement, or Graham, Ont., as it is called in the specifications and accompanying blue prints, provide for the supply and erection complete of the machinery, with the necessary motive power, as follows:—

ENGINE, GENERATOR AND SWITCHBOARD.—One 50 k.w., d.c. generator, 250 volts, to be mounted on extension base of engine; calculated to deliver its full rated load continuously, with a rise in temperature not to exceed 40 deg. C., in any part of the machine, and of carrying 25% overload for a period of two hours immediately following the above, with a temperature not exceeding 55 deg. C.

One simple non-condensing steam engine, to be direct connected to above generator both units to be mounted on the same base. The engine to be of the enclosed type, horizontal sidecrank; steam pressure 110 lbs., maximum back pressure 5 lbs.; it shall develop its full load rating at ¼ cut off, and shall be designed to carry an overload of 50% continuously without overheating in any part.

The switchboard is to consist of one generator panel and one feeder panel.

AIR COMPRESSOR.—One horizontal, duplex, steam driven air compressor, designed for steam pressure at 110 lbs., maximum back pressure 5 lbs., capacity 700 to 800 cubic ft. of free air a minute, at a speed not exceeding 100 revolutions a minute. Automatic speed and pressure regulator to be provided, and to be operated by the air pressure in the receiver.

One vertical air receiver 54 by 12 in., of the best steel, rivetted, and to be tested to 175 lbs. water pressure, and guaranteed safe and tight for a working pressure of 125 lbs., and equipped with necessary screwed openings, valves, etc.

MACHINES.—One 28 in. by 16 ft., motor driven gap lathe complete, with 26 in. four-jaw independent chuck, large and small face plates, six lathe dogs and standard equipment.

One 20 in. by 10 ft. motor driven double back geared engine lathe with taper attachment, with 18 in. four-jaw independent chuck, large and small face plates, six lathe dogs, three tool holders, with tools, complete with standard equipment.

One 16 in. by 8 ft. motor driven high speed double back geared engine lathe with quick change gears, 16 in. four-jaw independent chuck, etc., as for the 20 in. lathe.

One 14 in. by 6 ft. portable motor driven bolt turning lathe, with standard equipment.

One 30 in. by 30 in. by 8 ft. bed motor driven planer, with one tool head on cross rail, and standard equipment.

One 4 ft. motor driven radial drill, with set of taper sockets and standard equipment.

One 20 in. motor driven vertical back geared drill, with set of sockets, and standard equipment.

One motor driven crank shaper, one motor driven pipe machine to take from one to four inch, right and left hand; one motor driven single head bolt cutter, one motor driven combined punch and shear, 12 in. throat, ¾ in. hole, ¾ in. plate and to cut ¾ in. plate; one 500 lb. motor driven self-contained power hammer, 18 lb. stroke; one 6 in. by 36 in. motor driven grindstone; one double emery grinder, with two 16 in. wheels; one 30 in. motor driven band saw, one 20 in. motor driven buzz planer, two 60 in. updraft circular forges with tanks, complete with stacks; two electric forge blowers, with motors direct connected.

One 50 ton portable forcing press, mounted on four wheels, four column type, with hand operated pump; one three ton portable crane, two swage blocks, 150 lbs., planed true, and the necessary complement of miscellaneous tools necessary in a repair shop of this size.

Atlantic, Quebec and Western Ry.—Since page 909 went to press a London cable to the Montreal Star says:—"Canada is, it seems, directly responsible for the suspension of the Charing Cross Bank, with estimated liabilities of £2,000,000. The bank is trading under the name of A. W. Carpenter, who says he filed his petition in consequence of threats of certain persons to institute criminal proceedings against him in relation to investments of the bank's money in a Canadian railway scheme. It is understood the railway is the Atlantic, Quebec and Western, of whose bonds Carpenter or the bank is believed to hold £800,000. The company here refuses to give the amount of the bonds issued. Carpenter's son is an official of the company in Canada. Carpenter himself is also associated in Canadian oil enterprises. The effect of the suspension is very far-reaching, as the bank had branches in forty leading provincial centres in England, Wales, Scotland and Ireland, and the depositors are largely artisans."

Dominion Railway Subsidy Contracts.—A contract has been entered into, under the act respecting aid to certain railways, between the Dominion Government and the Halifax and Eastern Ry. for the building of the following line of railway:—From the Intercolonial Ry., near Dartmouth. to Dean's Settlement, 80 miles, thence to Melrose, 2 miles; thence to New Glasgow, and on to Guysborough, with a branch to Country Harbor, 116 miles.

An action has been entered in the Montreal Courts arising out of some transactions between D. Russell and J. E. Greenshields of Montreal in connection with the Qu'Appelle Long Lake and Saskatchewan Rd. and Steamship Co., Russell cleaming $1,250,000 as damages.

The G.T. Pacific Ry. and the Quebec Central Ry. are reported to be interested in a project for the erection of a hotel at Levis, Que., to cost about $1,000,000. The city council has promised to give Shaw Park as a site for the hotel.

The statement above referred to was contained in a dispatch sent from Levis, and purporting to give particulars of a resolution passed by the town council at a meeting held Sept. 27. We were advised Oct. 17 that the management of the Quebec Central Ry. is not aware of there being anything in the report, and on the same date, the G.T.R. management advised us that there was no truth in the report.

MORISON Suspension Furnaces

Canadian Ticket Agents' Association.

The annual gathering of the members of the Association was held in Quebec, Oct. 5, 6 and 7, the Chateau Frontenac being the headquarters. It was one of the most successful in the Association's history, 113 members and a large number of ladies being in attendance. As usual all arrangements had been most carefully made in advance by the secretary, E. de la Hooke.

The business meeting was held Oct. 5, at 10 a.m. J. P. Hanley, President, occupied the chair, and was assisted by S. B. Morris, First Vice President. Mayor Drouin, of Quebec, welcomed the members in French. Alderman Cannon, promayor speaking in French. F. W. Churchill C.P.R. ticket agent Collingwood, Ont., responded for the Association.

The Secretary-Treasurer E. de la Hooke, presented his annual report, in which he congratulated the Association on the fact that death had not invaded its ranks during the year. In referring to the membership he said: "It seems a hard proposition to exceed the 200 mark in our membership, and it is only occasionally that we even number that many, but we are always thereabouts. Twenty-five new members enrolled during the year, which if added to the number 192 reported on the roll last year, would have given us 217 but, alas, the withdrawals numbered 19, so that 198 in good standing is all that we can boast of. Some of the shrinkage arises from men retiring or going into other business, but the greater number are caused by men still eligible, who in spite of persuasion to renew their subscription, maintain an undignified silence. Do members do what they should do, viz. introduce to agents eligible for membership the advantages of joining the Association? I quite believe that were an effort put forth in this direction by each member in his immediate vicinity, good results would follow. That some do this, I know from experience, and our membership is increased thereby. Bear in mind the interests of the Association and its objects at all times, and speak out to your brother agents at every convenient season, as it is only by such means that the Association can grow and be of the power and numerical strength that it should be. When kindred and senior associations acknowledge us by sending delegates to represent them at our meetings, should we not be encouraged to bestir ourselves and prove that we are worthy of such acknowledgment. Let 'Excelsior' be our motto.

"It has often occurred to me that members are not the help to one another that they should be. For instance when a member has ticketed his passengers to a given point, why not then give them his card, suggesting that they call on the member in that place for further transportation, (advising him in the meantime). The passengers would accept it as a mark of attention and it would probably be a profit to your fellow member. Again, if a member visits a city, town or village where a brother is located, call on him (whether you know him or not) get acquainted with, him, pass the compliments of the day, compare notes, buy yourself a cigar and say 'So Long.' It is astonishing what these little exchanges of courtesies produce and undoubtedly establish a bond of union much to be desired. Good seed sown in good ground cannot fail to bring forth a bountiful harvest."

The receipts of the year were $544.25, which, with a balance of $123.82 from the previous year, made a toal of $668,-07. The expenditures were $498.49, leaving a balance of $169.58 carried forward.

President's Address.

J. P. Hanley said:—"It is with feelings of pleasure beyond expression that I welcome you to our annual convention in this historic city. Probably there is no place in this broad Dominion so suggestive of our past history and of our future possibilities as the hallowed spot wherein we are now asembled. It was from old Quebec in bygone days that the brave and dauntless men set forth through untravelled forest and unknown waters, to lay broad and deep the foundation of Canada's commercial greatness. With what engineering skill they blazed their right of way, with what unerring instinct they selected their line of route and their stations is best shown by the fact that our great railway systems now occupy the trail of these hardy, adventurous travellers of olden days.

"It is with pardonable pride that we as Canadians can reflect on the marvellous growth and development of the business with which we are so intimately associated. It seems but a short time ago when the work of our transcontinental line was projected by the Canadian people. There was grave searching of hearts as to the wisdom of the undertaking. Now there are three lines running from ocean to ocean, practically on Canadian soil, with branch after branch piercing into every corner where business exists, and forming a net-work of railway lines not excelled in commercial excellence and importance the world o'er. And we seem only at the beginning of our career. This year alone there are thousands of miles of railway under construction. We seem a great empire without bounds, without limitation. By sea as well as by land has our progress been remarkable. It is not long after all in the history of nations, since the canoe of the wandering Indian was the only medium of communication on our Great Lakes and rivers; now this fair Dominion boasts a commercial fleet, her flag may be seen waving proudly aloft over valuable cargoes, in trim and valiant ships that are officered and manned by brave and fearless men, born of the soil of Canada.

"This is the calling with which we are proud to be associated, advancing year by year in public value and benefit. We are in daily association with the traveller, and with his wants and desires we are intimately acquainted. There is therefore on our part a double obligation, to the Company and to the public, for we are in a great measure the agents of both and trusted by both alike. It is therefore with great pleasure I welcome to our meeting the representatives of the American Association of General Passenger and Ticket Agents and also the representatives of the American Association of Passenger Agents, whose presence here cannot but be productive of the greatest good. We will welcome their sound advice and ripe judgment while at the same time they form an important link and bring our association closer to our various administrative heads. The stores of information gained by us in our daily life may through this medium be of wide benefit to our companies and our patrons.

"I draw your attention to our continued growth in numbers as well as in influence. We are to-day 198 strong, the largest in our history. And there are many of our calling whose presence we earnestly desire, whose wise council and able assistance we are anxious to secure. To you I appeal. Use every legitimate means to have these enrolled. Let every man here be a missionary in this work. In the words of the Scripture let me say: 'Go ye forth and gather them into the barn.'

"Once more I welcome you. Sincerely do I hope our labors may be crowned with mutual advantages. Let us have a good time too. We are in a city of hospitality and among a people famed the world over for good cheer and merriment. Let us make our meeting here one that we will recall with pleasant remembrances in the years to come."

American Association of Passsenger Agents.

N. Mooney, General Agent New York Central Lines, Montreal, said: "I have been selected by the American Association of Passenger Agents, many of whom are scattered over the Dominion of Canada, to represent them at this meeting in Quebec. They wish me to convey to you their greetings and the assurance of that brotherly love which keeps the world going. Within the past year I came among you to live, having been appointed General Agent of the N.Y.C. Lines at Montreal. The treatment which I have received from the railway men has been most cordial and greatly appreciated by me. Going to Montreal—a stranger—I was received with open arms.

"I have been asked by President Andrews, of the American Association of Passenger Agents, to say a few words at this meeting. I find the question of transportation, both passenger and freight, is at this moment one of the greatest problems which we have to deal with, both on this and the other side of the border. The passenger department of a railway has in times past been termed the silk stocking end of the corporation—the freight department the money-maker. In other words the freight department the dog, and the passenger department the tail, but conditions have changed. A few years ago, every merchant and manufacturer who shipped a pound of freight over any railway could, for the asking, get transportation for himself, his family or any of his friends, and the consequence was that the passenger trains were running crowded with people but comparatively little revenue coming into the treasury for the service performed. Today, on account of our Interstate Commerce Law in effect in the United States, everyone is treated the same and there is no discrimination, whether it be one of the largest shippers in the country, or one of the most humble citizens, and instead of carrying passengers on free transportation the passenger department is now receiving the revenue which in former years the freight department got all the credit for, while we, the passenger men, did all the work.

"The relation of the passenger and freight departments should be most cordial. You will often hear passenger men say 'That does not concern me, that is a freight matter," or vice versa. This condition should not exist—we are all working for one cause, to get revenue for the company we represent, whether it be passenger or freight, as the money all goes into the same locker and we all get our pay from the same pay-car. Co-operation is one of the essential things to bring success. Within the past few weeks there have been conferences between the members of the Canadian Board of Railway Commissioners and the Interstate Commerce Commission in regard to this very co-operation, with the sole object of mutual benefit to the railways on each side of the border. I would heartily recommend that each individual member of this Association do everything in his power to bring about this agreement.

"I am sorry I shall have to limit my visit here to a day, as the meeting of the American Association of Passenger Agents takes place in Dallas, Texas, on the 10th and 11th of this month, and business of importance makes it necessary for me to attend. It will be a pleasure for me to convey to that Association

(Continued on pg. 943.)

"FRANKLIN" Air Compressors

made by the Chicago Pneumatic Tool Co. are recognized by the users of compressed air as being the best machinery of their kind on the market to-day. PROFESSIONAL CARDS.

THE RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the managements and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. THE RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

(Continued from pg. 939.)

the greetings of the Canadian Ticket Agents' Association."

AMERICAN ASSOCIATION OF G. P. & T. A.

The Secretary read a letter from G. A. Cullen, G.P.A., Delaware, Lackawanna & Western Rd., New York, who had been delegated to represent the American Association of General Passenger and Ticket Agents, expressing his regret at being unable to be present and sending the following paper to be read:

"I esteem it a great honor to be invited to address you, representing as you do, so worthily and so fully, the passenger transportation interest of this great and growing division of the British Empire. Standing in this, one of the most historic cities of the New World, viewing the scenes where British valor and British genius have established this Dominion and, with wise laws firmly enforced, have practically created this land of opportunity, it is but natural that our minds should dwell upon at least one (and that one far from the least) of those sturdy virtues that have made England the majestic world power that she has been now these centuries.

"It is told of Prof. Huxley that in the course of a conversation with some savant Huxley was deploring the fact that men of learning were not as a rule better versed in the ordinary facts of every-day life and especially in the facts of nature. The savant took issue, contending that he, himself, being fairly representative of his class, was familiar above the average man with those facts, and challenged Huxley to stump him. Said Huxley: 'Well, well, suppose you define a crab.' 'Oh,' said the learned doctor, 'a crab is a small, red fish that swims backwards.' 'Exactly right,' said Huxley, 'except that a crab is not red, it is not a fish and does not swim backwards.' It was doubtless this sort of thing that led our homely American humorist, Josh Billings, to remark in his crude way, 'The trouble with most folks is, not that they don't know enough, but that they know too darned much that ain't so.'

"Bravery is rightly regarded as the greatest of all virtues, for no other virtue is effective without it. But bravery is not enough. England does not owe her achievements through all these centuries solely, nor even principally, to being braver than her enemies. Was Napoleon less brave than Wellington? Ask Kitchener if the Dervishes were cowards? Did Havelock's men so greatly surpass the Sepoys in courage? No, England owes her pre-eminence to a far less spectacular virtue than bravery (much as she has had of that), to a virtue without which no nation in the history of man has done great things for so long. If there is one word that expresses the secret of England's long supremacy better than another that word is 'thorough.' Thorough in preparation, thorough in investigation, thorough in execution and administration, and back of it all, thorough in the conscientious daily life of her people. I do not suppose anyone can be educated to be thorough who has not the elements of thoroughness in the fibre of his character, (and that may be why so many practical failures are turned out of our schools and colleges), but the great majority of us Anglo-Saxons have that goodly heritage, although often undeveloped. Thoroughness is made up of an active imagination stimulated by an ambition to get at the facts, of a scorn of superficial half-knowledge, and above all of a readiness and eagerness to work and dig into the very heart of a problem. Thoroughness it is that leads our little ships of life off the treacherous shoals of 'I think' out into the deep and safe channel of 'I know.' Thoroughness is the very cardinal principle of successful railroad administration. As I see what it is that goes to make an exceptionally eminent railroad president. I am reminded of what someone has said—'Genius is an infinite capacity for taking pains.' We cannot all of us be railway presidents, just as we do not all of us have that infinite capacity that spells genius, but I venture the broad assertion that the man who wishes to travel in the direction of the presidency, rather than towards the other end of the ladder, will do well to develop his capacity for thoroughness. I know of nowhere that thoroughness is more necessary, nor at the same time where the temptation to a lack of thoroughness is greater, than in the important office of railway ticket agent. Temptation to slur over work is always greater where one is removed from daily contact with some supervising officer and deals largely with those who know far less than himself about his business, and it is to the everlasting credit of the ticket agents, both of Canada and the United States, that they have so largely resisted and triumphed over this temptation. Indeed, it is to their thoroughness in mastering the details of their business that their high standing in their various communities and with the travelling public is due. And I may say that a good part of the travelling for pleasure that is done today (and it is a large part of the total), would not be done at all were it not that the 'crooked paths have been made straight' in advance by the well informed, interested and capable ticket agent, and the apprehensions of discomfort allayed by his manner of confidence based on knowledge.

"You have not invited me here to preach a sermon or deliver a lecture, but I trust you will bear with me if I express the contempt both moral and intellectual which I feel for the man who, occupying the dignified and responsible position of ticket agent, representing the passenger department of a great railway Company, attempts, either through the desire to secure business or the even worse desire to cover up his own ignorance to give a passenger information that, as Josh Billings says, 'Ain't so.' 'Bluffing' is poor policy in the railway business. Bluffs always come home to roost, if not to the agent himself, certainly to his company. You and I can remember the day when men had the effrontery to boast of this sort of thing. Thank God it isn't 'good form' in the railway business today.

"Industry and intelligence are things that have made the ticket agent a personified encyclopedia of information in the past and—there is no royal road—these must be relied upon to keep him in that role in the future. I will only refer in passing to two features of a ticket agent's responsibilities that tend to develop his thoroughness and enhance his value to himself and to his company. The first is travel—who would expect a salesman in any other line of business to be successful who had not even seen his 'line of goods?' Particularly should a man know his own line and through car connections, not by the folder and guide merely, but by actual observation. I think many companies make a great mistake in not encouraging their agents, especially at the more important points, to familiarize themselves with the one thing the companies have to sell—transportation. Another means of development for the ticket agent is in employing some of his spare time in soliciting business outside of his office. This not only improves his acquaintance but develops capacities that are very apt to be of much use to him personally.

"But I must not be didactic. You 'know the game' quite as well and probably better than your preacher. I am your guest today. Let me be your host when you can find time to take a trip over the Lackawanna."

A TRIP ROUND THE WORLD.

M. McNamara, G.T.R. ticket agent, Walkerton, Ont., read the following paper: "Some two or three weeks ago I received a note from our esteemed secretary, Mr. de la Hooke, reminding me that I was booked for an address at this meeting, covering a trip around the world on British soil. I certainly felt frightened at his reminder, for I could not see how I was going to manage it. There are considerable stretches of water on the journey and our aeroplanes have as yet an unpleasant habit of tumbling to earth or the sea when required for carrying passengers.

"Last year Mr. McIlroy gave us a most interesting trip around the world starting from Peterboro. A two dollar rate for a certain trip then prevailed in that celebrated town and quite a number took advantage of the figure rate and found the trip most enjoyable. This year I determined to start from Walkerton, the enterprising capital of the county of Bruce. I had seen it stated in print that all sensible people travel by the Grand Trunk. Wishing to be considered a sensible man myself I determined to travel by that route. But instead of going around the world on British soil I decided to make the trip under the British flag. The flag of Britain represents the British soil wherever it flies and is the proud emblem of our nationality in every quarter of the globe. After many great battles all the nations of the earth and all the ships that sail the sea, have been forced to acknowledge its supremacy.

"Setting out from Walkerton by the G.T.R. we soon reach Montreal. Here we have a choice of several fine steamship lines all flying the British flag. We make our choice and sail down the majestic St. Lawrence fringed with beautiful scenery and alive with inspiring historical associations. We pass the grand old city of Quebec peopled with noble memories of the past and not unmindful indeed of the many inspiring attractions of the present. We sail on through the Gulf of St. Lawrence, pass the bleak Island of Anticosti, known in song and story as the graveyard of the Atlantic. The bones of many a noble ship lie bleaching on its desolate shores. On we sail through the straits of Belle Isle and out into the broad Atlantic. The first point of interest that we reach on the other side of the ocean is the Emerald Isle, dear old Ireland, that sweet gem of the sea, that for more than a thousand years has exerted a greater influence on the history of the world than any other place of its size on the habitable globe. When all Europe was a prey to barbarism after the downfall of the Roman Empire in the sixth century, Ireland alone kept the lamp of learning burning. From the time of St. Patrick in A. D. 432, down to the first English invasion under Henry II in 1155, the great university of Armagh, often containing more than 7,000 students, sent forth teachers and missionaries who spread the gospel and founded institutions of learning in every country in Europe.

"Sailing across the Irish Sea, we soon reach England. In many respects England contrasts strongly with Ireland. The union of the two countries has not always been peaceful, but it has produced great results. Liberty trickles down slowly from the founders of empires to the common man and indeed not much of it has yet reached the multitudes in some countries of Europe. By contrast, England may well be considered the cradle of liberty. It unites liberty with security in more just and equal proportions than any other country in Europe. Its union with Scotland under James I in 1603 has produced the happiest results. The Scotch and Irish did the fighting and the English pocketed the proceeds. They did not get the whole

Full information at the Company's Offices, Winnipeg, or 1 Lime St., London, E.C.

of them, though, for the canny Scot pertinaciously asserted his claims to a pretty good share, and got it too. The Irish will get their reward hereafter. In our journey around the world, under the British flag, one may well pause for a while in the British Isles. Looking at a map of the world we cannot help being struck with amazement at the thought that such a little country as England, Scotland and Ireland, the whole of them not much larger than half a dozen Canadian counties, should have achieved such astonishing results. They have established the greatest empire the world has ever known. The glories of ancient Rome fade before it. It covers the world, and has brought the priceless blessing of political liberty to mankind. What is the cause of this extraordinary result? Why have not other nations risen up to dispute its achievements? France was the first in the field as the leader of civilization in Europe. We may well accord it the same claim in America. Standing here in grand old Quebec, amidst so many monuments of its ancient glory, and recalling the greatness of its history, on this continent, we may well ask why England has taken the lead? Is it due to the different character of the people, or is it the result of their different political institutions?

Proceeding leisurely across the English Channel in our good ship, still flying the British flag, we stop for a moment at Calais in France. This was the last British possession on the continent of Europe. We must remember that the kings of England from the Norman conquest in 1066 down to the death of Queen Anne in 1710, claimed to be also kings of France, and much good blood was spilled and many bloody battles fought in support of this claim. Calais was alternately French and English for a century, but was finally taken by the French in 1554, whilst Mary Tudor was Queen of England. It is a matter of history that Mary died of a broken heart at the loss of Calais. On her death bed she said that if her body were opened "Calais' would be found written on her heart. We don't take things so seriously now, or possibly time has changed the value of their possession. But we sail on from Calais with scarcely a thought of its ancient glory. Coasting along at our leisure along the coast of France and Spain, we come to Gibraltar. What British heart does not thrill at the name of Gibraltar? It was anciently known as one of the pillars of Hercules and has been held alternately by the Turks, the French and the Spaniards until it finally fell into the hands of the British in 1704. The fortress commands the entrance to the Mediterranean and is considered impregnable. We now peacefully enter the straits and sail down the Mediterranean. In the midst of these historic waters we find the little island of Malta, with the British flag flying proudly from its government house. I need scarcely remind a religious assembly like this, that St. Paul was shipwrecked at Malta in A.D. 62. Indeed it is difficult to go to any place of either ancient or modern renown, without finding the British flag at the top of the mast. At the end of the Mediterranean we come to the Suez Canal. It is said that in the time of the Romans, Cæsar had a channel for his galleys cut through from Aden to Port Said, 90 miles. But it fell into disuse afterwards and again filled up with the sands of the desert. The present canal was cut by a French company, under the celebrated French engineer, M. de Lesseps, in 1858, but became British property in 1876, through a purchase of the majority of the stock for $22,500,000, by a vote of parliament. This is the modern way of accomplishing great things, for money is now the ruler of the world. We go through the Suez Canal with our flag flying, and pass into the Red Sea, going down along the coast of Egypt, which in effect has become a British possession. It is surprising how a handful of British people have obtained control of this wonderful country. Its population is about 20,000,000 and its civilization dates from the beginning of the world. The first of its Pharoahs, or great kings, is said to have been a grandson of Noah. It is now a British colony.

"Passing out of the Red Sea through the Gulf of Aden, we sail on to India, picking our way through hundreds of islands all flying the British flag. India has a population of over two hundred million people, composed of all sorts of Oriental castes and races. Their internal divisions enable a handful of British people to rule this vast empire, and this again illustrates the genius of Great Britain for governing the world. From Hindustan we cross the Bay of Bengal and out into the China Sea. Here again the commercial genius of the British people is most wonderfully exemplified. They have a strong grip on China and to a large extent dominate its commerce. China is not well known to the western world. Its own people claim an antiquity of a hundred thousand years, but western historians assert that it was founded by our own ancestor Noah as soon as he got out of the ark. It has a population of four hundred million industrious, capable people, who are now studying the civil and military arts of Europe and America. Four hundred million people with guns in their hands and able to use them as well as ourselves is a threatened peril that our descendants will one day have to face. After exploring China under the protection of the British flag, we return to our ship and pass on down through the Molucca Islands and on to New Zealand, Van Dieman's Land and Australia. For want of time we have to overlook the immense British possessions in South Africa, and the swarms of British islands in the Indian Ocean, the South Atlantic and the Pacific. Van Dieman's Land was for the first half of the last century used as a convict station for political prisoners, chiefly from Ireland. New Zealand was discovered by Capt. Cook in 1770. He found potatoes there in 1773 and took them to Europe. Sir John Hawkins had found them previously in Chili and Peru in 1565 and Sir Francis Drake found them in Santa Fe in 1586, but Sir Walter Raleigh found them in Virginia in 1560, during the reign of Queen Elizabeth, and planted them in Ireland. He is fairly entitled to the credit of having first grown both potatoes and tobacco in Europe. And such is the irony of history, that Elizabeth's successor, James the First, cut off his head. His Majesty did not smoke. With the British flag proudly floating from our mast head, we arrive at Australia. It is the largest island in the world and has an area of three million square miles. It was first known as New Holland and belonged to the Dutch, but became British by the usual process in 1790. It competes with Canada for the honor of being the greatest British possession under the flag.

"And now we are approaching our own beloved Canada, from the other side of the world. Sailing from Australia up the Pacific ocean we reach Vancouver. Here we take a C.P.R. train, under the superintendency of our old friend, Mr. Foster, and in due time, reach Walkerton. And what sensible man does not rejoice at living in Walkerton, a small, modern city, with advantages that neither Cæsar nor Napoleon could enjoy? Fine schools, beautiful churches, graded streets, city water, sewers, cement sidewalks, electric lights, and the most enlightened public sentiment in the proudest country that flies the British flag. Such is our beloved home."

AFTERNOON SESSION.

The business meeting was resumed after luncheon when letters were read from D. McNicoll, Vice President C.P.R., G. T. Bell, Assistant Passenger Traffic Manager, G.T.R., and M. H. Bohreer, District Passenger Agent, Mobile & Ohio Rd., Chicago, regretting their inability to be present, W. E. Rispin, G.T.R. ticket agent, Chatham, who was prevented from attending owing to illness in his family, wrote respecting his representation of the Association at the American Association of General Passenger and Ticket Agents' meeting in Havana.

Invitations for the holding of the next annual meeting at Charlottetown, P.E.I., and Sault Ste. Marie, Ont.,. were received from the civic and board of trade officials of those places and were referred to the executive committee.

The question of obtaining transportation on U.S. railways for members of the Association who were not wholly engaged in the ticket business was discussed, and it was decided to ask G. A. Cullen, G.P.A., Delaware, Lackawanna & Western Ry.. to take the matter up.

A resolution was passed expressing sympathy with W. Bunton, G.T.R. ticket agent, Peterboro, Ont., who was unable to attend owing to illness.

The following officers, etc., were elected for 1911:—President, J. F. Dolan, Montreal; First Vice President, S. B. Morris, Rodney, Ont.; Second Vice President, J. L. Thomson, Charlottetown, P.E.I.; Third Vice President, A. Philps, Huntingdon, Que.; Secretary-Treasurer, E. de la Hooke, London, Ont.; Auditor, F. M. Hawley, Cobourg, Ont.; Executive Committee, W. Jackson, Clinton, Ont.; M. McNamara, Walkerton, Ont.; W. McIlroy, Peterboro, Ont.; C. E. Horning, Toronto.

The re-election of E. de la Hooke as Secretary-Treasurer for the twenty-fifth year in succession, and the voting of an increase in his salary, produced much enthusiasm.

J. F. Dolan, the President elect for 1911, having thanked the members, the meeting adjourned.

SOCIAL FEATURES.

The Quebec Transportation Club had charge of the outside entertainment features of the programme, which, owing to the liberal co-operation of C. E. A. Carr, General Manager of the Quebec Railway, Light, Heat and Power Co., were carried through most successfully. On the morning of Oct. 5 the ladies of the party were taken on a sight-seeing trip around the city on special electric cars, and in the afternoon they were taken by special electric train to Montmorency Falls and the Kent House. In the evening the Association had a smoking concert at the Chateau Frontenac for the members and men guests, the ladies being entertained at a social in the parlors. On the morning of Oct. 6 the whole party went by special electric train to the Shrine of Ste. Anne de Beaupre, and then had luncheon on the C.P.R. s.s. Empress of Ireland, afterwards going on a trip round the harbor and to the Quebec bridge site, on one of the Quebec and Levis Ferry Co.'s boats. In the evening they went to see vaudeville and motion pictures at the Auditorium Theatre. On Oct. 7 the party went by special electric train to the village of Indian Lorette, where they received a hearty welcome from the Huron tribe. President Hanley was presented with an address and a bouquet, and was made a chief of the tribe, with the euphonious name of Onsedeksendishen. In the evening there was a reception and dance at the Kent House.

In appreciation of courtesies extended, the Association presented handsome cut glass mementoes to C. E. A. Carr, General Manager Quebec Ry., Light, Heat

ATTENTION, MASTER CAR BUILDERS!

The M. C. B. rules of interchange provide for the use of THE STEEL BACK BRAKE SHOE on your freight equipment.

The use of OUR STEEL BACK SHOE will mean a saving in brake shoe maintenance, brake heads and brake beams.

THE STEEL BACK BRAKE SHOE is an economy on all railway equipment.

Dearborn Water Treatment Prevents Scale and Leaks in Locomotive Boilers

Actual tests have demonstrated that 1-9 inch of scale formation results in 15.9 per cent. loss of boiler efficiency. Only 1-50 inch scale causes a loss of 9.4 per cent.

The coal wasted on American railroads, because proper attention is not given to the removal and prevention of scale formation, amounts to millions of tons annually.

In addition to the fuel wastage is the expense of boiler repairs made necessary by the same causes. On bad water districts the average mileage obtained per set of boiler flues is many times less than what can be accomplished with good water.

Dearborn Treatment prevents the scaling salts from forming, and stops leaks, corrosion, and pitting.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for Aug., $27,146, against $39,533 for Aug., 1909. Cumulative net profits for two months ended Aug. 31, $45,881, against $69,536 for same period 1909. Approximate traffic receipts for Sept., $32,007, against $33,567 for Sept., 1909. Cumulative traffic receipts for three months ended Sept. 30, $90,013, against $88,189 for same period 1909.

Alexander Gibson Ry. and Manufacturing Co.—The courts have fixed Feb. 11, 1911, as the date for sale by auction of the properties belonging to this company. The sale comes as the result of an equity suit brought for the foreclosure of mortgages amounting to over $500,000. The company formerly owned the Canada Eastern Ry. and the bridge over the St. John River, which gave the line an entrance into Fredericton, N.B. The Canada Eastern Ry. was bought by the Dominion Government and added to the Intercolonial Ry., and the bridge was taken over by the Dominion Government under the agreement by which the bond issue had been guaranteed. The company's railway interests at present are nominal, consisting of short spurs necessary for connecting its mills and timber limits with the railway systems of the province.

Algoma Central and Hudson Bay Ry.—A cablegram from Paris, France, says:—"La Journale Officiale contains a notice of the Algoma Central and Hudson Bay Railway, incorporated under the Canadian company law, having head offices in Sault Ste. Marie and a capital of $10,000,000, $500,000 of ordinary and $500,000 of preference shares, besides which an issue of $6,750,000 in debentures is authorized. It is proposed to place stock valued at 3,000,000 francs in Paris."

Canada Atlantic Ry.—Following are the officers and directors for the current year:—President, C. M. Hays; Vice President, E. H. Fitzhugh; Secretary-Treasurer, F. Scott; other directors, W. Wainwright, J. W. Loud, W. H. Biggar, R. S. Logan; General Auditor, W. H. Ardley.

Canadian Northern Ry.—The Edmonton and Slave Lake Ry. application for the amalgamation of which with the C. N. Ry. is being applied for, has outstanding $420,000 of 5% bonds. These were bought by the C.N.R. and are deposited as part of the collateral for the C.N.R. 4% perpetual consolidated debentures.

Central Canada Ry.—The second mortgage bonds will be redeemed Nov. 1 on presentation at the Bank of Montreal, or at the C.P.R. Treasurer's office.

Detroit, Grand Haven and Milwaukee Rd.—The State of Michigan has instituted a suit to recover about $3,000,000 alleged arrears of taxes from this railway, which is one of the U.S. lines controlled by the G.T.R. The company under its charter, granted in 1860, pays a tax of 1% on its capital stock. This stock is nominally $2,517,140, but the State contends that it is entitled to tax the capital actually invested in the line as the basis of calculation, instead of the nominal value of the common stock, as shown by the entries in the company's books. This the State authorities estimate at $7,000,000, and seek to collect taxes on this valuation for past years. R. S. Logan, Assistant to the President G.T.R., said in an interview recently, that this was an old claim, and had been successfully resisted on a previous occasion. He could not understand what the present suit meant, in the absence of papers.

The Dominion Atlantic Ry. will apply to the Dominion Parliament to authorize it to enter into an agreement with the C.P.R. for any of the purposes specified under sec. 361 of the Railway Act. At the annual meeting in London, Eng., recently, the President, T. Skinner, who is also a C.P.R. director, stated that almost all of the preference and ordinary stock of the company had been acquired by friends of the C.P.R. in accordance with the terms of the circular issued May 12. The report of the directors for the year ended June 30 was adopted.

Dominion Atlantic Ry.—Gross earnings for Aug., $160,600, against $158,380 for Aug., 1909. Aggregate gross earnings for two months ended Aug. 31, $308,200, against $301,737 for same period 1909.

Hillcrest Collieries.—A dividend of 1¾% has been declared on the preferred stock, payable to shareholders of record Sept. 30. In addition to its collieries in Alberta, the company owns a coal carrying railway, connecting with the C.P.R.

The Grand Trunk Ry. Co. will ask the Dominion Parliament for all necessary powers, to be exercised subject to approval of the shareholders, in respect of the following matters:—Semi-annual payment of dividends; providing a reserve fund for extensions, renewals, maintenance, repairs, etc.; to acquire, etc., the stocks, bonds or other securities of the Montreal and Southern Counties Ry.; to guarantee interest at 4% upon an issue of first mortgage bonds of the G.T. Western Ry., payable 50 years from date thereof; to issue such additional G.T.R. consolidated debenture stock as may be necessary in the exercise of the powers conferred by this act, and by the G.T. Ry. Act of 1910; and repealing certain inconsistent provisions of former acts.

Intercolonial Ry.—The figures for the traffic on the Intercolonial Ry. for the half year ended Sept. 30, have not yet been given out officially, but it is stated, unofficially, that they show a surplus of about $250,000.

Massawippi Valley Ry.—Following are the officers and directors for the current year:—President, J. G. Foster, Derby Line, Vt.; Vice President, C. W. Cate, Sherbrooke, Que.; other directors, J. W. Dunklee, Boston, Mass.; C. H. Kathan, Rock Island, Que.; F. N. McCrea, C. D. White, E. O. Grundy, Sherbrooke, Que.; H. N. Turner, St. Johnsbury, Vt., and J. H. Williams, Walpole, N.H.

Quebec and Lake St. John Ry.—Total earnings for Sept., $65,721.94, against $56,919.49 for Sept., 1909. Aggregate total earnings for nine months ended Sept. 30, $441,785.19, against $444,750.21 for same period 1909. The average earnings per mile for Sept. were $230.27, against $199.72 for Sept., 1909, and for the nine months ended Sept. 30, $1,559.33, against $1,567 for the same period in 1909.

Quebec Central Ry.—Gross earnings for July, $124,070.89; expenses, $77,501.16; net earnings, $46,569.73, against $107,411.36 gross earnings; $67,443.04 expenses; $39,968.32 net earnings for July, 1909.

Quebec Southern Ry. and South Shore Ry.—Application will be made to the Exchequer Court at Ottawa on behalf of the Attorney General for the approval of the settlement of the claims of C. K. Lawton, J. Hesseltine and W. Bloom. The creditors of the company have been called upon to show cause why the settlement shall not be confirmed. This action arises out of the winding up of the affairs of the old companies, which were in the hands of a receiver prior to their acquisition by the Delaware and Hudson Co., by which company they were amalgamated, and are now operated as the Quebec, Montreal and Southern Ry.

Quinze and Blanche River Ry.—Following are the officers and directors for the current year:—President, Hon. E. H. Bronson; Vice President, F. P. Bronson; other directors, W. G. Bronson and H. W. Cole; Secretary-Treasurer L. Crannell.

Temiscouata Railway.—At the annual meeting in Quebec Sept. 27th, the General Manager's report was read by Vice President J. H. Walsh, who presided owing to the unavoidable absence of President F. Grundy, from illness. The gross earnings showed an increase over the preceding year, and operating expenses a decrease. After meeting the fixed charges, 5% on the prior lien bonds, and $10,000 for redemption fund account, a dividend at the rate of 1% per year was declared on the consolidated mortgage income bonds, and an appropriation of $8,000 made from net revenue for permanent betterments to the line, leaving $5,000 to carry forward. Following are the officers and directors for the current year:—President, F. Grundy, Sherbrooke, Que.; Vice President, J. H. Walsh, Sherbrooke; other directors, E. O. Grundy, Sherbrooke; A. K. Cook, K.C., F. Murphy, K.C., A. Laurie, W. N. Campbell, Quebec; Secretary, D. B. Lindsay, Riviere du Loup; General Manager, G. G. Grundy, Riviere du Loup.

White Pass and Yukon Ry.—Gross earnings for Aug., $227,850, against $252,600 for Aug., 1909. Aggregate gross earnings for two months ended Aug. 31, $442,187, against $476,257 for same period 1909.

Railway Commissioners' Traffic Orders.

Other orders under this heading will be found on pg. 917.

CLASSIFICATION RATINGS ON BUILDING MATERIAL.

11899. Oct. 7.—The application of C. D. McGregor, of Vonda, Sask., complaining that rate charged by Canadian Northern Ry. on shipment of building material from St. Boniface, Man., to Vonda, was excessive. Upon the report and recommendation of the Chief Traffic Officer of the Board, concurred in by the Canadian Freight Association, it is ordered that the forthcoming new Canadian Classification 15 provide a building material list as follows:—

Building Material—	L.C.L.	C.L.
Brick:		
Common	4	10
Fire (not stove lining)	4	10
Hollow	4	10
Terra cotta fire-proofing	4	10
Cement:		
Asbestos	4	10
Common, in sacks or barrels	4	10
Gravel, common	4	10
Lime, common	4	10
Plaster:		
Asbestos	4	10
Calcined	4	10
Elastic pulp, in bags or barrels	4	10
Plaster of Paris, adamant and stucco, in bags or barrels	4	10
Sand:		
Asbestos	4	10
Common	4	10
Stone:		
Artificial	4	10
Dressed, not polished, carved or lettered	4	10
Blocks:		
Concrete building	4	10
Blocks, slabs or spires:		
Unwrought	4	10
Coursing and dimension	4	10

TATE BIFUNCTIONAL ACCUMULATORS

Are ideal for train lighting. They are 30 per cent. lighter than any other Storage Battery of same rated capacity.

They can be charged more rapidly, and show much higher Watt-hour efficiency on slow or rapid discharge.

They do not require to be washed out for the removal of sediment from the cells, because there is no sediment deposited.

This battery solves the problem of efficient lighting of trains by electricity.

It is important to railway managers that they should investigate the Tate Bi-functional Accumulator.

We also manufacture storage batteries for Automobile engine ignition and lamp lighting, and for all other purposes for which a storage battery can be used.

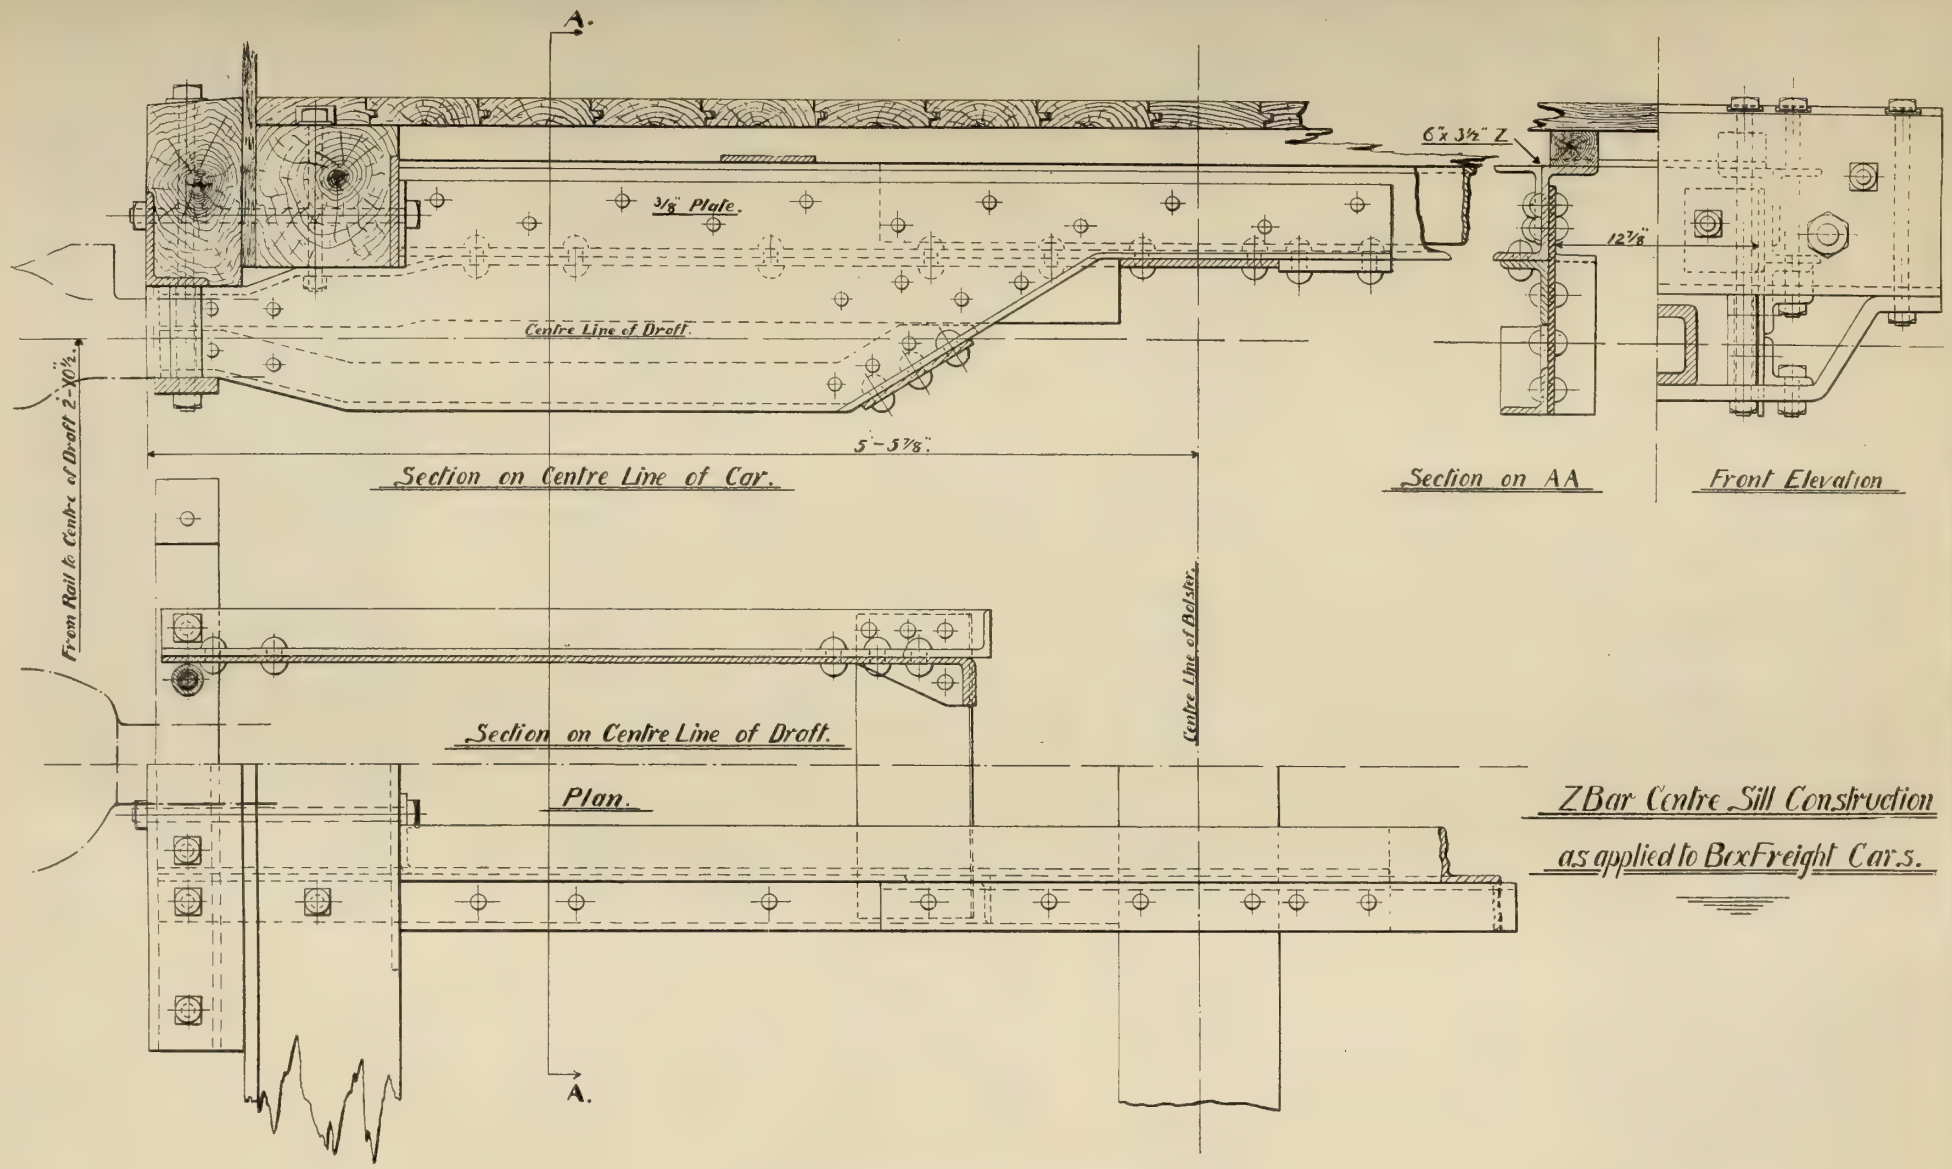
PROPRIETORS

ARTHUR M. GRANT,
MANAGER



Canadian Pacific Railway Steel Centre Sills.

The plans on this page and illustrations on pg. 951 show the Z bar centre sill construction as applied to C.P.R. cars, with Farlow draft gear attached to the sills.

The C.P.R. is using this type of construction on all the new wooden cars it is building. The arrangement can also be applied to old cars when the wooden centre sills require to be replaced. The arrangement can be adapted to suit any of the standard types of draw gear

It is claimed that this type of construction will reduce the cost of repairs to draft riggings and save renewals of draft timbers and centre sills, making the car practically as substantial, for draft gear purposes, as a steel car. This should effect a saving, as draft gear repairs are far more numerous than any other repairs to cars.

We are indebted to R. W. Burnett, Genera' Master Car Builder C.P.R., for the drawing, photographs and data.

HICKS LOCOMOTIVE AND CAR WORKS, = Chicago, Ill.

Railway Rolling Stock Notes.

The Standard Chemical Co., Faussett, Que., has purchased one locomotive from the Montreal Locomotive Works.

The Toronto, Hamilton and Buffalo Ry. has received two locomotives from the Montreal Locomotive Works.

The Intercolonial Ry. has received five consolidation locomotives (replace) from the Canadian Locomotive Co., Kingston, Ont.

The G.T.P.R. has received 166 box cars, nos. 312051 to 312216, and 99 refrigerator cars, nos. 340050 to 340148, from the Canadian Car and Foundry Co., Montreal.

By a typographical error the weight of the C.P.R. locomotive, class T2a, was given as 289,000 lbs., instead of 239,000 lbs., in the table showing the counterbalance record, published on pg. 819 of our Oct. issue.

The C.P.R., between Sept. 26 and Oct. 14, received the following additions to rolling stock:—172 box cars, eight vans, 48 refrigerators, 32 flat cars, one first class car, one second class car, and one D. 10 locomotive, from its Angus shops, Montreal.

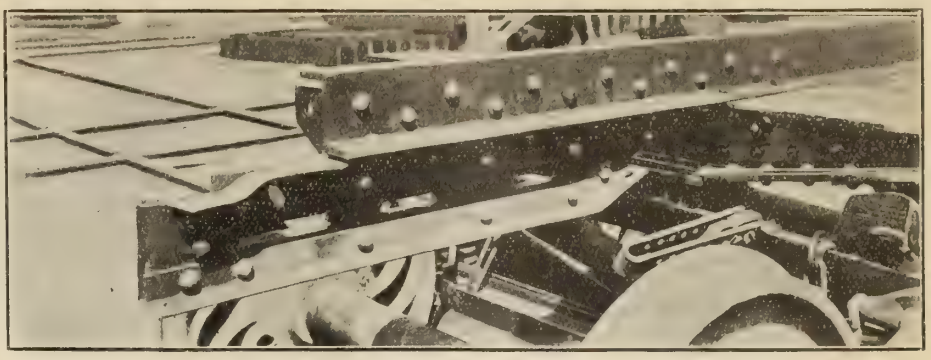
There was shipped from Vancouver, B.C., Oct. 11, a barge load of flat, box and passenger cars for the G.T. Pacific Ry., Prince Rupert, and on another barge, a locomotive, combination passenger car, two box cars and four flat cars for the Portland Canal Short Line Ry., Stewart, B.C.

The Black Lake Asbestos Co. has ordered one four-wheeled locomotive from the Montreal Locomotive Works. Following are the chief details:—

Gauge	3 ft.
Weight in working order	55,500 lbs.
Wheel base	6 ft. 3 in.
Cylinders	13 by 18 ins.
Driving wheel diameter	36 ins.
Boiler, type	Straight top.
Boiler pressure	165 lbs.
Tubes, number and diameter	100; 2 ins.
Tubes, length	10 ft.
Brake	Steam.
Capacity, water	1,000 U.S. gals.

The C.P.R. between Aug. 16 and Sept. 27, ordered the following rolling stock:—One D. 10 locomotive, one first class car, one double track plow, five single track plows, two flangers, 228 box cars, six refrigerator cars, 45 stock cars, 61 flat cars, and 12 vans at its Angus shops, Montreal; five steel snow plows, six steel frame flat cars, three steel coal cars, nine ballast cars, and three ore cars, from the Canadian Car and Foundry Co., Montreal, and one 75 ton wrecking crane in the U.S.

The Canadian Northern Ry., between Sept. 15 and Oct. 15, placed orders for the following rolling stock:—20 first class coaches, 10 baggage cars, three dining cars, eight second class coaches, four snow plows and 1,350 box cars with the Canadian Car and Foundry Co., Montreal; 250 box cars with the Silliker Car Co., Halifax; 10 second class coaches with the Crossen Car Mfg. Co., Cobourg, Ont., and two combination second class and baggage coaches and two baggage and mail coaches with the Preston Car and Coach Co., Preston, Ont.



Z Bar Centre Sill on C.P.R. cars, with Farlow draft gear attached.

The Canadian Northern Ry., between Sept. 15 and Oct. 15, received the following additions to rolling stock:—Four first class coaches, two baggage cars and 245 box cars, from the Canadian Car and Foundry Co., Montreal; 15 cabooses and 10 refrigerator cars, from the Crossen Car Manufacturing Co., Cobourg, Ont.; one second class coach, one second class and baggage car, and 35 box cars, from the Silliker Car Co., Halifax, N.S., and four baggage and mail coaches from the Preston Car and Coach Co., Preston, Ont.

Haney, Quinlan and Robertson, contractors, have received two locomotives from the Montreal Locomotive Works, and have ordered one four-wheeled locomotive, of which the following are the chief details:—

Weight in working order	56 000 lbs.
Wheel base	6 ft. 3 ins.
Cylinders	13 by 18 ins.
Driving wheel, diameter	36 ins.
Boiler, type	Straight top.
Boiler pressure	165 lbs.
Tubes, number and diameter	100; 2 ins.
Tubes, length	10 ft.
Brake	Steam.
Capacity, water	1.000 U.S. gals.

The Canadian Northern Ry., between Aug. 15 and Sept. 15 received the following additions to rolling stock:—50 flat cars, six stock cars and 10 cabooses from the Crossen Car Manufacturing Co., Cobourg, Ont.; two dining cars, 360 box cars, one first class coach, and two second class and baggage cars from the Canadian Car and Foundry Co., Montreal; 65 box cars, four second class coaches, and two second class and baggage cars from the Silliker Car Co., Halifax, N.S., and 10 switching and 12 ten wheel locomotives from the Montreal Locomotive Works.

The C.P.R., between Aug. 16 and Sept. 27, received the following additions to rolling stock:—372 wooden box cars, six first class cars, 14 vans, 62 refrigerator cars, one flanger, two baggage and smoking cars, two second class cars, three dining cars, six first class and smoking cars, two first class suburban cars, five baggage cars, three sleeping cars, and nine D. 10 locomotives from its Angus shops, Montreal; 532 steel frame box cars from the Canadian Car and Foundry Co., Montreal, and 23 N. 3 locomotives from the Montreal Locomotive Works.

Following are the chief details of the 25 logging cars which the British Columbia Electric Ry. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:

Capacity	80,000 lbs.
Length over end sills	41′ 0″
Width over side sills	9′ 0″
Width over flooring	9′ 3″
Height, rail to centre of drawbar	2′ 10½″
Height, rail to top of floor	4′ 0″
Couplers	Simplex, side opening
Air brakes	Westinghouse K.C.-812
Wheels	33″ cast iron
Journal boxes	Cast iron
Journal bearings	5″ by 9″ Canadian Bronze Co.
Trucks	Diamond arch bar
Body and truck bolsters	Simplex

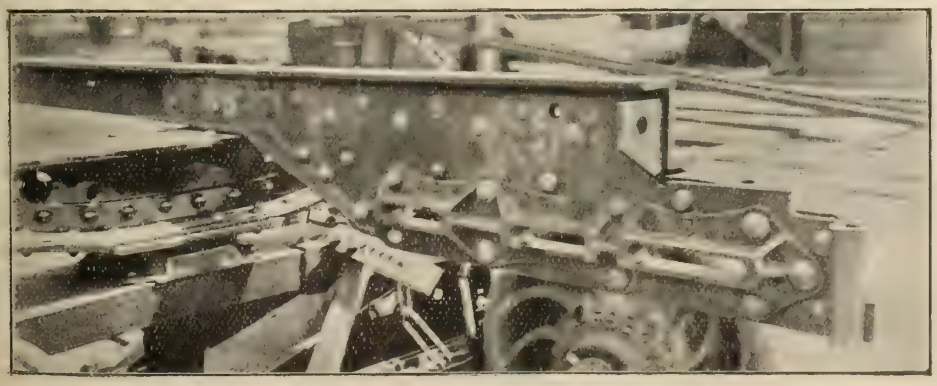
Following are chief details of the 50 logging cars which the Fraser River Lumber Co. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:—

Capacity	80,000 lbs.
Length over end sills	41 ft.
Width over side sills	8½ ft.
Width over flooring	8 ft. 10 ins.
Height, rail to centre of drawbar	2 ft. 10½ ins.
Height, rail to top of flooring	3 ft. 6½ ins.
Body bolsters	Cast steel.
Couplers	Simplex side opening.
Air brakes	Westinghouse KC-812.
Wheels	33-in. cast iron.
Journal boxes	5 by 9 ins.
Journal bearings	Canadian Bronze Co.
Truck bolsters	Cast steel.
Trucks	Diamond arch bar.

The C.P.R., between Sept. 26 and Oct. 14, ordered the following additions to rolling stock:—Three D. 10 locomotives, two observation-sleeping cars, 15 sleeping cars, two parlor cars, seven dining cars, 90 suburban cars 65 ft. long, 25 first class cars 65 ft. long, five first class and smoking cars 65 ft. long, five first class and smoking cars, 67 ft. long, five second class cars 65 ft. long, 10 tourist cars, 24 baggage and express cars, 10 baggage and smoking cars, 50 box cars, seven refrigerator cars, 13 stock cars, nine flat cars, and 12 vans, from its Angus shops, Montreal; one ore car and four coal cars from the Canadian Car and Foundry Co., Montreal.

The combination coach and parlor car which the International Ry. of New Brunswick is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue, is arranged with parlor, 29 ft. ¾ in. long, smoking compartment 7½ ft. long, ordinary first class compartment 17 ft. 8 ins. long, and toilet accommodation. Following are the chief details:—

Length over end sills	60′ 0″
Length over platforms	66′ 4″
Width over side sills	9′ 10½″
Width over all at eaves	10′ 2¾″
Width between deck sills	5′ 6″



Z Bar Centre Sill on C.P.R. cars, with Farlow draft gear attached.

Truck	All steel, 6-wheeled

Following are the chief dimensions and details of the 11 D. 10 locomotives, nos. 2685 to 2697, which the C.P.R. is building at its Angus shops, Montreal:—

Weight on drivers	143,000 lbs.
Weight, total	192,000 lbs.
Cylinders	21 by 28 ins.
Driving wheels, diameter	63 ins.
Boiler, type	Radial stayed, wagon top.
Boiler pressure	200 lbs.
Heating surface, tubes	2,263 sq. ft.
Heating surface, superheater	408 sq. ft.
Heating surface, firebox	190 sq. ft.
Tubes, number and diameter	24 5-in., 240 2-in.
Tubes, length	14½ ft.
Firebox	100⅞ by 69¾ ins.
Grate area	49 sq. ft.
Capacity, water	5,000 gals.
Capacity, coal	10 tons.
Air brakes	Westinghouse ET. 6.
Brake shoes	C.P.R. standard.
Brake beams	Simplex diamond, inside hung.
Couplers	Tower.
Headlight	Pyle National Electric.
Journal bearings	C.P.R. standard.
Lubricators	Detroit 5 feed.
Springs	C.P.R. crucible steel.
Wheel centres	Cast steel.
Tractive effort	34,400 lbs.

The steam motor car which the G.T.R. is building at its Point St. Charles shops, Montreal, for service over the International Bridge at Buffalo, N.Y., as mentioned in our July issue, will have a pair of driving wheels and a two-wheeled radial truck in front, and a four-wheeled passenger car truck at back. It will be equipped with headlight at each end, and Westinghouse air brakes on driving wheels, and four-wheeled truck with train air connections front and back. and air signal apparatus, with 8 inch air pump. Following are the chief dimensions and details:—

Weight, total	104,000 lbs.
Cylinders	11 by 16 ins.
Boiler, type	Straight top.
Tubes, number and diameter	144, 1½ ins.
Tubes, length	66½ ins.
Firebox	36 3-16 by 38¼ by 50 ins.
Heating surface, total	360 sq. ft.
Grate area	9.6 sq. ft.
Couplers	M.C.B. automatic.
Heating	Gold system.
Length over end sills	60 ft.
Length over drawbar	68 ft. 4 ins.
Width of body at lower deck crown moulding	10 ft.
Width of upper deck	6 ft. 1½ ins.
Height from rail to top of roof	13 ft. 10 ins.
Height from rail to top, over all	14 ft. 10 ins.
Height from rail to centre of coupler	2 ft. 11 ins.
Wheel base, one truck	8 ft.
Wheel base, total	52 ft.
Smoking compartment	11 ft. 7 ins.
Passenger compartment	31 ft. 6 in.
Length inside, total	58 ft. 2 ins.
Width inside	8 ft. 9 ins.
Height from floor to underside deck rails	7¾ ft.
Engine room	16 ft.
Wheels	34 ins. steel tired
Journals	4½ by 8 ins.
Lighting	Oil
Seating capacity, body	42
Seating capacity, smoker	16

MAINLY ABOUT PEOPLE.

D'Arcy Tate, Solicitor Grand Trunk Pacific Ry., Winnipeg, has been admitted to the Manitoba bar.

Mrs. Camp, mother of W. J. Camp, Electrical Engineer C.P.R. Telegraphs, died in Montreal Oct. 15.

C. D. Jameson, formerly Master Mechanic G.T.R. Western Division, Battle Creek, Mich., died at Montreal, Oct. 10.

Jno. Moffatt, of the Canadian Northern Ontario Ry. survey staff, was married recently to Miss Eva Lancaster, of Havelock, Ont.

N. Curry, President of the Canadian Car and Foundry Co., has been elected a director of the Travellers Life Insurance Co. of Canada.

Mrs. A. McDonald, sister of Jas. Leitch, K.C., Chairman of the Ontario Railway and Municipal Board, died at Chicago, Ill., Oct. 8.

G. A. Sharp, Superintendent Prince Edward Island Ry., Charlottetown, P.E.I., was married at Sussex, N.B., Oct. 4, to Mrs. Henry Bosworth.

Miss M. L. McHattie, daughter of T. McHattie, Superintendent of Motive Power, Central Vermont Ry., was married Sept. 22, to B. S. Dixon.

H. Davidson, for 36 years in the service of the Quebec Central Ry., latterly as station agent at Sherbrooke, Que., died there Sept. 29, aged 58.

Sir Thos. G. Shaughnessy, President C.P.R., has contributed $5,000 to the Notre Dame Hospital, Montreal, fund, which now amounts to over $200,000.

C. E. E. Ussher was entertained to dinner by Winnipeg railway men before leaving for Montreal to assume the duties of Passenger Traffic Manager C.P.R.

F. Barlow Cumberland, Port Hope, Vice President Niagara Navigation Co., has been re-elected a member of Senate of Toronto University, to represent Trinity College.

W. R. Haldane, General Freight Agent C.P.R. Kootenay and Boundary District, Nelson, B.C., went to the Halcyon Hot Springs, B.C., recently for the benefit of his health.

C. H. Gilroy and A. Allen, civil engineers engaged on the G.T. Pacific Ry., were drowned in Woodworth Lake, near Prince Rupert, B.C., Oct. 6, owing to the upsetting of their canoe.

J. W. Pyke, Montreal, has been elected President of the Keewatin Flour Mills Co., in succession to the late Jas. Crathern. Mr. Pyke has retired from Lake of the Woods Milling Co.'s directorate.

M. J. Heney, a native of Pembroke, who has carried out a number of large contracts on the C.P.R., and who built part of the White Pass and Yukon Ry., died in San Francisco, Cal., Oct. 11.

Miss Doris Allan, youngest daughter of A. A. Allan, of H. and A. Allan, Ltd., and President of the Shipping Federation of Canada, was married to R. Cowans, of Winnipeg, at Montreal, recently.

R. Potts, formerly Master Car Builder M.C.R. at St. Thomas, Ont., died there, Oct. 10, aged 75. He held that position for about 25 years, and was superannuated in 1904.

Miss E. C. Jones, elder daughter of L. K. Jones, I.S.O., Secretary of the Department of Railways and Canals, Ottawa, was married there recently to W. G. Richardson, of the Bank of Montreal, Winnipeg.

Miss Elizabeth Irving, elder daughter of Capt. Jno. Irving, formerly manager of the Canadian Pacific Navigation Co., was married at Victoria, B.C., recently, to A. F. West, R.N. on H.M.S. Shearwater.

H. C. Jell, of the C.P.R. accounting department, was presented with a case of pipes by the C.P.R. official staff at Moose Jaw, Sask., on his leaving the service recently. He has gone to live in California.

C. S. L. Hertzberg, second son of A. L. Hertzberg, Division Engineer C.P.R., Toronto, was married there Oct. 12, to Miss J. T. Todd, granddaughter of J. S. Playfair, President Muskoka Lakes Navigation and Hotel Co.

N. Monsarrat, President of the Kanawha and Michigan Rd., who died suddenly in New York, Sept. 30, was a native of London, Ont., but had been engaged in railway work in the U.S. for nearly 50 years.

A. W. Smithers, Chairman of the Board, G.T.R., left Montreal recently for New York en route for England, after having completed his inspection of the G.T.R., the G.T. Pacific Ry. and the National Transcontinental Ry.

The International Accident Underwriters' Association has awarded the George E. McNeill medal to T. Reynolds, the C.P.R. conductor who distinguished himself in the accident at Spanish River early in the year.

Lucius Tuttle who recently retired from the Presidency of the Boston and Maine Rd., has been elected Chairman of the Board, a new office. He was, between 1887 and 1889, Passenger Traffic Manager, C.P.R., Montreal.

M. J. Butler, Second Vice President and General Manager Dominion Steel Corporation, and formerly Deputy Minister of Railways and Canals, delivered an address to the Canadian Club at St. John, N.B., recently, on transportation.

Lieut.-Col. H. H. McLean, K.C., M.P., President and General Manager New Brunswick Southern Ry., and connected with other transportation enterprises in New Brunswick, has been elected President of the New Brunswick Rifle Association.

R. W. Leonard, C.E., formerly engaged in railway construction work, was the principal guest at a dinner given recently by the graduates of the engineering department of Toronto University, in honor of his appointment to the University Board.

Thos. Skinner, director C.P.R. and member of the Hudson's Bay Co.'s board and H. Burbidge, Commissioner of Shops for the Hudson's Bay Co., arrived in Montreal, from England, Oct. 14 and proceeded to Winnipeg, on Hudson's Bay Co.'s business.

J. Hendry, President of the Vancouver, Westminster and Yukon Ry., returned to Vancouver, B.C., recently from a six months trip to Europe, for the annual meeting of the Canadian Manufacturers Association. of which he was President, recently held in Vancouver.

T. D. Kevin, Train Dispatcher Alberta Ry. and Irrigation Co., Lethbridge, Alta., returned to duty Sept. 30, after some weeks absence on account of ill health, but had a relapse on the following day, and is likely to be off duty again for some considerable period.

Col. Sir Henry M. Pellatt, of Toronto, who is associated with various electric railway and other transportation enterprises, was gazetted to the 3rd class of the Royal Victorian Order, in connection with the recent trip of the Queen's Own Rifles of Toronto to England.

B. W. Yates, who committed suicide in Cleveland, Ohio, recently, formerly resided in Brantford, Ont. He was a son of the late H. Yates, railway contractor, Brantford, and had himself been engaged in railway contracting, and was at one time financially interested in the Pere Marquette Rd.

A. B. McDougall, who died in Lan-

caster tp., Glengarry county, Ont., Sept. 28, aged 84, spent a number of years as foreman and contractor on railway construction in Canada and the U.S. He is said to have been the first man to use nitro-glycerine in tunnel work, on the Hoosac tunnel.

A. E. Killam, Inspector of Bridges and Buildings I.C.R., Moncton, N.B., was married there, Oct. 11, to Miss J. H. Elliott. The wedding trip in the United States was arranged to include the convention of the American Railway Bridge and Building Association at Denver, Col., of which he is Third Vice President.

W. E. Lovelock who was recently appointed city ticket agent, C.P.R., Saskatoon, Sask., was born in London, Eng., July 1, 1870, and was from 1884 to 1903, in the Passenger Department of the old Metropolitan Ry. there. He came to Canada in 1904, since when he has been, to 1906, in Passenger Department C.P.R. Calgary Alta.; 1906 to Aug. 1910, ticket agent, C.P.R., Calgary, Alta.

A. Gauthier, North Bay, Ont., engaged on the Temiskaming and North Bay Ry. engineering staff, lost his way while out on a survey near Redwater. He climbed a tree to get his bearings, but fell 40 ft. to the ground. When discovered by a search party he was found to have received serious injuries, including a fractured thigh. He was taken to the North Bay hospital, Oct. 9.

H. H. Adams, who has been appointed General Manager Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was born at Detroit, Mich., Aug. 13, 1876, and entered railway service, July, 1899, as draughtsman on the M.C.R. After serving in various capacities in the engineering department, he was appointed Assistant Chief Engineer, Mar., 1902; secretary to the General Superintendent, Nov., 1902; Assistant Superintendent Canadian Division, Jan., 1904, and General Superintendent T.H. & B.R., Oct., 1909.

Garrett Vliet, who has been appointed Master Mechanic Western Division, G.T.R., Battle Creek, Mich., was born at Milwaukee, Wis., in 1856, and entered railway service in 1877, since when he has been, to 1879, draughtsman St. Louis and San Francisco Rd., Kansas City, Mo., Feb. 1879 to 1889, draughtsman Wabash Rd.; 1889 to July 1898, General Foreman Wabash Rd.; Oct. 1898 to Apr. 1899, General Foreman G.T.R., Battle Creek, Mich.; Apr. 1899 to Oct. 1910, Assistant Master Mechanic District 1, G. T.R. at Portland, Me.

R. L. Fairbairn, who has been appointed District Passenger Agent Canadian Northern Ry., Saskatoon, Sask., was born at Stillwater, Minn., Nov. 24, 1880, his parentage being Canadian, and entered railway service July 1899, since when, he has been, to Mar. 1904, in office of Auditor of Passenger Receipts, G.N.R.; Mar. 1904, to May 1, 1906, in Passenger Traffic Manager"s office, G.N. R.; May 1, to Dec. 1, 1906, assistant rate clerk, G.N.R. Passenger Department; Dec. 1, 1906 to June 1, 1908, chief rate clerk G..N.R. Passenger Department; June 15, 1908 to Oct. 1910, chief clerk Passenger Department, Canadian Northern Ry., Winnipeg.

C. Murphy, who has been appointed General Superintendent of Transportation C.P.R. Eastern lines, Montreal, was born at Prescott, Ont., Nov. 20, 1865, and entered C.P.R. service in 1888, since when he has been, to 1885, operator; 1885 to 1890, chief operator and dispatcher; 1890 to 1899, Chief Dispatcher, Ottawa; 1899 to June, 1900, acting Superintendent, and June, 1900, to 1902, Superintendent at Chapleau, Ont.; 1902 to Nov., 1903, Superintendent, North Bay, Ont.; Nov., 1903, to Feb., 1908, Superintendent District 2, Ontario Division; Feb. to June, 1908, relieving General Superintendent at North Bay, and at Montreal; June, 1908, to Sept. 30, 1910, General Superintendent Eastern Division, Montreal.

G. A. Montgomery, whose appointment as Superintendent Michipicoten Division Algoma Central and Hudson Bay Ry., Michipicoten Harbor, Ont., was announced in our last issue, was born at Bradford, Ont., Feb. 11, 1871, and entered transportation service Sept. 1, 1886, since when he has been, to Sept., 1887, assistant to agent Northern Ry., Newmarket, Ont.; Sept., 1887, to Mar., 1889, agent G.T.R., Powassan, Ont.; Mar., 1889, to Mar., 1890, freight clerk C.P.R., North Bay, Ont.; Mar., 1890, to June, 1893, chief clerk C.P.R. freight office, Sudbury, Ont.; June to Aug. 31, 1893, relieving agent, C.P.R. North Bay Division; Aug. 31, 1893, to June, 1900, chief clerk to Superintendent District 1, Lake Superior Division, North Bay, Ont.; June, 1900, to Aug. 28, 1902, chief clerk to General Superintendent Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont.; Aug. 28, 1902, to Aug. 15, 1910, Superintendent Manitoulin and North Shore Ry., Sudbury, Ont.

Jas. Black, who was recently appointed Freight Claim Agent, Saskatchewan Division C.P.R., at Moose Jaw, was born near Seaforth, Ont., Apr. 19, 1858, and entered railway service June 1, 1880, since when he has been, to July, 1881, assistant in freight office, Great Western Ry., St. Thomas, Ont.; July to Oct., 1881, assistant in freight and ticket office, same road, St. Catharines, Ont.; Oct. to Dec., 1881, freight checker, C.P.R., Winnipeg; Dec., 1881, to May, 1882, clerk in freight office, C.P.R., Winnipeg; from May, 1882, to May, 1886, he was not in railway service; May to Nov., 1886, freight checker Northern Pacific Rd., Duluth, Minn.; Nov., 1886, to Mar. 1889, he was not in railway service; Apr. to Aug., 1889, clerk to freight shed foreman, C.P.R., Vancouver, B.C.; Aug., 1889, to Aug., 1890, claim clerk, C.P.R., Vancouver, B.C.; Aug., 1890, to Apr., 1899, chief clerk and cashier, C.P.R., New Westminster, B.C.; Dec., 1899, to Feb., 1900, acting agent C.P.R., Nelson, B.C.; Feb., to Apr., 1900, chief clerk and cashier, C.P.R., Nelson, B.C.; Apr., 1900, to Apr., 1901, clerk in Claims Office, C.P.R., Winnipeg; Apr., 1901, to Dec., 1904, claim clerk, C.P.R., Winnipeg; Jan. to Dec., 1905, chief claim clerk, C.P.R., Winnipeg; Jan. to Dec., 1906, chief clerk Claims Office, C.P.R., Winnipeg; Jan., 1907, to Aug., 1910, Assistant Freight Claim Agent C.P.R., Winnipeg.

Chas. Macdonald, who has been appointed a member of the Quebec Bridge Board of Engineers, in place of M. Fitzmaurice, C.M.G., London, Eng., resigned, was born at Gananoque, Ont., Jan. 27, 1837, educated at Queen's University, Kingston, Ont., and graduated from the Rensse'aer Polytechnic Institute, Troy, N.J., in 1857. His first engineering work was on G.T.R. construction in Michigan, where he remained until the completion of the line. From 1863 to 1868 he was engaged on the Philadelphia and Reading Rd., and in 1868 commenced private practice as consulting engineer in New York City, and undertook the construction of a number of bridges on the Delaware, Lackawanna and Western, Delaware and Hudson, Pennsylvania and other important railways. In 1884 he became a member of the Union Bridge Co., and later senior partner. In this connection he designed some of the largest bridges in the U.S. built by his company, amongst which are the Poughkeepsie bridge over the Hudson River, the Merchants bridge at St. Louis, over the Mississippi River; the Leavenworth bridge, the bridge over the Ohio River at Cairo, Ill; the Sixth St. bridge at Pittsburg, Pa., and the Hawkesburg bridge in New South Wales, Australia, the construction of which he superintended in 1887. He was elected Vice President of the American Bridge Co., an amalgamation of companies in 1900, and remained in that capacity until that company was absorbed by the U.S. Steel Corporation, when he retired from active work. He has been a member of the American Society of Civil Engineers since 1869, and was Vice President in 1873-74, and President in 1908. He is also a member of the Canadian Society of Civil Engineers, member of the Institute of Mining Engineers, Trustee of the Renssalaer Polytechnic Institute, Troy, N.J., and was formerly a Trustee of the Stevens Institute and of the East River Bridge, New York. In 1894 Queen's University, Kingston, conferred the degree of LL.D. on him.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Quebec Ry.—J. J. Sunderland, heretofore Assistant Superintendent Quebec and Lake St. John Ry., Quebec, has been appointed Assistant Superintendent C.N.Q.R., vice R. S. Richardson, resigned. Office, Joliette, Que.

Canadian Northern Ry.—J. Moore, heretofore car foreman at Rainy River, Ont., has been appointed freight repair foreman, Winnipeg, vice T. Musgrove, appointed coach yard foreman, at Winnipeg. The position of car foreman at Rainy River has been abolished.

O. C. Bishop, heretofore Inspector, has been appointed Assistant Superintendent Sleeping, Dining and Cafe Parlor Car Department. Office, Winnipeg.

M. L. Flett has been appointed Inspector Sleeping, Dining and Parlor Cafe Parlor Car Department, vice O. C. Bishop, promoted. Office, Winnipeg.

R. L. Fairbairn, heretofore chief clerk Passenger Department, Winnipeg, has been appointed District Passenger Agent. Office, Saskatoon, Sask.

J. S. McKay has been appointed Dining Car Agent. at Prince Albert, Sask.

Canadian Pacific Ry.—C. Murphy, heretofore General Superintendent Eastern Division, has been appointed General Superintendent of Transportation, Eastern Lines. Office, Montreal.

J. M. R. Fairbairn, heretofore Principal Assistant Engineer, has been appointed Engineer Maintenance of Way Eastern Lines. Office, Montreal.

M. G. Murphy, heretofore General Travelling Passenger Agent Western Lines, with headquarters at Winnipeg, has been appointed General Travelling Passenger Agent all lines, with headquarters at Montreal.

J. A. Canavan has been appointed agent at Windsor St. station, Montreal, vice R. Miller, who has been appointed passenger trainmaster in charge of all passenger train movements, and with special charge of all immigrants' trains and connections there.

T. Whalen, heretofore head ticket examiner Windsor St. station, Montreal, has been appointed station master in charge of constables, gatekeepers and light porters there.

W. J. Brown, heretofore locomotive foreman at Toronto, has been appointed locomotive foreman at Havelock, Ont., vice D. S. Taylor, transferred to London, Ont.

E. J. Murphy, heretofore assistant locomotive foreman at Toronto, has been appointed locomotive foreman there, vice W. J. Brown, transferred.

C. Wheeler, heretofore night locomotive foreman at London, Ont., has been appointed assistant locomotive foreman at Toronto, vice E. J. Murphy, promoted.

HEAD OFFICE:

MARK FISHER BUILDING - - - - - - MONTREAL

D. S. Taylor, heretofore locomotive foreman at Havelock, Ont., has been appointed night locomotive foreman at London, Ont., vice C. Wheeler, transferred.

P. Coakley, roadmaster Guelph and Goderich sub-division, district 2, Ontario Division, Guelph, is reported to have been transferred to the Windsor subdivision.

L. B. Copeland, heretofore Roadmaster at White River, Ont., has been appointed roadmaster Sudbury subdivision, vice D. H. Ford, transferred. Office, Parry Sound, Ont.

J. O'Meara has been appointed chief dispatcher at North Bay, Ont., vice A. W. Hodgson, who has been appointed track dispatcher there.

D. H. Ford, heretofore roadmaster at Parry Sound, Ont., has been appointed roadmaster at White River, Ont., vice L. B. Copeland, transferred to Parry Sound, Ont.

T. Doust has been appointed Resident Electrician at Fort William, Ont., vice M. O. Robinson, resigned.

S. C. Wilcox, heretofore transit man at Brandon, Man., has been appointed Resident Engineer District 1, Manitoba Division. Office, Kenora, Ont.

C. E. McPherson, heretofore General Passenger Agent Western Lines, has been appointed Assistant Passenger Traffic Manager Western Lines. Office, Winnipeg, Man.

The office of General Passenger Agent Western Lines, heretofore held by C. E. McPherson, has been abolished.

C. B. Foster, heretofore Assistant General Passenger Agent, Vancouver, B.C., has been appointed General Passenger Agent Western Lines, Revelstoke and east. Office, Winnipeg, Man.

The office of General Agent C.P.R. Atlantic Steamships, Winnipeg (J. S. Carter) has been removed to 450 Main St.

R. M. Binney, heretofore roadmaster La Riviere, Gretna and Emerson subdivisions, has been appointed roadmaster Winnipeg Beach and Teulon subdivisions, vice C. J. Panser, deceased. Office, Winnipeg.

E. Larson has been appointed roadmaster La Riviere, Gretna and Emerson sub-divisions, vice R. M. Binney, transferred. Office, Winnipeg.

G. Motta has been appointed locomotive foreman at Moose Jaw, Sask., vice R. Ivers, resigned on account of ill health.

J. D. Muir has been appointed acting locomotive foreman at Red Deer, Alta., vice J. G. Norquay, on leave of absence.

H. W. Brodie, heretofore Assistant General Passenger Agent, Winnipeg, has been appointed General Passenger Agent Western Lines, west of Revelstoke. Office, Vancouver, B.C.

Government Railways Managing Board.—Towards the end of Sept. it was reported from Quebec that A. J. Corriveau, K.C., of that city, had been appointed a member of the Government Railways Managing Board, with headquarters at Moncton, N.B. On Oct. 12 we were officially advised that no appointment had been made up to that date "as contemplated from the province of Quebec in connection with the Managing Board."

Grand Trunk Pacific Ry.—The headquarters of the Division Engineer, C. C. Van Arsdol, have been removed from Prince Rupert to Hazleton, B.C.

P. H. McFadden, Superintendent Prairie Division, Melville, Sask., has resigned.

The following agents have been appointed:—Rivers, Man., F. W. Buggy; Uno, Man., R. E. Patterson; Raymore, Sask., A. M. Demings; Bradwell, Sask., T. J. Shields; Edson, Alta., B. A. Latta.

Grand Trunk Ry.—Jas. Gibson, heretofore locomotive foreman at Belleville, Ont., has been appointed Assistant Master Mechanic at Deering, Portland, Me., vice G. Vliet, promoted.

J. W. Farrell, heretofore chief dispatcher Districts 1 and 2 Eastern Division, Island Pond, Vt., has been appointed trainmaster District 3, Richmond, Que., vice P. G. Flaherty, resigned.

E. S, Cooper, heretofore dispatcher, has been appointed chief dispatcher districts 1 and 2 Eastern Division, Island Pond, Vt., vice J. W. Farrell, promoted.

A. Beausoleil has been appointed acting roadmaster Montreal Terminals, vice G. Beckingham, appointed General Roadmaster Eastern Division.

J. W. Wright, heretofore chief clerk dining and parlor car service, office Toronto, has been appointed Assistant Superintendent of the same service. Office, Toronto.

G. Vliet, heretofore Assistant Master Mechanic at Deering, Portland, Me., has been appointed Master Mechanic Western Division, vice W. Hamilton, resigned. Office, Battle Creek, Mich.

The office of trainmaster district 25 (main line) and district 26, at Battle Creek, Mich., heretofore held by T. G. Akers, has been abolished. All reports heretofore made to him are now made to the Assistant Superintendent.

The following agents have been appointed:—Oshawa Jct., Ont., W. Cross; Glen Huron and Nottawa, Ont., G. McMann; Suspension Bridge, N.Y. (Pass.), E. O. Foster; Winona, Ont., J. H. Brooks; Kippen, Ont., R. H. Reynolds; Belgrave, Ont., S. F. Babier; Aubrey, Que., J. O. Prefontaine.

Ha Ha Bay Ry.—J. E. Robitaille, heretofore Assistant Auditor Bay of Quinte Ry., Deseronto, Ont., has been appointed Accountant and Auditor. Office, Chicoutimi, Que.

Intercolonial Railway.—We are officially advised that G. R. Joughins, Superintendent of Motive Power, has tendered his resignation to the Government Railways Managing Board, and that it will be considered at the next regular meeting of the Board during the second week of November.

Quebec and Lake St. John Ry.—J. H. Davidson, heretofore chief dispatcher, has been appointed Assistant Superintendent, vice J. J. Sunderland, transferred to C.N.Q.R. service. Office, Quebec, Que.

J. E. Hamel has been appointed chief dispatcher at Quebec, vice J. H. Davidson, promoted.

Toronto, Hamilton and Buffalo Ry.—H. H. Adams, heretofore General Superintendent, has been appointed General Manager. Office, Hamilton, Ont.

C.P.R. Directors' Inspection.—Sir Thos. G. Shaughnessy, President, accompanied by R. B. Angus and C. R. Hosmer, directors, left Montreal Oct. 5, by special train, for the purpose of making the annual inspection of the line. Reaching Toronto Oct. 7, the party proceeded west over the Toronto-Sudbury line, arrived in Port Arthur Oct. 9, Winnipeg Oct. 11, Vancouver Oct. 16, and Victoria on the following day. On Vancouver Island the party went over the recently completed extension of the Esquimalt and Nanaimo Ry. from Wellington to Cameron Lake, and started on the way east Oct. 20.

A Montreal dispatch says that under the reorganization plan, raising the capital to $5,000,000, the Pay-as-you-enter Car Co. is offering 7% preferred shares at par, redeemable at 110 after June, 1912. Each share carries the right to acquire common stock at $25 a share. According to the brokers selling the stock, the company earned 8% on the common last year.

Alberta and Great Waterways Ry.

The statement of defence of W. R. Clarke, President, in the action brought by A. Hawes, Toronto, claiming one-sixth interest in the Athabasca Ry., the A. and G.W Ry., and the Canada West Construction Co., or in the alternative $250,000 damages, was filed Oct. 17. President Clarke denies all the allegations made by the plaintiff. The report of the Royal Commission which investigated the circumstances attending the formation of the company and the granting of the charter, is in the hands of the Alberta Government, but will not be made public until the meeting of the Legislature, Nov. 10.

The Quebec Central Ry. Co.'s annual meeting was held in London, Eng., Oct. 20. A cable says:—Reports submitted showed gross earnings for year ending June 30, $1,105,867; working expenses, $759,556; net operating revenue, $346,-311; interest earned on investments, $5,-675. The net income was $351,986, compared with $305,940 the previous year. Added to the net income for the year the amount brought forward from June 30, 1909, was $46,232, making a total net revenue of $398,218. The full interest on the 4% debenture stock, 3% debenture stock and 7% income bonds was paid, and a dividend of 10s. per share on the share capital, the par value of which is £25, was declared. During the fiscal year £75,000 of 4% debenture stock was issued for capital purposes.

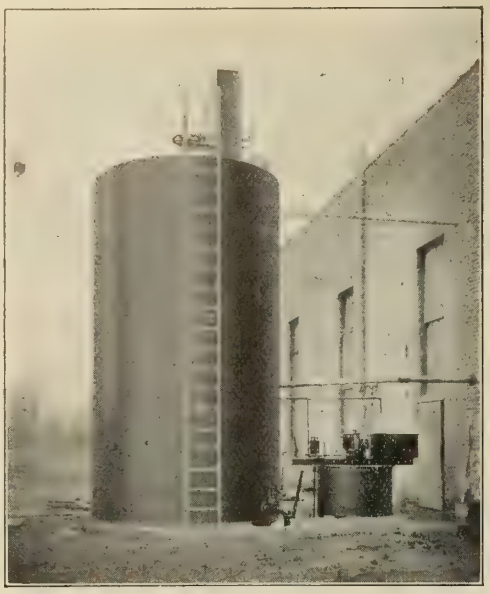
C.P.R. Office Building in Toronto.—It was reported in Toronto, Oct. 20, that arrangements had been completed by which the C.P.R. had secured all the land necessary at the corner of King and Yonge Streets, Toronto, for the erection of a large office building. The site includes that of the building at present occupied by the company as a ticket office, and office for the District Passenger Agent, and the next two properties fronting on King St. In the new building there will be centralized, according to the report, the business of the traffic departments of both rail and water lines, the telegraph department, and the Dominion Express Co.

D. Allan Earle, a St. John, N.B., solicitor, who died there Oct. 24, aged 60, was a brother of W. Z. Earle, formerly Manager of the St. John, N.B., railway, and now resident engineer of the Dominion Public Works Department at Winnipeg.

A Victoria, B.C., dispatch of Oct. 21 said Sir Thos. Shaughnessy had taken up with Premier McBride the question of the construction of a scenic line to be built by the C.P.R. from Banff, Alta., to Windermere, through the upper Columbia valley.

Kingston, Ont., Standard:—"Now that J. P. Hanley local agent of the G.T.R. of this city, and President of the Canadian Ticket Agents' Association, has been made a full-fledged Indian Chief, may we meekly ask if this gives him the right to scalp tickets."

The G.T.R. has given notice of appliion to Parliament for the repeal of the section of the original charter which provides that the fare for each third class passenger on the line between Montreal and Toronto shall not exceed one penny for each mile travelled, and that at least one train having third class carriages shall run each way every day throughout the length of the said line. For some time the G.T.R. has had a third class car attached to one train running each way each day, but the third class accommodation has not been much sought after by the general public.



The Water Softener that has Proved Every Claim

Every feature of the Booth Water Softener has been tested and proven—Not a single part is radical or experimental. It embodies the most successful principles of water softener design.

Simplicity is the very keynote of the Booth—All the usual complications have been eliminated—There are no freakish ideas to confuse the operator.

In the Booth Water Softener the value is all there before your eyes in good, sound, softener sense, design and material.

All parts are interchangeable—That means—that should any part become broken, any similar part in our entire output could immediately take its place—Sometimes that means a great deal to the owner.

Our claims of greater value—greater efficiency—and greater economy—are based upon actual results obtained. The proving of these claims alone have sold more Booth Water Softeners than all other efforts we have put forth.

The Booth is almost trouble proof—Put in the chemicals once in twelve hours—the water entering the softener for treatment does the rest.

The simplicity—the price—the freedom from trouble appeal to all "men who know."

Booth Water Softeners are being built to justify your confidence—you owe it to yourself to examine the Booth—as soon as you can conveniently do so—In the meantime—write for booklet, "Hard Water Made Soft"—It will give you further evidence in support of our claims—We invite you to send for it to-day.

Railway Signalling

By C. L. Hackett.

Railway signaling naturally divides itself into three general heads. Namely, interlocking, block signals and miscellaneous signals.

The primary reason for the use of signals on a railway is to convey information to the engine driver as to what action he is to take, and when to act. The difference between driving a locomotive and driving a horse and carriage is a question of momentum. In the case of the locomotive, a weight of several hundred or thousand tons is moving at high velocity, in the case of the carriage, a weight of a few hundred pounds is moving at low velocity, the control of the one is only approximate except through the lapse of a considerable interval of time, while the other is practically under instant control. Signaling has developed two types of signals, which are known as, a home signal and a distant signal. A home signal is a signal located along side of the track marking a definite point beyond which the engine driver must not proceed, unless the signal indicates that he can do so. As noted above, it is physically impossible to stop a train moving at any considerable speed instantly, therefore if the train is to be stopped before it passes the home signal, some preliminary information must be conveyed to the driver, as to what indication will be presented to him by the home signal. The means employed is the distant signal, which is set in advance of the home, a distance depending on the braking distance of the highest speed trains, and is simply a repeater of the home. When the driver finds a distant signal indicating that the home signal is at the stop position, he can apply brakes and bring his train to a stop before he reaches the home signal. If the distant signal is indicating clear the home signal must also be indicating clear.

In modern signaling the semaphore has come into general favor, as giving the best results with unfavorable weather conditions, and changing back grounds. The indications are given by the arm of the semaphore, the stop indication by the arm in the horizontal position, and the proceed indication by the arm inclined. Until recently the distant signal arm was distinguished from the home by having a V-shaped notch cut out of the end. The indications of the distant signal were the same as the home, that is the horizontal position of the distant arm indicated caution (that the home signal arm was at stop), the inclined position of the distant arm indicated that the home signal arm indicated clear. There is a confusion here quite apparent, as with the home arm horizontal an indication is given that the engineer must not proceed beyond the signal, whereas the horizontal position of the distant blade indicated caution, "proceed but be prepared to stop at the home signal," and the only distinguishing mark for the distant arm is the V-shaped notch, which is not distinguishable at any distance nor in all weathers, consequently there are serious objections to this horizontal indication having two possible meanings. The latest practice is to have each arm capable of giving three unmistakable indications, i.e., horizontal, meaning stop, inclined at an angle of 45 degrees, caution, and vertical, meaning proceed. This is more consistent, and it is impossible to mistake the indication.

The fundamental principle underlying the construction of signals, is that a failure in any part should cause the arm of the semaphore to assume the horizontal position, indicating stop. The common practice in America has been to give the indication by moving the arm from the horizontal to an inclined position below the point of support. This necessitates the use of a heavy counterweight to bring the arm back to the horizontal should any part of the signal break; naturally the accumulation of ice and snow on the arm itself would tend to offset this counterweight, and there are cases where such accumulation has been sufficient to hold the signal clear, when it should have returned to the horizontal. The German practice has always been to move the arm above the point of support, thus doing away with the heavy counter weight, and with this still further advantage that any accumulation of snow or ice on the blade tends to bring it back to the horizontal. This practice has found favor among the American signal engineers, and also is being used on the western lines of the C.P.R. and C.N.R. This is unquestionably a move in the right direction, and has everything to commend it.

While the day indications of a signal are given by position, the night indications are given by colors. Red has a position, but for the other indications, practice has differed on different roads. The different colors are obtained by means of shutters of colored glass which are moved in front of an oil lamp attached to the signal mast. These colored glasses are fastened into the same casting to which the arm giving the day indications is attached, each indication of the arm has then a corresponding color indication. It is essential if the principle of signal construction above referred to, is to be carried out, that the day indications and the night indications should be given by the same mechanism; that is, it should not be possible to give an indication for "proceed" with the arm, without at the same time, and by the same means giving this proceed indication with the proper color. There are a good many signals in use in Canada to-day which do not conform to this requirement. The night indication in these, is given by rotating the lamp on its vertical axis, while by means of a pinion gear the arm is made to move. It is under these circumstances easy to conceive of a condition where the night indication would be one thing and the day indication the opposite. This becomes particularly dangerous when we realize that at night, when the engineer gets close up to the signal, the head light of his engine would illuminate the arm, and there are very few engineers who finding the arm indicating clear, would not accept this as sufficient authority to proceed, even though the light on the signal as he approached showed red.

With regard to the question of the proper colors to use for the night indications, as stated above, practice has differed in this respect. Some roads use white for the clear indication (white in this case meaning that the lamp flame is not covered by any colored glass), and green for the caution indication of the distant signal. On the other hand, some roads use green for the clear or proceed indication, and orange for the caution. If we bear in mind again the principle of construction, it is not difficult to arrive at the conclusion that all night indications should be given by some distinctive color, and in no case should the flame itself be used, except as a stop indication. For if the white indication is used, a broken colored glass would give this indication. Up to the present the only colors with sufficient range to be used as night indications are the red, green and orange.

Another essential point to be remembered in connection with signalling is that it must be made impossible for any of the indications except the stop indication, to be displayed except by an authorized means. That is if the signal is operated by means of levers, then by means of the lever only can any indication be made. This necessitates the use of a rigid connection between lever and signal, or if wire is used there must be a back and front wire, if only a single wire is used to pull the signal clear, any unauthorized person could clear the signal which is manifestly an unsafe condition.

The Standard Code definition of interlocking is as follows:—"An arrangement of switch, lock and signal appliances so interconnected that their movements must succeed each other in a predetermined order." Interlocking in Canada up to the present has been confined to a great extent to the protection of the crossing of two railways at grade. This is by no means its only possible application, and indeed is probably the least important of its uses. It finds its greatest economy in terminals, junctions, and at points where a great many switches are grouped together, at such points all the switches can be handled from a central point by one or two towermen, with absolute safety to the trains, and with the greatest amount of expedition.

Under the law in Canada, all trains approaching a grade crossing with another railway, are required to come to a stop before proceeding over the crossing, unless the crossing is protected by interlocking. Aside from the safety afforded by interlocking the crossing, it can be shown that there is an actual saving in operating expense when the trains reach a certain number. Henderson, in his "Cost of Locomotive Operation," estimates that it costs in the neighborhood of 65c. to stop a train and again accelerate it to its original speed.

(Continued in next issue.)

Temiskaming & Northern Ontario Ry.—It is said that some arrangements are being discussed between the Ontario and the Manitoba Governments, by which, with the approval of the Dominion Government, there will be a remarking of the boundaries of the two provinces on Hudson Bay, and the district of Keewatin, which was recently divided up. The idea is that Ontario's territory fronting on Hudson Bay, shall be extended to Port Nelson, so as to allow of the extension of the T. and N.O.R. to a deep water port, and that in exchange for a waterfront useless for the development of a port, Manitoba will receive a portion of the inland territory originally granted to Ontario. It is said the question will be brought up at the next sessions of the Ontario and Manitoba Legislatures.

The G. T. R. is appealing against an increase of the assessment on its waterfront properties between John St. and Spadina Ave. Toronto, from $3,000 to $15,000 an acre.

J. K. Griffin, of Toronto, who died at Seattle, Wash., recently, was father of F. T. Griffin, C.P.R. Land Commissioner, Winnipeg, and of A. D. Griffin, Consulting Engineer, Galt, Ont. The late Mr. Griffin was the inventor of a form of railway ticket for the old Great Western Ry. which is said to have been afterwards copied by every railway in Canada and the United States, and is still in general use.

H.. P. Bell, C.E., who died at Victoria, B.C., Oct. 19, aged 69, was one of the assistant engineers on the Intercolonial Ry. construction in 1870 and 1871. He went to British Columbia and afterwards to Chili, where he spent some years in contracting, returning to B.C. he practiced there for some years, and some two or three years ago received an appointment on the Trent canal construction at Campbellford, but which he had to relinquish on account of failing health.

Is Western Canada Your Market?

Stovel's Commercial Routing and Shipper's Map of Western Canada is Indispensable to Your Map Equipment

We make a specialty of Railway Engraving and Printing and are prepared to submit sketches for railway map and designs for folder covers, etc., on request.

It will save you time and worry and give you a firmer grip on the selling details of your business by placing your whole selling organization literally "under your thumb."

Stovel Maps are standard from Coast to Coast. Our complete Price List of modern Canadian maps and Folder descriptive of the Routing Maps awaits your request. Will you write to-day? Address Department R.M.

Among the Express Companies.

The Canadian Northern Ex. Co. has closed its offices at Grays, Milton and Lena, Man.

H. McMorran, heretofore acting agent Canadian Ex. Co. at Port Hope, Ont., has been appointed agent there.

The Canadian Northern Ex. Co. has opened offices at Kenville, Man., and Fairlight and Langbank, Sask.

G. H. Waterhouse, heretofore route agent at Montreal, and latterly acting agent at Kingston, Ont., has been appointed agent Canadian Ex. Co. at Kingston, Ont.

Owing to the numerous claims made in respect of shipments of raw furs, express agents have been instructed to refuse all such shipments, unless the material is boxed.

The Canadian Ex. Co., operating over the G.T.P.R., has opened an office at 115 Second Ave., Saskatoon, Sask., and has appointed A. F. Lenon, heretofore general manager Saskatoon Forwarding and Storage Co., as agent.

S. B. Buller, city agent Canadian Northern Ex. Co., Toronto, died there Oct. 9, aged 29. Prior to his appointment to the Canadian Northern Ex. Co. he was in the Canadian Ex. Co.'s Toronto office.

The British Columbia Ex. Co. is increasing its facilities for handling business during the coming year, and is reported to have arranged for the purchase of three or four large automobiles, and for the starting of additional horse stages.

J. H. Parr, heretofore route agent at St. John, N.B., has been appointed route agent Canadian Ex. Co., in charge of routes 1, 2 (east of Point St. Charles), 7, 8, 11, 52, 53, 54, 89 and 110, with headquarters at Montreal, vice H. M. Gain, resigned.

W. G. Balfour has been appointed route agent Canadian Ex. Co., in charge of routes 3 (River Beaudette to Kingston), 4 (Kingston to Port Union, inclusive), 21, 25, 77, 78, 79, 80, 81, 82, 83 and 109, with headquarters at Montreal, vice G. H. Waterhouse, transferred.

Express companies are calling the special attention of their agents to shipments for the U.S., and instructing that, for such, they must secure guarantees, in duplicate, covering duties and all other charges, one copy of which must accompany the shipment, the other being retained.

Instructions have been issued by express companies, relative to the handling of the newspaper business, stating that as the companies derive revenue from this business, it is incumbent on their messengers to give the same attention to newspaper traffic as to other merchandise, as strong complaints have been made that parcels are frequently over-carried and otherwise carelessly handled.

The Customs authorities have announced that horses entering Canada from the U.S. for 24 hrs. or less, may be admitted without inspection, or without being dealt with by the veterinary inspector in any way, and Canadian horses returning from the U.S., after being there for over 24 hrs., are subject to veterinary inspection without fee, but when returning after having been there for 24 hrs. or less, are not subject to veterinary inspection.

By the terms of a bill of lading, or agreement with a consignor, a common carrier, or express company, is absolved from liability for damage due to "the act of God," but a recent U.S. decision holds that a carrier will not be excused from liability for consequences of unusual delay in transportation, caused by "the act of God," where the disability is known to the carrier at the time the property is received for shipment, and he fails to advise the consignor of the existing conditions, such as floods.

Grain Elevator Notes.

The Anchor Elevator Co. has built an elevator at Invermay, Sask.

The Tavistock Milling Co. has erected an elevator at Canfield, Ont.

The Alberta Grain Co.'s elevator at Fort Saskatchewan, Alta., is reported to have been sold to the Prairie Elevator Co.

The Vancouver Grain and Milling Co. is reported to have recovered $9,000 as damages from the Alberta Pacific Elevator and Grain Co., for failure to deliver grain contracted for.

The construction of the Goderich Elevator and Transit Co.'s elevator, and the Western Canada Flour Mills Co.'s elevator at Goderich, Ont., is proceeding rapidly, the walls of the latter structure being near completion.

Alberta-British Columbia Grain and Supply Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $20,000, to carry on a general grain dealing business, and in connection therewith to build, own and operate grain elevators, steam and other vessels, and other transportation facilities.

The Calgary Grain and Supply Co., Ltd., incorporated under the North West Territories Companies Ordinance, with office at Calgary, Alta., and power, among other things, to own and operate grain elevators, etc., has been licensed to carry on its business in British Columbia, with C. B. McAllister, Vancouver, as its attorney.

The C.P.R. elevator at Victoria Harbor, Ont., which was opened for business Oct. 11, has a capacity for 2,000,000 bush., which, according to a statement attributed to J. Oborne, General Superintendent Ontario Division, can be increased to 12,000,000 bush., without adding to the power equipment at present installed.

A report from Fort William, Ont., Oct. 14, states that the city has decided to tax the G.T.P. Elevator Co.'s elevator there. Under an agreement, the G.T.P.R. terminal property in the city, including its elevator, is exempt from taxation for 20 years. The city claims that the elevator is the property of the railway company in name only, and is owned and operated by a distinct company.

The Alberta-British Columbia Grain and Supply Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $20,000, to take over the business carried on by D. A. Allan and A. G. D. Kittson, under the name of the Alberta-British Columbia Grain and Supply Co., to deal in grain, and in connection therewith to own and operate grain elevators, steam and other vessels, and other transportation facilities.

J. Richardson and Sons, Ltd., Kingston, Ont., has leased the grain elevator on the Louise Embankment, Que., owned by the Quebec Harbor Commission, and formerly operated by the C.P.R. It is stated that the lease is for 10 years, and that the lessees will spend about $15,000 on repairs and new machinery. There is capacity for about 1,000,000 bush., and it is expected to have it in operation early in November.

The Manitoba Elevator Commission has taken over 170 elevators, situated in different districts of the province, since it commenced operations. A member of the commission is reported to have stated that while the elevator system under Government control has scarcely had a chance to show what its benefits will be, the fact that they have been used so extensively by the farmers, goes to show that they are satisfied, and very few complaints have been received as to their operation.

The Winnipeg Grain Exchange has declared the G.T.P. elevator at Fort William, Ont., a regular house, prepared to receive vessels at any time. Press reports stated that early in Oct., a vessel was unable to reach the elevator without taking heavy risk, owing to the dredging of the Mission River not having been completed. The Great Lakes Dredging Co., the contractor, is reported to have stated that the 10 days extension granted for the completion of the work was insufficient.

The report of the council of the Winnipeg Grain Exchange, presented at the recent annual meeting, said that the investigation by the Commission appointed by the Department of Trade and Commerce, of the terminal elevator system, had injured confidence in the method of handling grain through them. It was also announced that the Exchange had introduced the system of terminal warehouse receipts registration, and the Lake Shippers' Clearance Association had been appointed official registrar of warehouse receipts for the Exchange, the registry offices being at Fort William and Port Arthur. All terminal elevators at Fort William and Port Arthur are eligible to receive contract grain, under the rules which govern the members of the Exchange, each company operating them having agreed to abide by the regulations asked for. On the question of storage on grain at the terminals, it was stated that there had been some trouble between grain men and the C.P.R. for some time, and a committee was appointed to go further into the matter with the company.

THE Grand Trunk Railway Company of Canada will apply to the Parliament of Canada, at the next session thereof, for an Act conferring upon the said Company all necessary powers, to be exercised subject to the approval of the proprietors, in respect of the following matters:—

(a) Semi-annual payment of dividends.

(b) Providing a reserve fund for extensions, renewals, maintenance, repairs, etc.

(c) The form of transfer of the various classes of stock.

(d) To acquire, hold, guarantee, pledge and sell, or otherwise dispose of stocks, bonds or other securities of the Montreal and Southern Counties Railway Company.

(e) To guarantee interest at four per cent. upon an issue of first mortgage bonds of the Grand Trunk Western Railway Company, payable fifty years from date thereof.

(f) To issue such additional Grand Trunk consolidated debenture stock as may be necessary in the exercise of the powers conferred upon the Company by the Act now applied for and by the Grand Trunk Act, 1910.

(g) Repealing certain inconsistent provisions of former Acts.

(h) Repealing so much of section 3 of 16 Victoria, chapter 37, as provides that the fare or charge for each third class passenger by any train on that portion of the company's railway between Montreal and Toronto shall not exceed one penny for each mile travelled and that at least one train having in it third class carriages shall run every day throughout the length of the said line.

W. H. BIGGAR,
Solicitor for the applicants.

Dated at Montreal, the 6th day of October, A.D. 1910.

CANADIAN PACIFIC RAILWAY COMPANY.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada at its next session for an Act authorizing it to construct the following lines of railway:—

1. (a) From a point at or near Conquest on the Company's Moose Jaw Branch to a point at or near Asquith or Dunfermline, Saskatchewan, on the Company's Pheasant Hills Branch, or between those two places.
   (b) From a point at or near Wilkie on the Company's Pheasant Hills Branch in a southerly direction to a junction with the Company's Moose Jaw Branch in Twps. 31, 32 or 33, Ranges 18 or 19, W. 3 M., Saskatchewan.
   (c) From a point at or near Wilkie in a southwesterly and southerly direction to a junction with the Company's Moose Jaw Branch in Twp. 32, 33 or 34, Ranges 22 or 23, W. 3 M., Saskatchewan
   (d) From a point at or near Boissevain on the Manitoba and South Western Col. Ry. to a point at or near Lauder, Manitoba.
   (e) From a point on the Crow's Nest Branch in Sec. 12, Tp. 9, Range 26, W. 4 M., thence westerly along the north side of the Old Man River, to a point in Sec. 36, Tp. 7, Range 4, W. 4 M., a distance of about 55 miles.

2. Extending the time within which it may construct the following lines of railway:—
   (a) From Lanigan to Prince Albert.
   (b) From Wilkie northerly and westerly towards the Battle River, thence southerly to a junction with the Lacombe Branch of the Calgary and Edmonton Ry. Co.
   (c) From Outlook to a junction with the Lacombe Branch of the Calgary & Edmonton Railway Company.
   (d) From Estevan northwesterly, with power to terminate at or near Forward on the Company's Weyburn Branch.
   (e) From a point in Twp. 6, 7, 8 or 9, Range 30, W. 2 M., westerly, with power to terminate at Lethbridge.
   (f) From a point north of Teulon to a point between Marsh Point and the north boundary of Twp. 25, Manitoba.

3. Authorizing it to make the terminus of its Lauder Branch at or near Weyburn.

4. Increasing its bonding powers in respect of its Toronto-Sudbury Branch; and for other purposes.

Dated at Montreal, the 10th October, 1910.

W. R. BAKER,
Secretary.

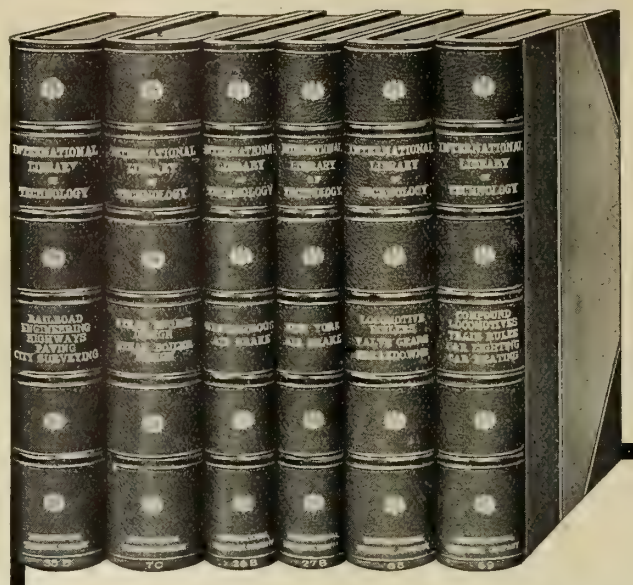
Andrew T. Thompson,
Ottawa, Agent.

NOTICE.—The Dominion Atlantic Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to enter into an agreement with the Canadian Pacific Railway Company for any of the purposes specified under section 361 of The Railway Act.

Dated at London, on the 10th day of October, A.D. 1910.

O. F. WALFORD, Secretary,
Threadneedle House,
Bishopsgate Street Within, London.

Andrew T. Thompson,
Ottawa, Agent.



YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. ELECTRIC RAILWAYS.

Canadian Street Railway Association.

PRESIDENT, D. McDonald, Manager Montreal St. Ry.; VICE PRESIDENT, J. Anderson, Manager Sandwich, Windsor and Amherstburg Ry.; SECRETARY-TREASURER, Acton Burrows, Managing Director Railway and Marine World.

ASSOCIATION'S OFFICE, 157 Bay St., Toronto.

EXECUTIVE COMMITTEE.—C. E. A. Carr, General Manager Quebec Ry. Light, Heat and Power Co.; P. Dubee, Secretary Montreal St. Ry.; H. M. Hopper, Secretary-Treasurer, St. John Ry.; J. E. Hutcheson, Superintendent and Purchasing Agent Ottawa Electric Ry.; C. B. King, Manager London St. Ry.; W. R. McRae, Superintendent Motor and Truck Department Toronto Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

Toronto Eastern Railway.

Application was made to the Minister of Railways Oct. 4 for the approval of the route plan of this proposed electric railway from Cherrywood station, on the Canadian Northern Ry.'s Toronto-Ottawa line in Pickering township, about 20 miles east of Toronto, to Cobourg, with branches to Lindsay and Port Perry, Ont. C.P.R. representatives objected on the ground that this line would interfere with the proposed Campbellford, Lake Ontario and Western Ry., the route plans of which were approved by the Minister in Nov., 1906. The C.L.O. & W.R. Co.'s charter, which is controlled by the C.P.R., provides for the building of a line from the C.P.R. between Blairton and Ivanhoe, Ont., southwesterly through the counties of Peterboro, Hastings and Northumberland to Cobourg, thence northwesterly through the counties of Northumberland, Durham, Ontario and York to the C.P.R. between Locust Hill and Leaside Jct., passing through or near Campbellford, Warkworth, Cobourg, Port Hope, Newcastle, Bowmanville, Oshawa and Whitby. The hearing was adjourned until Oct. 12 for the purpose of giving the Toronto and Eastern Ry. and the C.P.R the opportunity of coming to an agreement. In the meantime the Board of Railway Commissioners approved of the Campbellford, Lake Ontario and Western Ry.'s location. At the adjourned hearing on Oct. 12 the Minister of Railways approved the Toronto Eastern Ry.'s route plan and said that unless construction of the Campbellford, Lake Ontario & Western Ry. was started within 18 months, he would consult with the Board of Railway Commissioners with a view of having their approval of its location plans, rescinded. The Toronto Eastern Ry. has not yet applied to the Board of Railway Commissioners for the approval of its location plans, but will probably do so at an early date.

Surveys for the T.E.R. have been made from Cherrywood to east of Bowmanville, E. W. Oliver, of Mackenzie, Mann & Co.'s engineering staff, being in charge. It is expected that construction will be started next spring. From Cherrywood the line runs southwesterly, approaching the Kingston Road at Pickering, and from there east it practically parallels the Kingston Road on the north side, touching it at several points. The T.E.R. will be a high grade electric line on private right of way, built for fast traffic. It is said that the company's cars will run between Toronto and Cherrywood over the Canadian Northern Ontario Ry., thus obviating the necessity of obtaining a separate entrance to Toronto. It is reported that a connection will also be made with the Toronto & York Radial Ry.'s Scarboro division, but this is hardly probable.

The Toronto Eastern Ry. Co. was incorporated by the Dominion Parliament last session, to build a railway from Toronto to Cobourg, passing through or near Whitby, Oshawa and Bowmanville, with branches as follows:—From Cobourg or Port Hope to Peterboro; from Scarboro tp. to Markham, Stouffville or Uxbridge; from Oshawa via Lake Scugog to Lindsay, and from Oshawa southerly to Lake Ontario. The provisional directors named in the charter are W. F. Cowan, R. McLaughlin, T. E. Kaiser, F. W. Robson, Oshawa; J. H. Downey, Whitby; R. R. Mowbray, Kinsale, Ont. The capital stock is fixed at $1,000,000, and the head office in Oshawa. The charter is now owned by the Mackenzie, Mann & Co. interests. J. E. Rothery has been appointed Manager, and G. H. Bertram is Secretary, with office at 12 Wellington St. East, Toronto.

Projects, Construction, Betterments, Etc.

Barkerville to Fort George, B.C.—A recent press report stated that a survey party had been dispatched by Gore and Gregory, Victoria, B.C., to make a survey for an electric railway from Barkerville, along the valley of the Willow River, to Fort George, B.C., about 120 miles. (See Cariboo, Barkerville and Willow River Ry., May, pg. 349.)

British Columbia Electric Ry.—The line along the Fraser Valley from New Westminster to Chilliwack, B.C., 63.8 miles, was opened for traffic Oct. 3.

The question of building a second track on the Eburne line is under consideration by the directors in London, Eng., and the proposition to build a line from New Westminster to Ladner, is under consideration by the city council. Plans were submitted to the Point Grey municipal council Sept. 29, for the proposed electric railway. (Oct., pg. 873.)

Calgary Street Ry.—The Alberta Legislature last session confirmed certain bylaws passed by the Calgary city council. These included one providing for the raising of $226,000 by means of 30 year 4½% debentures for the purposes of electric railway construction, and a second providing for the issue of $40,000 of 30 year 4½% debentures for extensions of the city's electric railway. (June, pg. 495.)

Chatham, Wallaceburg and Lake Erie Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the branch line to Pain Court, Ont. (July, pg. 584.)

Edmonton Electric Ry.—Among the bylaws of the city of Edmonton confirmed by the Alberta Legislature last session was one providing for the issue of $92,000 of debentures, the estimated share payable by the municipal street railway department of the city, of a street railway deck and attachments in connection with the high level bridge to be erected by the Calgary and Edmonton Ry. (C.P.R.), over the North Saskatchewan River. (Jan., pg. 57.)

Edmonton Interurban Ry.—Application will be made to the Alberta Legislature to incorporate a company with this title for the purpose of building the following electric railways:—From Edmonton to St. Albert or Morinville, or both; from Edmonton or from a point on the last mentioned line to Athabasca Landing; from Edmonton or Strathcona to Fort Saskatchewan; from Edmonton or Strathcona, or a point on the last mentioned line to Beaver Lake; from Edmonton or Strathcona, or a point on the last mentioned line to Camrose; from Edmonton or Strathcona, or a point on the last mentioned line to Wetaskiwin; from Edmonton or Strathcona, or a point on the last mentioned line to Pigeon Lake; from Edmonton to Mewassin; from Edmonton to such last mentioned lines to Lac Ste. Anne; from Edmonton or a point on the first or last mentioned lines to Fort Assiniboine, on the Athabasca River; and from any one of the said points to any other of the said points. Power is asked to carry any of the lines along such road allowances or public highway as may be convenient. Short, Woods, Biggar and Collisson, Edmonton, Alta., are solicitors for applicants.

Halifax Electric Tramway.—The new double track from Spring Garden to Cobourg Road, Halifax, N.S., has been completed, and the regular car service has been operated over it since Sept. 20. (July, pg. 584.)

Hamilton Street Ry.—An arrangement is being considered with a view of a line being laid on Pictou or Ferrie St., Hamilton, Ont. The route favored by the city council is James and Ferrie Streets to Emerald, to Mars, and from there to Wentworth and Gilkinson streets. (June, pg. 495.)

Kincardine to Orillia, Ont.—The Mayor of Owen Sound has issued a circular letter to municipalities between Kincardine and Orillia, stating that negotiations were in progress with a Cleveland, Ohio, syndicate for building a line from Owen Sound to Meaford, and suggesting that Kincardine, Port Elgin, Southampton, Owen Sound, Meaford, Thornbury, Collingwood and Orillia should join with the intervening rural municipalities in a guarantee of bonds for a line from Kincardine or Goderich to the C.P.R. Georgian Bay and Seaboard Ry. The title given to the line proposed is the Air Line Electric Ry. to Montreal. The total distance to Montreal from Kincardine is 417 miles, and the distance from Kincardine to Orillia, where a junction could be made with the Georgian Bay and Seaboard Ry., is 137 miles. The Kincardine people favor the line, but say they cannot promise municipal aid further than the amount already guaranteed the Ontario West Shore Ry., for the Goderich-Kincardine line.

London and North Western Ry.—Those interested in the building of this projected railway from London to Sarnia, and other points in western Ontario, have been showing some activity of late, but we are advised that nothing definite has been decided upon, although arrangements are being made with a view to construction.

The company was incorporated in 1909 by the Dominion Parliament, with D. A. Stewart, T. E. Pound, J. Hall, London; D. Milne, Sarnia; T. G. Turnbull, Komoka; A. J. Stoner, Fernhill; J. C. Knapton, Parkhill, as provisional directors. The lines authorized to be built are from London to Sarnia, and from London to Grand Bend; the company was given power to make agreements with municipalities for the operation of its lines over or along highways; to generate electricity for motive power, and to sell its surplus power.

During 1909 D. A. Stewart entered into negotiations with several of the municipalities in the vicinity of London for the building of an electric railway, and some surveys were made by W. G. Swan, London. (Oct., pg. 875.)

London Electric Railway Terminal.—Local reports state that a project is on foot for the erection of a terminal station for electric railways in London, Ont. Some property at the south-east corner of Bathurst and Richmond streets has lately changed hands, and it is said that the purchasers are interested in one or other of the existing or projected electric railways. Those interested in the London and Western Counties Ry. refuse to say anything at all, and officers of the London and Lake Erie Ry. and Transportation Co. say that while it is their intention to have a station nearer the heart of the city,

NOTICE is hereby given that application will be made to the Parliament of Canada. during the next session thereof, for an Act to incorporate a Railway Company under the name of The British Columbia & Dawson Railway Company, with power to lay out, construct, equip, and operate a line of railway, telegraph and telephone lines, from a point at or near Lytton in the Province of British Columbia running along the Fraser River to Fort George to a crossing of the Nechaco River at the mouth of the Stewart River, following the same by way of Stewart Lake, Thatcher River, Trembleur Lake, Middle River, North Tacla Lake, Driftwood River, Bear Lake, passing through Fort Conley, thence along the valley of the Skeena River to a summit between the Skeena and the Stickine Rivers, down the Stickine to Telegraph Creek, and thence up Telegraph Creek to the head waters of Teslin River, following the same to the northern boundary of British Columbia and from there on by the most practicable route to the City of Dawson in the Yukon Territory, also from Ashcroft, in the said Province of British Columbia, to the Fraser River at or near a point where Big Creek enters the said River; also from a point at or near Lillooet along the south side of Seaton and Anderson Lakes and via Lillooet Lake and River, and Harrison Lake, thence to the City of Vancouver.

And to purchase or lease from, sell or lease, or to amalgamate with the British Columbia and Alaska Railway Company.

ANDREW T. THOMPSON,
Solicitors for applicants.

Dated at Ottawa, this 7th day of October, A.D. 1910.

NOTICE.—The British Columbia Southern Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the following lines of railway:—

(a) From a point at or near Michel to a point at or near Kananaskis.
(b) From the Elk River and the Upper Kootenay River to the 49th parallel and the Tobacco Plains.
(c) From a point on the Lower Kootenay River to New Westminster and Burrard Inlet, with a branch to Nelson via Salmon River.
(d) From Michel Creek to Martin Creek.
(e) From a point on its main line about 36 miles west of the eastern boundary of British Columbia, southerly and easterly, not exceeding 10 miles, and such branch lines from its main line, and from the line between Fort Steele and Golden, as may be authorized by the Governor General in Council;

and for other purposes.

Dated at Montreal, the 10th October, 1910.

H. C. OSWALD,
Secretary.

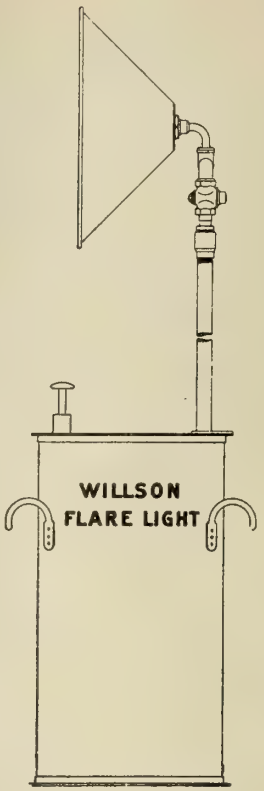
Andrew T. Thompson,
Ottawa Agent.

NOTICE.—The Georgian Bay and Seaboard Railway Company will apply to the Parliament of Canada, at its next session, for an Act increasing the company's bonding powers, and authorizing the company to connect with the Ontario and Quebec Railway between Burketon Junction and Havelock.

Dated at Toronto, the 10th October, 1910.

GEORGE A. WALKER,
Secretary.

Andrew T. Thompson,
Ottawa Agent.



THE WILLSON PORTABLE FLARE LIGHT

Brilliant Powerful Economical

Specially adapted for use in all kinds of construction work.

Its candle power varies from 1,000—8,000 according to the size of apparatus. The cost of 8,000 candle power is less than 6c. per hour.

O'Brien & Fowler, Contractors to the G.T.P., say:—

"During the past two or three years we have used various kinds of lights, but none of them have proved the equal of yours, either in the matter of economy or usefulness. The effectiveness of your light is beyond dispute."

The other railways of the Canadian Northern Railway System traverse the finest summering country in **Nova Scotia, Cape Breton Island, Quebec, Western Ontario,** and the **West.** For booklets and information write to the Information Bureau, Canadian Northern Railway System, Toronto, Ont.

they have not done anything in the way of securing a site.

Monarch Radial Ry.—W. H. Price, Toronto, the company's solicitor, appeared before the town council of Barrie, Ont., Oct. 6, in connection with the proposed franchise for the line in that town. He stated that the company was ready to begin construction just as soon as the town granted a franchise. An application to the Toronto board of control, with respect to an entrance into the city, was referred to the City Engineer and City Solicitor, Oct. 15. (Aug., pg. 682.)

Montreal and Southern Counties Ry.—A Montreal dispatch says that arrangements are in progress under which the M. & S.C.R. will pass formally under G.T.R. control. The G.T.R. has decided to apply to Parliament for power to acquire the electric system, which, since its initiation, has become a popular medium of communication between Montreal and the south shore, and is certain, as its further expansions continue, to prove a profitable aid to the G.T.R.

Niagara, St. Catharines and Toronto Ry.—The villages of Fenwick and Ridgeway, Ont., are negotiating with the company in order to secure a branch line being built, to give them connection with Welland and the company's system. (Oct., pg. 877.)

Niagara, Welland and Lake Erie Ry.—Application will be made to the Dominion Parliament for the incorporation of a company with this title, to build an electric railway from Niagara Falls, N.Y., to Lake Erie, between Fort Erie and Port Dover, by way of Niagara Falls, Welland and Port Colborne, Ont. Power is also desired to generate electricity and to dispose of the surplus; to erect and operate telegraph and telephone lines, amusement parks, etc., with other customary powers. Griffiths and Upper, Niagara Falls, Ont., are solicitors for applicants.

Ontario West Shore Ry.—Track has been laid as far as Prince Albert, Ont., where a bridge is being built. This bridge was expected to be completed Nov. 1, when tracklaying was to be resumed. It is hoped to have the line from Goderich to Kincardine, Ont., completed this year. (Oct., pg. 877.)

Ottawa Electric Ry.—The President and other officers met the street railway committee of the Ottawa city council Oct. 12, and discussed the question of the extension of the lines in the city. The three extensions discussed were, to the cemeteries, to Ottawa South and to Dow's Lake. The result of the deliberations will be reported to the city council. (Oct., pg. 877.)

People's Ry.—A bylaw was passed Sept. 26 by the taxpayers of Guelph, Ont., subscribing for $85,000 of preference stock in the company, and granting a franchise within the city. The line will connect Guelph with Berlin and Stratford, and radiating from Guelph lines will be built to Puslinch Lake, Hespeler, Elora, Fergus and Arthur. W. A. Bugg, the Secretary, is reported to have stated subsequently to voting that grading on the line from Guelph to New Germany would be started immediately. The line between Berlin and New Germany is under construction, and is expected to be completed by Dec. 31.

Following are the directors for the current year:—G. Clare, President; J. G. Reiner, Wellesley; J. C. Hallman, New Dundee; Dr. Groves, A. Steele, and —. McClellan, Fergus; —. Kimmel, G. Wanless, W. J. Moody, D. Moody, W. Pieper and W. A. Bugg, Berlin. (Oct., pg. 877.)

Quebec Ry., Light and Power Co.—The upper level line to Kent House, as recently projected, will not be gone on with, but a new route has been decided upon. This will leave the existing line at Beauport, about two miles from Quebec, gradually ascend the hill and then on to Kent House, a distance of about three miles. The maximum gradient will be about 4%, and the average gradient over the whole line about 2%. The company is acquiring the right of way.

The new line to Sillery has been completed and has been in operation since the end of Sept. (Sept., pg. 783.)

Quebec Ry. Light, Heat and Power Co.—Application will be made to the Dominion Parliament to amend the company's charter so as to give it the right of constructing, maintaining and operating railways in the Dominion. The company owns the Quebec Ry., Light and Power Co.'s lines.

Raymond, Alta.—The Alberta Legislature last session gave the town of Raymond power to acquire or construct public utilities, among which are particularly specified, street railways or tramways. All the powers usually given to companies in respect of these matters are vested in the town, to be exercised through its council, and it is provided that any profits arising out of the operation of these utilities shall, after providing for a sinking fund, be transferred to the general funds, and applied as directed by the council.

Regina, Sask.—The first section of the municipal electric railway is under construction, and is expected to be completed by Nov. 1. The piece of line being built is on Albert St. from Dewdney to Eleventh Ave., and through the subway. The contract was given to R. S. Blome and Co. for the laying of ties and rails ready for the paving at actual cost, plus 15%, to place the extra concrete required at $8.50 a cubic yard, and the balance of the paving at $3 a square yard. (Aug., pg. 683.)

Rural Ry. of Manitoba.—A proposition was submitted to the St. Vital, Man., township council, Sept. 26, on behalf of this company, offering, if given a franchise, to build a line of five miles from the southerly limits of either Winnipeg or St. Boniface, as far as the dividing line between the municipalities of St. Vital and Ritchot, by Nov. 1, 1912. The council received the proposal favorably, and referred the terms of the franchise to its legal adviser for consideration. The matter will be further considered at a meeting of the council Nov. 5. The municipal council of Ritchot passed a bylaw Oct. 4 granting the company a franchise in that municipality.

The Rural Ry. of Manitoba was inporated by the Manitoba Legislature last session, and is authorized to build a line on St. Mary's road, through St. Vital and other municipalities abutting on the Red River southward as far as the International boundary. The company's officers are:—C. E. Lewis, Minneapolis, Minn., W. Z. Peatman, and J. Bernier, M..L.A. (Feb., pg. 111.) (See also St. Vital, Feb., 1908. pg. 121.)

Saskatoon, Sask.—The Moose Jaw Electric Ry., which is incorporated under the British Columbia Companies Act to build electric railways in Saskatchewan and British Columbia, is in treaty with the Saskatoon city council for a franchise in that city. The council desires to submit the question to a vote as to whether the line should be built as a municipal enterprise or by a company. (Aug., pg. 685.)

Sherbrooke Ry. and Power Co.—Track has been laid on the extension of the line on Frontenac St., and work on the other new lines is reported to be well advanced. The new power house is expected to be completed by Nov. 1. (Oct., pg. 877.)

Stratford Ry.—The bylaw granting a franchise for an electric railway in Stratford, Ont., was finally passed by the city council at a special meeting Sept. 30. (Oct., pg. 877.)

Taber, Alta.—The town of Taber was given by the Alberta Legislature last session similar powers as to the building of street railways and tramways as were granted to the town of Raymond, and mentioned under the head of "Raymond" above.

Three Valley and Vernon Tramway Co.—Application will be made to the B.C. Legislature for the incorporation of a company with this title to build tramways and telegraph and telephone lines between Three Valley and Vernon, from the south boundary of the C.P.R. right of way, near the west end of Three Valley Lake, southerly along Frog Creek valley to the north end of Mabel Lake, along the shore to the south end, and following the Shuswap River to Bisset Creek, along Bisset Creek to Lumby, thence westerly through White Valley and Coldstream to Vernon. S. A. Mundy, A. McRae and W. E. Hodges are the applicants.

Toronto and York Radial Ry.—The Grand Jury of the county of York, Oct. 12, returned a true bill against the company for maintaining a common nuisance on its Metropolitan Division. The indictment sets out that the rails are "kept at an injurious height above the ground," thereby impeding ordinary traffic, and that the company neglects "to make proper repairs" to its line, thereby causing great inconvenience to the public. The hearing of the case was adjourned until the next Quarter Sessions.

The Chairman of the Ontario Railway and Municipal Board expressed the opinion, Oct. 7, that the only remedy for the present alleged inadequate service on the Metropolitan Division is to build a second track from the C.P.R. crossing through to Glen Grove and the golf grounds. If the Board had power to order it to be done, such an order would be issued.

Toronto tp. council has approved of an agreement made with the T. and Y.R. Ry., settling the question of damages arising from the company's failure to extend its line from Port Credit to the western limits of the township, on the payment of $1,500 cash and a further $1,000 if the line is not so extended within two years. (Oct., pg. 877.)

Toronto, Niagara and Western Ry.—The Board of Railway Commissioners devoted considerable time Oct. 11 and 12 at Hamilton, to a consideration of the company's application for approval of the proposed route along the north shore of the bay, reaching the city by a bridge from Carroll's point over the Desjardines canal. The city solicitor, representatives from Dundas, the Hamilton Ferry Co., and individual property owners appeared in opposition. The Board's Chief Engineer has made an inspection of the proposed route, but his report has not been made, consequently the Board's decision will not be announced for some time. (Aug., pg. 685.)

Winnipeg Electric Ry.—A plan has been filed for an extension of the line on Notre Dame Ave., from Arlington St. to the C.P.R. crossing, and it is stated that the line will be built this fall. (Oct., pg. 877.)

H. E. Smith, Comptroller Montreal St. Ry., has been elected Third Vice President American Street Railway Accountants' Association for the current year.

NOTICE.—The Alberta Railway and Irrigation Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the following lines of railway:—

(a) From Cardston to a point in Range 1, W. 5.
(b) From a point between Spring Coulee and Mountain View westerly to a point on the C.P.R. between Range 2, W. 5 and Range 27, W. 4.
(c) From Stirling easterly to a point in Range 4, W. 4, between the line of the C.P.R. and the International Boundary.
(d) From a point between Lethbridge and Stirling to some point on the International Boundary between Ranges 24 and 30, W. 4;

and for other purposes.

Dated at London, the 10th October, 1910.

DAVID AMEY,
Secretary.

Andrew T. Thompson,
Ottawa Agent.

NOTICE.—The Campbellford, Lake Ontario & Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to construct a line of railway from a point on the railway operated by the C.P.R. between Smith's Falls and Sharbot Lake, thence southwesterly to a point at or near Cobourg, thence westerly and northwesterly to a point between Locust Hill and Leaside Junction, instead of the railway authorized by section 8, of chapter 54 of the Statutes of 1904, and authorizing the company to increase its bonding powers.

Dated at Montreal, the 10th October, 1910.

H. C. OSWALD,
Secretary.

Andrew T. Thompson,
Ottawa, Agent.

NOTICE.—The Guelph and Goderich Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the branches which it has been authorized to construct by S. 7 of chapter 81 of the Statutes of Canada, 1904, and for other purposes.

Dated at Guelph, the 10th October, 1910.

A. H. MACDONALD,
Secretary.

Andrew T. Thompson,
Ottawa Agent.

NOTICE.—The Kootenay & Arrowhead Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railway from Gerrard to Arrowhead, and for other purposes.

Dated at Montreal, the 10th October, 1910.

H. C. OSWALD,
Secretary.

Andrew T. Thompson,
Ottawa Agent.

NOTICE.—The South Ontario Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to construct a railway from a point at or near Guelph Junction to a point at or near Hamilton, and for other purposes.

Dated at Montreal, 10th October, 1910.

H. C. OSWALD,
Secretary.

Andrew T. Thompson,
Ottawa, Agent.

2 GRAND PRIZES AND
5 GOLD MEDALS

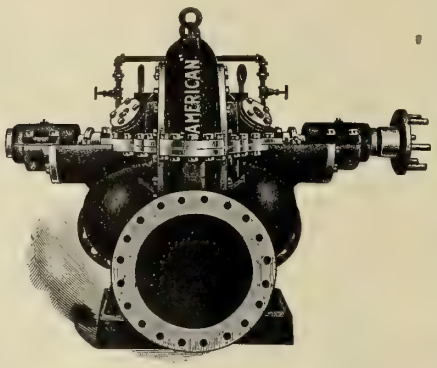
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Aug., $302,121; working expenses, $170,083; net operating earnings, $132,038; renewal funds, $22,626; net earnings, $109,412; approximate income from investments, $22,000; net income, $131,412, against $242,016 gross earnings; $128,442 working expenses; $113,574 net operating earnings;; $16,394 renewal funds; $97,180 net earnings; $16,500 approximate income from investments; $113,680 net income for Aug., 1909. Aggregate gross earnings for two months ended Aug. 31, $585,656; net earnings, including approximate income from investments, $239,277, against $462,681 gross and $211,698 net for same period 1909.

An issue of £600,000 additional stock has been placed on the London market to finance the building of new lines, the provision of new equipment, and work on the power development plant at Jones Lake.

Calgary St. Ry.—Passenger earnings for Sept., $19,003.10; miscellaneous earnings, $290.66; total earnings, $19,293.76; operating expenses, $474.06; maintenance and equipment, $1,978; transportation, $7,302.03; general expenses, $1,250.28; total expenses, $10,104.37; net operating earnings, $9,189.39. Passengers carried, 464,543; mileage, 60,666 miles; earnings per mile, $31.32; expenses per cent. of revenue, 52.371.

Halifax Electric Tramway.—Receipts for Sept., $21,141.04, and for two weeks ended Oct. 14, $10,407.87, against $21,020.91, and $9,389.61 for same periods 1909.

London St. Ry.—Gross earnings for Sept., $26,045.64; expenses, $15,470.80; net earnings, $10,574.84; deductions, $2,363.05; net income, $8,211.79, against $24,937.83 gross earnings; $14,633 expenses; $10,274.83 net earnings; $2,363.05 deductions; $7,911.78 net income for Sept., 1909. Aggregate gross earnings for nine months ended Sept. 30, $190,724.73; expenses, $134,856.98; net earnings, $55,867.75; deductions, $21,503.45; net income, $34,364.30, against $183,382.10 gross earnings; $126,338.33 expenses; $57,043.77 net earnings; $21,619.13 deductions; $35,424.64 net income for same period 1909.

Montreal and Southern Counties Ry.—Following are the officers for the current year: President, S. T. Willett; First Vice President, T. Craig; Second Vice President and General Manager, W. B. Powell; Secretary-Treasurer, H. W. Cooper.

Application will be made by the G.T.R. to Dominion Parliament for power, among other things, to acquire, hold, guarantee, pledge and sell or otherwise dispose of M. and S.C. Ry. stocks, bonds or other securities.

Montreal Park and Island Ry.—Following are the officers and directors for the current year:—President, Hon. L. J. Forget; Vice President, K. W. Blackwell; Managing Director, W. G. Ross; other directors. Sir H. M. Allan, P. Galibert, D. McDonald, T. A. Trenholme; Secretary, P. Dubee.

Montreal St. Ry.—The city treasurer, Oct. 8, received a cheque for $276,618, being the amount due from the company as percentage on the receipts of the line within the city.

Montreal Terminal Ry.—Following are the officers and directors for the current year:—President C. H. Catelli; Vice President, C. S. Campbell; other directors, R. Forget, J. G. Ross, F. E. Meredith, W. W. Skinner, J. L. Peron; Secretary-Treasurer, L. G. Morin.

The city treasurer, Oct. 8, received a cheque for $1,299, being the amount due from the company for percentage on its receipts within the city for the last financial year.

Nipissing Central Ry.—A meeting of the shareholders has been called for Nov. 7 for the purpose of ratifying and confirming what has been done by the acting directors and officials; approving and confirming the building of the line, and the acquisition of various franchises, rights and properties; confirming the financial arrangements made, and the giving of such further directions respecting the future management of the company as may be advisable. S. A. Jones is acting Secretary.

Quebec Ry., Light, Heat and Power Co.—The executive of the Bourse of Paris, France, has granted the company's application to have its stock listed.

St. Thomas Street Ry.—Earnings for Aug., $1,948.42; expenditures, $2,203.41, against receipts of $2,110,467 and expenditures of $2.608.39 for Aug., 1909.

Toronto Ry.—Gross earnings for Sept., $428,580.07; expenses, $199,502.60; net earnings, $229,077.38, against $379,981.08 gross earnings; $180,834.11 expenses; $199,146.97 net earnings for Sept., 1909. Aggregate gross earnings for nine months ended Sept. 30, $3,195,938.01; expenses, $1,634,760.20; net earnings, $1,561,177.81, against $2,857,291.30 aggregate gross earnings; $1,449,636.09 expenses; $1,407,655.21 net earnings for same period 1909.

Winnipeg Electric Ry.—Gross earnings for Aug., $247,046; working expenses, $124,719; net earnings, $122,327, against $197,817 gross earnings; $100,726 working expenses; $97,091 net earnings for Aug., 1909. Aggregate gross earnings for eight months ended Aug. 31, $2,031,256; net earnings, $1,009,468, against $1,622,809 gross earnings, and $812,544 net earnings for same period, 1909.

Electric Railway Notes.

G. E. Moffatt, consulting engineer British Columbia Electric Ry., is reported to have resigned.

The Winnipeg Electric Ry. has recently tested an automatic fender invented by J. Milford Moorhouse, of Winnipeg.

J. F. Argue, for over 25 years in the Toronto Ry.'s service, latterly as a divisional superintendent, died in Toronto, Oct. 6.

The Montreal Board of Control has arrived at an agreement with the Montreal Street Ry. for a new method of snow removal in the city.

The Montreal Street Ry. has entered suit against the Montreal Star, claiming $100.000 as damages, and charging defamatory libel in articles published.

A. Gaboury, Superintendent Montreal St. Ry., has been elected a member of the executive committee American Street and Interurban Railway Association for the current year.

The Toronto Ry. is said to have about 50 new cars of the latest model, completed or in course of completion, to be put in operation as soon as the extensions now under construction are completed.

W.. G. Ross, Managing Director Montreal Street Ry., was elected Vice President of the American Street and Interurban Ry. Association, at the annual convention at Atlantic City, N.J., early in October.

R. J. Clark, for the past six years Assistant Comptroller of the Toronto Ry., and Comptroller of the Toronto and York Radial Ry., has been appointed Comptroller of the Kansas City Electric Street Ry., Power and Light Co.

O. J. Cherry, Superintendent upper steel arch, Lewiston and Queenston bridges, has also been appointed Division Superintendent, Park and River Division, International Ry. E. H. Henning, Division Superintendent, continues in charge of the Buffalo & Niagara Falls local lines.

By a judgment of the Quebec courts rendered June 30, 1909, the Montreal Street Ry. was ordered to remove certain tracks laid on the property of the Harbor Commission within two months. Notice of appeal was given, and this was argued before the Court of Appeal, Sept. 20, and judgment reserved.

The fiftieth anniversary of the running of the first tram car in England was celebrated recently. The first car was run at Birkenhead by the late G. F. Train, who had as an office boy C. Robinson, who has been for years the moving spirit in connection with the tramways and light railway building in Great Britain.

The Quebec Public Utilities Commission received a report from Commissioner Laberge on recent fatal accidents on the Montreal Street Ry., and discussed it at a private sitting in Quebec Oct. 5. The Commissioners decided to hold a special session in Montreal for the investigation of the accidents, but at the time of writing no date had been announced for the session.

The Toronto board of control has instructed the city counsel to find out if the city has a case against the Metropolitan Ry. (Toronto and York Radial Ry.) for not keeping Yonge St. in a proper state of repair, and if so to prefer an indictment against the company. A report for a similar purpose is being prepared on the T. & Y.R. Ry., Mimico division.

The British Columbia Electric Ry. has received two 34 ft. passenger cars from the Preston Car and Coach Co., Preston, Ont., each 44 ft. over vestibules and 45 ft. over bumpers. They are arranged with a smoking compartment at one end with a corridor extending from the rear vestibule into the main compartment, and are finished in Honduras mahogany, with semi-empire ceilings, the seats, which are of the walkover pattern, being upholstered in rattan.

In the British Columbia Electric Ry.'s new wages schedule, which went into effect July 1, the increase of pay granted was given on the understanding that the bonus scheme, under which the employes have heretofore shared in the company's profits, will cease after the next payment of the bonus, which will take place probably in November, and will relate to the year ended June 30. The profit sharing scheme has been terminated at the men's request, they preferring an increased rate of pay to an annual bonus.

The Galt, Preston and Hespeler St. Ry. has received two 55 ft. passenger cars from the Preston Car and Coach Co., Preston, Ont. They are 43 ft. 5 ins. over bodies, 53 ft. 7 ins. over vestibules, 55 ft. over bumpers, and 9 ft. wide over sheathing, and are painted Pullman color on the outside, with semi-elliptic transom sash over the side windows and in the deck, glazed with leaded art glass. A smoking compartment is provided at one end, and a motorman's cab at each end. The trucks are equipped with Westinghouse 93 motors, 75 h.p., and multiple unit control.

J. E. Rothery, who has been appointed Manager Toronto Eastern Ry., was Superintendent of the Niagara Falls, Park and River Ry. from 1893 until its absorption by the International Ry., when he was appointed Superintendent of the Buffalo & Niagara Falls division, including the lines in Canada. In 1906 he was appointed General Manager of the Ohio Valley Scenic Route at East

NOTICE.—The Manitoba & Northwestern Railway Company of Canada, will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the following lines of railway:

(a) From Yorkton to a point at or near Prince Albert.
(b) From Russell to the northern or western boundary of Manitoba.
(c) From some point between Portage la Prairie and Arden to the northern or western boundary of Manitoba.
(d) From some point between Westbourne and Beautiful Plains northwesterly in the direction of Lake Dauphin or Duck Mountains.
(e) From a point between Theodore and Insinger to a point in Township 32, Range 18 or 19, W. 2nd M., with power to terminate at a point in Range 16 or 17.
(f) From Bredenbury to Kamsack;

and for other purposes.

Dated at Montreal, the 10th October, 1910.

H. C. OSWALD,
Secretary.

Andrew T. Thompson,
Ottawa Agent.

THE VANCOUVER AND LULU ISLAND RAILWAY COMPANY.

NOTICE.—The Vancouver and Lulu Island Railway Company will apply to the Parliament of Canada at its next session, for an Act extending the time within which it may construct branch lines, under the provisions of section 3, chapter 86 of the Statutes of 1901, and for other purposes.

Dated at Montreal, the 10th October, 1910.

H. C. OSWALD,
Secretary.

Andrew T. Thompson,
Ottawa, Agent.

NOTICE.—The Ottawa Northern & Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the extension of its main line from Maniwaki to a point at or near James Bay and the extension to Lake Temiskamingue, and for other purposes.

Dated at Montreal, the 10th October, 1910.

H. C. OSWALD,
Secretary.

Andrew T. Thompson,
Ottawa Agent.

NOTICE.—The Walkerton & Lucknow Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railway from a point at or near Walkerton to a point at or near Lucknow, via Teeswater, and for other purposes.

Dated at Toronto, the 10th October, 1910.

GEORGE A. WALKER,
Secretary.

Andrew T. Thompson,
Ottawa Agent.

Liverpool, Ohio, including the East Liverpool Traction & Light Co., the Ohio Valley Ry. Co., and the Stubenville and East Liverpool Ry. & Light Co. He resigned that position in May, 1910, and has been living in Toronto since.

Toronto Electric Railway Matters.

The City Engineer and the City Solicitor presented a joint report to the Toronto board of control recently on a system of civic car lines for the recently annexed districts. The plans show 9.7 miles of lines to serve East Toronto, North Rosedale and West Toronto, at an estimated cost of $570,000, exclusive of car barns and power plant, which would bring the cost up to $750,000. Upon consideration of the report the board directed the City Solicitor to report on the advisability of the city acquiring the suburban lines, and the Secretary was instructed to arrange for a conference with the Toronto Ry. management with a view of seeing if an arrangement could be made for acquiring the lines of that company. This conference was held Oct. 10, and at its close the Mayor stated that President Mackenzie had said he was prepared to recommend the shareholders to sell as soon as the city had power to buy, the price to be one mutually to be agreed upon, or to be settled by arbitration. Nothing was said about the matter at the meeting of the council held the same day, but it was understood that it would be reported on at a later meeting. The council, however, affirmed the principle of building, equipping and operating the lines proposed for the suburban districts by a commission, and the board of control was requested to draw up a constitution for such a commission, so that the necessary authority could be asked at the next session of the Legislature.

The question of the position of the suburban lines is mixed up with that of the lines in the suburban districts. The franchise of the section of the Mimico line within the city expires Dec. 31, 1911, and it was decided Oct. 8, to give notice of the intention of the city to take it over then. The piece of line is 1.1 miles long, and is assessed at $990 for land, and $3,550 for rails, ties, etc.

Government Regulation of Railways or Government Operation.—The Oxford University Press, London and Toronto, has issued a book written by C. S. Vrooman, of Oxford, Eng., entitled "American Railway Problems in the Light of European Experience, or Government Regulation v. Government Ownership of Railways." The subject is dealt with in 15 chapters, and five appendices are added. The suspended sentence of nationalization is the heading of the introductory paper, and the subject matter in the different chapters are:—Railway regulation by the several States, present status of federal regulation, proposed reforms in federal regulation, varieties in railway regulation, government ownership not confiscatory, three chapters on the result of government ownership in different countries; can Americans afford safety in railway travel? the ultimate issue involved in railway accidents, European railway corruption, American railway corruption, the spoils system and state railways, the industrial state, final considerations. The appendices contain Lamartine's Warning, the Swiss federal laws on accounting, acquisition, operation and organization, and the law as to the state operation of Italian railways. The book can be obtained through the Railway and Marine World Book Department.

The Empire Hotel, Winnipeg, is reported to have been sold by R. J. Mackenzie, of Mackenzie, Mann & Co., to T. Donley, of Simcoe, Ont., for $250,000.

Telegraph and Cable Matters.

The Canadian Northern Telegraph Co. has opened offices at Kenville, Man., and Fairlight and Langbank, Sask.

The Marconi Wireless Telegraph Co. is now receiving messages for transmission to the European continent. Hitherto the service has been to Great Britain and Ireland only.

Contradictory reports as to the state of G. Marconi's health have appeared recently in the Canadian and British press. Statements that he is in a serious condition have been denied and reiterated.

A Government wireless telegraph station is in course of erection near Skidegate, in connection with the Queen Charlotte Islands telephone line. The station is expected to be ready for operation during November.

Operators have been placed along the G.T.P.R. and the National Transcontinental Ry. between Fort William, Ont., and Winnipeg, in connection with the operation of the railway for the moving of the wheat crop to the head of the lakes.

A. B. Smith, Manager G.T.P. Telegraph Co., announced, Oct. 14, that the telegraph line between Fort William, Ont., and Edmonton, Alta., about 1,200 miles, was open for service. About 20 new stations have been equipped between Fort William and Winnipeg.

The Dominion telegraph line, which is being erected through Northern Alberta, reached Peace River Crossing Oct. 6, and erection was proceeded with for 16 miles to the Shaftsbury settlement, where, it is stated, telephone communication will be opened up this winter.

The Great North Western Telegraph Co. has announced that after Nov. 30 it will discontinue its news service, as it believes that since telegraph companies are now classed, by law, as common carriers, the collection and dissemination of news is not properly in their province.

The cable operators at the cable station at North Sydney, N.S., were recently granted a bonus of one month's salary, in recognition of loyal service, when both of the Canso-Penzance cables were out of service. During this suspension over 3,500,000 messages were relayed at North Sydney.

The board of conciliation, consisting of J. E. Duval, chairman, H. W. Ashley and F. J. Reynolds, appointed to enquire into the grievances of the G.T.R. telegraphers, arrived at a decision, Oct. 5, which gives the operators a new schedule of rules regulating the hours for service and conditions of promotion, and increases of pay amounting to about 4%.

W. J. Camp, Electrical Engineer C.P.R. Telegraphs, is a member of the committee of the Association of Railway Telegraph Superintendents, which has in hand the erection of a monument, to be erected at Turner, N.Y., to commemorate the sending of the first telegraphic train order on the continent. The Old Time Telegraphers and Historical Association, at its recent reunion, decided to contribute not less than $10 to the fund.

The C.P.R. has opened telegraph offices at Lake Louise Chalet, Alta.; Summit Lake, B.C.; Hallsboro, Niversville, and Shawanan, Man.; Adelard, Islington, Komoka and Point au Baril, Ont.; Ivry and Woodlands, Que.; Cross, Drake, Dysart, Jansen, Markinch and Marquis, Sask., and has closed its telegraph offices at Natal, B.C.; Firdale, Man.; Beaucage, Bismark, Bissett, Eauclair, Garden, MacLennan, Melrose and Moffat, Ont.

The cable steamship Colonia has completed the laying of a cable between New York and Penzance, Eng., via Newfoundland, in what is claimed to be record time. She commenced laying the cable at Bay Roberts, Nfld., July 18, and reached Penzance in nine days, and on Sept. 14 returned to Bay Roberts and laid the cable to Coney Island. On this last section the cable parted in deep water, the end being recovered in 24 hours.

The material for the erection of Marconi wireless telegraph stations at Macovic and Cape Harrison, Labrador, has been landed at the respective points, and the work has commenced. The erection will be completed this year, but it is not anticipated that the stations will be fully equipped, as they will be of little use until next year, when, it is stated, other stations will be erected, forming a chain from Cape Chidley, through Hudson Bay to Fort Churchill.

The annual general meeting of the G.N.W. Telegraph Co. was held in Toronto, Sept. 28. Following are the officers and directors for the current year: President, H. P. Dwight; Vice President, A. Brown; Vice President and General Manager, I. McMichael; other directors, H. N. Baird, J. Hedley, Hon. J. K. Kerr, W. C. Matthews, Toronto; R. C. Clowry, J. B. Van Every, New York; Secretary-Treasurer, G. D. Perry; Auditor, A. C. McConnell; Assistant General Manager, S. B. McMichael.

The Maritime Telegraph and Telephone Co. has laid a cable across Northumberland Strait, between Nova Scotia and Prince Edward Island. The cable leaves Nova Scotia at Waterside, near Cariboo Island, nine miles from Pictou, and reaches Prince Edward Island, at the Woad islands, about 35 miles from Charlottetown. It is stated to be the intention to establish telephone communication by means of the cable, and press reports from Pictou state that as telegraph instruments have been sent there, the telegraph may be used, in the event of failure, with the telephone.

The Western Union Telegraph Co.'s annual report shows an increase of 7,081,966 messages and 504 stations over the previous years, while 2,847 miles of pole and cable, and 46,549 miles of wire, of which 30,515 miles were copper, were added during the year. The total mileage of wire is now 1,429,049, of which 530,517 miles are copper. The total earnings were $32,754,111.13; operating expenses, repairs, etc., $26,614,302.88; other income, $1,135,091.80; interest and dividends, $4,677,526.23; balance, $2,597,373.82. The assets of the company, which have been re-valued, amount to $307,737,262.07.

A St. John, N.B., dispatch of Oct. 19 says:—"J. Kent, Manager C.P.R. Telegraphs, foreshadows an extension of the company's lines along the Dominion Atlantic Ry. When asked how the acquisition of control of the railway by the C.P.R. would affect the telegraph company, he remarked that it was the usual C.P.R. policy to have its own telegraph wires over all its lines of railway. Mr. Kent said the C.P.R. is now operating 1,400 miles of single-track railway by telephone, and finds it more satisfactory than telegraph. The system is to be extended to 2,100 miles this season."

The Montreal Street Ry. Co. has entered an action for libel against the Montreal Star, claiming $100,000 as damages suffered by it on account of statements by the newspaper at various times. The M.S.R. Co. alleges that for some months the paper has conducted a systematic campaign against it by printing unfair headings, distorting facts and giving incorrect reports of accidents or legal proceedings in which the company was involved.—Montreal Press Dispatch.

Buoy Steamboat for the St. Lawrence.

The steamboat which the Department of Marine contemplates building, and for which provision has been made in this year's estimates for the buoy service on the River St. Lawrence between Montreal and Quebec has been designed with the view of meeting the increased demands and requirements of this important branch of marine work, and replacing the C. G. S. Shamrock, which is now considered quite inadequate and unsuited for the service. The principal dimensions of the new vessel are:—Length, 170 ft.; breadth, 31½ ft.; depth, 15½ ft.; displacement about 1,000 tons; speed on service, 11 knots.

The general accommodation is placed at the forward and after ends, the machinery being also placed aft in order to provide a large clear well and hold forward for the special work connected with the lifting and lowering of buoys and their attendant gear. The well, which is about 66 ft. long, is traversed by two derricks, one capable of lifting 10 ton weights, and the other of lifting five ton weights, the larger lift being for the handling of buoys and the smaller lift for manipulating the cables and anchors. These derricks are operated by a specially designed winch, which is situated abreast the fore mast. The general structure of the ship is largely above Lloyds requirements, special consideration having been given to those parts directly in way of the well. The structure forward and aft and along the load water line is also largely in excess of the usual requirements, in order to provide sufficient strength for working in floating ice about 12 inches thick. The vessel is divided into eight water-tight compartments, and large steam pumps of high power, and smaller hand pumps are provided for the pumping and flooding arrangements. The main and lower decks are of steel, wood sheathed, and the forecastle, bridge and boat decks are partially plated and wood sheathed; a double bottom is fitted under the fore hold and engine room. The accommodation is ample and roomy. Under the forecastle deck, provision is made for the housing of the seamen and firemen with their respective water-closets and wash houses adjoining. On the main deck aft abreast the e. and b. casings are placed the cabins for the officers, bathroom and water-closet, ward room, galley and pantry, and a special mess room is also provided there for the crew and firemen. On the bridge deck are situated the staff officers' quarters, two staterooms, wireless telegraph office, dining saloon, bathroom and water-closet, and chart room. The latter, which is for the staff officers' use, is placed at the fore end of the deckhouse and commands the working well. On the boat deck, in a teak deck-house, is the navigating position, with captain's cabin adjoining, these being surmounted by a sighting platform for the superintending engineer.

The vessel is provided with a complete installation of electric light, and also a powerful searchlight of about 16,000 candle power. The power is derived from two dynamos situated in the engine room, driven by two compound engines of the enclosed type. A set of accumulators is also provided for the running of certain lights. As is usual in the service a system of wireless telegraphy will be installed. A very efficient system of ventilation is provided for and precaution has been taken to provide fresh air to all parts of the living quarters, holds, stokeholds and engine room. The steam steering engine will be placed in a recess in the engine room, controlled from the navigating position in the wheel house, and the usual hand gear is provided in a neat teak case aft.

Three boats are fitted under davits on the boat deck, viz.:—A gasoline launch, 26 ft.; a lifeboat. 26 ft.; and 1 dinghy, 15 ft. These are all under direct control by steam power, a boat-hoisting engine being provided adjoining.

The water service arrangements are very complete. All the compartments are supplied, and also the decks, the pumps for the respective purposes being situated in the engine room. The bunkers will have a capacity capable of providing a steaming radius of 1500 knots, and a large reserve can be provided for. In order to provide a steadier platform when lifting heavy weights, rolling keels are fitted on the bilges.

The vessel will be fitted with twin screw triple expansion engines, working at about 130 revolutions a minute. Steam will be derived from two single ended cylindrical boilers, each fitted with two Morison's patent withdrawable furnaces, and having a working pressure of 180 lbs. per square inch. All the usual auxiliaries will be installed in the engine room, viz.:—Circulating pumps, air pumps, feed pumps, bilge pumps, injector pump, general service donkey, ballast pumps, fresh water pump, sanitary pump, etc., etc., and special provision has been made at the sea inlets for the prevention of ice formation. The piping arrangements will be very complete, and in several instances will be duplicated in order that should one connection become choked, an alternative connection may be used. Each of the boilers will be fitted with an installation of a temperature balance which has given great satisfaction on the C. G. S. Earl Grey. The propellers will be of the built up type, of special mixture steel, and will be of heavy construction and specially designed for the work. The contract for this new addition to the marine fleet will be awarded shortly, as it is intended to have the vessel placed on her service as early as possible.

The name of the schooner A. K. Woodward has been changed by order-in-council to H. S. M.

An item which was running through the press during Oct., purporting to be a "special" from Washington, D. C., regarding the number and tonnage of Canada's shipping, quotes grand totals, totals by provinces etc. and also of new tonnage, which is given as having been added "during the curent year." All the figures mentioned in the "special," refer to the year ended Dec. 31 1909 and were included in the annual summary of Canadian shipping, published in our July issue.

The Canada West Indies Route.

The report of the Imperial Royal Commission appointed to enquire into trade connections between Canada and the West Indies, states that as a market from the West Indies point of view, Canada is at some disadvantage, geographically, as compared with the U.S., and that there is little hope of counteracting these disadvantages unless a good form of through communication is established, between the West Indies and Canada, as far west as Toronto, and perhaps even Winnipeg. A subsidy of £27,000 annually is paid for a fortnightly service, between St. John and Halifax alternately, and the West Indies, the agreement in this case, expiring this year. The subsidy is paid equally, by the Canadian and British Governments. The report continues: "In the course of our enquiry, it has been continually urged upon us that the present service has not been satisfactory and in both countries it was repeatedly urged that the development of mutual trade depended largely on the improvement in the means of transportation. The principal causes of complaint in Canada were the unpunctuality of the steamers and their slow speed; the inadequacy of accommodation, both for passengers and freight; the lack of care in transit, and the delay at Halifax involved to shipments from St. John. In the West Indies, the special causes of complaint brought to our notice were the inferiority of the steamers employed; the high rates for certain classes of cargo, and the uncertainty of finding space when the steamers arrived at the northern islands, although accommodation might have been reserved in advance. There was a very general opinion among the witnesses in Canada, that a weekly service was desirable, that the steamers should maintain a speed of 12 knots an hour, at least; while in the West Indies, the general opinion was that fortnightly steamers would be adequate though a few favored a more frequent service. We are of the opinion that the most efficient service might be obtained by dividing the service into two parts. In summer there should be one fortnightly sailing from Halifax, and another fortnightly sailing from Montreal, calling at Quebec and St. John. The services should be so arranged that the departures from Halifax and St. John should take place on the same day of alternate weeks, thus forming a weekly service from Canada, giving to Halifax and St. John the direct connection with the West Indies which they desire and giving Montreal and Quebec the opportunity to send their goods direct to the West Indies entirely by water, during the season of open navigation. In the winter the sailings would be from Halifax and St. John only, and in the summer it should be laid down that the steamers on the St. John route should start from Montreal a specified number of days before the due date of departure from St. John. As it is desirable that there should be no delay through the calling of the steamers for coal on the voyage, it should be stipulated that the Montreal-St. John steamers should be fully coaled at Montreal, and the Halifax steamers fully coaled at Halifax for the outward voyage, and that if additional coal were required for the homeward voyage, the arrangements should be such as to involve the least possible delay. ..... Having regard to the importance of retaining and extending as far as possible, the market which Canada offers for West Indies products, we would represent that the maintenance and improvement of the steamship service is in the highest degree essential. We cannot fail to recognize that the withdrawal of the existing service would very seriously hamper and in

some cases entirely extinguish, the trade which is now growing up. It is possible, that if the subsidy were withdrawn, a fairly frequent, though irregular service might be maintained between Canada and the larger ports, but we cannot doubt, that in such event, the smaller islands would cease to be visited. The selection of a firm to undertake the contract for this service falls mainly with Canada, where the headquarters must necessarily be established. We have no doubt that every opportunity will be given to any responsible firm to tender for the service, if it should be decided to continue it.

"The preceding recommendations were made with a view to the establishment of an adequate cargo and passenger service between Canada and the West Indies and at the time of their preparation we had not given special consideration to the possibility of including a fast mail service. Since the conclusion of our enquiry, a new situation has arisen through the expiration of the mail contracts between England and the West Indies, and in consequence a way has been opened for the acceleration of the service between Canada and the West Indies. so as to provide an all British route for mails between the United Kingdom and the West Indies by way of Canada. We have discussed this matter with representatives of the General Post Office and have given our assistance in preparing a scheme for a service between Canada and the West Indies, on the same general lines as the preceding, but with vessels steaming at 15 knots an hour. leaving Halifax or St. John, immediately on the arrival of the weekly mails from Liverpool, and which, in the summer, would be landed at Rimouski and conveyed by rail to Halifax or St. John."

Stranding of the s. s. Craigendoran.

Following the enquiry into the causes of the stranding of the s.s. Craigendoran at Anticosti Island, late in August, referred to in our last issue, Capt. L. A. Demers, Wreck Commissioner, delivered the following judgment, Oct. 5, which was concurred in by Jas. Bain and J. A. Band, Assessors:—

The court, having carefully weighed the evidence adduced, finds that the captain and officers, being strangers to the Gulf St. Lawrence, failed to exercise adequate precaution in equipping themselves with necessary information concerning the prevailing winds, tides and currents, which may be found in the sailing directions, which could have been procured with facility in either Montreal or Quebec. From the time Fame Point was passed the vessel seems to have been steered in a seamanlike manner, and a course was taken intending to pass three or four miles off South Point, Anticosti, in order to make the East Point lightship. An hour prior to the stranding, when land was sighted, the master, in estimating his distance therefrom, relied absolutely on his visional observance, whereas the vessel, being equipped with a deep sounding machine, supposedly in good order, a cast of the lead could have been taken without interruption to the ship's speed, thus determining the distance and allaying doubts regarding the master's uncertain estimate. The captain accordingly proceeded on that unauthenticated course, which, however, was altered half a point prior to the accident, the necessity for which seems somewhat vague and would appear uncalled for if the master's estimate of the vessel being 5 or 6 miles off, is to be accepted, but the fact that the stranding occurred almost immediately following the alteration, indicates conclusively that she must have been well inshore. Following the stranding, the engines were stopped, but no attempt was made to impede the vessel's headway by reversing, and in the court's opinion some definite action should have been taken to ascertain the exact location of the stranding, which, however, was omitted, and consequently the ship, carrying the impetus imparted by her former speed of nine knots, must have traversed a distance approximating three-quarters of a mile before attaining a dead stop, at which time the cast of the lead was taken, which recorded 20 fathoms. The lighthouse was in full view, and if the possibility of a cross bearing were precluded, the exact position could nevertheless be ascertained by the measurement of the height of the lighthouse.

In view of the facts adduced, the court can arrive at no other conclusion than that the necessary precautions for the safety of the vessel were not exercised by the master and second officer, which neglect on their part is the more emphasized by the fact that they were navigating strange waters and had at all times the means available to verify the position of their vessel, the atmosphere being penetrable to a distance of six or seven miles, and even admitting that objects were not sufficiently defined for observation purposes, soundings should have been taken to authenticate the observation made by naked eye by the master and the second officer.

One of the witnesses intimated that the wreck, which has been lodged in that vicinity for 15 years, is further removed from shore than the chart indicates, but even admitting that the derelict be further out than shown by the chart, by one and a half miles, the court nevertheless contends that it would not constitute an impediment to the safe navigation of vessels whose courses are taken to make certain points or enter the Straits of Belle Isle. In view of the above, the court has arrived at the conclusion that the master has been guilty of carelessness in neglecting to supply himself with the sailing directions, and for his failure to take proper observations to ascertain the vessel's distance from the land, and the implicit reliance which he placed on his visional observation, without attempt at verification, the court holds was by no means seamanlike. Owing, however, to the fact that the vessel escaped serious damage in consequence of the said carelessness, the court will not deal with the master's certificate, but finds it incumbent upon it to severely censure him, and to also reprimand the second officer for failure in calling the master's attention, and not taking necessary bearings and soundings when land was seen.

Montreal Harbor Traffic Statistics.

Following are details of the Montreal harbor receipts from the commencement of the St. Lawrence navigation season to Sept. 30, as compared with those for the same period 1909:—

	1910.	1909.
Imports	$181,500.00	$144,500.00
Exports	59,000.00	58,000.00
Local traffic	43,665.11	35,715.50
Totals	$284,165.11	$238,215.50

The number of vessel arrivals during the period was 571, of a total tonnage of 1,688,294, against 513 vessels and 1,-441,514 tons in 1909. The previous record was in 1908, whe nthere were 579 vessel arrivals, having a tonnage of 1,-514,829. The depth of water in the ship channel, on Oct. 1, was 29¼ ft., a decrease of 2½ ft., as compared with the depth on Oct. 1, 1909.

The name of the steamboat City of Windsor, registered at Sault Ste. Marie, Ont., has been changed by order-in-council to Michipicoten.

C. P. R. Steamboat for Arrow Lakes.

The C.P.R. is having built for service on the Arrow Lakes, B.C., a stern wheel steamboat with the following general dimensions:—

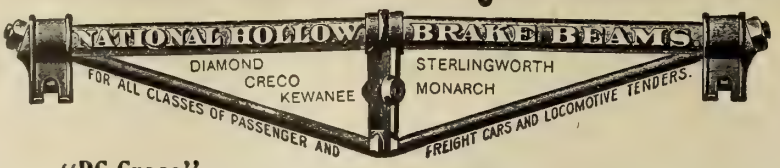
Length over all	228 ft.
Length between perpendiculars	200 ft.
Beam moulded	38 ft.
Beam over guards	44 ft.
Depth, moulded	7½ ft.

The hull proper is entirely of steel, strongly braced longitudinally by diagonal framing and bulkheads. The vessel is, by seven transverse bulkheads and the longitudinal bulkheads, divided into 20 watertight compartments, thereby ensuring greatest safety from sinking through the puncturing of any part. The shell plating forward is doubled in the bottom to further minimize the danger of damage from grounding. There are four large rudders with tillers connected to and operated by the one steering gear. The hull, which, as well as the machinery and boilers, has been constructed by Polson Iron Works, Ltd., at Toronto, in remarkably short time, has been shipped in knock down shape to its destination, there to be re-erected and riveted up complete for launching. The shipment consisted of 19 cars. On the completion of the steel work, the carpenter and joiner work will be done under the direction of J. C. Gore, Superintendent B. C. Lake and River Service, C.P.R.

The steamboat is intended for both passenger and freight service, the main deck being reserved for freight, engine and boiler room, kitchen, pantry, refrigerator and rooms for cooks, stewards, etc. The passenger accommodation, consisting of 67 state rooms, will be located in deck houses on three separate decks, first and second saloon deck and upper deck. Besides there will be a first saloon deck, smoking room, lavatories, dining room, pantry and ladies' cabin, and on second saloon deck, observation rooms fore and aft. The captain's and officers' rooms will be located on upper deck forward and above these will be the pilot house. The accommodation and public rooms will be handsomely fitted out and furnished.

The double tandem compound engines, which were designed by Polson Iron Works, and have recently been completed and tested under steam at their yard in Toronto, are said to be the first of this type to be built in Canada, and the largest stern wheel engines in the Dominion, the over all length being 75 ft. The engines were designed to give a little over 1,000 h.p. when running at 25 revolutions a minute, and cutting off at half stroke, and with 200 lbs. steam pressure at the boiler. The high pressure cylinders are 16 ins. diameter, and the low pressure 35 ins. diameter, with a stroke of 8 ft. The high pressure cylinders are placed forward of the low pressure, with a cast steel distance piece between them, which also forms the cylinder covers, and is firmly bolted to the cylinder beams. The cylinders have brackets cast on at each end, which also rest on the cylinder beams, and are bolted to them, but the holes are made oval to allow for the expansion of the cylinders, which is considerable owing to their great length. The cylinder beams which form the bedplate or frame of the engine, are box girders built up of plates and angle bars, and carry the cylinders, the guide bars, main bearings and brackets for the valve gear. The main valves on the high pressure cylinders are hollow piston valves fitted with spring rings. The low pressure valves are balanced slide valves. The high and low pressure valves on each engine are connected to one spindle, which is worked by a valve motion with a stationary link which gives the same lead to the valve in whatever position the block is placed.

CHICAGO RAILWAY EQUIPMENT CO.



Our **"PC Creco"** Brake Beams are for use on new heavy steel passenger equipment and withstand a load of **40,000** lbs. with 1-16 in. deflection. Greater capacity if desired, without increase in Diamond Special depth of strut or change of adjustable brake head.

The point of cut-off is altered or the gear reversed by moving the block in the link. A radius rod connects the block and the valve stem. The gear is actuated by a steam reversing gear of the direct type. The high pressure cylinder is fitted with a separate cut-off valve working inside the main piston valve and worked by a separate eccentric. The travel of this valve is regulated by the position of a block in a separate curved link similar to the main link, except that the link is pivoted at one end instead of at the centre. The piston rods and valve stems are fitted with special metallic packing manufactured by Polson Iron Works. The after low pressure covers are made in halves to facilitate removal for inspection of the low pressure piston. The connecting rods, which are 32 ft. long from centre to centre, are built up of steel plates, channels and tee bars, with solid forged steel ends, fitted with bronze bearings secured by straps, with gibs, cotters and bolts. The crank shaft is a hollow forging of nickel steel fitted with solid forged steel webs, and weighs over ten tons. The engine has been designed throughout with very ample bearing surfaces, and a large factor of safety, as the nature of the service it is built for requires that there shall be no possibility of a break down, the boat having to be as regular in its trips as an express train.

The boiler is of the locomotive type, and is said to be the largest boiler of this type which has been built in Canada, being 90 ft. in dia. and 28 ft. 4 ins. long, with a grate area of over 75 sq. ft. and heating surface of 2,750 sq. ft. The boiler is built for a working pressure of 200 lbs. per sq. in., and is designed to burn up 3,800 lbs. of coal per hour under forced draft, air being supplied by a fan driven by a slow speed turbine.

Salving the s. s. Princess May.

The recent salving of the Canadian Pacific s.s. Princess May, which was wrecked on Sentinel Island, while bound from Skagway, Alaska, to Seattle, Wash., Aug. 5, is of peculiar interest, owing to the position of the vessel after the disaster, and the difficulties encountered in releasing her.

About two hours after leaving Skagway, neither hearing the fog whistle on the one hand, nor seeing the lighthouse on the other until too late, the Princess May bore at full speed on to a reef just north of Sentinel Island. She was running at 12 knots and went on the rocks with an impetus that drove her up high and dry, raising the bow into the air. The position was a peculiar one. She was held on either side so that she could not slip over. At high tide, the hold filled with water. At low tide, the hull was all quite dry. The sides of the reef fall away abruptly 50 ft. and anything happening to loosen the boat would have sunk her at once, for in grinding over the rocks a long jagged tear was made in the single bottom, and it was found that 120 plates were damaged. The crew handled their work quickly, quietly and well, and order prevailed. The passengers were taken ashore, suffering nothing more than some discomfort. Signals of distress were promptly answered and the salving tug Santa Cruz, of Seattle, was hastened to the scene of the accident.

The salvage feat, as difficult as it was unique, was accomplished by Capt. W. H. Logan, special agent of the London Salvage Association. The first work was to calculate the weight of the vessel to ascertain what sliding ways were required. It was decided to construct ways with a capacity of 11 tons per sq. ft., which was later reduced to 5 tons per foot. Much of the rock had to be blasted with dynamite. The tug Santa Cruz arrived at noon, Aug. 13, and two 10-in. and one 4-in. pumps were placed on board, and anchors laid astern. A 5-ton anchor was laid obliquely from the port side aft, with 250 fathoms, part cable and part wire. Two additional anchors were laid to starboard on a single 250-fathom line. The Santa Cruz made an attempt to pull her off, but did not move her. Before making the attempt, the hull was carefully patched. There was a hole about 50 ft. long and about 18 in. wide on the starboard bow and other holes on the port side about 4 ft. long. Both bilges were stove and there were holes under the engines and boilers. A large number of holes were made amidships by the steamer settling on the rocks at every tide. The majority of the holes were

comparatively small, but of irregular shape.

When the patching was complete, it was found that the anchors and hawsers were not heavy enough and that the tug could not move the vessel. The British Columbia Salvage Co.'s tug William Joliffe was accordingly sent for. Heavier anchors were laid out and when the sliding ways were ready the tugs made another attempt to pull the ship off, which was ineffectual, and a third pull was taken at midnight, Sept. 2, when the tide was highest, and the steamer moved about 60 ft., and at noon the following day another haul was made and she slid into deep water, the pumps keeping her afloat. The wreck was towed to Juneau and thence to Esquimalt, making but little water during the long tow from the north. Within 30 hours after the wreck was floated, one of the heaviest gales of the season occurred and had she been out on the reef at the time it would probably have pounded her to pieces. That there was no break in the hull speaks well for her construction. The floating was the thirty-second successful salvage job completed by Capt. Logan.—Marine Review.

Vessels Removed from the Register.

The following vessels were removed from the register, during Aug. and Sept. for the reasons assigned:—Steam,—Dama Quebec 37 tons, broken up; J. L. Murphy, Ottawa, 109 tons, broken up; Platea, St. John, N.B., 2,044 tons, sold to foreigners; Pydna, St. John, N. B., 1,854 tons, sold to foreigners; Relief, Quebec, 193 tons, converted into a sailing vessel; Two Brothers, Quebec, 9 tons, broken up. Sailing,—Barcelona, Lunenburg, N.S., 99 tons, stranded; Bear River, Digby, N.S., 38 tons, lost at sea; Brilliant Star, Sydney, N.S., 32 tons, broken up; Calcium, Parrsboro, N. S., 687 tons, abandoned at sea; Electric Light, Digby, N.S., 34 tons, broken up; Fanny, Digby, N.S., 7 tons, broken up; Franklin King, Charlottetown, P.E.I., 27 tons, wrecked; G. M. Dutcher, Digby, N. S., 32 tons, sold to foreigners; La France, Lunenburg, N.S., 89 tons, stranded; Lizzie Jane, Digby, N.S. 18 tons, broken up; Lumen Diei Arichat, N. S., 20 tons, broken up; Mabel T., Weymouth, N.S., 13 tons, stranded; Marie Clarisse, Quebec, 21 tons, out of existence; Marie du Sacre Cœur, Quebec, 46 tons, out of existence; Morelight, Halifax, N.S., 52 tons, broken up; Nonpareil, Lunenburg, N.S., 88 tons, wrecked; Norman B., Digby, N.S., 20 tons, broken up; Ponhook, Liverpool, N.S., 199 tons, transferred to Barbadoes; T. W. S. Greser, Digby, N.S., 30 tons, out of existence; Twilight, Digby, N. S. 14 tons, lost; Union, Arichat, N.S., 77 tons, lost; W. D. Bickford, Digby, N.S., 44 tons, out of existence; Wave, Digby, N.S., 11 tons, broken up.

Notices to Mariners.

The Department of Marine has issued the following:—

96. Sept. 21.—255. Quebec, Gulf of St. Lawrence, Harrington islands, Harrington harbor, buoys established. 256. Quebec, River St. Lawrence, survey steamer at work in vicinity of Father Point and Bicquette island, caution.

97. Sept. 22.—257. New Brunswick, south coast, Bay of Fundy, Bliss island, position of lighthouse. 258. Nova Scotia, Cape Breton island, south coast, off entrance to Louisburg harbor, change in sounding of submarine bell eastward of Harbor shoal. 259. Prince Edward Island, north coast, Cascumpecque harbor, Alberton range lights, additional information. 260. Newfoundland, east coast, Trinity bay, Old Perlican island, lighthouse established. 261. Newfoundland, Bay of Exploits, Grassy island, and Lower Sandy point, lights established.

98. Sept. 23.—262. Ontario, Georgian Bay, east side, Waubaushene, range lights established. 263. Manitoba, Lake Winnipeg, mouth of Red River, front range lighthouse destroyed by storm, temporary light established.

99. Sept. 26.—264. Quebec, Gulf of St. Lawrence, Great Mekattina island, Treble Hill island, Flat island, and Murr islands and rocks, corrected positions. 265. Quebec, River St. Lawrence, Beaujeu bank, gas buoy moved on account of dredging operations. 266. Quebec, River St. Lawrence, ship channel off St. Thomas de Montmagny, gas buoy moved. 267. Quebec, River St. Lawrence, above St. Thomas de Montmagny, gas buoys used for dredging purposes moved. 268. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, below Cap Charles, Grande Pointe shoal, buoy discontinued.

100. Sept. 29.—269. New Brunswick, Bay of Fundy, Passamaquoddy bay, Cherry island, characteristic of fog bell. 270. New Brunswick, east coast, Miramichi bay, Preston beach, life-saving station established. 271. Prince Edward Island, south coast, Hillsborough bay, Charlottetown harbor, position of Brighton beach range lights. 272. St. Pierre Island, Galantry head, fog signal reported irregular.

101. Oct. 1.—273. Nova Scotia, south coast, Port Mouton, channel dredged to public wharf in harbor, buoys established.

102. Oct. 4.—274. Quebec, Ottawa River, Way shoal light discontinued. 275. Ontario, Lake Ontario, off mouth of Niagara River, gas and bell buoy adrift. 276. Ontario, River St. Mary, Sault Ste. Marie Canadian canal, daymarks at upper entrance range lighthouses.

103. Oct. 11.—277. Quebec, Gulf of St. Lawrence, Magdalen islands, Grand Entry harbor, range light established. 278. Newfoundland, southwest coast, Port Basque, Channel head, characteristic of fog alarm. 279. Newfoundland, west coast, St. John bay, shoals discovered.

104. Oct. 13.—280. British Columbia, Burrard Inlet, English bay, False Creek, lights established. 281. British Columbia, Burrard Inlet, Second narrows, beacon destroyed.

Atlantic and Pacific Ocean Marine.

The Canada Atlantic and Plant Line s.s. A. W. Perry, became disabled during a storm off Halifax Harbor, Oct. 2, and had to put back to Halifax, where she was overhauled.

The Quebec Steamship Co. and the Royal Mail Steam Packet Co. have agreed on a joint service between New York and Bermuda.

Capt. Dugge, of the Canada Line's s.s. Prinz Adalbert, was fined $20 on each of six charges, to which he had pleaded guilty of neglecting to report cases of sickness on board his vessel at Quebec.

The Minister of Marine, accompanied by a number of shipowners and those interested in the navigation of the St. Lawrence, inspected the improvements and works in progress in the river, Oct. 6.

The Thomson Line is reported to have decided to make a number of improvements in its steamship service between Canada and Europe, next year. It is stated that the passenger accommodation on its vessels will be increased, and a more frequent service with Italy will be given.

Furness Withy and Co.'s s.s. Ulunda, which has been calling at St. John's, Nfld., for some years, is reported to have been sold to a Greek firm for operation in the Mediterranean. The s.s. Durango has taken the place of the Ulunda, and will run between St. John's, Halifax, and Liverpool, Eng.

Officials of the White Star-Dominion Line were reported to have visited Halifax early in Sept., for the inspection of the railway terminal facilities there in connection with the arrangement, whereby the steamships Laurentic and Megantic are to call there weekly for two months and fortnightly thereafter during the winter season.

The C.P.R. s.s. Montcalm, which was in collision with the s.s. Kronprinz Olav recently, was arrested at the instance of J. Bryde, owner of the Kronprinz Olav, which is chartered to the Dominion Coal Co., on a claim of $15,000 for damage sustained. A bond was given for the amount and the Montcalm sailed for Avonmouth, Eng.

Press reports from Ottawa state that the Government will probably, at an early date, call for tenders on an increased subsidy, for an improved service with the West Indies, to implement the recent report of the Royal Commission on trade relations between Canada and the West Indies. It is also stated that with a faster service than at present, the West Indies mail to Great Britain will probably come through Canada.

It is reported that the Department of Marine has decided not to hold an enquiry into the causes of the recent grounding of the s.s. Manchester Engineer on the south shore of Belle Isle, as there is no question of an officer of the vessel having shown carelessness in navigation. In the act regulating these enquiries, it is provided that only when there is ground for believing that carelessness on the part of an officer of the ship has been the cause of a disaster shall it be incumbent on the Department to hold an enquiry.

The Dominion Government subsidy of $15,000, granted to the C.P.R. for the winter service between St. John, N.B., and London, Eng., has been renewed for a year.

Maritime Provinces and Newfoundland.

The St. John, N.B., ferry committee is negotiating for the purchase of a second hand ferry boat in New York.

G. S. Mayes, of St. John, N.B., has recovered from the Dominion Government $9,750 under several dredging contracts.

The Department of Public Works received tenders during Oct. for the construction of a breakwater at Great Salmon River, N.B.; a wharf at Barrington Cove, N.S., and a breakwater at New Edinburgh, N.S.

The Newcastle Steamboat Co., Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $19,000, and office at Newcastle, to carry on a general steamboat and coal business. The provisional directors are P. Hennessy, D. Morrison, J. Ferguson, G. Stables, P. W. Dixon and others.

The Red Cross Line's s.s. Rosalind, which has been operated by the Black Diamond Steamship Co., between St. John's and Montreal during the summer months, has returned to the Halifax and New York route, making fortnightly trips, alternately with the s.s. Florizel.

Writs have been issued against the Dominion Coal Co.'s s.s. Bonavista, by the owners of the barges Ernest and Aurora Boreale, for $280 and $150, respectively, for damages alleged to have been sustained, by the Bonavista colliding with them when entering her berth at Montreal.

An Imperial order-in-council has been issued declaring that certificates of competency granted by Newfoundland to persons intending to act as engineers on British ships, in addition to those granted to masters and mates, shall be on the same force as if they had been granted under the Merchant Shipping Act.

The Menzies Construction Co., Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $49,000 and office at Prince of Wales, Musquash co., to carry on a general construction business, and to build, own and operate steam and other vessels. The provisional directors are G. C Carman, C. Nevins, H. M. Hopper, C.

E. Lordley and H. O. McInerney, St John.

The Fishermen's and Sailors' Home Joint Stock Co., has been authorized to dispose of its property, to pay its liabilities, and to hand over the residue to the Royal National Mission to Deep Sea Fishermen, or other organization carrying on a fishermen's or sailors' home in St. John's, Nfld.

Press reports from Sydney, N.S., state that a daily service between Sydney and Port aux Basques, Nfld., will be inaugurated next season by the Reid Newfoundland Co., and also that Bowring Bros. have decided to have a vessel built for the St. John's-Sydney-Montreal service, to run with the Rosalind and Bonavista on a weekly schedule.

The Inglewood Pulp and Paper Co.'s steam tug Help which has been utilized for some time in connection with dredging near St. John, N.B., was driven ashore at Fort Dufferin breakwater during a gale, Oct. 4, and became a total loss. She was a wooden vessel, built at Liverpool, N.S., in 1903, and equipped with engine of 29 n.h.p. driving a screw Her dimensions were:—Length, 76 ft., breadth, 27.7 ft.; depth, 8.4 ft.; tonnage, 146 gross, 78 register.

Harvey and Co.'s s.s. Regulus, against which damages were assessed amounting to $155,000, in connection with the collision with the s.s. Karema, and which was sold by auction in New York recently, was bought in by the owners, who had her repaired in New York, loaded with cargo for St. John's, Nfld. Under the U.S. laws it is provided that no vessel adjudged responsible for an accident shall be compelled to pay damages amounting to more than her value. It is stated that this provision has been of considerable advantage to the owners. The Regulus was reported, Oct. 24, to have been totally wrecked, and 19 of her crew drowned while on her way to Sydney, N.S..

Bowring Bros'. sealing steamer Goneril, which is under construction at Glasgow, Scotland, is expected to be finished in Jan., 1911. She is stated to be the largest sealing steamer built for the Newfoundland trade, her dimensions being:—Length, 330 ft.; breadth, 48 ft.; depth, 31 ft., with a computed tonnage of 3,700. She is being fitted with accommodation for 200 saloon and 100 steerage passengers and equipped with the latest improvements, for a speed of 14 knots an hour. She will be run on the St. John's, Nfld., Halifax and New York route, in conjunction with the s.s. Florizel.

The steam tug Canso, recently completed at Yarmouth, N.S., is built under Lloyds survey to class 100 A1, and has dimensions:—Length over all, 97½ ft.; breadth, 22 ft.; depth, 8½ ft. The construction is on the frame and reverse frame system, spaced 2 ins. apart throughout her length; steel deck sheathed with hard wood; deckhouse, consisting of chief engineer's room, refrigerator room, bath, and store rooms, on the main deck; captain's quarters and wheel house on the upper deck. The men's quarters and mess room are located forward and the officers' mess room, etc., aft of the engine room. The engines are of the triple expansion type, with cylinders 12, 19 and 20 ins. diar. by 20 ins. stroke, developing about 400 h.p., making 160 revs. per minute.

J. Constant, of London, Eng., has submitted a proposal to the Sydney, N. S., city council, for the establishment of a shipbuilding yard, floating dock and repair plant, salvage plant, etc., and asks for a bonus, to be paid on such terms as the council may decide. The offer, it is stated, is subject also to Dominion and Provincial subsidies being granted. It is proposed to have the shipbuilding yard of sufficient capacity to build vessels up to 300 ft. long; to have the floating dock capable of dealing with vessels of 6,000 tons dead weight capacity, and to have the salvage equipment include one steam tug of the most modern type, and two seagoing salvage lighters of about 1,000 tons capacity. The matter was discussed by the council Oct. 10, and a committee appointed to go into the details and report.

Province of Quebec Marine.

The Dominion Dry Dock Co. has deposited plans with the Public Works Department for the construction of a first class dry dock at Levis, to cost about $4,000,000.

The Public Works Department received tenders during Oct. for the construction of wharves at Bic, St. Andre and Aylmer, a breakwater at Paspebiac, and piers at L'Assomption, Riviere des Prairies and St. Joseph de Sorel.

Press reports from Quebec state that the Government will have built at Quebec during the winter a vessel to be used as a transport between Quebec and Levis, in connection with the National Transcontinental Ry. It is stated that the cost will be between $400,000 and $500,000.

The ferry committee of the Quebec city council recently recommended that a letter be sent to the Levis Ferries, Ltd., informing it, on legal advice, that it had a contract with the city which spoke for itself and must be followed. The city council later resolved, by 16 votes to 14, to hold back the letter.

The captain of the steamboat Senator Derbyshire was recently fined $20 and costs at Quebec for employing unlicensed pilots, and a man whom he employed was fined $5 and costs for acting as a pilot without a license. The Quebec Corporation of Pilots, which brought the case, also recovered an amount for unpaid pilotage dues.

The Department of Marine has communicated with the Montreal board of control on the question of the overcrowding of ferry steamers, and states that it is expected that next spring the board will station men at the boats to see that they are not overcrowded, and in order to carry this out in a proper manner, automatic gates should be provided.

The Richelieu and Ontario Navigation Co.'s steamboat Rapids Prince, which has been built at Toronto, arrived at Montreal at the end of September, a number of the company's officials and directors meeting her at Lachine and completing the journey on board. She is to be berthed at Sorel for the winter, and not placed in service until the reopening of navigation.

The board appointed to enquire into the shipliners' grievances against shipowners at Montreal, has reported to the Department of Labor. The report is unanimous on the question of hours and the arrangement of work, but the companies' representative dissented from the recommendation as to wages, viz., 25c. an hour for day work and 32c. for night.

The Chateau Quinte, Ltd., has been incorporated under the Quebec Companies Act, with a capital of $20,000, and office at Ste. Marguerite du Lac Masson, to acquire and operate the hotel Bellevue there, and in connection therewith to own and operate steam and other vessels, cars and other vehicles propelled by any motive power. The provisional directors are S. G. Hyman, L. L. Pepin, C. B. Godwin, W. M. Parsons, and A. L. Rinfret, Montreal.

The Richelieu and Ontario Navigation Co. is being sued for damages for not carrying checked baggage on the same vessel as the passenger. The company claims that it is not compelled to carry it on the same vessel as the passenger, and that delay in delivery is not good ground for damages. The point was taken under consideration by Justice Charbonneau, of the Superior Court, Quebec, Oct. 3.

The Levis Ferry, Ltd., is having two ice breaking ferry steamboats built by G. T. Davie and Sons, of Levis, for the service between Levis and Quebec. The vessels, which are being built to Lloyds' specification class 100 A1, will be named Laval and Plessis, and will be of the following dimensions:—Length, 127 ft.; beam, 32 ft.; depth of hold, 17¾ ft.

The Canadian General Development Co.'s steamboat Sogenada, which recently arrived at Montreal from Great Britain, under her own steam, and which is stated to have been the smallest steamboat to cross the ocean, was built at Rutherglen, Scotland, in 1909, and is a screw driven vessel with engine of 29 n.h.p. Her dimensions are:—Length, 75.4 ft.; breadth, 15.6 ft.; depth, 8.2 ft.; tonnage, 65 gross, 6 register.

The Montreal city council and the Montreal Harbor Commission again discussed the question of the building of a landing stage on St. Helen's Island, Oct. 14. The city desires that either the Government or the Harbor Commission erect the stage, without any charge on the city, while the Commission states that the island, being under control of the Commission, the Government has no authority to do any work there, and as the money for the work would have to be raised by loan, it could not carry it out without charge, and offers to erect the landing stage and maintain it, for the city, for 6% per annum of the cost.

The report of the ferry committee of the Quebec city council, calling upon the council to advise the Levis Ferry, Ltd., that it must conform to the contract in connection with the ferry service between Quebec and Levis, and which was referred back to committee, was again sent to the council, Oct. 12, with the legal opinion that any decision which the city council might make in the ferry matter, would in no way affect or have any influence whatever on the cases pending before the courts, which were rather on matters of right than matters of fact, and that the city had no right to grant any delay to the company.

The Canada Atlantic Transit Co. has purchased the s.s. Newona, which was brought from England last fall, and of which we gave some details in our Nov., 1909 issue. She was built at Wallsend-on-Tyne, in 1909, and was specially designed for the Canadian lake and canal traffic. The machinery consists of tri-compound screw engines, with cylinders, 21½, 34 and 55 ins. diar. by 36 ins. stroke, supplied with steam at 190 lbs. pressure. There are six cargo hatchways, each 12 by 29 ft., and the hull is divided into three cargo holds by steel bulkheads. Her dimensions are:—Length, 250.3 ft.; breadth, 43 ft.; depth, 22.5 ft.; tonnage, 2,179 gross, 1,401 register.

Ontario and the Great Lakes.

Capt. J. A. Macdonald, who was connected with lake navigation for 50 years, and commanded vessels for about 40 years, died at Kingston recently, aged 74.

The Great Lakes Dredging Co.'s dredge, which sank recently outside Port Arthur, has been towed, under water, to Port Arthur, and floated for examination.

The Dominion Public Works Department will receive tenders to Nov. 7 for

the construction of an extension to the wharf at Providence Bay, Manitoulin Island.

The Jaques Transportation Co., Ltd., incorporated under the Dominion Companies Act, has been licensed to carry on its business in Ontario, with J. H. Hall, Ottawa, as its attorney.

The Inland Lines, Ltd., s.s. Dundurn, which ran aground near Alexandria Bay, N.Y., was released by the company's s.s. Glenellah, and taken to Kingston for examination and repairs.

The Dominion Government survey steamboat Bayfield is engaged in taking soundings and other survey work in Lake Ontario. She commenced operations at the eastern end, and is working along westerly.

The Geo. Hall Coal Co.'s steamboat Phoenix ran on the rocks about six miles west of South Bay point, early in Oct., and salvage operations have been successfully carried out, and the vessel docked for repairs.

W. M. German, M.P., is reported to have stated that the Government will provide an appropriation, next session, for the commencement of construction on a new Welland canal, about 22 miles long, starting about six miles west of Port Colborne, with its outlet on the Jordan River.

The Dominion Fish Co., Toronto, has purchased the steamboat C. W. Moore, formerly owned by A. Booth and Co., Chicago, Ill. She was built at Allegan, Mich., in 1881, and is equipped with engine of 19 n.h.p., driving a screw. Her dimensions are:—Length, 124 ft.; breadth, 24 ft.; depth, 9.4 ft.; tonnage, 428 gross, 259 register.

The Morden Transit Co.'s steamboat United Lumberman, was destroyed by fire at North Tonawanda, N.Y., at the end of Sept. She was a screw driven vessel, with engine of 46 n.h.p., and was built at Dresden, Ont., in 1884, her dimensions being:—Length, 139.2 ft.; breadth, 31.6; depth, 11.7 ft., tonnage, 399 gross, 259 register.

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for Sept., as follows Superior 601.99; Michigan and Huron, 580.30; Erie, 571.88; Ontario, 245.70. Compared with the average Sept. levels for the past 10 years, Superior was 1.05 ft. below; Michigan and Huron, 0.73 ft. below; Erie, 0.55 ft. below, and Ontario, 0.47 ft. below.

The Lake Coast Trading Co.'s steamboat Kaministiquia, which was burnt to the water's edge recently at Port Arthur, was built at Toronto in 1886, named Imperial, and was rebuilt and renamed at Port Arthur in 1906. She was screw driven, with engine of 13 n.h.p.; her dimensions were:—Length, 109 ft.; breadth, 22 ft.; depth, 7 ft.! tonnage, 106 gross, 72 register. She had been used for some time as a ferry and passenger boat on the Kaministikwia River.

The Ontario Gravel Freighting Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at Windsor, Ont., to carry on the business of dredging and marine transportation on the Great Lakes and inland waters, and to build, own and operate steam and other vessels, wharves, docks, warehouses, etc. The provisional directors are:—O. E. Fleming, K.C., C. W. Cadwell, Windsor, Ont.; H. H. Oakes, B. Waller, I. B. Unger, Detroit, Mich.

Press reports state that negotiations are in progress involving the reconsideration of the proposed boundary line between Ontario and Manitoba, with the intention of giving Ontario access to the port which it is intended to open up on Hudson Bay, when the Hudson Bay railway is constructed. The idea is to extend the Ontario line to the new port, and to give Manitoba, in return, a portion of the Keewatin territory which it was the intention to include in Ontario, when the new boundaries are settled.

The Dominion Department of Marine is reported to have arranged to take over from the U.S. all the lighthouses, lights and other aids to navigation in the Limekiln crossing in the Detroit River. Although the crossing is in Canadian territory, the aids to navigation there have hitherto been in charge of the U.S., in view of the fact that some years ago the channel was dredged and improved by the U.S. Government. It is stated that the Department contemplates considerable improvements in the lights there during next year.

A joint committee of the Toronto city council and board of trade has recommended that application be made to the Dominion Parliament to recognise the existing harbor commission and to alter and enlarge its powers, so that it may control all property on the water front, within the city limits, build docks, railways, elevators, etc., and impose and collect tolls and penalties. The present commission consists of five members, two of whom are nominated by the city council, two by the board of trade, the fifth being nominated by the other four and appointed by the Governor-in-Council. Under the new proposals, it is desired that the city council nominate three, the Governor-in-Council one on his own motion, and one on the nomination of the board of trade.

Manitoba, Saskatchewan and Alberta.

The steamboat recently built in Winnipeg for the Arctic Ice Co., Winnipeg, of which we have previously given some particulars, has been named Amelia Mac. She is screw driven, with engine of 16 n.h.p., and is of the following dimensions:—Length, 66 ft.; breadth, 17 ft.; depth, 7 ft.; tonnage, 65 gross, 44 register.

The Lake Winnipeg Shipping and Supply Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000, and office at Winnipeg, to carry on a general shipping, navigation, shipbuilding, wrecking, dredging and warehouse business. The provisional directors are E. Bickerdike, E. and R. Siderfin, W. D. Robertson, D. Howatson and C. S. Scott, Winnipeg.

The Northern Transportation Co.'s steamboat Northland Call arrived at Grouard, Alta., at the end of Sept., being, it is stated, the first steam vessel to make the through trip from Athabasca Landing to the west end of Lesser Slave Lake. She navigated the Athabasca River from Athabasca Landing to Mirror Landing, thence up the Little Slave River, through the hitherto unnavigable rapids to the east end of Lesser Slave Lake, and across the lake to Grouard. The wing dams, recently constructed in the Little Slave River, have made such a trip possible by increasing the depth of water.

A steel barge, the Rosamond Billett, which was launched at Winnipeg Oct. 10, has been built for Hugh Sutherland, Executive Agent Canadian Northern Ry., to transport sand and other building materials on Lake Winnipeg and the Red River. The barge is 170 ft. long, 40 ft. beam and 13 ft. deep, and will carry 1,000 tons of sand on a draught of 8½ ft. It is equipped with three hoppers, in which the sand is deposited by a powerful centrifugal pump. By a system of pipes and valves the sand is taken from these hoppers with the same centrifugal pump and discharged on shore. The barge is propelled by two compound engines of 366 h.p., operating twin screws, and there are two Scotch boilers. The barge was designed by W. E. Redway, N.A., Toronto, and built by the Doty Engine Works, Ltd.

B.C. and Pacific Coast Marine.

Capt. F. Amesbury, Manager Victoria and Vancouver Stevedoring Co.'s Vancouver branch, died there recently.

The Canadian-Mexican-Pacific Steamship Co. is reported to have chartered the s.s. Wensleydale, 2,568 tons.

The Queen Charlotte Whaling Co., Victoria, is applying for permission to purchase certain lands at Rose Harbor, Moresby Island.

The C.P.R. commenced a double triangular weekly steamship service between Vancouver, Victoria and Seattle,

The Owen Sound Wire Fence Co. Limited
Owen Sound, Ont.

Oct. 30. It is intended to continue it throughout the winter.

The C.P.R. has, it is reported, owing to the tremendous growth of the northern B.C. trade, ordered another steamship to be built in England.

The C.P.R. s.s. Princess Beatrice ran aground in the Narrows, near Vancouver recently. It has been stated that the damage was not serious. She is a wooden vessel, and was built at Victoria in 1903.

Plans have been deposited with the Public Works Department, Ottawa, by Bullen Bros., Esquimalt, B.C., for the construction of a dry dock there. It is said that the financial arrangements for the carrying out of the work are well advanced.

Press reports from Vancouver, state that the Pacific Whaling Co. is arranging to have built in Norway, five additional whaling steamers for use in B.C. waters, and that they will be of the same type as the William Grant, the largest of the company's vessels.

The Cocos Island Hydraulic and Treasure Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $300,000, to seek for treasure deposited on Cocos Island, on adjacent islands and in the vicinity, and in connection therewith to own and operate steam and other vessels.

The Portland Canal Short Line Ry. has deposited with the Public Works Department, Ottawa, and at the registry office at Prince Rupert, plans and description of site and side elevation of a proposed railway wharf and trestle approach, to be built near the mouth of Bear River at Stewart.

Canadian Collieries (Dunsmuir) Ltd., incorporated under the Dominion Companies Act, with power, among other things, to own and operate steam and other vessels, wharves, piers, docks, etc., has been licensed to carry on its business in British Columbia, with W. J. Taylor, Victoria, as its attorney.

J. McGowan, engineer of the C.P.R. British Columbia Coast Service, is in Great Britain for the purpose of inspecting the two vessels, Princess Adelaide and Princess Mary, which are now practically complete. The former, which is being built at Glasgow, Scotland, will be the first one to sail for the Pacific coast.

The Canadian Fish and Cold Storage Co., Prince Rupert, has registered its recently built steamboat, which has been named F. H. Phippen. It was built at North Vancouver this year, and is a screw driven vessel with engine of 7 n.h.p. Its dimensions are:—Length, 54.4 ft.; breadth, 12.3 ft.; depth, 6 ft.; tonnage, 26 gross, 17 register.

The Dominion Government is reported to have approved the Thompson Co.'s plans for the construction of a dry dock at Vancouver, B.C., providing for one of the second class under the subsidy act granting aid of 3½% per annum on the cost of construction, for 25 years. The dock will be 600 ft. long, and it is estimated that the cost will be $1,000,000.

The Department of Public Works has awarded a contract for the construction of a steel bow well twin screw barge loading dredge for British Columbia, to W. Simons and Co., Renfrew, Scotland, who are represented in Canada by Jno. Reid and Co., Board of Trade Bldg., Montreal.

The British Columbia General Development Syndicate, Ltd., has been incorporated under the B.C. Companies Act, with a capital of $250,000, to carry on a general development business, and in connection therewith to build, manage or control tramways, railways, steam and other vessels, wharves, docks, etc., and to act as general carriers by land and water.

The Terminal Steam Navigation Co.'s s.s. Belcarra was reported to have sunk off Jarvis Inlet, Sept. 17, after striking a rock. The passengers and crew escaped in the boats. She was a screw driven vessel, built in Vancouver in 1902, and was formerly known as Unican. Her dimensions were, length 89.2 ft., breadth 20 ft., depth 8 ft.; tonnage, 253 gross, 172 register, with engine of 20 n.h.p.

The stern wheel steamboat Hamlin, which has recently been purchased by Greer, Courtney and Skene, has been altered for oil consumption, and to fit her for towing purposes, and is being operated up the Fraser River. She was built in Vancouver in 1898, her dimensions being:—Length, 146.2 ft.; breadth, 30.8; depth, 4.6 ft.; tonnage, 515 gross, 323 register. She is equipped with engine of 17 n.h.p.

The Royal City Navigation Co.'s steamboat Paystreak, while clearing from the wharf at Pitt river, recently, backed on to some rocks, which cut a hole in the bottom, behind the boilers. The cargo was safely removed, and the vessel floated and taken to New Westminster for repairs, which were not heavy. She was built at New Westminster this year, and is operated between New Westminster and Chilliwack.

The Westholme Lumber Co., Vancouver, is being sued by insurance underwriters for $500, alleged to be a sum agreed to be paid by the company for the cargo of coal on the barge Quatsino, wrecked between Green and Grey islands, in Oct., 1909. It is stated that after a small quantity of the coal was removed, the barge slid off the reef into deep water, when the company repudiated the contract.

The Puget Sound Navigation Co. is reported to have purchased the steamships Yale and Harvard, which were operated by the Eastern Steamship Co. a year or two ago between St. John, N. B., and Boston, Mass. It is said that they will be run between Seattle, Wash., and Vancouver and Victoria. Press reports stated that the vessels were to leave Boston for the Pacific coast during October.

The Pacific Marine Brokerage Co., Ltd., has been incorporated under the B. C. Companies Act, with a capital of $25,000, to acquire the power boat Faloma, and the marine brokerage business carried on in New Westminster by F. S. DeGray: to build, purchase or otherwise acquire and operate steam and other vessels for the conveyance of passengers and freight, and to carry on the general business of carriers by land and water.

The Public Works Department has awarded the contract for the construction and delivery at Vancouver of a large bucket ladder dredge to W. Simons and Co., Renfrew, Scotland, represented in Canada by Jno. Reid and Co., Montreal. It is stated to be a condition that the dredge must be delivered in six months, under heavy penalties for delay. The dredge is to be used for widening the entrance to Burrard Inlet, and will be the largest and most powerful of its kind on the Pacific Coast.

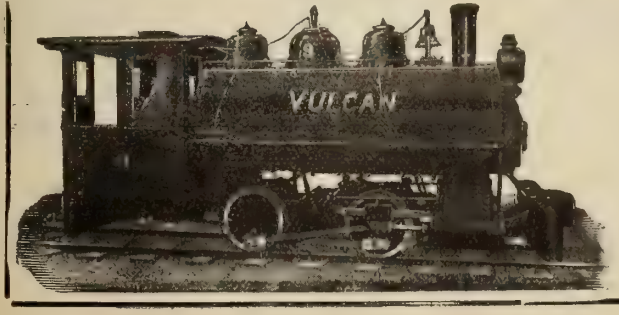
A petition, signed by those engaged in the fishing industry in the Fraser River country, has been sent to the Minister of Marine and Fisheries, asking that in future no licenses to fish be granted to Asiatics, or persons interested in the fishing industry through motives of speculation. It is pointed out that a number of fishermen have to go to the U.S. to earn a living, made possible by the fact that Asiatics are not granted licenses there.

The C.P.R. s.s. Princess Adelaide, which has been built at Glasgow, Scotland, for the Pacific Coast service, is a single screw steamship, with dimensions:—Length, 290 ft.: breadth, 46 ft.; depth, 17 ft.; constructed of steel throughout, with a cellular double bottom, seven transverse bulkheads, two water tight flats, and is practically unsinkable. She has 118 staterooms, and on her recent trial trip maintained an average speed of 18.25 knots an hour.

The Marine Department is reported to have acquired from the G.T.P.R., four acres of land on the south shore of Casey Cove, Prince Rupert, about 2½ miles from the city, for the establishment of a lighthouse and buoy depot. The work, which it is stated will be undertaken, includes workshops, stores, etc., connected with a wharf of re-inforced concrete, projecting 30 ft. into the water, by a tramway, with houses for employes. The estimated cost is given as $100,000.

The C.P.R. s.s. Princess Mary, which is being built at Paisley, Scotland, for the B.C. Coast Service, was launched there recently. She is a twin screw vessel, with dimensions:—Length, 210 ft.; breadth, 40 ft.; depth, 16 ft. The upper deck extends the whole length, and she will have accommodation for 200 passengers. She is equipped with two sets of triple expansion engines, designed for a speed of 15 knots an hour. The vessel was christened by Mrs. Pritchard, daughter of A. Piers, Manager C.P.R. Steamships.

The Fort George Lumber and Navigation Co., Vancouver, has added two steamboats to its fleet, named respectively Chilcotin and Fort Fraser. Both were built at Soda Creek this year, the dimensions of the former being:—Length, 134.5 ft.; breadth, 23.5 ft.; depth, 4.5 ft.; tonnage, 435 gross, 274 register, equipped with engine of 21 n.h.p., driving a paddle wheel, and of the latter: Length, 56 ft.; breadth, 11.8 ft.; depth, 2.9 ft.; tonnage 33 gross, 21 register; equipped with engine of 2 n.h.p. driving a paddle wheel.



Now is the time to place your order for Contractors' Locomotives. Why not buy the best?

Inter-phones

No. 2016—Type Metal Inter-phone for desk use

Inter-phones will connect all your departments—bring all the strings of your business to your own office chair—and make it possible for you to get in touch with any of your employees—or for them to get in touch with each other—at a second's notice and without loss of time.

No. 1324 Non-Flush Type Metal Inter-phone for wall mounting

Inter-phones cost little to install and operate at a low maintenance charge. The minutes they save will pay over and over again the cost of their installation and operation.

On request we will be glad to send you **free** Bulletin No. 1012 with full particulars.

NOTICE.

To the Holders of The Canadian Northern Railway Company 5 per cent. Income Charge Convertible Debenture Stock.

Notice is hereby given that the amount of interest to be paid on the 2nd day of November, 1910, to the nolders of the above mentioned stock, in respect of the half year ending June 30th, 1910, will be at the rate of 5 per cent. per annum.

By order of the Board of Directors.
Toronto, October 8th, 1910.

R. P. ORMSBY, Assistant Secretary,
The Canadian Northern Railway Company.

It is reported that a party of business men from Portland, Ore.., and Seattle, Tacoma and Spokane, Wash., has chartered the G.T.P. Steamship Co.'s s.s. Prince Rupert for a cruise to Honolulu next February, and it has been pointed out that the party will have to embark at a Canadian port, as, under the U.S. laws, a voyage between the main land and Honolulu is regarded as coastwise navigation, and therefore, the Prince Rupert, being a foreign vessel, cannot operate between a U.S. port and Honolulu.

G. A. Keefer, Dominion Resident Engineer, New Westminster, in charge of the dredging operations on the Fraser River, is reported to have stated recently that there is now not less than 15 ft. of water in any part of the sandheads at extreme low water, and at ordinary high water, not less than 27 ft., and at higher tides, 30 ft. The river is now considered navigable for any vessel, the Annieville bar, which was some danger to navigation, having been removed, the recently constructed wing dams having completely cleared the channel. A new channel through the sandheads, decreasing the distance between New Westminster and deep water by about a mile, will be completed within a year.

E. D. Watson, cashier Reid Newfoundland Co., was married to Miss C. M. White, at Boswood, Nfld., Oct. 5.

Canadian Northern Fisheries, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $2,500,000 and office at Toronto, to carry on the business of fishing in all its branches; to own water lots, wharfage rights and privileges, trawling and seining rights, etc.; to build, own and operate vessels of all descriptions, wharves, docks, piers and works for the improvement of navigation, fishing and whaling, and other busin thereto. The provisional directors are F. H. Phippen, K.C., G. G. Ruel, A. J. Reid, R. H. M. Temple and R. P. Ormsby, all of whom are connected with the Canadian Northern Ry. Legal Department, Toronto. In this connection a recent cablegram from London Eng., says: —Wm. Mackenzie and associates are planning another appeal to the English market, viz., Canadian Northern Fisheries £400,000 5% bonds, to be offered at 86. The purpose is to acquire and operate a whaling business on the Pacific coast. The underwriters are to receive 2½% cash bonus, and a bonus of 19% in common stock is being given to the syndicate with whom Mr. Mackenzie and associates are now endeavoring to place the issue.

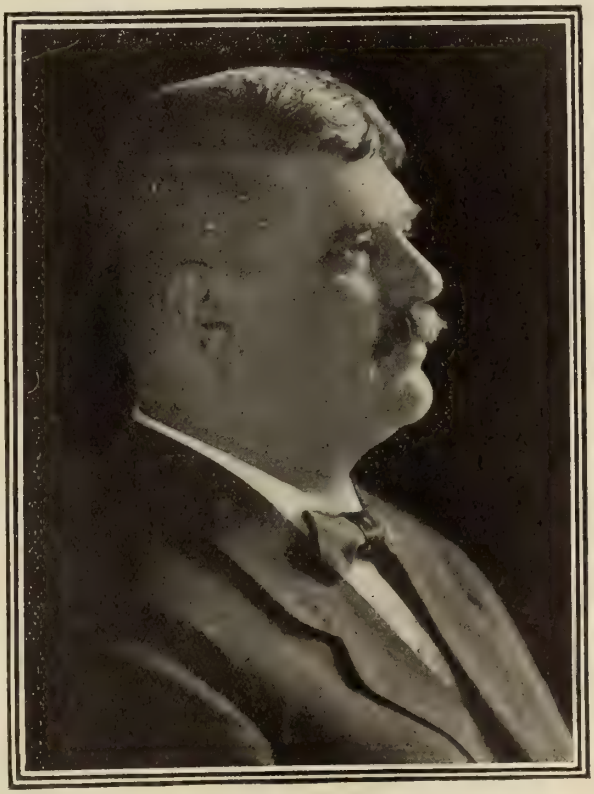
A Review of the Past and Present Locomotive Boiler, with Suggestions.

By T. W. Lowe, General Boiler Inspector C. P. R. Western Lines.

It is not my intention in this paper to attempt to give a complete description of the design, construction and maintenance of locomotive boilers between 1874 and 1910, but rather to refer to them in a general way, and explain the necessity for the many changes in design during the past 36 years. Further on in the paper I will refer to the "Maintenance and care of the modern locomotive boiler," make some remarks on round house practice, and conclude with special reference to feeding the boiler with water, and carrying a sufficient quantity to avoid damage to the crown sheet of the inside firebox, due to the absence of water. When I refer to the boiler, I am speaking about plates under tensile stress, and when speaking about the inside firebox, I refer to plates under compression.

The types of locomotive boilers which have been, and still are, in general use on locomotives on the North American Continent are commonly titled under the following names: Straight, figure 1; wagon top, figure 2; extended wagon top with Belpaire firebox, figure 3, and extended wagon top round top firebox, figure 4, together with many other designs under experiment in the U.S., and which derive their names from the patentee. The only material difference in their construction compared to any I have already quoted is to be found in the design of the inside and outside firebox. The straight boiler, figure 1, derives its name because the barrel plates and outside firebox are parallel on the top, and steam dome being usually located ahead of the firebox. The wagon top boiler, figure 2, consists of a firebox elevated above the barrel courses, with a tapered section joining them, having its dome located over the firebox or taper course, dependent entirely upon the style of staying adopted to support the crown sheet of the inside firebox. The extended wagon top with Belpaire firebox, figure 3, carries the designer's name, the most noticeable difference in construction is at the firebox, here the top is flat and tapered, otherwise the general shape ahead of it conforms to that of the extended wagon top design. The extended wagon top round top firebox, figure 4, has one or more courses ahead of the firebox corresponding in diameter to that of the firebox, with the dome usually located on the course next the firebox and a taper course further forward.

Locomotive boilers consist of the following main parts: smoke box, front tube sheet, tubes, barrel, steam dome, outside firebox, and inside firebox, the latter two being separated at the bottom legs by a foundation ring secured in place by suitable rivetting, all of the inside firebox being supported by threaded stay bolts, excepting a portion of the crown on some designs, which have crown bars and sling stays. Other staying in general use are face plate staying, barrel stays to back tube sheet, front tube sheet staying, dome stays, lateral stays, and flexible stay bolt, all of which when properly designed, marked off, assembled, rivetted, caulked and tubed, entitle the boiler to receive a proof water and steam test, when, if satisfactory, it is ready to be applied to the engine.



W. G. Brownlee
General Transportation Manager Grand Trunk Railway.

Let us now look into the construction of the straight boiler, figure 1, which in the early days were built with the longitudinal barrel seams lap-jointed, and double rivetted, with very little consideration given to whether the rivet and plate section were proportionately strong, and when of the best construction and workmanship did not figure to have more than 56% of the strength of the original plate, with the factor of safety frequently as low as three, yet we find from our experience that not one of the many of this old construction could ever have failed in service had the practical man and supervisor used common sense, and taken reasonable precaution to repair defects brought to their notice because of leakage. This longitudinal seam construction has been abandoned in the modern boiler and we can now have seams designed which all afford the same strength or more than the original plate, with that much more security. Several of the straight boilers which I met with in my early practice had the longitudinal seams welded throughout and at the time of scrapping they were probably 25 years or more old, and had not caused any inconvenience working under the customary 140 lbs.. pressure per square inch. The Countess of Dufferin, now in the Wm. Whyte park at Winnipeg, is a relic of this design. The steam domes on the Dubb boilers all came to the C.P.R. with welded vertical seams, and although some of these boilers are still in existence working under 150 lbs. pressure, not one of these welded seams were ever known to fail or leak. If asked why the practice of welding seams has been abandoned, I will have to take refuge under the plea that it is expected to be restored again, probably with more success than before because of the thicker material now in general use. The flanging of the old straight boilers had a very sharp radius in contrast to the present designs, and this resulted in frequent cracking in their root, as well as serious leakage at the bottom corners of the firebox.

Although the design of the straight boiler has not been abandoned altogether, the wagon top boiler, fig. 2, was introduced because of the necessity for more steam room. A much improved longitudinal and circumferential seam joint for the boiler came into practice with this design, yet the application of the steam dome on top of the firebox, and the necessity of partly supporting the inside firebox crown sheet with sling stays attached to the dome and crown bars, together with sling stays from the crown bars secured to the wagon top, set up breathing stresses throughout the wagon top, which were constantly being recorded by defects developing with the dome stays, sling stays, dome and wagon top itself, which necessitates frequent inspection and expense to maintain, and because of this it was not long before the extended wagon top with Belpaire firebox, fig. 3, came into favor, and although straight boilers are being built and operated, principally in good water, I would never expect the wagon top boiler to regain its popularity. The extended wagon top boiler with Belpaire firebox, fig. 3, was a radical departure from any previous design in construction, because the top of the firebox is

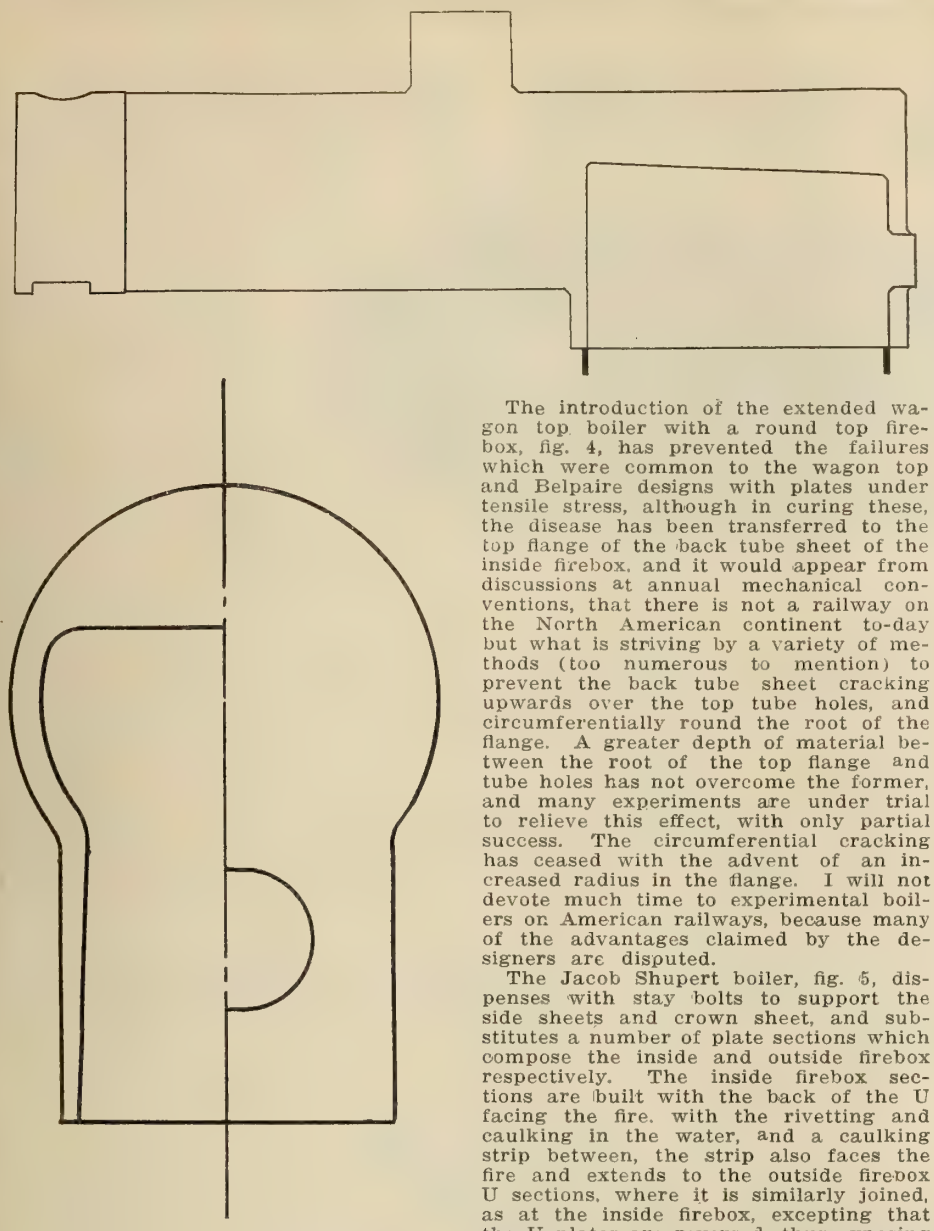

Fig. 1. Straight Locomotive Boiler.

flat and tapered horizontally, which necessitates a throat connection between the firebox and barrel to correspond with the different shapes of each. This design was in service under a year when the top of the throat connections developed cracks which necessitated reinforcements at once, and although the actual cause for this failure has not been assigned, it is satisfactory to know that the reinforcements applied have been entirely satisfactory as regards preventing further trouble. It is apparent to me that if this flat connection is independently stayed free from the influence of the inside firebox that this connection can be maintained as integral as any other part of the boiler. Experiences with this design recommends it for the following main reasons, nonpriming, foamless, breaks less stay bolts and is generally more economical in boiler repairs compared to other designs. These are results attributable to better circulation. The staybolting of the fireboxes is accomplished under the soundest principles of good boilermaking, and I am firmly convinced that its many points of superiority over other designs more than compensate for the extra initial cost of manufacture compared to the extended wagon top round top firebox.

The introduction of the extended wagon top boiler with a round top firebox, fig. 4, has prevented the failures which were common to the wagon top and Belpaire designs with plates under tensile stress, although in curing these, the disease has been transferred to the top flange of the back tube sheet of the inside firebox, and it would appear from discussions at annual mechanical conventions, that there is not a railway on the North American continent to-day but what is striving by a variety of methods (too numerous to mention) to prevent the back tube sheet cracking upwards over the top tube holes, and circumferentially round the root of the flange. A greater depth of material between the root of the top flange and tube holes has not overcome the former, and many experiments are under trial to relieve this effect, with only partial success. The circumferential cracking has ceased with the advent of an increased radius in the flange. I will not devote much time to experimental boilers on American railways, because many of the advantages claimed by the designers are disputed.

The Jacob Shupert boiler, fig. 5, dispenses with stay bolts to support the side sheets and crown sheet, and substitutes a number of plate sections which compose the inside and outside firebox respectively. The inside firebox sections are built with the back of the U facing the fire, with the rivetting and caulking in the water, and a caulking strip between, the strip also faces the fire and extends to the outside firebox U sections, where it is similarly joined, as at the inside firebox, excepting that the U plates are reversed, thus exposing the rivetting and caulking for repairs. The integrity of the inside and outside firebox depends on the plate which retains the U plates in position and on which superior workmanship under construction is a necessity, as the vital section through the rivet holes is hidden from service inspection.

The Wood corrugated inside firebox boiler, fig. 6, is another design which the patentee claims is desirable to prevent cracking of fireboxes. Its construction is such that the staybolts are on the high side next the fire, and on the low side next the water. It is my opinion that if their position was reversed, and it was possible to keep the corrugations free from scale formation, the firebox would have greater usefulness.

The combustion chamber firebox boiler, fig. 7, is on trial on some roads. The C.P.R. Western Lines experimented with two of this design about 18 years ago, with which we had little trouble due to tube leakage, yet there were other stresses set up which created cracking of the sheets, and resulted in numerous stay bolt breakages which stopped further trials, as they were deservedly unpopular.

The Wooten boiler, fig. 8, is designed specially at the firebox end with a view of getting a large grate area, and has a shallow firebox to burn anthracite coal.

The barrel of the boiler in some of the Mallet engine boilers, fig. 9 C.P.R., and fig. 10, U.S., is built in two sections, separated by an intermediate chamber, each section having its own complement

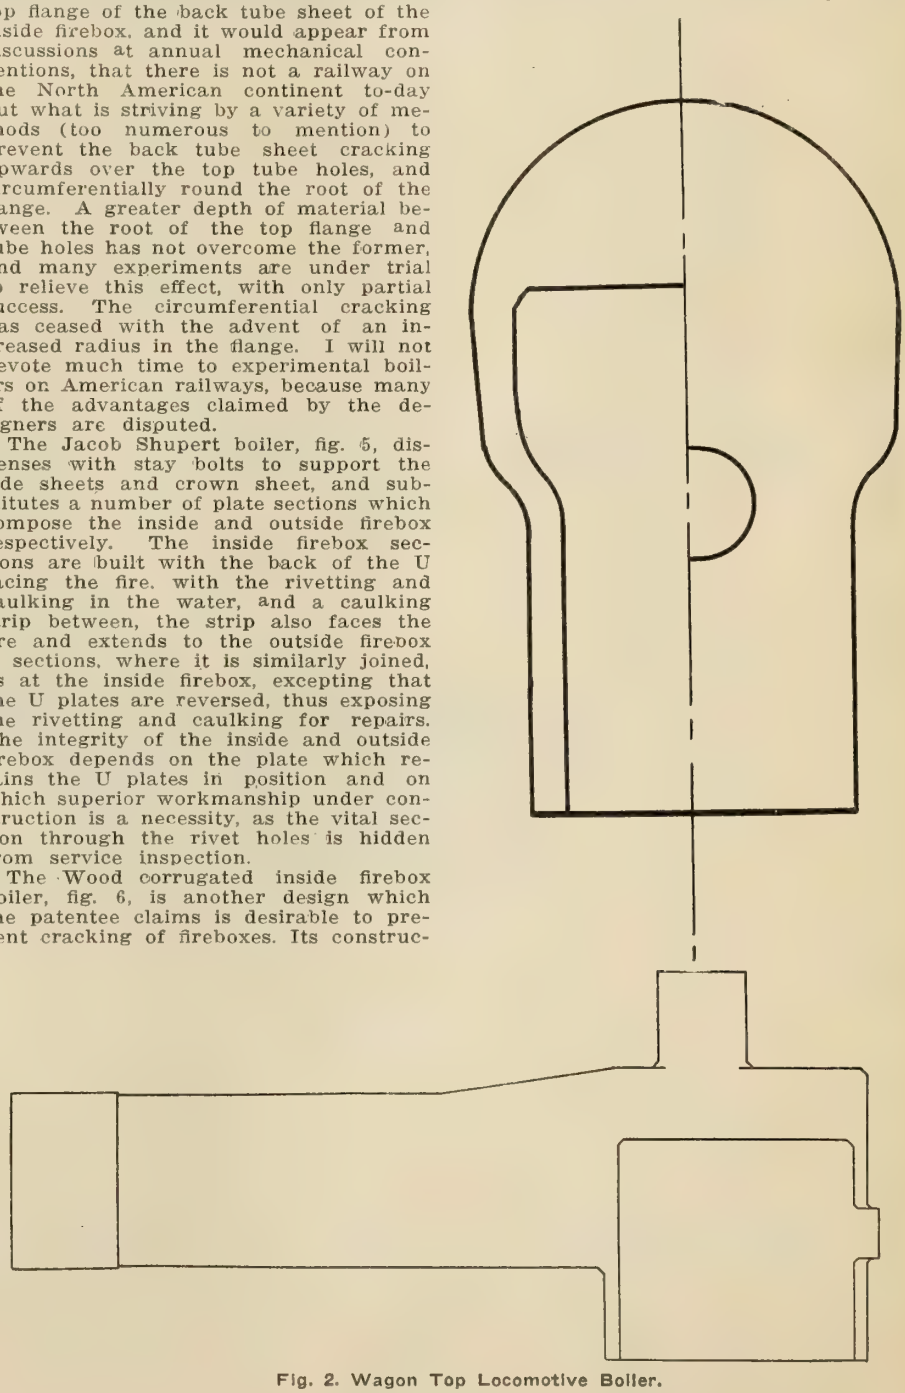

Fig. 2. Wagon Top Locomotive Boiler.

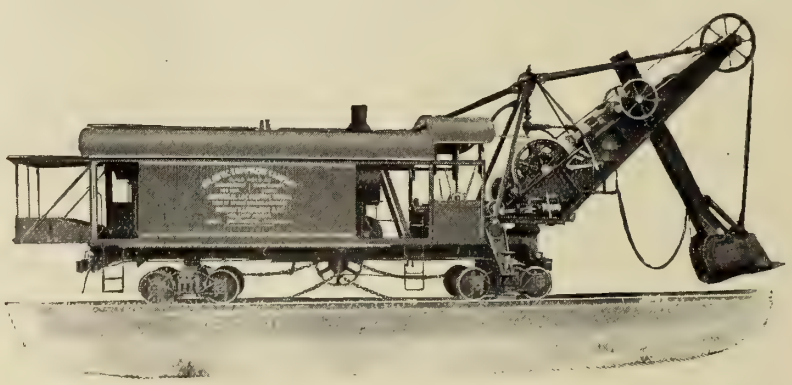
ROTARY SNOW PLOWS

Rotary Snow Plows have been in successful operation under the most trying conditions for over twenty-five years.
They keep the road open.
Work with certainty and regularity.
Do not spread the rails.
Do not derail.
Heavy snowstorms and deep drifts increase operating expenses.
No snow too heavy or too hard for the Rotary.
No drift too deep.

THE NEW ATLANTIC STEAM SHOVEL

SIMPLE - STURDY



For heavy or light digging.
No chain troubles.
Few repairs.
Not top heavy.
Saves fuel.

MONTREAL LOCOMOTIVE WORKS, LTD.

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

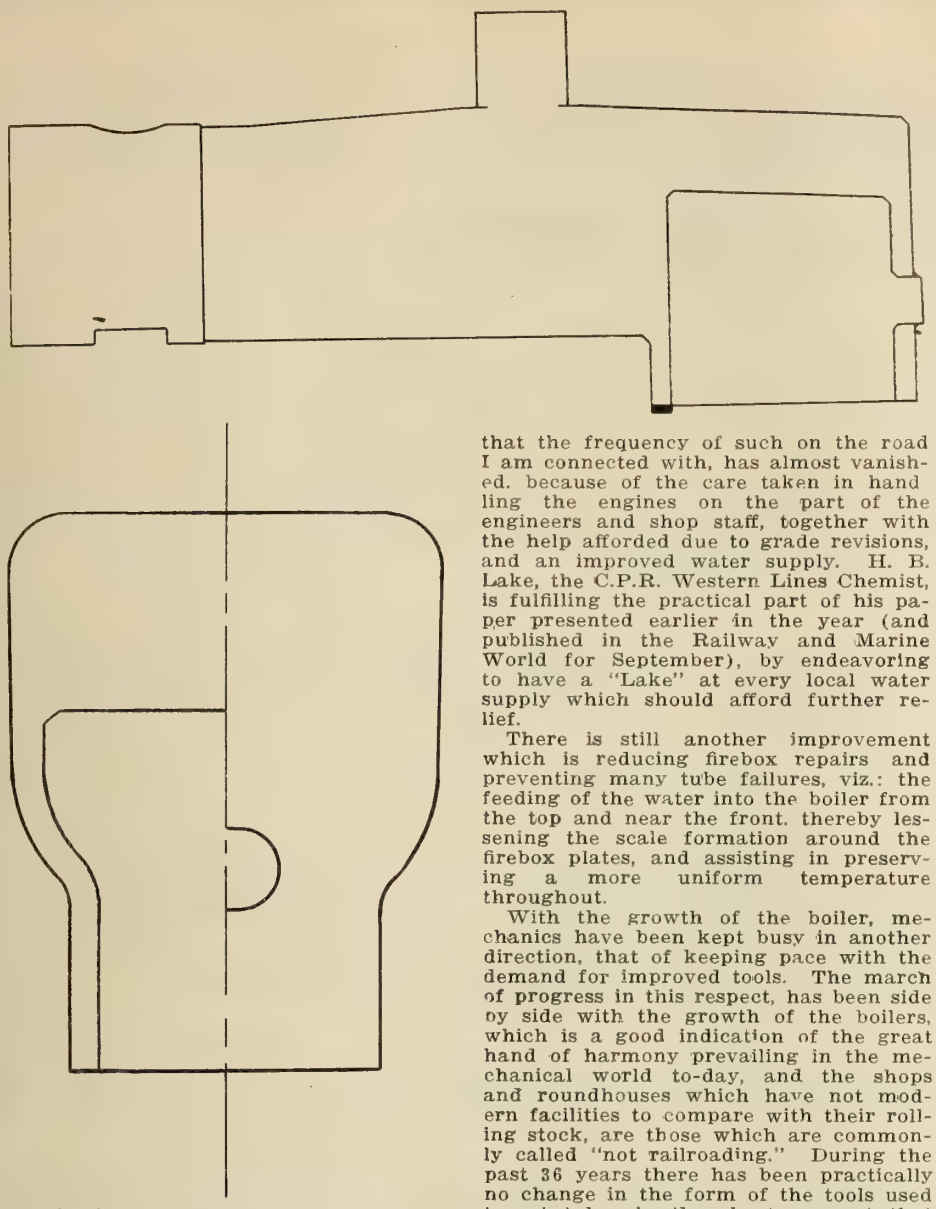


Fig. 3. Extended Wagon Top Locomotive Boiler, with Belpaire Firebox.

of tubes, the forward section being practically a water heater for the main boiler and firebox at the rear, they are connected with circulating pipes.

There are many other designs which I will pass by and close this part of the paper by alluding to the comparison of the general dimensions of locomotive boilers in use in 1874 with those of some obtaining today. In 1874 the diameter was about 40 ins., material iron, 45,000 lbs. tensile stress per sq. in., ⅜ in. thick, whereas in 1910 the diameter has increased to 86 ins. material steel, 60,000 lbs. tensile stress per sq. in., ⅞ in. thick, and the boiler pressure has increased from 140 lbs. to 200 lbs. and over, per square inch. The grate area has increased from about 18 sq. ft. in 1874 to 68 sq. ft. in 1910. The inside fireboxes in 1874 were about 72 ins. long, 35 ins. wide, compared to many to-day 126 ins. long 78 ins. wide. There were about 140 tubes 2 ins. diameter 11 ft. long in 1874, whereas a number to-day have 448 tubes 2¼ ins. diameter 21 ft. long.

The most prolific source of annoyance to railway officials is to have a leaky boiler on a train, or a failure because of leaks, as it generally presents itself by the following from the Engineer "Tubes leaking" or "Tubes burst," and it is unusual to have any other class of boiler failure, I am pleased to say that the frequency of such on the road I am connected with, has almost vanished. because of the care taken in hand ling the engines on the part of the engineers and shop staff, together with the help afforded due to grade revisions, and an improved water supply. H. B. Lake, the C.P.R. Western Lines Chemist, is fulfilling the practical part of his paper presented earlier in the year (and published in the Railway and Marine World for September), by endeavoring to have a "Lake" at every local water supply which should afford further relief.

There is still another improvement which is reducing firebox repairs and preventing many tube failures, viz.: the feeding of the water into the boiler from the top and near the front. thereby lessening the scale formation around the firebox plates, and assisting in preserving a more uniform temperature throughout.

With the growth of the boiler, mechanics have been kept busy in another direction, that of keeping pace with the demand for improved tools. The march of progress in this respect, has been side by side with the growth of the boilers, which is a good indication of the great hand of harmony prevailing in the mechanical world to-day, and the shops and roundhouses which have not modern facilities to compare with their rolling stock, are those which are commonly called "not railroading." During the past 36 years there has been practically no change in the form of the tools used to set tubes in the sheets, except that they are power driven, and welded principally by machines, on the roller principle.

Several railways are experimenting by welding tubes into the firebox tube sheet, the success of which has not been fully demonstrated. My own views in this respect are, that few men are sufficiently familiar with the cost of this method, neither have they experimented with it long enough to determine the percentage of failures. that might be expected, compared to the present method, and therefore it is too soon to say that it will succeed the old method.

Corrosion is another enemy to boiler plates, particularly noticeable on the pressure side of the inside and outside firebox close to the foundation ring, as well as throughout the back tube sheet, tubes and the bottom of the barrel of the boiler, from the pressure side. This is discovered by vigilant inspection and repaired by authorized boiler practices, for which regulations are issued by the heads of the mechanical department to the foremen (on well governed railways) to guide them in directing a standard method of performance. Corrosion is in a degree preventible by neutralizing the action with zinc slabs suspended inside the boiler, it requires renewal frequently and is best suited for marine boiler practice because of their accessibility. Little experimenting has been conducted with locomotive boilers to prevent corrosion, principally because they are inaccessible, except at general repairs, and with the tubes removed. It is my opinion that treatment to combat corrosion will become a very live question in the future and there is the whole truth in the old proverb: "Prevention is better than cure"—and more especially so if shown to be profitable.

Incrustation is one of the chief promoters of trouble to the locomotive boiler. It enters the boiler as impure water and the incrusting solids are precipitated around the stay bolts in the water space, adhere to the firebox plates, causing them to bulge and crack, and gradu-

For End Elevation See Fig. 4.

ally develop a stocking of scale surrounding the tube, which necessitates their frequent renewal. The water containing excessive salts in suspension does not develop as much injury to a boiler as that which contains a much less quantity of salts in solution, for the reason that the former can be almost all washed out at intervals, to prevent injury, whereas most of the latter has to be chiselled away because of its hardness. Washing out the boilers is a most important part in the care of boilers. Our practice is to have printed regulations and a blue print of the tools in general use, conveniently placed in the round house, so that the new and regular staff can become familiar with the authorized methods, and it is then the foreman and other officials' duty to see they are observed. The treatment of water is a chemical question, and on most railways it is in direct charge of the chemist, so. we look to him to prevent the boilers getting filled up with incrusting solids, which we appreciate can be more conveniently removed by water purification before entering the boiler.

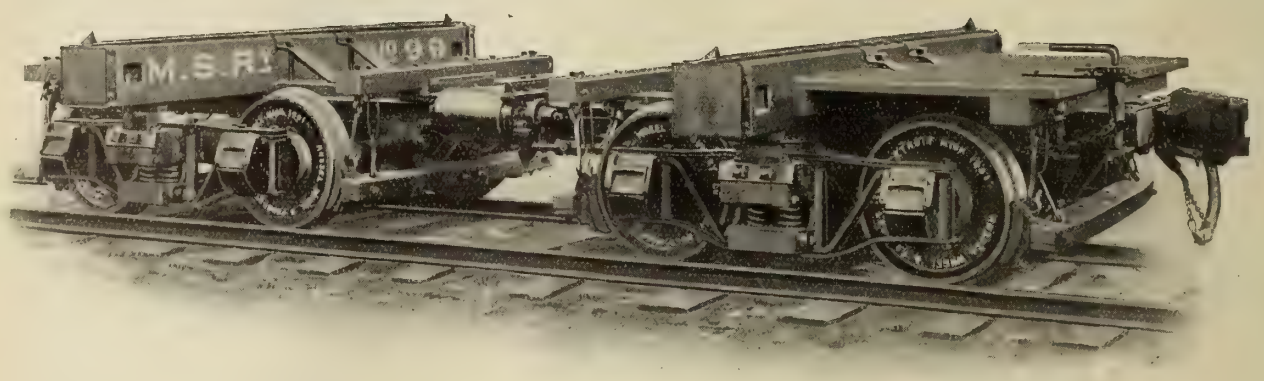
I will now refer to a part of the engineer and fireman's duty, that of feeding and preventing an injury to plates which would be affected by an absence of water. The most desirable regulations for feeding is to constantly supply the quantity of water evaporating, thereby keeping a uniform level in the boiler. In stationary practice this is automatically accomplished with a steam pump, float, and regulating valves, but I am not familiar with any design suitable to be attached to a locomotive. Uniform feeding is desirable because it reduces fuel consumption and boiler work and prolongs the life of fireboxes and maintains even temperature.

So much has been written and expressed by many prominent mechanical men and others about crown sheet separations, that I hope to be excused for venturing to make some remarks on a question which concerns engineers, firemen and the railway companies alike, and I will feel fully repaid for the trouble of touching upon this question, if it should only have the effect of preventing one failure of this kind. We have all read of the experiments conducted in which water was injected into boilers when the sheets were red hot. I want to say that if the sheets were red hot before the water was turned on to them, the plate would not have been there to receive it, and the men who conducted the experiment (if they were close enough to it) would not likely have lived to tell the tale. The reason for this is that before the crown sheet gets red hot the factor of safety will have disappeared and the plate would likely be weakened as to almost separate from its staying. Steel plates rapidly decline in value after reaching 400 deg. temperature and at about 1,000 deg. temperature they possess about 1-5 of the strength they had at 400 deg. and yet steel is not red hot at 1,000 deg. temperature. I see no good to be derived from telling engineers and firemen that it will not harm a crown sheet to inject water into it when hot. because my own experience tells me that it will not undo the harm already done, and the plan I would suggest as proper to pursue would be to get the fire out and steam pressure off as soon as possible, as any assumption you have as to how long the water is absent from the sheet, when such has actually occurred, can only be guess work, and by waiting to take further chances of recovering the water. may be just long enough to allow the sheet to get hot enough to cause a complete separation, and result in fatal injuries to those on or about the locomotive. I do not take the view that crown sheets separate, because of injecting water on to them when hot, but the water may frequently be feeding into the boiler at the time of separation, for the reasons I have just explained, and if the same trouble had been taken to get the fire out, as to get the injector on, the crown sheet might have been saved. Remember that because you can bring water into sight in the water glass, after it has disappeared, by closing the top mounting of the water glass, that it does not put any more water in the boiler. Remember also that a new crown sheet, flanged, hot, but not red hot, can be curved out of its good position by sprinkling water over one side of its surface, because the contraction shortens the metal on one side and the reverse side is obliged to stretch to accommodate the curve, we know this to be the result on the floor before erection, and therefore the practice is not good.

The foregoing paper was prepared for presentation before the Western Canada Railway Club.

Russel Heavy Duty Dump Cars

The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

Canadian Government Railways.

The Government railways are the Intercolonial Ry. in Nova Scotia, New Brunswick and Quebec, and the P.E.I. Ry. in Prince Edward Island. These lines are under the control of the Government Railways Managing Board, formed under an order-in-council of April 20, 1909. The gross earnings of these lines for the year ended Mar. 31, were $9,647,963.71, and the working expenses $9,095,903.96, showing a profit of $552,059.75. The profit on the I.C.R. was $623,164.66, and on the Windsor branch $37,104.08. There was a deficit of $108,-208.99 on the P.E.I.R.

The I.C.R. has a length of 1,447.13 miles, of which 23.13 miles is double track, and the aggregate length of spur lines, sidings and yard tracks is 383.71 miles. The Windsor branch, 32 miles, is leased to the Dominion Atlantic Ry. for 21 years from Dec. 13, 1892, at a rental of one-third of the gross earnings, the Government assuming all cost of maintenance of the road and works. The P.E.I.R. is 3½ ft. gauge, and is 267.5 miles long.

The expenditure on the I.C.R. for the year on capital account was $1,278,-409.45, making the total expenditure on the whole road $92,273,073.51. The expenditure on capital account was $2,-588,822.71 less than in the previous year, of which $1,353,646 was expended on rolling stock, against no capital expenditure under this head in the year under review. The main heads of expenditure on revenue account were:—Maintenance of way and structures, $1,629,-254.81, less credit of $6,975.06 for maintenance of joint tracks, yards, etc.; maintenance of equipment, $1,851,-792.68; traffic expenses, $179,882.61; transportation expenses, $4,870,874.65, less credit of $86,206.89 for operating joint yards and terminals; general expenses, $206,447.53. The gross earnings for the year were derived as follows:—Passengers, $2,765,884.66; freight, $6,-048,884.18; mail and express, $408,-847.66; miscellaneous, $44,618.49. The gross earnings per mile of railway were $6,404.56; per engine mile, $1.08; per train mile, $1.39, and per car mile, 9.82 cents.

The other general statistics show:—Engine mileage, 8,608,486; train mileage, 6,682,353; car mileage, 94,384,628; expenses per train mile, maintenance of way and structures, 24.28 c.; maintenance of equipment, 27.71c.; traffic expenses, 2.69c.; transportation expenses, 71.60c.; general expenses, 3.09 c.; total, 129.37c.; ratio of expenses to gross earnings: maintenance of way and structures, 17.50%; maintenance of equipment, 19.98%; traffic expenses, 1.94%; transportation expenses, 51.62%; general expenses, 2.23%. The revenue for the past year shows an increase of $741,165.53, over that of the year ended Mar. 31, 1909, while the working expenses show a decrease of $682,951.22 in the same period. The number of passengers carried was 3,-122,324, an increase of 217,330 in the number of local passengers, and a decrease of 2,243 in the number of through passengers, a net increase of 215,087 passengers over the previous year. The actual quantity of freight carried was 4,071,692 tons, of which 144,452 consisted of supplies carried for the railway. The revenue producing freight, 3,927,240 tons, was 353,268 tons in excess of that carried in the previous year. Local freight showed an increase of 216,188 tons, and through freight of 137,080 tons. The rolling stock on Mar. 31 consisted of 414 locomotives, 452 passenger, mail and express and baggage cars, four steam motor cars, and 12,514 freight, cars of all types, auxiliary cars, snow plows, work cars, etc. Other traffic statistics are:—Average freight tonnage per train, 260.02; average passengers per train, 58-99; average tons per loaded car, 17.23; average passengers per car, 9.62; average distance per ton of freight carried, 271.69 miles; average distance per passenger carried, 48.73 miles; train mileage, 2,578,885 miles; freight, 4,103,468; loaded car mileage, 61,916,687; empty car mileage, 12,843,-789; steam motor mileage, 16,563.

There was an addition of $206,396.97 to the capital expenditure on the P.E.I.R. during the year, making the total capital expenditure $8,465,364.91. The added expenditure included $156,-531.57 for increased accommodation at Charlottetown, and $49,829.25 for the branch line from Harmony to Elmira, 9.9 miles, which was placed under contract during the year. The gross earnings for the year were $319,074.74, and the working expenses $427,283.73, a deficiency of $108,208.99. As compared with the year ended Mar. 31, 1909, there was an increase of $7,751.11 in the gross earnings, and an increase of $16,953.32 in the working expenses. The earnings were:—Passengers, $140,076.83; freight, $153,373.11; mails and sundries, $25,-624.80. The expenditures were:—Maintenance of way and structures, $121,-046.70; maintenance of equipment, $79,-258.26; traffic expenses, $968.97; transportation expenses, $211,004.76; general expenses, $15,005.04. The general statistics show:—Passengers carried, 351,038; freight carried, 105,741 tons; engine mileage, 444,837; train mileage, 323,522; car mileage, 2,051,034; gross earnings per mile of railway, $1,195.03; per engine mile, 71.73 cents; per train mile, 98.63 cents; per car mile, 15.56 cents; working expenses, per mile of railway, $1,600.31; per train mile, 132.07 cents. The rolling stock on Mar. 31 consisted of 31 locomotives, 61 passenger cars, 506 freight cars of all types, 10 snow plows, and nine flangers.

Railway Lands Patented.—Letters patent were issued, during Sept., covering Dominion lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	160.00
Canadian Northern Ry.	3,471.08
Canadian Pacific Ry. grants	6.48
Canadian Pacific Ry. roadbed and station grounds	175.89
Grand Trunk Pacific Ry.	368.27
Manitoba and Southeastern Ry.	160.00
Total	4,341.72

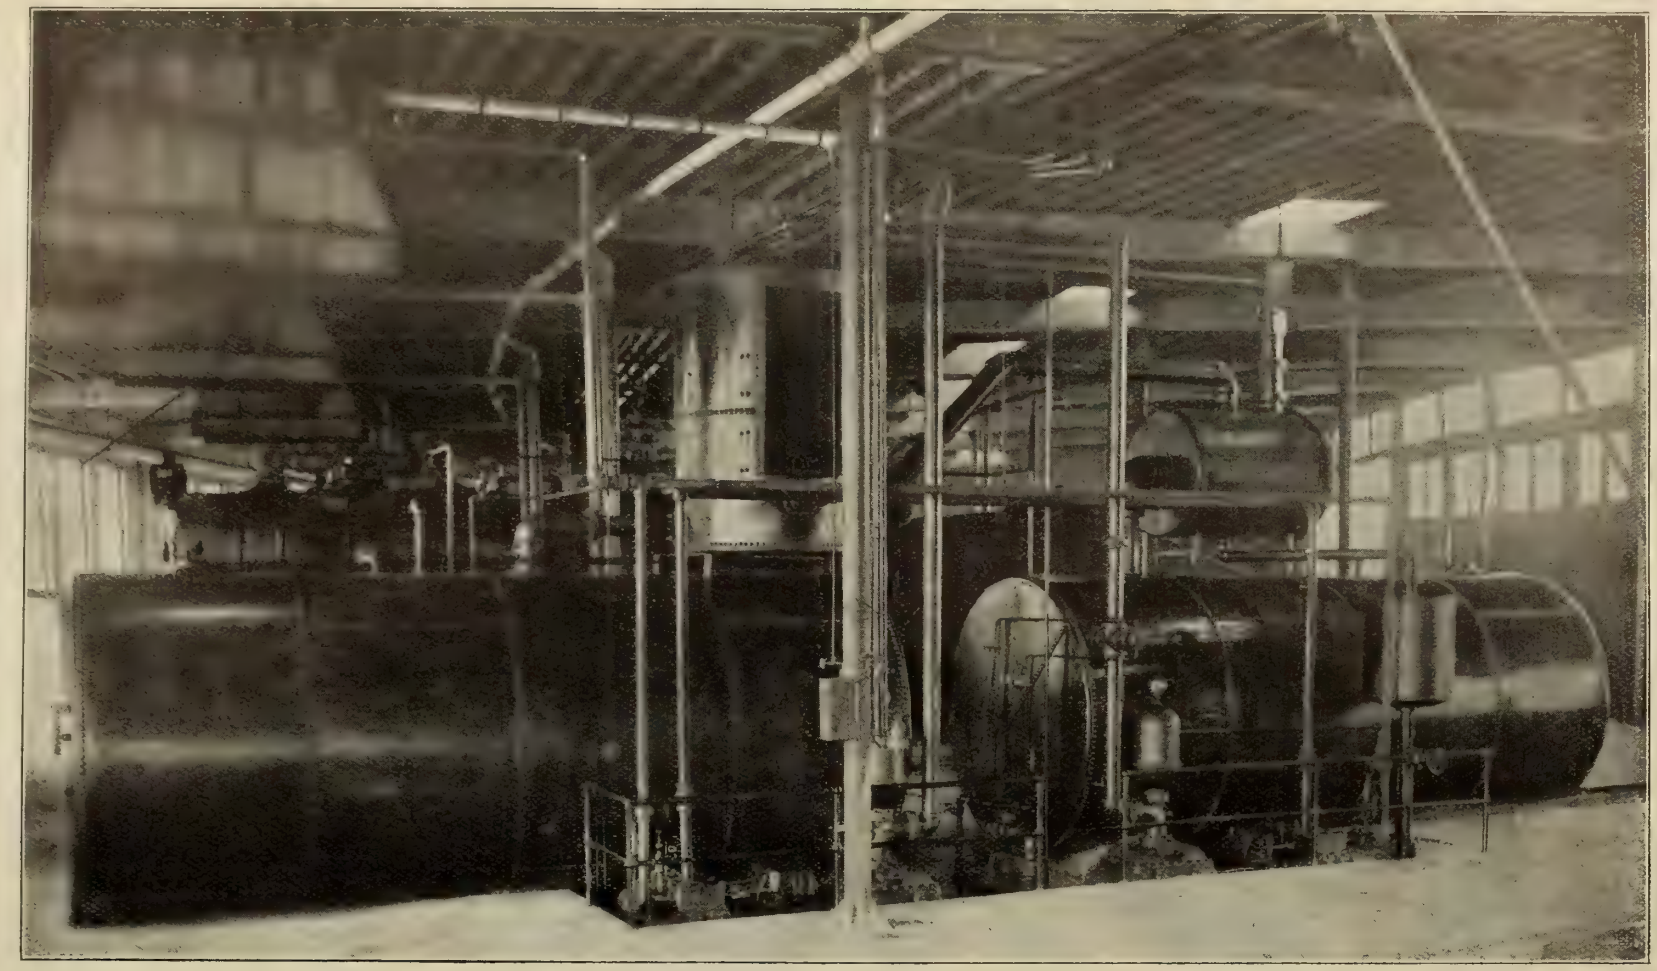
NATIONAL



NATIONAL

NATIONAL BOILER WASHING SYSTEM

installed at the

ROUNDHOUSE OF THE CHICAGO & EASTERN ILLINOIS R.R.

DANVILLE, ILL., U.S.A.

This system saves 900 hours boiler washing labor, 537,600 lbs. of coal, 1,024,000 gallons water and 2,048 engine hours per month. Engine hours saved equals three engines per day, filling water averages 190°. This system saves and utilizes the heat units blown out of locomotive boilers and reduces trouble of leaking flues, cracked side sheets and broken staybolts. Washing water automatically maintained 140°. Estimates and blueprints furnished upon request.

The National Boiler Washing Company, Limited, Montreal

Railway Signaling.

By C. L. Hackett.

(CONTINUED FROM NOVEMBER ISSUE.)

Mr. Peabody, Signal Engineer of the Chicago & North Western Ry., after having experimented with different trains, concluded that it averaged 45c. per train. For the sake of illustration, if we take 45c. as the cost, it is an easy matter to determine how many trains per day will justify the expenditure necessary to install interlocking at a crossing. Fig. 1, on page 1001, shows in diagram the signaling necessary to protect a single track crossing a single track. There would be 16 levers. This sized plant installed would cost $4,800, and would require a day and night towerman to operate it. The yearly cost for the plant would stand about as follows:—

Cost of interlocking		$4,800 00
Interest on cost, 4%	$ 192 00	
Depreciation, 7%	336 00	
Cost of maintenance per year	240 00	
Cost of operation per year.	1,200 00	
Total cost per year	$1,968 00	

Saving to be effected:—

Trains per day.	Cost per year acct. stopping	Total yearly cost of interlocking	Net saving per year.	Cost of Interlocking.	Time required to pay for installation from saving.
14	$1,971	$1,968	$3	$4,800	
20	2,817	1,968	849	4,800	5½ years
25	3,521	1,968	1,553	4,800	3 years

It is apparent then that 14 trains a day over this plant would justify its installation, aside altogether from the saving due to increased safety.

Interlocking is based on the following principles. First, that a failure in any part of the apparatus will prevent a clear signal being displayed. Second, that the normal position of all signals is "stop." Third, that a signal cannot be cleared for a train to move across the interlocking until all the switches in the route are properly set, and locked. Third, that a signal cleared locks all the switches, and that no switch or lock can be moved while the signal is clear. Fifth, that the signal cleared guarantees to the engineman the route, with no possibility of a move being made by any other train that could in any way foul the route given. In Canada the first three of these have been always conformed to, but the fourth (fully as essential as the other three) has not. Fig. 2, on pg. 1001, is a sketch of a plant in operation which does not. A train moving from B to C having received a clear signal no. 1 is not protected from a possible movement by a train from Q which could cause a serious side swipe at the frog A. I have seen several other plans which also have this serious loop hole, and it has been my experience that if a loop hole is left in any signaling installation it is only a question of time when some train will run into it.

In order to prevent a train running by a signal at a crossing the law requires the use of a derailing switch operating in connection with the signals. The signal can only be cleared after the derailing switch has been closed and locked. The closing of the derailing switch on one side locks the derails on the crossing line open, the idea being that if signals alone were used, it would be possible to have a train on the crossing run into by a train on the other line, should the engineer disobey the signal. Each individual interlocking plant is a problem in itself, different conditions either in track lay out or operation in itself, different treatment in the location of the signals, and this is the province of the signal engineer. The signal engineer of a large road is one of the most important officials. His knowledge and experience must be large and varied. He should be a civil engineer, and also thoroughly understand how the trains are operated, his duties, once the plant is installed, are closer allied to the operating end of the railway than to the engineering. In order for him to be able to advise what arrangement of signals will give the greatest results he must be in close touch with the officers who are responsible for the movement of the trains, otherwise his usefulness to the railway is not fully utilized.

In Fig. 1 we have the layout of a simple crossing of one single track line with another. Each derail is handled by a lever situated in a convenient building. The locks for the derails are handled by levers, and the signals by levers. All of these levers are grouped together in a frame, the interlocking between the levers being obtained by the use of cross locking operated by the levers, and held in the lever frame itself. The levers are numbered consecutively from left to right, the derail, switch, lock or signal which they operate being numbered to correspond to the lever, the connection between the levers and the functions being made by means of pipe carried on rollers, the turns in the pipe lines being made with bell cranks. The lock lever also operates what is known as a detector bar, whose function is to prevent the switch or derail being unlocked if there is a train on the track. This detector bar consists of a long bar of steel supported on a number of links pivoted to a casting attached to the base of the rail, free to move in a plane parallel to the track and inclined slightly toward the centre. When the bar is moved the links raise it above the tread of the rail. If, however, a wheel is on the rail the bar cannot be moved, as it will be held down by the wheel tread which projects beyond the rail head. This prevents the lock plunger from being withdrawn while there is a car on the track. In the figure the interlocking between the levers would be:—

Reverse lever no. 1	lock lever no. 2	reversed			
Reverse lever no. 2	lock lever no. 5	reversed	10 reversed,	13 normal.	
Reverse lever no. 3	lock lever no. 4	reversed			
Reverse lever no. 4	lock lever no. 7	reversed	12 reversed,	15 normal	
Reverse lever no. 5	lock lever no. 6	reversed			
Reverse lever no. 6	lock lever no. 8	normal	11 normal.		
Reverse lever no. 7	lock lever no. 8	reversed			
Reverse lever no. 8	lock lever no. 6	normal	9 normal.		
Reverse lever no. 9	lock lever no. 8	normal	11 normal.		
Reverse lever no. 10	lock lever no. 9	reversed			
Reverse lever no. 11	lock lever no. 9	normal	6 normal.		
Reverse lever no. 12	lock lever no. 11	reversed			
Reverse lever no. 13	lock lever no. 10	reversed	5 reversed.	2 normal.	
Reverse lever no. 14	lock lever no. 13	reversed			
Reverse lever no. 15	lock lever no. 12	reversed	7 reversed,	4 normal.	
Reverse lever no. 16	lock lever no. 15	reversed			

Thus the first lever to be moved would be the derails, then their locks, then the home signal and last the distant signal, in returning the track to its former position, the order of moving the levers is just the opposite.

Block signals differ from interlocking signals only in this respect. Interlocking signals indicate a condition of the track and switches, block signals on the other hand indicate the presence or absence of a train in or from a specific length of track. They may indicate the condition of the switches also, but their function is to show whether a train can be admitted to a block system, or whether it is already occupied. The block system is a means of moving trains by means of signals, as opposed to moving trains by time table and train orders. The principle on which it is based is that two trains must not occupy the same piece of track at the same time. The line is divided into sections, the limits of which are marked by a signal, and trains are only admitted to one of these sections by means of the signal governing that block. The length of these sections will depend on the number of trains run, their speed, and maximum length.

There are several different methods of block signaling in use. In the telegraph block system the signals are operated manually, upon information by telegraph. This is simply a make shift and is a combination of the block system and the Standard Code and dispatching system, a combination that cannot be made if the basic principle of block signal operation is maintained. In the controlled manual block system the signals are operated manually and so constructed as to require the co-operation of the signalman at both ends of the block to display a clear signal. That is in this system the signal at the entrance end of the block is so interlocked with the signal levers at the outgoing, and that it requires the men at each end to co-operate in order to admit a train. There are several types of this system, "the block and block," ordinarily used on a double track, where head on movements are not ordinarily made, and the staff system used on single track, where head

on movements must be protected. In the automatic block system the signals are operated by electric, pneumatic or other agency actuated by a train, or by a certain condition affecting the use of a block. This system does not supersede the train order system of dispatching, and is not absolute, that is from its nature it is necessary where automatics are used to insert the rule, that an engineer finding a block signal indicating stop, must bring his train to a stop at the signal and then proceed, under caution. If this rule is not used the train men would have to flag through the block; the introduction of this rule makes the automatic a permissive signal.

Miscellaneous signals comprise train order signals, used at stations to indicate to the runner whether he is to stop for orders or not. Station signals, used to protect trains standing at stations where no block system is in use. Outlying switch signals used to indicate to a runner, whether or not the main line switch is properly set for him to proceed. Highway crossing signals, used to warn the public at a highway of the approach of a train. In the case of station signals, it is futile to simply put up a home signal of 1,500 or 2,000 ft. from a station, and expect that this will protect the station. It will not. If a train is running at 45 or 50 miles an hour, as pointed out above, it would be impossible for the driver to stop at the signal, and if the signal does not mark the point beyond which he must not go, what does mark this? In order for a station signal to be effective it must have a distant signal working in conjunction with it. I have in mind a condition which I saw some time ago at a station, where a freight train had stopped. The caboose was perhaps some 50 ft. inside of the station signal, which was indicating "stop." Approaching the signal at this point there is a sharp curve, a following freight came round the curve and did not have time to stop before it ran into the caboose of the standing train. A distant signal would have given the proper preliminary information. The fundamental principle that must be kept ever in mind in signaling is that a failure in any of the parts must produce the stop indication. Thus when we put up a signal at a highway crossing to protect the public using that crossing, it is here just as necessary to keep this principle in view as it is at an interlocking plant. The crossing signal should be so constructed that if any thing fails, the signal should give a positive stop indication to the highway. Most of the highway crossing signals simply consist of a bell. When the bell rings the public understand that a train is approaching the crossing, when the bell is silent it is perfectly safe for them to cross the tracks. This is evidently wrong, a broken wire, a discharged battery or one of several things may happen to prevent the bell ringing, yet the non-ringing of the bell is an indication in the proceed position, nor does the addition of a light in connection with the bell improve matters. The light is run usually by the same source of power as the bell; anything that will cause the bell to fail will also cause the light to do likewise. A crossing signal to be dependable must be built on the same principle as a signal. It should have a visible stop indication that will show "stop" should any break occur. The bell is a good adjunct to such a signal, but the visible indication which will take up the stop position by gravity is essential.

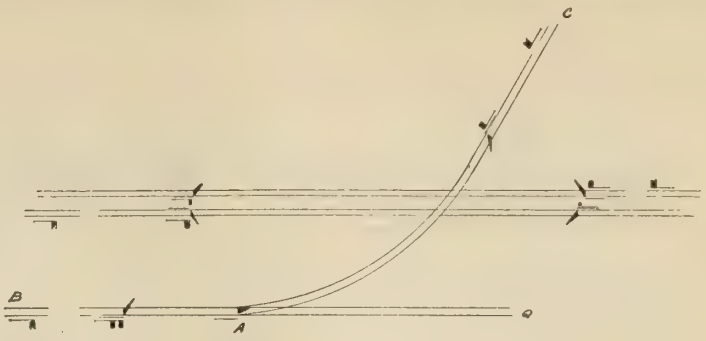

FIG. 2

The foregoing paper was read before the Central Railway and Engineering Club, recently.

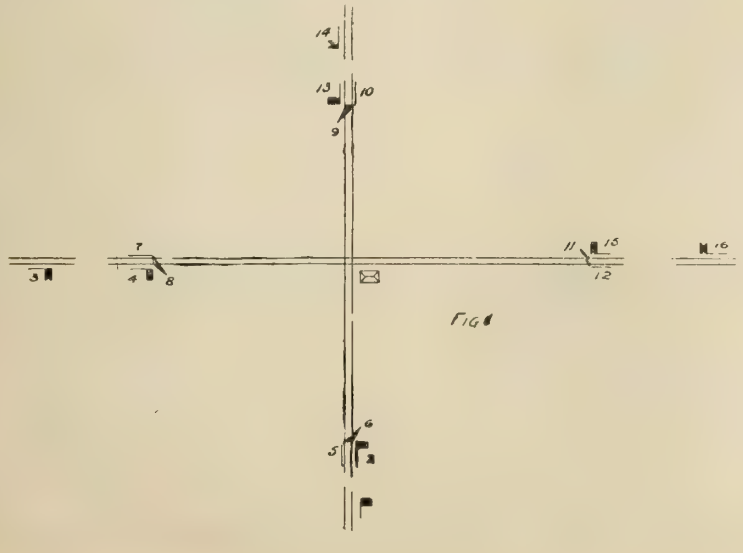

FIG 1

Railway and Canal Expenditure.

For the year ended Mar. 31 the total expenditure on the Government railways, railway subsidies, etc., was $32,862,094.46, of which $21,505,975.91 was charged to capital, $2,260,214.59 to income, and $9,095,903.96 to revenue. The expenditure on capital account included $19,968,126.86 for the Eastern Division of the National Transcontinental Ry., and $53,042.63 for surveys for a railway to Hudson Bay. The expenditure on income included a total of $2,048,097.05 paid as subsidies to railways other than the Government lines; $112,465.04 for the Board of Railway Commissioners, $17,644.66 for inspection of the Grand Trunk Pacific Ry., and $111,788.02 for preparing plans, etc., for the reconstruction of the Quebec Bridge. The expenditure on the Intercolonial Ry. was $9,923,479.78, viz., on capital account, $1,278,409.45, and on revenue account, $8,645,070.33. On the maintenance of the I.C.R. Windsor branch, the expenditure, $23,549.90, was charged to revenue account. On the P.E.I. Ry. the total expenditure was $633,688.70, of which $206,396.97 was charged to capital and $427,283.73 to revenue.

The expenditure on canals aggregated $3,259,097.18, of which $1,650,706.64 was on capital account, $489,256.68 on income, $604,899.26 for staff, and $514,234.60 for repairs, the last two amounts being charged to revenue. Added to the above for miscellaneous expenditures in both branches the sum of $4,706.79, the total expenditures for the year on railways and canals amounted to $36,125,898.43.

The total revenue derived from railway and canal work was $9,841,347.99, of which railways produced $9,647,963.71 and the canals $193,384.28, the sum of $168,893.63 being received from hydraulic rents. The canals have been free of tolls since 1905.

The total Government expenditure on railways prior to and since Confederation amounts, on capital account, to $236,654,665.29, including $25,000,000 granted to the C.P.R. for its main line, and $660,683.09 expended on the Annapolis and Digby line. In addition there has been expended from the consolidated fund a total of $202,532,757.03, making a total of $439,187,422.32. Of this amount $13,881,460.65 was expended prior to Confederation, on the construction of portions of what is now the I.C.R. system.

The Government expenditure on canals prior to and since Confederation amounts on capital account to $96,982,449.37, of which $20,593,866.13 was expended prior to Confederation, and from the consolidated fund $29,346,507.21, making a total of $126,328,956.58.

The total expenditures on railways and canals therefore amounts to $565,516,378.90, adding to which for general expenditures embracing both, $810,358.32, the grand total expenditure is $566,326,737.22. This amount does not include payments to the province of Quebec in respect to the building of the Ottawa and Quebec Ry., which is dealt with by the Finance Department.

Filing Railway Location Plans.—The Board of Railway Commissioners has given notice that hereafter, with every application by a railway for approval of a location, or deviation of a location, there shall be filed with the Board an affidavit by a competent engineer that the proposed location or deviation is not at any point more than one mile from the route approved by the Minister of Railways.

Senator Beique has been given a verdict of $300 damages in an action for libel brought against La Nationaliste, a Montreal Sunday newspaper, on account of some comments made on the sale of the South Shore Ry., which Senator Beique purchased at a receiver's sale, on behalf of its present owners the Delaware and Hudson Co.

STUDY VANADIUM

Specify Type "A"

For all general purposes where great static strength, ductility and high resistance to shock are needed. It works like soft open hearth steel under hammer or dies. Fine for drop forgings; withstands high temperatures and takes excellent finish. Machines easily.

Specify Type "D"

For springs, gears in constant mesh, rifle barrels, high tensile wire, and similar work. Particularly good for severest service conditions.

Specify Type "E"

For case hardening. Makes strong case; has powerful resistance to abrasion; close cohesion of case to softer core; case doesn't flake or powder away; exceedingly ductile core, with great strength and resistance.

Specify Type "G"

For locomotive tires. High static strength, stands 1,260 alternations before fracture under alternating impact test, which is more than twice as great as test on regular tire steel. This type is very homogeneous, machines readily and has splendid wearing qualities with fine tractive surface.

Specify Type "H"

For cutting tools, rotary rock cutters, saw blades, forging and stamping dies, etc. Tempers accurately and evenly; although hard, is extremely tough. Retains edge more than twice as long as carbon steel.

Specify Type "J"

For steel castings, locomotive frames, mill pinions, etc. Extremely tough, close in structure, strong as ordinary forgings, twice as strong as ordinary steel castings.

Specify Vanadium Steel Everywhere

In preference to ordinary steel. Use smaller sections and get greater strength and vitality. All good steel makers make Vanadium Steel. We make the alloy only.

Specify the product of the American Vanadium Company, which is the only standard, guaranteed free from impurities and correct in every particular. Write us for illustrated booklets and information.

Our Department of Engineering and Tests

is always ready to help you.

American Vanadium Company

324 Frick Building

Pittsburgh, Pa.

Canadian Northern Railway Report.

The following directors' report, over the signature of W. Mackenzie, President, was submitted at the annual meeting in Toronto recently:—

The result of operations for the year ended June 30, is as follows:—

Gross earnings—	
Passenger traffic	$2,415,440.39
Freight traffic	10,102,510.36
Express, mail, telegraph, dining and sleeping cars, interest and profits from elevators and other subsidiary companies	1,315,110.83
	$13,833,061.63
Working expenses, including taxes, etc.	9,488,671.60
Net earnings	$4,344,390.03
Fixed charges	3,313,632.58
Surplus	$1,030,757.45

The gross earnings show an increase of $3,251,293.70, or 30.7%, and net earnings, $778,027.86, or 21.82% over the preceding year. The working expenses, including all taxes, were 74.01% of gross earnings of the railway proper and 68.59% of gross earnings from all sources, compared with 72.55% and 66.30% respectively last year. An examination of the gross earnings shows that the development of the territory tributary to your railway is proceeding with great rapidity. In passenger receipts the increase is $486,754.04, or 25.24% over last year, and to keep pace with the demand for train service considerable new passenger equipment is now on order. The receipts from freight traffic also show a substantial increase over last year, the figures being $2,621,-184.42, or 35.04%. In this connection your attention is directed to the statement of freight carried, from which it will be seen that in the movement of grain, live stock, immigrants' effects, lumber and building materials generally, your company shows a very substantial increase over the previous year. It is gratifying to your directors that Government figures of grain reported at Winnipeg show that not only has your railway increased its business but that the proportion of the total crop carried by your railway increases year by year. The returns for the crop of 1909 show that your company carried 31% of the total shipments from Manitoba, Saskatchewan and Alberta. This your directors submit is a very satisfactory showing, having regard to the comparatively short time which your railway has been in existence, and also especially in view of the fact that the company has operated but a few years in Saskatchewan, and more recently still in Alberta. The remarkable increase in immigrants' effects of 1,939 cars, or 62% over the previous year, and 12,211 cars, or 128% over 1909 of coarse building materials, is gratifying proof of both kinds of expansion in your territory, viz., the opening up of new districts and the improvement in the quality of commercial and domestic construction in the towns. The larger centres reached by your railway, such as Winnipeg, Regina, Saskatoon, Prince Albert and Edmonton, have grown considerably during the year, but the expansion, as indicated by the haulage of heavy building materials, applies to practically every district which your railway serves. Commercial conditions generally throughout Western Canada are reflected in the substantial increase in freight revenues from the movement of westbound business.

The average mileage operated during the year was 3,179, compared with 3,013 the preceding year. The most noteworthy of the lines taken over from the construction department is that from Zealandia to Kindersley, on the Saskatoon-Calgary line, which has opened up a remarkably extensive and fertile tract of country. During the early spring as many as 40 carloads of immigrants' effects were daily being hauled to Kindersley, which, although a town of less than one year old, has nearly 1,000 inhabitants. It is expected the line will reach Calgary at an early date, and give that most important city its first competitive railway. The mileage actually brought into operation does not fully represent the extent of the growth of your railway during the year. Considerable stretches of line which have been constructed had not been formally taken over by the operating department at the close of the fiscal year, although an immigration service was being furnished by the construction department into several districts hitherto unreached by railways. The expansion of lines already in hand assures considerable development in the immediate future. The of Prince Albert, has already been commenced. Construction has already been of the Crooked Lake region, northwest tapping of the enormous timber limits started on the branch line to the Brazeau coal fields, which will furnish an inexhaustible supply of the finest fuel to Central Alberta and Western Saskatchewan. It is hoped with the completion of the line from Morinville to Athabasca Landing to bring much nearer development the asphalt and other deposits in the Athabasca district.

The crop results have proved more conclusively than ever the wisdom of building your railway through diversified territory. It happens this year that Southern Manitoba and the country adjacent to the U.S. has a crop below the average, but in the northern districts, where your line has immense territory tributary to it, the crops are, if anything, above the average. Your more experienced officers who have been through the country report that your company may expect to carry as much grain from the crop of 1910 as it did from the crop of 1909, the satisfactory conditions of the crop of 1910 being due to the better weather conditions prevailing in the northern half of the wheat-growing country, and there being an increased acreage under cultivation in all sections of the Prairie Provinces reached by your line. It may be taken as established, therefore, that with so vast an extent of producing country as is covered by your line a general crop failure is practically impossible. For the further development of the resources of the country served by your railway there is needed only a continuance of immigration to meet the demand for labor, which is as great today as it has ever been in Canada, and in that connection arrangements have been completed for a more extended campaign in Great Britain, as your directors most earnestly desire to see the best class of men from home settled along the company's line.

The land sales during the year were 246,996 acres, for $2,561,072.52—an average of $10.36 an acre, compared with 116,662 acres for $1,091,722.37—an average of $9.36 an acre last year. Among the sales is one to a colonization company which purposes to establish settlers of the very best class in the districts east of Prince Albert, which is especially suitable for mixed farming, and which, by reason of its wooded character, appeals strongly to settlers from Great Britain. Since the close of the fiscal year a number of other sales have been made at higher values per acre, and others are pending. The result to date in respect to land sales has been very gratifying to your directors. In Feb., 1899, an issue of $2,000,000 of land grant bonds was authorized, secured by certain lands. A reference to the general balance sheet shows that after providing for the retirement of the total issue, there is a surplus of $2,733,378.67 in the hands of the trust company belonging to your company, in addition to which there is a balance of deferred payments still to collect of $597,671.97. In June, 1909, a further issue of £1,027,400, or $5,000,013.32, of land grant bonds was authorized, secured by specific lands. Sales to the amount of $2,260,810.13 under this mortgage have been made on the deferred payment plan and with the collections your directors have retired £53,000, or $257,933.32 of the bonds, thus reducing the amount of bonds outstanding at the close of the fiscal year to £974,400, or $4,742,080. The general position in regard to land sales is as follows:—

Cash held by National Trust Co.		$4,733,378.67
Deferred payments due C.N.R. on sales		8,231,249.09
		$12,964,627.76
Less land grant bond issue, Feb., 1899	$2,000,000	
Less land grant bond issue, June, 1909	4,742,080	6,742,080.00
Surplus belonging to C.N.R. Co.		$6,222,547.76

In addition to which the C.N.R. has still 1,151,017 acres of land to dispose of, having a value, on the basis of present prices, of not less than $14,000,000.

Your directors are glad to report that two more important steps have been taken during the year towards making the C.N.R. a transcontinental line, with its own trans-oceanic connections. A contract has been entered into between the Canadian Northern Pacific Ry. Co. (which was separately incorporated on account of necessary arrangements in connection with the proposed issue of securities guaranteed by British Columbia) and the B.C. Government for the

Removal of Offices.

The Railway and Marine World offices have been removed to 70 Bond Street, Toronto. This has been rendered necessary by the expansion of business and consequent increase of staff, and by the necessity for securing more room for records, data, maps, plans, charts, reference library, etc., all of which are being continually added to. No more space being available at 157 Bay Street, it became necessary to look for new quarters.

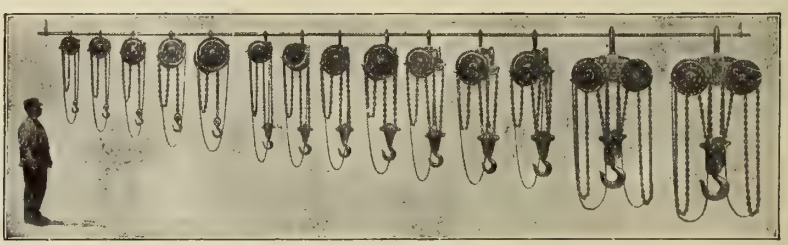
In deciding to secure enlarged accommodation, the question of the best natural light available, by windows facing north, was the first consideration. It was some time before this could be found in a satisfactory locality, but it was ultimately secured in a new building at 70 Bond Street. In our new location we are installing the latest equipment and appliances for carrying on business to the greatest possible advantage. Added to the splendid natural light secured, a most up to date system of electric lighting has been put in. The offices are being equipped with the latest devices for filing correspondence, data, card indexes, etc., with ample provision for the systematic storage of and ready reference to maps, plans, charts, etc., of which we have a large and valuable collection, and for a reference library thoroughly covering the transportation and allied fields. Intercommunicating telephones will connect every desk and effect a large saving of time.

For some time past we were considerably inconvenienced by lack of sufficient space in our old offices, which were, however, most satisfactory in other respects. In our new quarters the work will be carried on to much greater advantage, and the result will be seen in still further improvements in the Railway and Marine World.

USE THE READING CHAIN BLOCK

It has all the advantages of other chain blocks and many important features of superiority possessed by no other.

HIGHEST EFFICIENCY GREATEST DURABILITY



The Reading Multiple Gear Chain Block is used by the biggest and most important Railroad Systems in America, as well as the biggest Industrial Corporations, and is recognized wherever used as being superior to any other block made.

Write for full particulars.

MUSSENS LIMITED

MONTREAL	TORONTO	COBALT	WINNIPEG	CALGARY	VANCOUVER
318 St. James St.	73 Victoria St.	Opp. Right of Way Mine	259-261 Stanley St.	Crown Bldg.	Mercantile Bldg.

construction of the line from Alberta to the Pacific coast, approximately 500 miles. The contract calls for the completion of the work within four years, and your directors have not only every reason to anticipate that it will be finished within the stipulated time, but that when it is completed and in operation it will prove of tremendous traffic advantage to the C.N.R. system as a whole.

Through a subsidiary company, the Canadian Northern Steamships Ltd., your directors now operate the two fastest steamers in the British-Canadian service, the Royal Edward and Royal George. These steamers are triple turbine vessels of over 12,000 tons each, with a speed exceeding 20 knots. They furnish a fortnightly service between Bristol, Quebec and Montreal, and carry mails. Bristol was chosen as the British port because of its contiguity to Canada, its admirable dock facilities and the opportunity it affords of securing freight and passenger business from the Midlands, the West of England, and South Wales. The service was inaugurated in May, and the result of the season's work so far is quite as satisfactory as your directors anticipated.

During the year various issues of securities were made on account of the construction of additional lines. In respect to the two issues, each of £600,000 4% first mortgage debenture stock guaranteed as to principal and interest by Saskatchewan and Alberta, respectively, on certain branch lines to be constructed, your directors desire to say that whilst the progress of construction has been quite satisfactory, none of the lines were completed before the close of the fiscal year. The payments authorized by the respective governments have been charged to "advances to lines under construction," and the balance unexpended appears on the general balance sheet to the credit of both governments. The interest paid on these securities is not a charge on the current year's business. Near the close of the fiscal year an issue was made of £950,000 Duluth, Winnipeg & Pacific Ry. 4% first mortgage debenture stock, which your company, with the approval of the Dominion Government, agreed to guarantee as to principal and interest. The Duluth Company owns the entire capital stock of the Duluth, Rainy Lake & Winnipeg Ry., which operates a line from Fort Frances, on your company's main line, southerly to Virginia, Minn., and is now constructing a continuation of about 78 miles to Duluth, where it has already acquired very valuable terminal properties. The importance of this connection to your company cannot be overestimated, because of the ever-increasing movement of passenger and freight traffic passing through the Duluth gateway to and from the U.S. and Western Canada. In addition to this the Duluth Company has obtained an exclusive contract with the Virginia & Rainy Lake Lumber Co. (having an annual capacity of 250,000,000 ft.) for the haulage of all its logs and lumber. The railway also has tributary to it the immense iron ore mines of the Missabe Range, and shipments must be carried by rail to the Great Lakes for furtherance by water carriers to destination. The operation, too, of one of the largest pulp and paper mills in the U.S. at International Falls, near Fort Frances, will contribute largely to the gross revenue of the Duluth line, it being estimated that when the complete plant is in operation it will represent the haulage of over 1,000,000 tons of raw or finished products annually, the greater tonnage of which will be handled by the Duluth Company. Instead, therefore, of being called upon to make any payments under the guarantee, it is expected that the arrangement will add materially to the gross revenue of your company.

In keeping with the policy of the company your directors continue to incur large expenditures in betterments of the property. During the year additional car trust obligations were created to the amount of $3,000,000, and $1,650,000 repaid in respect to previous obligations, thus making a net increase on the account of $1,350,000. Considerable mileage has been relaid with heavy steel. New stations and freight houses have been built and existing buildings extended at many points. Industrial tracks have been built or extensions made to existing sidings and generally an intelligent regard has been had to the pressing necessities of a development which can only be characterized as remarkable in its growth.

Toward the close of the financial year your directors arranged for an issue of 5% 20-year income charge convertible debenture stock, secured by a general charge on properties of the company, subject to prior charges. The total amount of this stock at any time outstanding is not to exceed an amount equal to $10,000 a mile of the company's lines. During 1916, 1917 and 1918 holders of the stock have the right to exchange their holdings for an equal amount of fully paid ordinary shares in the capital stock of the company. The interest on the stock, at a rate not exceeding 5% per annum, is payable only out of the net earnings. In and after 1920 the company is entitled to redeem the stock at par. Since the close of the financial year $5,000,000 of this stock has been disposed of upon satisfactory terms and, as you will see by the figures given in the annual statements, and by its present earnings, the company will be in a position to meet the full interest during the coming year.

The accounts and statistical tables appended, were submitted by D. B. Hanna, Third Vice President, as follows:—

GENERAL BALANCE SHEET.

ASSETS.

Cost of railway and equipment		$133,782,348.08
Acquired securities (cost)		5,725,060.21
Advances to other companies		1,819,227.32
Advances to lines under construction and terminals at Winnipeg		7,864,010.89
Value of material and supplies on hand	$1,412,162.18	
Due from agents, station balances, etc.	612,650.72	
		2,024,812.90
Deferred payments on land sales	8,231,249.09	
Cash with National Trust Co., account of land sales	4,733,378.67	
		12,964,627.76
Cash Account—		
With Dominion Government	975,751.94	
Province of Manitoba	1,710,199.20	
Province of Saskatchewan	2,076,478.83

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

SUMMARY OF EQUIPMENT.

	June 30, 1909.	June 30, 1910.
Locomotives	372	346
Sleeping and dining cars	43	39
Passenger coaches	203	164
Baggage and mail and express cars..	79	72
Business cars	11	7
Freight, refrigerator and stock cars	11,735	9,465
Conductors' vans	184	118
Boarding, tool, auxiliary cars, steam shovels and snow equipment	416	355

The total mileage owned and operated, including leased lines, at June 30, was 3,325, located as follows:—Ontario, 353.7 miles; Manitoba, 1,530.9 miles; Saskatchewan, 1,182.5 miles; Alberta, 214.2 miles; Minnesota, 43.7 miles. The average mileage operated during the year was 3,179.

The report was unanimously adopted, and the directors re-elected, as follows:—W. Mackenzie, President; D. D. Mann, Vice President; Z. A. Lash, K.C., F. Nicholls, Toronto; R. M. Horne-Payne, London, Eng.

The monorail car, running between Bartow and City Island, New York, which met with an accident on the first day of its operation three months ago, has been rebuilt, and the road, which has been carrying passengers experimentally for some weeks, shortly commence regular service under a new franchise. The car is carried on two trucks on a single rail, and is supported by a strong trolley running on a rigid overhead rail supported from standards placed on the side of the track.

The British Board of Trade's report on railway accidents in the United Kingdom during 1909, shows that only one passenger was killed in an accident to a train in which he was travelling, and that this was the first fatality for 20 preceding months. The number of passengers injured while travelling was 390, which is the lowest average for several years past. As 1,264,000.000 passengers were carried during 1909, the death record is certainly remarkably small. By accidents to pasengers from other causes—falling between trains and platforms, etc.—directly traceable to personal carelessness and disobedience of orders, 82 persons were killed and 2,148 were injured.

December Birthdays.

Many happy returns of the day to—

E. Alexander, Assistant Treasurer C.P.R., Montreal, born in Yorkshire, Eng., Dec. 8, 1862.

J. H. Barber, Engineering Department C.P.R., Montreal, Que., born at Cobourg, Ont., Dec. 20, 1856.

N. E. Brooks, C.P.R. Division Engineer, Calgary, Alta., born at Sherbrooke, Que., Dec. 25, 1866.

Harold Browning, Steamship Agent, etc., Windsor, Ont., born at Stamford, Lincolnshire, Eng., Dec. 2, 1864.

J. C. M. Buntzen, Director British Columbia Electric Ry. Co., Copenhagen, Denmark, born there Dec. 16, 1859.

T. C. Burpee, Engineer of Maintenance of Way Intercolonial Ry., Moncton, N.B., born at Sheffield, N.B., Dec. 11, 1852.

W. W. Butler, Vice President Canadian Car and Foundry Co., Ltd., Montreal, born at Danville, Ohio, Dec. 9, 1862.

M. M. Campbell, C.E., Building Inspector G.T.R., Montreal, born at Bridgeton, N.B., Dec. 17, 1879.

A. H. Chave, Purchasing Agent and Assistant to First Vice President Canadian Car and Foundry Co., Montreal, born at Williamsbridge, N.Y., Dec. 26, 1872.

H. P. Dwight, President Great North Western Telegraph Co., Toronto, born at Belville, Jefferson Co., N.Y., Dec. 23, 1828.

R. Forget, M.P., President Richelieu and Ontario Navigation Co., Montreal, born at Terrebonne, Que., Dec. 10, 1861.

W. H. Gardiner, City Freight Agent C.P.R., and District Freight Agent Esquimalt and Nanaimo Ry., Victoria, born there, Dec. 6th, 1859.

H. H. Gildersleeve, Manager Northern Navigation Co. of Ontario, Sarnia, born tion Portland Canal Short Line Ry.,

A. J. Gorrie, ex-General Superintendent Canadian Northern Quebec Ry., now Receiver Quebec and Lake St. John Ry., Quebec, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, Manager of Construction Portland Canal Short Line Ry., Stewart, B.C., born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, General Superintendent Lake Superior Division C.P.R., North Bay, Ont., born at Mifflinburg, Pa., Dec. 21, 1864.

D. B. Hanna, President Quebec and Lake St. John Ry., Third Vice President Canadian Northern Ry., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

S. P. Howard, ex-General Freight Agent Eastern and Lake Superior Divisions C.P.R., Montreal, born there Dec. 30, 1865.

R. Johnson, Locomotive Foreman C.P.R., White River, Ont., born at Quebec, Que., Dec. 24, 1863.

B. B. Kelliher, Chief Engineer Grand Trunk Pacific Ry., Winnipeg, born in Ireland, Dec. 26, 1862.

J. T. McGrath, Master Mechanic G.T.R., Battle Creek, Mich., born at Toronto, Dec. 6, 1869.

A. T. McKean, Soliciting Freight Agent C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

L. Macdonald, Division Freight Agent G.T.R., Toronto, born at Montreal, Dec. 10, 1871.

J. Niblock, ex-Superintendent C.P.R., Naramata, B.C., born in York County, Ont., Dec. 21, 1849.

A. Price, General Superintendent Alberta Division C.P.R., Calgary, born at Toronto, Dec. 6, 1861.

G. D. Robinson, Assistant Export and Import Freight Agent C.P.R., Toronto, born at St. John, N.B., Dec. 7, 1877.

C. Schreiber, C.M.G., Consulting Engineer Department of Railways and Canals, Ottawa, Ont., born at Bradwell, Essex, Eng., Dec. 14, 1831.

F. P. Smith, Secretary Richelieu and Ontario Navigation Co., Montreal, born there, Dec. 23, 1873.

C. E. E. Ussher, Passenger Traffic Manager C.P.R., Montreal, born at Niagara Falls, Ont., Dec. 29, 1857.

H. H. Vaughan, Assistant to Vice President C.P.R., Montreal, born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to Third Vice President Canadian Northern Ry., Toronto, born there Dec. 1, 1883.

W. Wood, locomotive foreman C.P.R., Megantic, Que., born at Montreal, Dec. 6, 1863.

G. T. R. Subsidiary Companies.

Following are the officers and directors for the current year:—

CHICAGO AND KALAMAZOO TERMINAL RD.—President, A. B. Atwater; Vice President, F. M. Hodge; Secretary-Treasurer, G. W. Alexander; other directors, L. C. Stanley, M. H. Lane, F. B. Lay, C. B. Hays, D. A. Shepardson, C. Clarage.

CHICAGO, DETROIT AND CANADA GRAND Trunk Jct. Rd.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, J. W. Loud, W. H. Biggar, A. B. Atwater; Secretary, G. W. Alexander; Treasurer, F. Scott.

DETROIT, GRAND HAVEN AND MILWAUKEE Ry.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, J. W. Loud, W. G. Brownlee, Jos. Hobson, A. B. Atwater, F. W. Egan, A. P. Sherrill, J. Pridgeon, jr.; Secretary-Treasurer, G. W. Alexander.

GRAND RAPIDS TERMINAL RD.—President, A. B. Atwater; Secretary-Treasurer, G. W. Alexander; other directors, L. C. Stanley, F. W. Egan, C. Clarke.

GRAND TRUNK JUNCTION RY.—President C. M. Hays; Vice President, E. H. Fitzhugh; other directors, J. W. Loud, A. B. Atwater, F. A. Howe; Secretary-Treasurer, G. W. Alexander.

GRAND TRUNK MILWAUKEE CAR FERRY Co.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, W. G. Brownlee, A. B. Atwater, E. H. Bottum; Secretary-Treasurer, G. W. Alexander.

GRAND TRUNK WESTERN RY.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, W. G. Brownlee, A. B. Atwater, A. Dixon, A. W. Wright, L. R. Skinner; Secretary-Treasurer, G. W. Alexander.

INTERNATIONAL BRIDGE CO.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, J. W. Loud, W. G. Brownlee, H. G. Kelley, Jos. Hobson, H. W. Sprague; Secretary, G. W. Alexander; Treasurer, F. Scott.

MICHIGAN AIR LINE RY.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, J. W. Loud, W. H. Biggar, A. B. Atwater; Secretary, G. W. Alexander; Treasurer, F. Scott.

PONTIAC, OXFORD AND NORTHERN RD.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, M. M. Reynolds, J. W. Loud, A. B. Atwater, L. C. Stanley; Secretary-Treasurer, G. W. Alexander.

ST. CLAIR TUNNEL CO.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, J. W. Loud, W. G Brownlee, W. H. Biggar, Jos. Hobson, A. B. Atwater; Secretary, G. W. Alexander; Treasurer, F. Scott.

TOLEDO, SAGINAW AND MUSKEGON RY.—President, C. M. Hays; Vice President, E. H. Fitzhugh; other directors, J. W. Loud, A. B. Atwater, A. F. Temple, C. W. Middleton, F. E. Ranney; Secretary-Treasurer, G. W. Alexander.

The Intercolonial Ry. brotherhoods of machinists, boilermakers, blacksmiths, and carmen appointed a committee, Nov. 10, to consider the question of federation on similar lines to that adopted on the C.P.R.

G. T. R. Semi-Annual Meeting.

The semi-annual meeting was held in London, Eng., Oct. 21, when the report for the half year ended June 30 was presented. The following summary shows a comparison of the revenue with that of the corresponding half-year, 1909:—

1909.		1910.
£2,866,468	Gross receipts	£3 321,636 11 0
	Deduct—	
2,079,196	Working expenses, being at the rate of 73.94%, as compared with 72.54% in 1909.	2,456,065 7 6
787,272	Net traffic receipts	865 571 3 6
Cr. 58,092	Balance of income from rentals, outside operations, and car mileage	*Cr.* 58,089 10 2
845,364	Total net revenue	923,660 13 8
	Add—	
16,013	Amount received from International Bridge Co.	16,012 16 7
6,507	Interest on Central Vermont Ry. bonds	6,506 14 3
60,320	Interest on securities of controlled lines and on St. Clair Tunnel bonds acquired by the issue of Grand Trunk 4% debenture stock	62,483 10 10
33,997	Balance of general interest account	38 302 7 0
£962,201	Net revenue receipts	£1,046,966 2 4

Following are the net revenue charges for the half-year, compared with the corresponding period:—

1909.		1910.
£77,603	Rents (leased lines)	£77,603 0 9
503,481	Interest on debenture stocks and bonds of the company	520,240 17 4
34,332	Interest on debenture stock and bonds of lines consolidated with the company	32,447 17 9
41,103	Can. Atlantic Ry. deficiency	34,965 18 2
25,749	D., G.H. & M. R. deficiency	34,547 16 10
682,268		699,805 10 10
279,933	Leaving a surplus of	347,160 11 6
£962,201		£1,046,966 2 4

Adding the balance of £11,839 11s 6d at credit of net revenue account on Dec. 31, 1909, to the surplus of £347,160 11s 6d, the amount available for dividend is £359,000 3s 0d, from which the directors recommend payment of the following dividends, viz.:—

Half-year on 4% guaranteed stock	£197,816 11 8
Half-year on first preference stock	85,420 15 0
Half-year on second preference stock	63,210 0 4
	£346,447 7 0

leaving £12,552 16s 0d to be carried forward to next half-year's account.

Following is a table of the receipts for the half-years ended June 30, 1910 and 1909:—

TRAFFIC STATISTICS

Description.	1910	1909	Increase.	Decrease.
	£	£	£	£
Passengers	884,274	789,162	95,112	....
Mails and express	146,426	134,823	11,603	....
Freight and live stock	2,186,027	1,861,785	324,242	....
Other receipts	104,909	80,698	24,211	....
	3,321,636	2,866,468	455,168	....

Description.	1910.	1909.	Increase.	Decrease.
Passengers carried	4,990,401	4,817,156	173,245	....
Average fare per passenger	42·53d	39·32d	3·21d	....
Tons of freight and live stock	8,832,832	7,506,806	1,325,526	....
Average rate per ton	59.40d	59.52d	....	0.12d
Tons carried one mile	1,539,037,718	1,374,618,422	214,419,296	....
Earnings per train mile	83.49d	75.77d	7.72	....

The average rate per ton per mile on the entire freight business was 0.67c., compared with 0.66c. in the corresponding half-year.

The working expenses, excluding taxes, were £2,409,690, or 72.55% of gross receipts, compared with £2,037,014 or 71.06%, an increase of 1.49%.

Revenue expenditure, including taxes, for half-years ended June 30, 1910 and 1909:—

Description.	1910.	1909.	Increase.
	£	£	£
Maintenance of way, and structures	365,487	272,176	93,311
Maintenance of equipment	638,696	449,110	189,586
Traffic expenses	107,375	91,407	15,968
Conducting transportation	1,204,624	1,135,172	69,452
General expenses	93,508	89,150	4,358
Taxes	46,375	42,182	4,193
Total	£2,456,065	£2,079,197	376,868
Percentage of gross receipts	73·94	72.54	1·40
Expenditure per train mile	61·73d.	54·96d.	6·77d.

The train mileage compares with that for the half year ended June 30, 1909, as follows—

Description of Mileage.	1910.	1909.	Increase.
Passenger	4,133,538	4,086,109	47,429
Freight	5,141,909	4,752,765	389,144
Mixed trains	272,592	240,528	32,064
Total	9,548,039	9,079,402	468,637

The gross receipts show increase of £455,168, or 15.88%; the working expenses, including taxes, £376,868, or 18.12%, and train mileage 468,637, or 5.16%.

The charges to capital account were £148,821 10s 11d. Of this £110,342 9s 4d was for the acquisition of $537,000 G.T. Western Ry. first mortgage bonds issued in respect of a similar amount of Northwestern G.T. bonds, which matured Jan. 1, and were paid off during the half-year; and £27,148 18s 6d for discount and commission on 4% guaranteed stock and additional 4% debenture stock issued in exchange for Midland consolidated bonds, less premium on 4% debenture stock sold.

The expenditure on capital account in respect of new works, double track and land purchased, was as follows:—

New works	£4,153 4s. 5d.
Double track	1,152 9 9
Land purchased	6,024 8 11
	£11,330 3 1

During the half-year, 10 passenger engines and one dining and six first class passenger cars were built in the company's works, and 35 freight engines and 10 baggage cars purchased on revenue account, and £122,117 3s 1d has been charged to revenue in reduction of engine and car renewal suspense account, leaving the balance of that account on June 30 £75.578 3s 4d, of which £26.346 was in respect of engines and £49,232 3s 4d of cars.

CANADA ATLANTIC RAILWAY.

The following summary shows results of the half-year's working, compared with the corresponding period of 1909:

1909.		1910.
£168.073	Gross receipts	£192.977
161,482	Working expenses	169,500
6.591	Net traffic receipts	23,477
12,419	Balance of income from rentals, outside operations and car mileage	4,586
£19,010	Total net revenue	£28.063

The interest charges were £63,029, against £60.113, so that there was a net revenue deficiency of £34,966, compared with £41.103 in 1909.

GRAND TRUNK WESTERN RAILWAY.

The following summary shows results of the half-year's working compared with the corresponding period, 1909:

1909.		1910.
£553,847	Gross receipts	£643,457
440,093	Working expenses	509,571
113,754	Net traffic receipts	133,886
Dr. 39,996	Balance of income from rentals, outside operations and car mileage	*Dr.* 55,872
£73,758	Total net revenue	£78,014

The net revenue charges were £92,187, so that there was a net revenue deficiency of £14,173, compared with a deficiency of £13,883 for the corresponding half-year of 1909. Deducting this deficiency from the surplus for the half-year ended Dec. 31, 1909, of £25,789, there remains a surplus for the year to June 30, 1910, of £11,616, and adding to this the balance of £5,650 carried forward on June 30, 1909, the net revenue balance is £17,266, which will admit of payment of full interest on second mortgage income bonds, and leave a balance of £4,937.

DETROIT, GRAND HAVEN AND MILWAUKEE RAILWAY.

The following summary shows results of the half-year's working, compared with the corresponding period, 1909:—

1909.		1910.
£160,223	Gross receipts	£199,488
136,955	Working expenses	167,654
23,268	Net traffic receipts	31,834
Dr. 12,072	Balance of income from rentals, outside operations, and car mileage	*Dr.* 29,401
£11,196	Total net revenue	£2,433

The net revenue charges were £36,981, against £36,946 in 1909, so that there was a net revenue deficiency of £34,548, as compared with £25,749 for the corresponding period of 1909.

GRAND TRUNK PACIFIC RAILWAY.

The contractors for the Government have continued to encounter difficulties on the eastern division from Lake Superior Jct. to Winnipeg owing to the sinking of the line caused by the swampy nature of the ground at various points. These difficulties have been practically overcome, and, under special arrangement with the Government, the expectation that this year's grain would be carried over the line from Winnipeg to the Lake will be realized. Pending the official opening, it has been arranged, in order to give the public as soon as possible the convenience of improved communication between Winnipeg and Edmonton over the Prairie section, that a daily passenger and freight train service should be run each way between those points. This service was commenced early in July, and has given great satisfaction, the time saved in the journey being from five to seven hours as compared with any other route. The expenses of operation are charged to construction account, which is also credited with the receipts. From Winnipeg west the track has been laid for 916 miles to Wolfe Creek, the end of the Prairie section, 123 miles west of Edmonton. From Wolf Creek, the beginning of the Mountain section, track has been laid to Edson, and it is expected, will be extended to the Athabasca River, 100 miles, by the end of the season. From Prince Rupert rail has been laid for 80 miles, and grading completed to Copper River, 130 miles. The expectation that the line would reach Tete Jaune Cache from the east and Aldermere from the west this year, is not likely to be fulfilled, owing to the great scarcity of labor. The contractors have made every effort to obtain labor, offering as much as $3 a day, and making every possible arrangement for the comfort of the men, yet they are at least 5,000 men

short of their requirements. Continued progress has been made with the building of branch lines from Melville to Regina, Melville to Yorkton and Canora, Sask., and Tofield to Calgary, Alta. The scarcity of labor has, however, also retarded the work on these lines.

REPORTS OF OFFICIALS.

The Chief Engineer, H. G. Kelley, states that the expenditure for maintenance of the property, during the half-year was $454,116.03 more than during the corresponding period of 1909.

The Superintendent of Motive Power, W. D. Robb, reports expenditure, mileage, etc., as follows:—

Half-year ended	Total expenditure.	Train mileage	Rate of expense per mile. Train	Engine	Car
June, 1910..	$4,944,322	9,548,089	51 78c	39.68 c.	3.25 c.
" 1909..	4,150,751	9,079,492	45.72c	35.91 c.	2.83 c.

An increase in expenditure of $793,571, or 19.12%, compared with an increase in train miles of 468,637, or 5.16%.

	Passenger trains.	Freight trains.	Mixed trains.
The average number of cars moved per train was..	4.6	25.5	7.0
And for the corresponding period	4.5	26.7	6.8

During the half-year three locomotives were scrapped, leaving 26 old light capacity engines set aside to be scrapped. Ten Pacific type passenger locomotives were built at Point St. Charles shops, and 15 compound consolidation freight locomotives and 25 simple mogul freight locomotives were purchased, and put into service.

The actual stock at June 30th, 1910, was 924 locomotives, against the official figure of 803.

The comparative cost of repairs per train, engine and car mile was:—

Half-year ended.	Total cost of repairs and renewals.	Total miles run by cars. Passenger.	Freight.	Total	Repairs and renewals of locomotives. 1910.	1909.	All repairing charges, including shop machinery, tools and marine equipment, etc. 1910.	1909.	Cost per mile. Train	Car.
June, 1910	$1,344,588	19,599,216	132,637,532	162,236,748					14.08 c.	0.893 c.
" 1909	1,034,178	18,817,467	127,871,131	146,688,598					11.39 c.	0.705 c.
Cost per mile.										
n.....					16.99 c.	11.37 c.	19.00 c.	12.98 c.		
Engine.....					13.02 c.	8.94 c.	14.56 c.	10.19 c.		
Car.....					1.07 c.	0.70 c.	1.19 c.	0.80 c.		

J. Coleman, Superintendent Car Department, reports expenditure, mileage, etc., as follows:

An increase in expenditure of $310,410, or 30.01%, with an increase in car miles of 5,548,150, or 3.782%.

One dining and six first class cars were built at the company's shops, and 10 baggage cars were purchased, out of revenue.

The income account for the half-year is as follows:—

A. W. Smithers, Chairman, in proposing the adoption of the report, dealt with the accounts in detail, and also referred to his recent tour of inspection over the system. He reported that the Ottawa station is nearing completion, and stated that the company would have as tenants and part users, the C.P.R., C.N.R. and New York Central Lines. The recently built M.C.R. Detroit River tunnel was also mentioned, and it was announced that the G.T.R. would, doubtless use the tunnel for some of its traffic, on terms, especially during the winter, so that difficulty with ice in the Detroit River would be avoided. The trip over the G.T.P.R. from Fort William to Prince Rupert was also described, and it was stated that it was hoped to have track laid to the Athabasca River this year. Dividends of 2% on the 4% guaranteed stock, 2½% on the first preference stock, and 2½% on the second preference stock were declared. The company is promoting legislation in the Dominion Parliament to sanction the holding of one general meeting each year, instead of two, and to make up its accounts annually instead of semi-annually; to pay dividends semi-annually, to provide a reserve fund for extensions, renewals, maintenance, repairs, etc.; to acquire, hold and sell the stocks and securities of the Montreal and Southern Counties Ry.; to guarantee interest at 4% on an issue of 4% first mortgage bonds of the Grand Trunk Western Ry., to issue additional G.T.R. consolidated debenture stock as may be necessary, and to repeal certain inconsistent provisions of former acts.

Government Railways Provident Fund.

This fund was established April, 1907, by a contribution of 1½% of the monthly salary or wages of each officer or employe, on which 3% is allowed by Government and a sum equal to that contributed by the employes given out of the revenues of the railways. The minimum allowance from the fund is $20 a month and the maximum is two-thirds of the pay at the time of retirement. The fund is administered by five persons, three of whom are officers of the railway appointed by the Department of Railways and two elected annually by the contributing employes. On April 1, 1909, there had been accumulated a fund of $225,898.31. The employes' contributions for the year were $69,949.70, and with the railway contribution, interest, etc., the total fund for the year aggregated $372,595.09. The total expenditure for the year was $117,010.01, of which $103,628.20 was paid out in retiring allowances to employes, leaving a capital balance of $255,585.08. Since the fund was started 398 employes have been pensioned, of whom 168 were placed on the list during the year under review; 45 pensioners have died, leaving 353 persons now on the list. The total amount paid in pensions since the fund was started has been $191,608.87.

Reid Newfoundland Co's Works.

A Toronto Globe staff correspondent has been visiting Newfoundland and writing a series of letters. In one from St. John's he says:—"The city's greatest industry is the Reid Newfoundland Co.'s locomotive and car works. These turn out the rolling stock of the road, carry out all repairs, and keep pace with the need of the new lines in supplying equipment. They are now building four locomotives. They also carry out all the work of the dry dock, which is 600 ft. long, 132½ ft. wide in the body, with 85 ft. entrance and 25 ft. depth on the sills. The dock held one of the Empresses. It is available for all purposes, from the patching of a fishing schooner to the repairing of a liner's hull. There are now 250 men employed in the works, but the force is increased to about 400 in the busy season."

Emergency Tools for Cars.

The Board of Railway Commissioners passed the following order: 12206, Nov. 3:—"Every railway company subject to the legislative authority of the Parliament of Canada, operating a railway by steam power, shall cause its sleeping, dining, baggage, mail and express cars and coaches used in passenger service on its railway, to be equipped with emergency tools, consisting of a sledge, axe, and saw; said tools to be kept in a conspicuous place in every such car, so as to be easy and ready of access in case of need, and said cars to be so equipped on or before April 1, 1911. That every such railway company be liable to a penalty of not exceeding $25 for every failure to comply with the foregoing regulation within the time for its coming into force and thereafter."

The Engineers' Club of Toronto, at a meeting Nov. 10, considered the proposed bylaws of a social club, which it is intended to establish there. The intention is to limit the membership to 500 resident, 200 non-resident, 25 life and 75 associate members. The provisional directors are:—C. M. Canniff, Chairman Engineers' Club of Toronto; A. B. Barry, W. Chipman, J. Galbraith, J. G. Sing, J. B. Tyrrell and A. J. Van Nostrand.

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

WIRE ROPE

Why experiment continually with wire rope you know is not up to "**Dominion**" quality—quality that means better material, better construction and better service?

Material—All our ropes are made from the best quality of wire, specially drawn to our rigid specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

Construction—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years' experience in manufacturing wir ropes enables us to offer the best to be had anywhere.

Service—Every length of "Dominion" Rope gives satisfaction, because it is serviceable and dependable.

All Lengths and Sizes Carried in Stock for Immediate Shipment

The Dominion WIRE ROPE Company Ltd., MONTREAL

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Central Ry.—The location plan of the section under construction from Red Deer to Rocky Mountain House shows a line from just south of Red Deer, in tp. 38, range 27, southwesterly to the Red Deer River, where the line turns northwest, and crosses the 5th meridian at Cygnet Lake, passes to the south of Sylvan Lake, crosses the Medicine River south of Eckville, and then proceeds westerly to Rocky Mountain House, through tps. 39, ranges 3, 4, 5, 6 and 7. We are advised that it is expected to complete about 20 miles of grading, and to lay about six miles of track this season. The company had not purchased any rails at the time of our advice, and the six miles of track which it is proposed to lay will be for the purpose of getting in bridge material.

The Board of Railway Commissioners has authorized the A.C.R. to cross the C.P.R.'s Calgary and Edmonton Ry. at Red Deer, by an overhead bridge. The location plans of the line easterly from Red Deer have been approved by the Board of Railway Commissioners to Sounding Creek, in tp. 30, range 5, west of the 4th meridian, and from that point to Moose Jaw, Sask. The line will cross the South Saskatchewan River, between ranges 7 and 8, tp. 21, and will parallel the C.P.R. from Caron into Moose Jaw.

The Board of Railway Commissioners has authorized the building of a branch line at Rocky Mountain House, in tp. 39, range 7, west 5th meridian.

Application is being made to the Dominion Parliament for an act authorizing the building of the following additional lines:—From the present authorized easterly terminus at Saskatoon, northerly and northeasterly to Fort Churchill, on Hudson Bay, with a branch from some point on the line to Port Nelson, also on the Hudson Bay, with power to enter into agreements with the Crown as to the construction, equipment or operation of such a line; from Moose Jaw, Sask., to the International boundary in tp. 1, range 16, west of the second meridian; from the already authorized line between Red Deer River and Cygnet Lake, generally northeasterly to Blackfalds, and Lacombe, Alta.; three branch lines of 30 miles each into the Big Horn Range between the North Saskatchewan and Brazeau Rivers, and two branch lines of 25 miles each, northerly and northeasterly near the crossing of the Brazeau River. An extension of time for the building of the lines already authorized is also asked. (Nov., pg. 909.)

Alberta North Western Ry.—The Alberta Legislature is being asked to amend the act of incorporation of 1906 and the amending acts of 1908 and 1909, in several particulars, and to grant an extension of time for construction. Emery, Newell and Bolton, Edmonton, Alta., are the solicitors. (Aug., 1909, pg. 573.)

Algoma Central and Hudson Bay Ry.—Application is being made to the Dominion Parliament to extend the time for the construction of the projected line from the C.P.R. northward to James Bay, specifically described in chap. 46 of the statutes of 1901, and to authorize the building of a branch from near mile 17 from Michipicoten Harbor northerly for a distance of 9.5 miles.

At a dinner at Sault Ste. Marie, Ont., Oct. 24, to the General Manager of the Lake Superior Corporation, W. C. Franz, he stated the company had provided $4,000,000 for the completion of the line to C.P.R. main line, and had also determined that it was to be built through to James Bay. The right of way, which was graded to Hawk Lake in 1903, had been cleaned up, and already six miles of track had been laid on it. Montreal River was to be crossed by a steel viaduct, 1,100 ft. long, the material for which was on order. The subgrade had been cleaned up well on to Hobon, the junction with the C.P.R., and it was hoped to have that section of the line completed next season. (Nov., pg. 909.)

Athabasca Northern Ry.—The Dominion Parliament is being asked to extend the time within which the company may build the lines authorized by chap. 57 of the statutes of 1904-05. Smith, Markey, Skinner, Pugsley and Hyde, Montreal, are the solicitors. (July, 1909, pg. 473.)

British Columbia and White River Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a line from the International boundary between British Columbia and Alaska, near Bear Creek, a tributary of the Chilkat River, northwesterly towards the Alsek River, through the Shakwak Valley to Lake Kluane, and via the Doujek Valley to White River, and if desired, thence to the International boundary between Yukon Territory and Alaska, between the 62nd and 64th parallels of latitude. H. Fisher, Ottawa, is solicitor for applicants.

Burrard Inlet Tunnel and Bridge Co.—The Board of Railway Commissioners has approved the location of this projected line from station 122-57.5 at the west side of Kootenay St., to station 154-86.9 at north side of Burrard Inlet, near Seymour Creek, B.C. This distance consists of the approaches to the proposed bridge across the Narrows; the question of the approval of the other plans filed, which have already been approved by the Minister of Railways, has been held over.

The general plans provide for the building of a bridge across the second narrows of Burrard Inlet, from North Vancouver to near the eastern boundary of Hastings townsite, and a tunnel under the first narrows, from near the mouth of Capilano River to Stanley Park, and either by means of new lines of railway or utilizing some existing lines, connect the bridge and tunnel by a belt line. Some plans have been prepared by Cleveland and Cameron, Vancouver, showing the projected tunnel and connecting lines, and a plan for a bridge at the second narrows has been submitted by Waddell and Harrington. In an interview Nov. 2, J. Y. McNaught, Reeve of North Vancouver, said the line would join the Great Northern Ry. east of False Creek, and on the north side of the inlet it would run west as far as Deep Cove on the North Arm, and eastward as far as Horseshoe Bay on Howe Sound. A diamond drill will be at work shortly finding out the depth required for the foundations of the bridge, which will be located west of the mouth of the Seymour River. (Nov., pg. 909.)

Canadian Western Ry.—See Chicago, Milwaukee & St. Paul Ry.

Chicago, Milwaukee & St. Paul Ry.—A report from Fergus Falls, Minn., Oct. 27, stated that N. J. Kaulman had had a conference with the company's General Passenger Agent with respect to the surveys for a line to Fargo, N.D., and has been assured that these surveys would be extended, as it was the intention of the company to build into Winnipeg, Man.

Engineers representing the Chicago, Milwaukee and Puget Sound Ry., which is the western extension of the Chicago, Milwaukee and St. Paul Ry., are reported to be at work making surveys in the Flathead Valley, and are said to have completed the location of a line from a town in Montana to the International boundary, to connect with the proposed line in Canada. There are several charters in existence covering this line, one or two of which are held by the Canadian Western Ry., which is applying to the Dominion Parliament for some changes in its provisional directors, extending the time for construction, and authorizing it to enter into agreements with other companies. It is said that the C., M. & P.S. Co. is interested in this charter.

Detroit River Tunnel.—Officers of the Michigan Central Rd. state, in reference to the reports current in Windsor, Ont., Nov. 1, that the tunnel between Detroit, Mich., and Windsor, Ont., is altogether too small; that it was designed to admit the use of much larger cars than any now in use on U.S. or Canadian railways. (Nov., pg. 909.)

The Elkhorn Northern Ry. Co. was incorporated last session by the Manitoba Legislature, with power to build a railway from the International boundary in range 27, 28 or 29, north of Antler, N.D., northerly to Elkhorn, and thence to the northern boundary of Manitoba, near Powell. The provisional directors are:—J. H. Miller, J. S. McLeod, G. C. Smith, W. J. Thompson, R. de W. Waller, B. Burke, A. McN. Fraser, H. J. Jones, J. J. Pierce, J. Carse, Elkhorn, Man. (May, 1909, pg. 355.)

Essex Terminal Ry.—The Board of Railway Commissioners has authorized the company to cross with its tracks the Windsor, Essex and Lake Shore Rapid Ry. tracks, at rail level, at Howard Ave., Windsor, Ont. (June, pg. 447.)

Frank, Alta.—At a meeting of the Crow's Nest Pass Improvement League, held at Frank, Alta., Nov. 9, a resolution was passed in favor of increased railway accommodation, and a committee was appointed to obtain from the Alberta Minister of Public Works information as to the charters granted to companies other than the C.P.R. for building railways through the Pass, and to find out what these companies were prepared to do in the way of increasing the railway facilities. At a meeting of the Macleod branch of the League, Nov. 1, a resolution was passed asking the Alberta Government to obtain information from the companies holding charters for building lines through the Pass as to a definite time when they would begin construction.

Hardy Bay to Quatsino Sound.—Application is being made to the British Columbia Legislature to incorporate a company with this title to build a line from Hardy Bay or Port McNeill, or some other convenient place near thereto, on the eastern shore of Vancouver Island, to Coal Harbor, on the west arm of Quatsino Sound, or to some point on Quatsino Sound. Barnard and Robertson, Victoria, B.C., are solicitors for applicants.

High River and Hudson Bay Ry.—Application is being made to the Alberta Legislature to incorporate a company with this title to build the following lines:—From the western boundary of the province, in tps. 17, 18 or 19, easterly to High River, thence northeasterly to the eastern boundary of the province in tps. 26, 27 or 28; from some point on the last mentioned line near High River northwesterly through Sheep Creek Pass to the western boundary of the province in tp. 19, 20 or 21; from a point near High River southwesterly to the western boundary of the province in tp. 16 or 17. The company is also asking for power to develop water powers and to dispose of electricity for power and lighting purposes. Ballachey and Black, High River, Alta., are solicitors for applicants.

Indian River Ry.—At the recent annual meeting of the Lake Megantic board of trade it was stated that work would be started next spring upon this projected railway; that the line would

connect with one in the U.S., and that the surveys for the whole of the line from Rumford Falls, Me., to Megantic, Que., had been completed. (Feb., pg. 109.)

Intercolonial Ry.—F. W. Bowden, Chief Engineer of the Department of Railways, spent some time early in Nov., in inspecting various branch lines in New Brunswick for the purpose of reporting on their physical condition with a view of their being acquired by the Government under the act passed last session.

A building 40 by 40 ft. is being built at Moncton, N.B., as an addition to the gas plant there. This will double the size of the building. The foundations are concrete with brick superstructure.

It is reported that the building of a second track between Moncton and St. John, N.B., will be begun next year. The first section of the work to be done, J. T. Halliday, Superintendent of the Truro-St. John district, is quoted as saying, will be from St. John to Hampton.

The Halifax board of trade was given to understand Nov. 3 that considerable improvements would be made at the deep water terminals as soon as plans were made and approved. The members of the Managing Board inspected the terminals a few days previously, and directed the carrying out of certain temporary improvements, including the doubling of the shed accommodation at pier 4. Work was started Nov. 4. (Nov., pg. 911.)

Kettle Valley Lines.—Application is being made to the Dominion Parliament to authorize the Kettle River Valley Ry., one of the railways operated under this title, to build the following branches:—From Penticton to the International boundary at Osoyoos Lake; from the already authorized line to Allison or Princeton; from the already authorized Coldwater-Fraser River line to Steamboat Mountain mining camp, B.C. Various other powers are asked for, including authority to acquire steam and other vessels, to build docks, etc.; to operate hotels, to carry on an express business, and to issue securities in respect of properties other than its railway lines. The notice is signed by C. B. Gordon, Secretary.

Construction has been started at Greenwood, B.C., by J. B. McLean & Co., on a further section of the line from Midway. A contract has been let to A. Schuill for the tracklaying of the 10 miles of grading completed by the old Midway and Vernon Ry., from Midway to Rock Creek. This work will be completed at once. Thirty miles of the extension are now under contract from Rock Creek to Penticton, and a similar mileage from Merrit easterly towards Penticton is also under contract. Track laying has been started at Merrit, 65 lb. rails being used, and it is expected to have the first 10 miles laid towards Penticton by Dec. 31. The divisional headquarters will be at Penticton, the plans for which include a wharf on the lake. A. McCullough, Engineer in charge of Construction, and J. P. Ford, the C.P.R. Resident Engineer at Revelstoke, B.C., were in Penticton, Oct. 28, going over the site of the yards, etc. (Nov., pg. 911.)

Kootenay and Alberta Ry.—C. Fergie, Manager of the Western Coal and Coke Co., Montreal, which is operating the Beaver Creek Coal Mines, is reported to have stated, prior to his going east, Oct. 27, that the line would be built at an early date, and that plans for the laying out of the Beaver Creek, Alta., townsite, the building of miners' cottages, etc., were under consideration by the directors at Montreal. A local report says the staking out of the route of the line is being proceeded with. (Aug., 1909, pg. 573; see also Lethbridge Collieries, Nov., pg. 911.)

Lloydminster and North Western Ry.—The Alberta Legislature is being asked to incorporate a company with this title to build a line from Lloydminster northwesterly to St. Paul de Metis, Alta. J. D. Munro, Lloydminster, is solicitor for applicants.

Manitoba and Keewatin Ry.—The Dominion Parliament is being asked to extend the time within which this projected railway may be built. (Sept., pg. 727.)

Midland Continental Ry.—According to press reports this railway, "now under construction from Winnipeg to the Missouri River," has completed grading "for the first fifty mile division between Jamestown and Edgeley, N.D.," and that following a recent inspection by the company's officials, "it was announced that rails would be laid and trains running by spring." No names are mentioned in connection with the project, but it is said "the builders of the road are principally Chicago and Middle West business men and capitalists." (See American Midland Ry., Sept., 1907, pg. 663.)

The New Brunswick Coal and Ry. Commissioners have accepted the tender of P. Lea & Co., Moncton, N.B., for the erection of a two stall engine house at Minto, N.B., to replace the one recently burned. The work is expected to be completed by Dec. 31. (Nov., pg. 911.)

Ontario, Hudson's Bay and Western Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build its projected railway. (June, 1909, pg. 442.)

Owen Sound and Meaford Ry.—A conference was held in Owen Sound, Ont., Nov. 12, between the provisional directors of the O.S. & M. Ry., the mayor and chairman of the railway committee of the Owen Sound town council, with respect to this projected railway. It was decided to endeavor to secure the co-operation of the towns across the three counties of Bruce, Grey and Simcoe, and to secure a charter for a line from Southampton, through Owen Sound, Meaford, Thornbury, Collingwood, and on to Orillia, so that the company would have a charter that could be utilized to make connection with any of the three big railways, or to enable the company to avail itself of any bargain that might be made to construct and operate the road. (June, pg. 451.)

Pacific and Peace River Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from near Bella Coola on Burke Channel, B.C., following the Bella Coola River valley for about 20 miles, thence northeasterly, passing east of Teta Chuck, Cheslatta and Fraser Lakes to Fort Fraser, thence northerly, passing east of Stewart Lake to Fort St. James; thence northeasterly to Fort McLeod, and through the Pine Pass to Peace River near Dunvegan, Alta., about 480 miles. Power is also asked to build and operate car ferries, wharves, docks, etc., in connection with the line, and any branches which may be authorized. J. A. Ritchie, Ottawa, is solicitor for applicants.

Peace River Great Western Ry.—The Alberta Legislature is being asked to incorporate a company with this title to build a line from Edmonton northwesterly to the southwesterly end of Lesser Slave Lake, thence northwesterly to and along the Peace River, Hudson, Howell, Ormond and Marlatt, Edmonton, Alta., are solicitors for applicants.

Pincher Creek, Cardston and Montana Ry.—A Pincher Creek, Alta., dispatch of Oct. 31 says no construction has been done, but it is stated that the management is ready to begin at any time. J. A. Taylor has been in Ottawa, and C. Luber, the President of the company, has had an interview with the Alberta Premier in connection with the project. (Nov., pg. 911.)

Pontiac Central Ry.—An extension of time for the building of this projected railway is being asked from the Dominion Parliament. J. M. Wilson, Montreal, is President. (Dec., 1907, pg. 923.)

Porcupine District, Ontario.—The line to the Porcupine district, for which the Government has entered into an arrangement with a syndicate, of which E. A. Walberg is head, starts from the Temiskaming & Northern Ontario Ry., near mileage 225, and runs east of the lake to Frederickhouse. Several gangs of men were reported, Nov. 14, to be engaged in cutting out the right of way. J. R. Nichols is superintendent in charge of construction. The line will be operated by steam at first, but it is expected to arrange for its operation by electricity later on. The Ontario Government will facilitate the application for a charter of incorporation next session of the Legislature. (Nov., pg. 913.)

Prince Edward Island Ry.—A deputation from Prince Edward Island recently waited on the Dominion Government at Ottawa to urge the building of a railway from New London along the north shore. This branch would start from Emerald or Kensington, on the main line, and pass through Clifton to Stanley Bridge in New London, about 12 miles, but those interested in promoting the building of the line suggest that it should be extended from New London to a junction with the main line between Mount Stewart and Royalty Junction, 23 miles, making the total length of the line about 35 miles. (Oct., pg. 831.)

Quebec Central Ry.—The Chaudiere Valley extension from St. George, Beauce, to St. Justine, Que., 28 miles, was passed for traffic by E. V. Johnson, inspecting engineer of the Department of Railways, Ottawa, Oct. 26. The line runs through a good farming country, and opens up considerable timber areas. The stations on the section now opened for traffic are at Morisset, Ste. Rose, St. Germaine, and St. Justine. At this point the line is only eight miles from the International boundary between Quebec and Maine. Track has been laid beyond St. Justine for about a mile, and it is expected that the line will be completed to St. Sabine road by the end of the year. The extension will ultimately effect a junction with the Temiscouata Ry., at Cabano, Que. (Oct., pg. 831.)

Queen Charlotte Island Ry.—R. C. Brown, one of the provisional directors, returned to Prince Rupert, B.C., recently from Queen Charlotte Island, where he had been inspecting some coal areas on Skidegate Inlet, in which he is interested. The route of the proposed railway is from between Skidegate and Queen Charlotte City to Masset Inlet, through an area in which there are extensive deposits of coal, and adjacent to which there are large areas of timber. (May, pg. 353.)

Reid Newfoundland Ry.—The 700 ft. trestle across Gott's Cove, on the Bonavista branch line, was completed Oct. 25, and tracklaying was proceeded with to Indian Brook, where another trestle was being built. Trestles are also being built at North West Arm, and at Freshwater, and these were expected to be ready by Dec. 1. The grading is completed practically to Bonavista, and it is expected that track will be laid on the entire branch by Dec. 31. (Nov., pg. 911.)

Saskatoon and Hudson Bay Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Saskatoon, Sask., northerly to Melfort, and northeasterly to Pas Mission. The notice of applica-

tion is signed by V. T. Bartram, Secretary, Toronto, and is dated at Ottawa.

St. John Valley Ry.—F. B. Carvell, M.P., Woodstock, N.B., in discussing the prospects of railway construction in the St. John Valley, St. John, N.B., Nov. 12, said he believed a line from Grand Falls to St. John would be under construction within the next two years, and for its accomplishment he looked to one of the big railways. (Nov., pg. 913.)

Temiskaming and Northern Ontario Ry.—Engineers have secured a new location for the line between North Bay and Riddle, Ont., 34 miles, which will reduce gradients, and cut out a number of curves. The new route is easterly of the present line. The Commissioners have, it is said, decided to apply to the Ontario Government for $1,500,000 to enable them to carry out the plans. A reduction in operating expenses will, it is expected, offset the cost of the new line.

The Ontario Premier said Nov. 12, that the Government was not thinking of, and had not considered the possibility of selling the line to the C.P.R., the G.T.R. or any other company.

Toronto Civic Railway.—Good progress is being made with the grading for this short line along the eastern bank of the Don River, which the Toronto city council is building to connect the several lines entering Toronto with the Ashbridge's Bay industrial district. We are advised that an arrangement has been made with the railway companies for the supply of rails and other materials. (Nov., pg. 913.)

Toronto, Hamilton and Buffalo Ry.—The Board of Railway Commissioners has granted the company's application to build spur lines across Grant Ave., Wentworth St., Sanford Ave. and Sherwood Ave., Hamilton. The application was opposed by the Hamilton city council on the ground that it was the thin end of the wedge to make of the eastern district a large freight yard. (Oct., pg. 831.)

Vancouver North to Grouse Mountain.—It is said that among those who are making application to the British Columbia Legislature for the incorporation of a company to build a railway up Grouse Mountain are Macdonell and Gzowski, engineers and contractors, Vancouver; C. H. Allen, San Francisco, Cal.; G. M. Gibbs, and W. E. Graveley, Vancouver. (Nov., pg. 913.)

Windsor to Chester, N.S.—Local press reports state that a preliminary survey is being made for a line from Windsor to Chester, in Lunenburg county. Windsor is the point where the Dominion Atlantic Ry., the old Midland Ry. of N.S., and the Windsor branch of the Intercolonial Ry. meet, the whole being operated by the D.A. Ry., which has passed under the control of the C.P.R., while Chester is a seaport, and a station on the Halifax and South Western Ry., 51 miles from Halifax.

The Wainwright, Alta., board of trade has received a letter from the Canadian Monorail Corporation, enquiring as to the feasibility of establishing a monorail system of transportation in the district, which, it is claimed, is entirely suitable for such a farming district, if it is sufficiently settled to warrant the venture.

A bench warrant was issued at Montreal, Nov. 13, for the arrest of E. Smith, a C.P.R. sleeping car conductor, who failed to appear after being committed for trial on charges of theft of sleeping car fares and railway tickets. In connection with the case, a C.P.R. official is reported to have said that the traveling public is very much to blame for these thefts, in offering facilities and inducements.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses and net profits from July 1, 1910, with increases over, or decreases from, those of 1909-10:

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings, expenses, etc., of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. & M.R. for Sept., 1910, and 1909, respectively:

GRAND TRUNK RAILWAY.

	1910.	1909.
Earnings	$3,217,700	$3,058,300
Expenses	2,269,200	2,106,900
Net earnings	$948,500	$951,400

CANADA ATLANTIC RAILWAY.

	1910.	1909.
Earnings	$175,800	$189,600
Expenses	158,700	160,200
Net earnings	$17,100	$29,400

GRAND TRUNK WESTERN RAILWAY.

	1910.	1909.
Earnings	$529,600	$521,000
Expenses	402,100	364,600
Net earnings	$127,500	$156,400

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1910.	1909.
Earnings	$184,900	$180,000
Expenses	147,700	125,000
Net earnings	$37,200	$55,000

Approximate earnings for Oct., $4,200,039, and for two weeks ended Nov. 14, $1,802,180, against $4,043,361 and $1,826,468 for same periods, 1909.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to Oct. 31:

	1910.	1909.
Grand Trunk Ry.	£2,481,267	£2,434,609
Canada Atlantic Ry.	137,289	150,410
G.T. Western Ry.	403,703	430,389
D.G.H. & M. Ry.	136,562	141,364
Totals	£3,158,821	£3,156,772

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

SAW LOGS FROM RAINY RIVER.

12107. Sept. 22.—Re application of the Rat Portage Lumber Co., Ltd., under secs. 314, 318, 321, and 323 of the Railway Act, for an order directing the Canadian Northern Ry. to reduce its tolls, charges or freight rates for carrying the applicant's saw-logs from the Rainy River and points adjacent thereto, to the applicant's mills, in St. Boniface, Man.; that no switching charge be allowed; that the railway supply cars as required by the applicant, to enable the applicant to carry on its business; that the railway pay to the applicant any damages caused by its neglect and refusal to supply the necessary cars for the removal and haulage of the applicant's logs, and also, any additional monies the applicant was obliged to incur in handling and carrying over its logs. It is ordered that it is the duty of the C.N.R., as successor of the Manitoba & South Eastern Ry., to haul pine and spruce logs upon its lines: (a) for any distance up to 150 miles from Winnipeg; (b) from the point, if any, where the railway touches Rainy River to Winnipeg, at a rate not to exceed $2.50 per 1,000 ft. b.m., in accordance with the provision of 61 Vic., chap. 43, Manitoba. That the C.N.R. file with the Board, joint tariffs with the Minnesota & Manitoba Ry. showing through rates from Minnesota points to Winnipeg by continuous route provided by the Minnesota & Manitoba Ry. and the C.N. Ry. as successors to the Manitoba & South Eastern Ry., not to exceed $2.50 per 1,000 ft. b.m. That if, for any reason, the C.N.R. and the Minnesota & Manitoba Ry. are unable to agree upon such joint tariffs, or the division thereof, the C.N. Ry. shall file with the Board tariffs showing rates from the International boundary line between Minnesota and Manitoba, which, added to the local rate upon the Minnesota & Manitoba Ry. from the point of origin to such International boundary line shall not exceed $2.50 per 1,000 ft. b.m. That the $2 switching toll charged by the C.N.R. for the switching services rendered is hereby disallowed.

The annual meetings of the Canadian Society of Civil Engineers will be held at Winnipeg, Jan. 24 to 27, 1911.

We are advised that while the G.T.R management is considering the situation at Turcot, Que., Belleville and North Bay, Ont., to see what interest the employes would take in the establishment of Y.M.C.A., buildings at these points, no definite action has been decided upon.

The Temiskaming and Northern Ontario Ry. Commission has granted a general increase in wages to conductors, brakemen, baggagemen and yardmen, effective from Oct. 1, varying from 10 to 25%. These increases, it is stated, bring the T. & N.O.R. into line with other companies' rates.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

11949. Oct. 14.—Authorizing Detroit River Tunnel Co. to open for traffic its tunnel and railway works between Windsor, Ont., and Detroit Mich.

11950, 11951. Oct. 10.—Authorizing C.N.R. to build between lots 85 and 86, and between lots 105 and 91, Cote St. Pierre South, Two Mountains county.

11958. Oct. 15.—Authorizing G.T.R. to build across road between lots 28 and 29, con. B, Brighton tp., Ont.

11953 to 11958. Oct. 14-15.—Authorizing city of Vancouver, B.C., to lay sewers and culvert under C.P.R. at six points.

11959. Oct. 14.—Authorizing W. L. Gilson, Dixville, Que., to lay water pipe under G.T.R.

11960. Oct. 14.—Authorizing city of Brantford, Ont., to lay sewers under G.T.R. on South Market St.

11961, 11962. Oct. 14.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.T.R. at Lake Shore Road, Toronto, and across C.P.R. telegraph wires in Waterloo tp.

11963 to 11969. Oct. 14.—Authorizing city of St. Thomas, Ont., to erect electric wires across C.P.R. telegraph wires at three points, and across Bell Telephone Co.'s wires at four points.

11970. Oct. 14. — Authorizing Nipissing Power Co. to erect wires across G.T.R. at Callander, Ont.

11971. Oct. 15.—Ordering G.T.R. within 90 days to install improved electric bell at crossing two miles west of Clinton, Ont.

11972. Oct. 17.—Approving Kettle River Valley Ry. bylaw authorizing O. E. Fisher, G.F. & P.A., to prepare and issue tariffs.

12061. Oct. 12.—Ordering G.T.R. to install gates at Sherman Ave. and Lottridge St. crossings, Hamilton, Ont., appointing a watchman to operate same, and to build northerly two additional tracks, authorized by order 3370.

12062. Sept. 15.—Ordering C.P.R. to build bridge about 1,200 ft. west of present crossing at mileage 2.6, west of Lethbridge, Alta., and another at mileage 10.6.

12063. Oct. 21.—Authorizing town of Brantford, Ont., to lay sewer pipe under T.H. & B.R. on South Market St.

12064. Oct. 21.—Authorizing town of Meaford, Ont., to lay pipe under G.T.R. at St. Vincent St.

12065. Oct. 22.—Amending order 11822, Sept. 17, which authorized the erection of gates at C.P.R. crossing of Fourth St. west, Calgary, Alta., by providing that 20% of the cost be paid out of the Railway Grade Crossing Fund.

12066. Oct. 22.—Authorizing G.T.P.R. to build between secs. 7 and 12, tp. 44, r. 6, w. 4 m.; to close road allowance between south boundary of its right of way and north boundary of secs. 7 and 12, and divert highway to a crossing 415 ft. east of road allowance.

12067. Oct. 22.—Authorizing C.N.R. to cross C.P.R. Langdon branch at sec. 35, tp. 24, r. 27, w. 4 m., Alta.

12068. Oct. 22.—Relieving C.P.R. from providing further protection at crossing of Brock Road at North Claremont, Ont.

12069. Oct. 21.—Authorizing C.P.R. to open for traffic that portion of its line from mileage 9.56, London section, to a connection with G.T.R. in lot 7, con. 1, Etobicoke tp., Ont., and Y connections.

12070. Oct. 12.—Authorizing T.H. & B.R. to build branches in Hamilton, Ont., from west of Grant Ave. to east side of Wentworth St., and to west of Sherman Ave.

12071. Oct. 21.—Authorizing C.P.R. to cross C.N.R. Maryfield branch in the n.e. ¼ sec. 30, tp. 5, r. 16, w. 2 m., Sask.

12072. Oct. 22.—Ordering C.N.R. by Dec. 1, to erect fences according to provisions of Railway Act, along both sides of its right of way, where it is unfenced, between Maidstone and Paynton, Sask., and to install cattle guards.

12073. Oct. 22.—Authorizing Ottawa Electric Co. to erect wires across C.P.R. at Metcalfe Road.

12074. Oct. 24.—Approving revised location of part of C.N.R. Vegreville-Calgary branch through tps. 25-24, r. 25-27, w. 4 m., mileage 224.49 to 238.82.

12075. Oct. 10.—Authorizing city of Fort William, Ont., cross with its street railway the Fort William Terminal Ry. and Bridge Co.'s spur on Syndicate Ave.

12076. Oct. 22.—Amending order 11750, Sept. 9, which authorized Vancouver, Fraser Valley and Southern Ry. to build across certain highways in Vancouver, B.C.

12077. Sept. 22.—Ordering C.N.R. to build siding connecting its line with Tuxedo Park Co. and Canada Cement Co.'s premises, St. Boniface and St. Charles parishes, Man.

12078. Oct. 24.—Ordering C.N.R. to build highway crossing at easterly limit of lot 8, con. 1, Paipoonge tp., Ont.

12079. Oct. 24.—Dismissing application of A. Denis Co., Edmonton, Alta., for order that C.P.R. be required to carry hay from Eastern Canada at rates charged on grain from west to east.

12080. Oct. 24.—Approving location of Burrard Inlet Tunnel and Bridge Co.'s line from station 122-57.5 at Kootenay St. to station 154-86.9 at Burrard Inlet, near Seymour Creek, B.C.

12081, 12082. Oct. 24.—Authorizing city of Edmonton, Alta., to cross at rail level with its street railway, the Edmonton, Yukon and Pacific Ry. on Edward St., at two points, and to erect wires across E.Y. & P.R.

12083. Oct. 24.—Authorizing city of Port Arthur, Ont., to build highway across C.P.R. at Nelson and Clavet Sts.

12084. Oct. 25.—Authorizing Canadian Light and Power Co. to erect wires across Beauharnois Light, Heat and Power Co.'s wires at St. Louis Road, Beauharnois, Que.

12085. Oct. 24.—Authorizing Twin City Oil Co. to build overhead tramway across C.N.R. at Strathcona, Alta.

12086. Oct. 25.—Authorizing city of Brantford, Ont., to cross Brantford & Hamilton Electric Ry. at grade, at Alfred St.

12087. Oct. 25.—Approving location of C.P.R. station at Thessalon, Ont.

12088. Oct. 25.—Authorizing C.P.R. to remove station building at Sault Ste. Marie, Ont., to new location.

12089. Oct. 24. — Authorizing Sandwich East tp., Ont., to build drain along G.T.R. right of way from the Parent outlet between lots 143 and 144, con. 1, westerly to the Little River.

12090. Oct. 25.—Rescinding order 11202, July 21, authorizing crossing of Seymour Power & Electric Co.'s wires in Thurlow tp., Ont.

12091. Oct. 15.—Relieving O. & N.Y. Ry. from providing further protection at crossing of third highway south of Rideau River, con. 2, Russell Road, Gloucester tp., Ont.

12092. Oct. 25.—Authorizing G.T.R. to build new station at Amigari, near Fort Erie, Ont.

12093. Oct. 25.—Approving highway crossing road diversion in n.e. ¼ sec. 35, tp. 28, r. 21, w. 2 m., Sask.

12094. Oct. 26.—Approving location of portion of C.P.R. Regina branch from mileage 199.2 to crossing of C.N.R. spur to East Prince Albert, at mileage 232.4, Sask.

12095. Oct. 26.—Authorizing Shawinigan Cotton Co. to lay pipe under C.N.Q.R. between Shawinigan Falls Jct. and Shawinigan Falls.

12096. Oct. 25.—Authorizing Peterboro Radial Ry. to erect wires across G.T.R. at George St.

12097. Oct. 25.—Authorizing Ontario Distributing Co. to erect wires across G.T.R. at con. 3, Stamford tp., Ont.

12098 to 12102. Oct. 25.—Authorizing Ontario Hydro-Electric Power Commission to erect wires at five points.

12103. Oct. 25.—Authorizing C.N.R. and G.T.P.R. to operate trains over joint crossing near Riley, Alta., without being brought to a stop.

12104 to 12106. Nov. 25.—Approving plans of proposed culvert to be build under G.T.R. at three points in Lochiel tp., Ont.

12107. Sept. 22.—Ordering C.N.R. to haul pine and spruce logs any distance up to 150 miles from Winnipeg, from point, if any, where its line touches Rainy River to Winnipeg, at a rate not to exceed $2.50 per 1,000 ft. b.m.; also to file joint tariffs with Minnesota & Manitoba Ry., showing through rates from Minnesota points to Winnipeg, and disallowing $2 switching toll charged by C.N.R.

12108. Oct. 26.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Galt, Preston and Hespeler Electric Ry. at Joseph St., Preston.

12109. Oct. 26.—Approving C.N.R. revised location through tps. 25-24, r. 26-27, w. 4 m., Alta., mileage 233.39 to 237.62 (revised location) from junction with main line at Vegreville.

12110. Oct. 25.—Authorizing C.P.R. to build spur for Imperial Oil Co. in Moose Jaw, Sask.

12111. Oct. 26.—Authorizing C.P.R. to build spur for E. Patenaude, Outremont, Que.

12112. Oct. 26.—Relieving G.T.R. from providing further protection at crossing ¾ mile east of Tillsonburg, Ont.

12113, 12114. Oct. 27.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Tel. Co.'s and G.T.R. wires in Yarmouth tp. and New Hamburg tp. respectively.

12115. Oct. 26.—Authorizing G.T.R. to build branch and spur therefrom to D. J. McLean and Co.'s premises, near Blackwater Jct., Ont.

12116. Oct. 26.—Extending to Dec. 1 time within which White Pass and Yukon Ry. file its tariff of telegraph tolls, for approval, and authorizing it, meantime, to charge tolls previously authorized.

12117. Oct. 26.—Extending to Dec. 1 time within which Canadian Northern Telegraph Co. file its tariff of tolls for approval, and authorizing it, meantime, to charge tolls previously authorized.

12118. Oct. 28.—Relieving C.P.R. from providing further protection at highway crossing in lot 6, con. 1, mileage 39.91, Nassagaweya, tp., Ont.

12119. Oct. 27.—Authorizing T.H. & B.R. and G.T.R. to operate trains over crossing of G.T.R. north of Brant St. and east of McKinstry St., Hamilton, Ont.

12120. Oct. 26.—Extending to Dec. 1 time for approval of C.P.R. telegraph tolls between points west of and including Sudbury, Ont., to and from points west of Sudbury, from and to points east thereof, and east of and including Windsor, Ont.

12121. Oct. 26.—Extending to Dec. 1 time for approval of G.T.P. Telegraph Co.'s tariff of tolls between points in Canada, except betwen its local offices on its Ottawa division, and Quebec, and between them and Swanton, Vt.

12122. Oct. 27.—Approving C.P.R. plan showing location of standard bell to be installed at crossing of King St., Woodstock, N.B., ordering installation of same, and authorizing C.P.R. to operate trains over crossing without first being brought to a stop.

12123. Oct. 27.—Authorizing Essex Terminal Ry., Windsor, Essex and Lake Shore Rapid Ry., and C.P.R. to operate trains over crossing of W.E. & L.S.R.A. and C.P.R., authorized by order 1139, June 5, 1906, and crossing of Essex Terminal Ry. and W.E. & L.S.R. Ry. on Gravel Road, and crossing of Essex Terminal Ry. and C.P.R., just east of Gravel Road, Sandwich tp., Ont., without first being brought to a stop.

12124. Oct. 10.—Refusing application of G.T.P.R. for authority to build sidings adjacent to its main line in Fort William, Ont.

12125. Oct. 28.—Approving James Bay & Eastern Ry. revised location between mileage 14.39 and 14.93, Ashuapmauchouan tp., Que.

12126. Oct. 27.—Approving Algoma Central & Hudson Bay Ry. plans of standard frame and pile trestles.

12127. Oct. 28.—Relieving G.T.R. from providing further protection at crossing ¾ mile east of Tillsonburg, Ont.

12128. Oct. 28.—Authorizing city of Vancouver, B.C., to lay sewer under C.P.R. at Front St.

12129. Oct. 28.—Authorizing Waterville Water Works Co., to lay pipe under G.T.R. near Waterville, Que.

12130. Oct. 27.—Authorizing city of Brantford, Ont., to lay sewer under G.T.R. on George St.

12131. Oct. 27.—Authorizing Simcoe Ry. & Power Co. to erect wires across Bell Telephone Co.'s wires between lots 16 and 17, con. 3, Tay tp., Ont.

12132. Oct. 27.—Ordering G.T.P.R. to build shelter for passengers and freight at Reford, Sask.

12133. Oct. 26.—Extending until Dec. 1 time for temporary approval of G.N.W. Telegraph Co.'s tariff of tolls.

12134, 12135. Oct. 26-29.—Authorizing city of Vancouver, B.C., to lay sewer under C.P.R. at Park Drive and Salisbury Drive.

12136. Oct. 29.—Approving Hamilton Radial Ry. Standard Tariff of Maximum Freight Rates, C.R.C. 2.

12137. Oct. 29.—Extending until June 30, 1911, time within which spur for Standard White Line Co. at Beachville, Ont., may be completed.

12138. Oct. 28.—Authorizing city of Vancouver, B.C., to lay sewers under C.P.R. at Laurel St.

12139. Nov. 2.—Approving revised location of G.T.P.R. Alberta coal branch, mileage 31.77 to 37; location mileage 37 to 56.04.

12140. Oct. 29.—Authorizing C.P.R. to build spur for Continental Oil Co. in Saskatoon, Sask.

12141. Nov. 2.—Approving G.T.P. Branch Lines Co., plan, Sept. 19 required to be filed by order 11823, Sept. 19.

12142 to 12144. Nov. 2.—Authorizing Erindale Power Co. to erect wires across G.T.R. at three points near Toronto.

12145, 12146. Nov. 2.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires in Waterloo tp., and across C.P.R. telegraph wires in Hamilton.

12147. Nov. 2.—Authorizing Ottawa Electric Co. to erect wires across C.P.R. Ottawa and Prescott branch at Heron Road.

12148. Nov. 2.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at lot 4, con. 3, South Easthope tp.

12149. Nov. 2.—Authorizing Canadian Light and Power Co. to erect wires across Bell Telephone Co.'s wires at Woodlands, Que.

12150. Nov. 2.—Authorizing Ottawa Electric Co. to erect wires across C.P.R. at Fairbank Ave.

12151. Nov. 2.—Ordering Brandon, Saskatchewan and Hudson's Bay Ry. to build spur to Brandon Sandstone Brick Co.'s premises, Brandon, Man.

12152. Nov. 3.—Authorizing Canadian Light and Power Co. to erect wires across Bell Telephone Co.'s wires at Beauharnois, Que.

12153. Nov. 3.—Authorizing C.P.R. to use bridge 80.8 on its Windsor section, Ont.

12154. Nov. 2.—Authorizing C.P.R. to build spur for Metal, Limited; Hick-Sehl Hardware Co., and McMahon and Quinn, Lethbridge, Alta.

12155. Nov. 4.—Authorizing C.P.R. to build additional track across Third St. east, Olds, Alta.

12156. Nov. 2.—Authorizing Brantford Gas Co. to lay pipe under G.T.R. at Marlboro St., Brantford, Ont.

12157. Nov. 2.—Authorizing C.P.R. to use bridges 21.9 and 100.7 on its London section, Ontario Division.

12158. Nov. 2.—Authorizing C.P.R. to build bridge over McKellar River, Fort William, Ont.

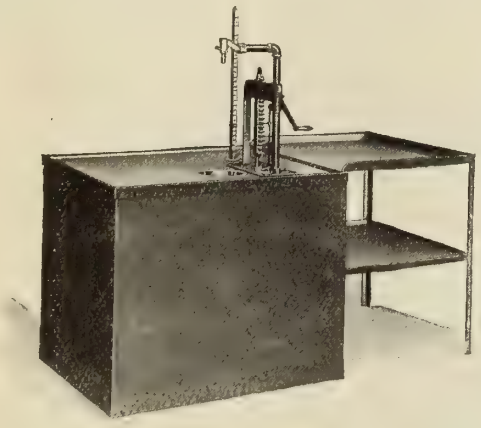
12159. Nov. 3.—Authorizing town of Galt, Ont., to erect wires across G.T.R. at Kerr St.

SILLIKER CAR COMPANY, LIMITED, HALIFAX, N. S., CANADA

STREET RAILWAY CARS

HEAVY FORGINGS AND CASTINGS

RAILWAY, FREIGHT AND PASSENGER CARS OF ALL KINDS



For Rapid Filling of Lamps

the Bowser Table Tank is peculiarly adapted. The pump can be adjusted to fill exactly different sized lamps in use, or will discharge a Quart, Pint or Half-Pint at each stroke, as desired. This outfit illustrates the practical manner in which

Bowser Oil Storage Systems

(adopted by nearly 150 railroads)

fill all existing needs in oil storage and handling. The table affords space for the lamps; the stick gauge shows the contents of the tank at all times; the first touch of the crank brings the flow of oil; oil accidentally spilled is quickly drained into a special receptacle. The greatest cleanliness, saving of time and oil, a re made possible with this outfit. Write for Booklet No. 18.

S. F. Bowser & Co., Ltd., 66=68 Frazer Ave., Toronto

12160. Nov. 2.—Authorizing city of Quebec to lay pipes under C.P.R. at Carillon St.

12161. Nov. 2.—Authorizing town of Orillia, Ont., to lay pipe under Georgian Bay and Seaboard Ry., in South Orillia tp., Ont.

12162. Nov. 4.—Authorizing C.P.R. to prevent undue delay to its passenger steamers between Owen Sound and Fort William, Ont., to do on the Lord's Day any work necessarily incidental to the loading or unloading of freight and its transfer to C.P.R. cars at Owen Sound and Fort William, and the coaling of its steamers at Owen Sound.

12163. Nov. 4.—Approving C.N.Q.R. station building at L'Assumption.

12164. Nov. 4.—Approving Chatham, Wallaceburg and Lake Erie Ry. Standard Passenger Tariff C.R.C. 7, showing maximum toll of 2½ c. a mile, or fraction thereof.

12165. Nov. 4.—Approving Hamilton Radial Ry. Standard Passenger Tariff C.R.C. 1.

12166. Nov. 4.—Dismissing application of Mutual Transit Co., for leave to unload and tranship freight from its vessels to C.P.R. trains, and do work incidental thereto, on the Lord's Day.

12167. Nov. 4—Authorizing C.P.R. to build bridges: 123.33 and 23.24 Chapleau section, Lake Superior Division, 8.16 Mimico River, London section, Ontario Division; 84.6, Nicomen Creek, Thompson section, British Columbia Division: 15.9, Michel Creek, Cranbrook section, Alberta Division; 36.6, Coal Creek, Cranbrook section, Alberta Division; 79.1, Nicomen Creek, Cascade section, British Columbia Division.

12168. Nov. 4.—Authorizing C.P.R. to use bridge 27.2 on its Orangeville branch, Ontario Division.

12169 and 12170. Nov. 4.—Authorizing city of Toronto to lay sewer under G.T.R. at two points.

12171. Nov. 4.—Authorizing town of Orillia, Ont., to erect wires across G.T.R. and Bell Telephone Co.'s wires at East St.

12172. Nov. 4.—Authorizing Canadian Light and Power Co. to erect wires across Bell Telephone Co.'s wires at Primeau Road, Caughnawaga, Que.

12173 to 12177. Nov. 4.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.N.W. Telegraph Co.'s wires and G.T.R. at Hamilton; across C.P.R. telegraph wires and G.N.W. Telegraph Co.'s wires in North Easthope tp., and across Bell Telephone Co.'s wires in Woodstock.

12178. Nov. 4.—Authorizing C.P.R. to build spur for the Excelsior Coal Mining Co., in s. w. ¼ sec. 30 tp. 1, r, 5, w. 2, m, at mileage 153.46, Portal subdivision.

12179. Nov. 4.—Approving for six months from date C.P.R. Standard Freight Mileage Tariff.

12180. Nov. 4.—Authorizing Esquimalt and Nanaimo Ry. to open for traffic the portion of its line from Wellington to Cameron Lake, B. C., mileage 77.3, to 107.6.

12181. Nov. 5.—Authorizing G.T.P. Branch Lines Co., to divert road in sec. 13, tp. 12, r. 16, w. 2 m, Assiniboia District, Sask.

12182. Nov. 5.—Authorizing C.P.R. to divert and change level of Silver Creek, Ont., to build culvert across G.T.R. right of way lands

12183. Nov. 5.—Authorizing C.P.R. to cross with its Moose Jaw north westerly branch, the C.N.R. located line, in sec, 17, tp| 30, r 14, w. 3 m., Sask.

12184. Nov. 5.—Amending order 12119, Oct. 27, which authorized T.H. & B.R. and G.T.R. to operate trains over G.T.R. crossing north of Brant street, Hamilton, Ont.

12185. Nov. 7.—Rescinding order 11767, Sept. 23, which authorized C.P.R. to open for traffic portion of its Kipp-Aldersyde Branch, from mileage 0 to 28.2, and limiting speed of trains over same to 30 miles an hour.

12186. Nov. 7.—Authorizing C.P.R. to build bridge 7.4 on its London sub-division, Ontario Division.

12187 to 12189. Nov. 7.—Authorizing C.N.O.R. to build between lots 9 and 10, broken front concession, Thurlow tp.; across road on lot 2, con. 1, Belleville, and across MacDonald St., between lots 7 and 8, broken front concession, Belleville.

12190. Nov. 7.—Authorizing C.N.R. to build across 20 highways west of second meridian.

12191, 12192. Nov. 7.—Authorizing C.N.O.R. to build between lots 291 and 295, and between lots 223 and 218, St. Benoit parish, Two Mountains county, Que.

12193. Nov. 7.—Authorizing Port Colborne village, Ont., to lay water pipe under G.T.R. at St. Arnaud St.

12194. Nov. 7.—Authorizing town of Pembroke, Ont., to lay water pipe under C.P.R. at MacKay St.

12195. Nov. 7.—Authorizing Port Colborne village, Ont., to lay water pipe under G.T.R. at Welland St.

12196. Nov. 7. — Authorizing Interurban Electric Co. to erect wires across C.P.R. switch extension at Symes Rd., Toronto.

12197, 12198. Nov. 7.—Authorizing Seymour Power and Electric Co. to erect wires across Bell Telephone Co.'s wires at two points in Sidney, tp., Ont.

12199 to 12205. Nov. 7.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across other wires at seven points.

12206. Nov. 3.—The equipment of cars with emergency tools. This order is given in full on another page.

12207. Sept. 19.—Ordering C.P.R. to build and operate extension of Clover Bar Coal Co.'s spur across its lands to Humberstone Coal Co.'s lands, in n. w. ¼ sec. 7, tp. 53, r. 23, w. 4 m.

12208. Nov. 7.—Authorizing G.T.P. Branch Lines Co. to build spur from its Melville-Regina branch to Colmer gravel pit, Yorkton District, Sask.

12209. Nov. 7.—Authorizing C.P.R. to build spur and branch for the Gros Falls Co. at mileage 2.22 from Piles Jct., Que.

12210. Nov. 8.—Authorizing Welland Telephone Co. to erect wires across M.C.R. between second and third crossings west of Stevensville station, Ont.

12211. Nov. 8.—Ordering Atlantic and Lake Superior Ry. within 60 days to build and maintain shelter for freight and pasengers at St. Jean de l'Evangeliste, Que.

12212. Nov. 8.—Authorizing C.N.O.R. to build between lot 38, con. 1, Sidney tp., and lot 1, broken front concession. Thurlow tp.

12213. Nov. 8.—Dismissing application of C.N.R. for approval of its location through tps. 38-39, r. 23-24, w. 4 m., mileage 21.38 to 36.49, from junction with Vegreville-Calgary branch.

12214. Nov. 8.—Authorizing G.T.R. to build branch to Chesley Chair Co.'s premises, Chesley, Ont.

12215. Nov. 8.—Approving plan of standard iron fire protection for decks of timber bridges; and authorizing G.N.R. to substitute same for style of protection required under clause 10 of order 11446.

12216. Nov. 3.—Dismissing application of Sandwich East tp., Ont., for order authorizing G.T.R. to allow it to build a drain on its right of way, from between lots 143 and 144, con. 1, westerly to Little River.

12217. Nov. 3.—Authorizing C.N.O.R. to build across road on lot 410, East North River range, St. Andrew's parish.

12218. Nov. 8.—Authorizing city of Peterboro, Ont., to lay sewer under G.T.R. at Smith St.

12219. Nov. 9.—Authorizing Ottawa Electric Co. to erect wires across C.P.R. near Rideau River, Ont.

12220. Nov. 7.—Approving revised location of part of C.P.R. Regina, Saskatoon and North Saskatchewan branch from mileage 26.35 to 28.56, Sask.

12221. Nov. 9.—Approving amended location of G.T.P. Branch Lines Co.'s Regina-Boundary branch from mileage 0 to 10.407, Sask.

12222. Nov. 9.—Authorizing C.N.O.R. Co. to build a bridge over Moira River, Belleville.

12223. Sept. 27.—Authorizing the C.N.O.R. to connect temporarily with G.T.R. Midland branch, at Port Hope.

12224. Nov. 7.—Approving character and specifications of Parrott Drain to be built under P.M.R. in Harwich, tp., Ont.

12225. Rescinding order 5888, in the matter of the Trainmen's Association of Canada and ordering conditions re employment and protection of employes. This order is given in full on another page.

12226. Nov. 9.—Authorizing town of Walkerton, Ont., to lay pipe under Walkerton and Lucknow Ry. at Orange St.

12227.—Nov. 9.—Authorizing J. Auclair, of St. Hilaire, Que., to lay pipe across G.T.R. in lot 130.

12228. Nov. 10.—Authorizing Tilsonburg, Lake Erie and Pacific Ry. to change its branch line as located along Victoria St., Ingersoll, Ont.

12229. Nov. 9.—Authorizing Georgian Bay & Seaboard Ry. to build acros five highways in Medonte tp., one highway between Medonte and North Orillia tp., eight highways in North Orillia tp., and six highways in South Orillia tp., Ont.

12230. Nov. 9.—Ordering that C.P.R. comply with terms of order 7969, Sept. 1, 1909, to provide crossings on line dividing r, 1, northeast and r, 1, southwest at mileage 2.9 and 3.5, from Megantic, and build crossing at mileage 3.5, from Megantic, Que., within 30 days.

12231, 12232. Nov. 9.—Reporting to Governor in Council, for sanction, bylaw 24, of Quebec, Montreal and Southern and Napierville Jct. Rys.

12233. Nov. 10.—Authorizing Canadian Light and Power Co. to erect wires across Bell Telephone Co. wires at Chateauguay River crossing, Chateauguay, Que.

12234 to 12235.—Nov. 10.—Authorizing E. con. 4, Dover East tp., to Paincourt, and Albert and D. Sirvois, of St. Hilaire N.B., to lay water pipes under Temiscouata Ry.

12236. Nov. 10.—Authorizing Chatham, Wallaceburg and Lake Erie Ry. to open for traffic portion of its line from main line in con. 4, Dover East tp., to Pain Court, and limiting speed of trains to 18 miles an hour.

12237. Nov. 10.—Authorizing C.P.R. to build spur for Superior Fuel & Coal Co., Winnipeg.

12238. Nov. 11.—Authorizing C.P.R. Co. to build additional track between s.e. ¼ sec. 29, and s.w. ¼ sec. 28, tp. 22, r. 23, w. 4 m. at Stobart, Alta.

12239. Nov. 11.—Authorizing Saskatchewan Government to build highway across C.P.R. in sec. 25, tp. 20, r. 11, w. 2 m.

12240. Nov. 11.—Authorizing Saraguay Electric and Water Co. to erect wires across Montreal Terminal Ry. on Prefontaine St.

12241 to 12248. Nov. 11.—Authorizing town of Maisonneuve, Que., to lay gas and water pipes under C.N.Q.R. at eight points.

12249. Oct. 12.—Authorizing T.H., & B, Ry. to build spurs from west of Grant Ave., on its main line easterly across Grant Ave., Wentworth St., Sanford Ave., and Sherman Ave., to east side of Wentworth St., and south of main line across Sanford Ave. to west of Sherman Ave., and west of Prospect St., Hamilton, Ont.

12250 to 12254. Nov. 11.—Temporarily approving Bell Telephone Co.'s agreements with Brompton Pulp and Paper Co., Tarentorus Telephone Co., J. H. Rogers and J. McLaughlin, Norwich, Ont., Urban and Rural Telephone Co., and Metcalfe Rural Telephone Association.

12255. Nov. 11.—Authorizing C.N.O.R. to build across lines from G.T.R. to Lehigh Valley Cement Works, Thurlow tp.

12256. Nov. 11.—Authorizing C.P.R. to build spur for Perrault, Audy Co., at mileage 8.64 from Place Viger station, Montreal.

12257. Nov. 11.—Authorizing C.P.R. to build spur across Jarvis St., and block 52, Winnipeg.

12258. Nov. 11.—Authorizing G.T.P. Branch Lines Co., to close road allowance between secs. 24 and 25 and between secs 25 and 30, within right of way limits, tp. 31, r. 24, w. 4, m.

12259. Nov. 11.—Authorizing C.P.R. to build spur for Wilson Box Co., at mileage 2.9 from St. John, N.B.

12260. Nov. 11.—Authorizing C.P.R. to build across Rama Road, in lot 30, con. 11, Mara tp., Ont.

12261. Nov. 11.—Authorizing C.P.R. to build spur for C. I. Kilburn, Saskatoon, Sask.

12262. Nov. 11.—Authorizing C.P.R. to build spur for the Canadian Nursery Co., in lot 40, Pointe Claire parish, Que.

12263. Nov. 11.—Approving location of Georgian Bay and Seaboard Ry. from mileage 74.25 to 87.65.

12264. Nov. 11.—Temporarily approving Bell Telepone Co.'s agreement with Maidstone tp.

12265. Nov. 11.—Relieving G.T.R. from providing further protection at crossing of three-quarter township line at lot 19, mileage 95¼, Drumbo, Ont.

12266. Nov. 11.—Authorizing. town of Maisonneuve, Que., to lay a gas pipe under C.N.Q.R. at First Ave.

12267. Nov. 12.—Approving temporary crossing by Toronto Ry., of C.P.R., C.N.R. and G.T.R. at Queen St.

12268 Nov. 12.—Authorizing G.T.R. to build spur to Milnes Coal Co.'s premises, North Toronto. Ont.

12269. Nov. 12.—Amending order 12211, Nov. 8, ordering Atlantic and Lake Superior Ry. to build shelter for freight and passengers at St. Jean de l'Evangeliste, Que., by substituting "Quebec Oriental," for "Atlantic & Lake Superior," in line 5 of the recital.

12270. Nov. 7.—Authorizing Trenton Electric & Water Co., to erect wires across Bell Telephone Co.'s wires at lot 36, con. 2, Sydney, tp., Ont.

12271. Nov. 14.—Authorizing C.P.R. to open for traffic portion of its Teulon branch, between mileages 47.7, and 74.5, Man.

12272. Nov. 14.—Authorizing C.P.R. to build spur for Bawlf Collieries Co., Bawlf, Alta.

12273 Nov. 14.—Authorizing Alberta Central Ry. to build branch at Rocky Mountain House, in tp. 39, r. 7, w. 5 m.

12274. Nov. 14.—Authorizing Seymour Power and Electric Co., to erect wires across Central Ontario Ry., near Anson Jct., Ont.

12275. Apr. 29.—Ordering, on application of the Mount Royal Milling Co., that rice, not otherwise specified in packages, in less than carloads. be included in first supplement to Canadian Classification 15, at fourth class instead of third class, as at present.

12276. Nov. 10.—Ordering that G.T.R. cease from interfering with any facilities now enjoyed by D. McManamy, Sherbrooke, Que., for handling traffic over its siding adjacent to his property.

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

CHICAGO

C.P.R. Betterments, Construction, Etc.

Sir Thos. G. Shaughnessy. President, on his return to Montreal, Oct. 30, from his annual trip of inspection of the line to the Pacific Coast, in company with other directors, said, in an interview, that he found everything in a satisfactory condition. Referring to work in hand or in prospect, he said:—"At present we are at work on 400 miles of new lines, and have made plans ready for the building of at least 400 miles additional next year. We are also about to commence the construction of a fine new hotel at Calgary, and on its completion we will put on a daily train service between Calgary and Field. We also intend to place another steamship on the Pacific as soon as we can get one built." With reference to Toronto he said he hoped very soon to announce some of the company's plans for the city and vicinity.

Truro to Tatamagouche Bay.—A press report from Prince Edward Island states that surveys have been made by the C.P.R. for an extension of the Dominion Atlantic Ry. Midland division from Truro to Tatamagouche Bay, near Brule, N.S., and that a site for a dock at Charlottetown, P.E.I., is being looked for, so as to operate a car ferry service from the mainland to the Island.

Digby, N.S.—C.P.R. engineers, officers of the Dominion Atlantic Ry. and Dominion Government engineers, were in Digby, Oct. 27, inspecting the shipping facilities there. A local press report states that everything is favorable for building tide elevators, and extensions to the freight sheds, so as to provide for increased business when the C.P.R. formally takes over the D.A.R.

Improvements at St. John, N.B.—The purchases of land by the company in St. John are reported to have been completed. The properties purchased are on Mill and Main streets, and the price of the three areas is said to have been $241,000.

Fredericton Improvements.—W. Downie, General Superintendent Atlantic Division, is reported to have stated Nov. 5 that the yard facilities at Fredericton, N.B., were insufficient to handle the growing freight business, and plans for new yards had been completed. He expected that construction would be started in the spring.

Orford Mountain Ry.—Application is being made to the Dominion Parliament to authorize the building of a line from near Mansonville, Que., to the International boundary line, and for other purposes.

Connection with Montreal Terminal Ry.—At a recent meeting of the Montreal board of control it was stated that the C.P.R. had started laying a track to connect with the Montreal Terminal Ry. between Forsythe and Moreau streets, for the building of which notice of application had been given to the Board of Railway Commissioners.

St. Lawrence Boulevard, Montreal.—The work on the steel superstructure carrying the C.P.R. tracks over the St. Lawrence boulevard, has been completed. The structure is wide enough to allow eight tracks to be laid.

Place Viger Improvements.—It was reported Nov. 1 that the buildings over a large area of the land acquired for the improvements in the yards at this station had been torn down, and that 12 new tracks leading into the area set apart for the new station had been laid. Some of these new tracks were used Nov. 1, when the lines leading into the present station were abandoned. The work on the Notre Dame St. viaduct is proceeding rapidly, and the steel work for the new station building is being rapidly got into place.

Hawkesbury to Cornwall.—A meeting of representatives of the municipalities interested is being arranged to discuss a project for building a line from Hawkesbury to Cornwall, Ont., running through Vankleek Hill, Alexandria and Martintown, to be operated by the C.P.R.

Ottawa Tunnel Proposals.—It was stated Nov. 10 that negotiations were in progress between the C.P.R. and the Canadian Northern Ry. with a view to their co-operation in the project for the building of a tunnel into the city. The City Engineer suggested that the C.P.R. should give other companies running rights over the Alexandria Bridge as a quid pro quo for permission to build the tunnel along the canal. It is proposed that the plan should be reported on by an independent engineer for the city, and the city engineer has recommended W. F. Tye, formerly Chief Engineer C.P.R., in connection with the matter. While the opinion at Ottawa is rather in favor of the proposed tunnel, opposition is being manifested in municipalities along the canal, and according to a local report of Nov. 15, a deputation representing the different interests is being arranged to interview the Government. The matter is to be considered by the Government Dec. 8.

Ottawa-Mattawin River.—A press report states that a contract has been let eight in North Orillia tp., and six in South Orillia tp. Location plans for the to Stewart and Hewitson, Port Arthur, Ont., for the concrete work for the bridge at the junction of the Ottawa and Mattawin rivers, at the Ontario-Quebec boundary near Mattawa. The bridge is 2,700 ft. long.

Canadian Railway Prosperity.

The relatively happy position of Canadian railways, as compared with roads in the United States, is shown by the earning statements for September and three months of the year of 48 U.S. railways. These 48 U.S. railways show an average gain in gross for the month of only 5.70%, and net shows a decrease of 4.19%, while for the three months these roads show an average gross gain of 6.59% and an average net decrease of 6.80%. The showing of the Canadian roads, especially the Canadian Pacific and the Canadian Northern, is vastly different. They show gains in gross for September of 18.86% for the C.N.R., and 11.92% for the C.P.R., and in net of 22.37 and 13.97% respectively, while for the three months the C.P.R. gained 19.87% in gross and 24.92 in net, and the C.N.R. 31.18 and 33.11.

Brockville, Ont.—H. P. Timmerman, Industrial Commissioner, and other C.P.R. officials were in Brockville Nov. 10, looking into the business situation. This visit is connected locally with press reports that the company has abandoned, temporarily at any rate, its project for a line from Kingston to Toronto in favor of an extension of the Georgian Bay and Seaboard Ry., from Peterboro via Kingston to Brockville. In this connection Toronto papers state it has been officially announced that by Nov., 1911, all the wooden bridges between Smiths Falls and Toronto will be replaced by structures of steel or re-inforced concrete, and that the facilities at all stations will be increased.

Georgian Bay and Seaboard Ry.—The Board of Railway Commissioners has authorized the company to build its line across five highways in Medonte tp., one between Medonte and North Orillia tps., line between mileage 74.25 and 87.65 have been approved.

North Toronto.—A freight shed has been built at North Toronto, and considerable improvements have been made at the passenger station to meet the requirements since the new trains to Montreal have been put on.

West Toronto Yards.—The Board of Railway Commissioners has directed the construction of a subway under the tracks at Elizabeth St., within a year. The buildings on the site of the extension of the yards west of Elizabeth St. are being torn down, and the ground along the street is being cleared in preparation for the subway.

Lambton Westerly Second Track.—The station at Lambton, Ont., has been moved nearer Dundas St., and the second track, heretofore ending east of the station, is being extended to meet that recently laid westerly from the west end of the platform. The second track has been laid to the east bank of the Humber River, and the grading for the second track has been almost completed from the west bank of the river to east of Islington station, where a second track has been laid to a connection with the Islington-Mimico spur, and westerly to near Summerville.

Islington-Mimico Spur.—The Board of Railway Commissioners has authorized the opening for traffic of the line from mileage 9.56 from Toronto, near Islington, to a connection with the G.T.R. near Mimico, with Y connections.

Guelph Station.—Work was started Oct. 28 on the foundations of the new station at Guelph, Ont. The plans show a building 125 by 33 ft., with roof projections at each end. The foundations are being carried down to the rock, about 12 ft. below ground level. The cost of the building is put at $20,000, and the contract for the structure, which is to be of brick with slate roof, has been let to Wells and Gray.

The plans show a brick building with slate roof, having a frontage to the tracks of 122 ft., and a depth of 35 ft. at the office section, with covered areas at each end 30 by 22 ft. over all. The layout shows a general waiting room 75 by 32 ft., off which there is an office 16 by 20 ft., lavatories for men and women, each 10 by 20 ft. There are four entrances to this room. At one end is accommodation for baggage and express, the baggage room being 18 by 28 ft., and the express room 30 by 28 ft. The building will be lighted by electricity, and the heating apparatus will be installed in a basement under the baggage and express rooms.

Tillsonburg, Lake Erie and Pacific Ry.—The Board of Railway Commissioners has approved of a change in the location of the line along Victoria St., Ingersoll, Ont. Plans have been prepared for a station building on the corner of Thames and Carnegie streets..

St. Mary's and Western Ontario Ry.—A Stratford press report says it is likely that the project to build a line from St. Marys to Stratford will be abandoned, and that a line will be built from Embro through to Linwood, probably via Wellesley, and that the line to Gravel Bend will be located through Carlingford, Russeldale and Exeter.

London Improvements. — Work has been started on the improvements northeast of London, Ont. Several wells are being sunk to give the company its own water supply.

Toronto-Sudbury Branch.—Since the opening of the line from Bolton Jct., Ont., to Sudbury, the C.P.R. has been carrying out a work of grade reduction and general improvement on the line from West Toronto to Bolton Jct. The wooden trestles are being replaced by concrete and steel bridges, or concrete arches with solid embankments, curves have been cut out, and the gradient reduced over considerable distances. The

The Jack

That Has Superseded All Others

For the Handling of Heavy Railway Equipment

40 TONS LIFTING CAPACITY

AN IMPROVED BARRETT GEARED RATCHET JACK

Representing the Latest and Highest Development In Geared Jack Construction

Designed particularly for the rapid, safe and convenient handling of the heaviest loaded freight cars, passenger or Pullman coaches, locomotives in round-house, etc., and is fully capable of taking care of any kind of railroad equipment under all conditions. The Jack is single-acting and is extremely quick in action, raising the load rapidly, and in view of the special leverage provided in this Jack the full load may be raised with much less energy at the end of the lever than with any other type of Geared Jack.

largest bridge on the section, which, it is expected to complete this season, is over the Humber River, between Weston and Woodbridge. The rail level is 80 ft. above high water mark, and the bridge has a span of 285 ft. There were used in the construction of the bridge 2,000 cubic yards of concrete, and it is estimated that it will take about 140,000 yards of clay and other material to complete the embankment.

Bridge at Fort William, Ont.—The Board of Railway Commissioners has authorized the building of a bridge over the McKellar River at Fort William.

Teulon Branch.—The Board of Railway Commissioners has authorized the opening for traffic of the Teulon branch, in Manitoba, from mileage 47.7 to 74.5.

Second Track, Winnipeg to Regina.—We are advised that the second track has been completed between Winnipeg and Portage la Prairie, Man., and that some grading for a second track between Portage la Prairie and Brandon has been done. The second track is expected to be completed to Brandon in 1911. Nothing has been arranged with regard to the construction of a second track between Brandon and Regina, Sask.

Increasing Facilities at Brandon.—We are advised that nothing has been discussed as yet in regard to the building of a new station at Brandon, Man., although it is apparent that it will soon be necessary to provide increased facilities there.

Virden-McAuley Branch.—The Board of Railway Commissioners has authorized the opening for traffic of a section of 14 miles on the Virden-McAuley branch.

Hamiota to Birtle, Man.—The Minister of Railways has approved of the route plan of the proposed branch line between Hamiota and Birtle, Man., and it is said that construction will be gone on with next year.

Pheasant Hills Branch.—The Board of Railway Commissioners has authorized the opening for traffic of the section of this branch from mileage 430.39, at Wilkie, Sask., to mileage 561.63, at Hardisty, Alta. This completes the connection from the main line at Kirkella, Man., to a junction with the Calgary and Edmonton Ry. Wetaskiwin branch.

Regina and North Saskatchewan Branch.—The Board of Railway Commissioners has approved the revised location of the Regina, Saskatoon and North Saskatchewan branch from mileage 26.35 to 28.56. It has also approved the location plans of the line from mileage 199.2 to the crossing of the Canadian Northern Ry. spur to East Prince Albert, mileage 232.4.

Subway at Regina, Sask.—The civic authorities at Regina, Sask., have received an intimation from the Board of Railway Commissioners that, in connection with the recent order for the erection of a subway under the C.P.R. tracks, the city will be required to do all the excavating and paving, and to erect all substructures, drains and lights, and to pay abuttal damages, if any; while the C.P.R. is to provide all the land necessary and to build all the superstructures.

Calgary Yards, etc.—The new yards at Calgary, Alta., are practically completed. In the area taken in, 16 miles of additional track have been laid, and the new buildings comprise a 20-stall roundhouse, 40,000 gall. water tank, a 2,000-ton icehouse, and a new shed for outgoing freight, the old shed being given over for incoming freight. A new wing, two stories, is being added east of the main station house, and it is expected that next year a similar wing will be added at the west end.

Bridges at Lethbridge.—The Board of Railway Commissioners has authorized the building of a bridge about 1,200 ft. west of the present crossing at mileage 2.6, west of Lethbridge, Alta., and another at mileage 10.6.

Vancouver, B.C.—W. Whyte, Vice President, on the occasion of his recent visit to Vancouver, is reported to have stated that the traffic there was growing so rapidly that enlarged station accommodation was imperative. The matter would be discussed in Jan., 1911, when the estimates for the year would be under consideration.

Esquimalt and Nanaimo Ry.—We are advised that work is being gone on with clearing the right-of-way from tidewater to Cowichan Lake, for the proposed branch to open up timber lands sold to the Empire Lumber Co. of New York. The final negotiations for the transfer of the lands are expected to be completed at an early date, when the building of the line will be gone on with. All the work for the building of the line will be let to Janse, McDonnell and Timothy.

The Board of Railway Commissioners has authorized the opening for traffic of the first 30 miles of the Alberni extension, viz., from Wellington to Cameron Lake. A passenger service was inaugurated Nov. 9, a train being run each way three days in the week. A stage is run between Cameron Lake and Port Alberni.

Representatives of the Songhees tribe of Indians and agents of the B.C. Government have reached an agreement by which the Indians will abandon the reserve in the centre of Victoria. It is expected that the city council will be able to so arrange matters that a portion of the reserve may be secured for joint terminal facilities for the C.P.R. and the Canadian Northern Ry.

C.P.R. Hotels.—We are advised that Sir Thos. G. Shaughnessy, President, during his recent trip to the West, authorized the erection of a hotel at Calgary, Alta., work on which will be started as soon as possible. It was also decided to enlarge the Royal Alexandra at Winnipeg, and to provide additional accommodation at Lake Louise, Banff, and Vancouver, B.C. We are also informed from another source that there was no foundation for the recent press reports that the company was about to build hotels at different points, so as to complete a chain of such along its line from the Atlantic to the Pacific.

Press reports state that an effort is being made to secure the erection of C.P.R. hotels at Gore Landing, Ont., and at Moose Jaw, Sask. Nov., pg. 933.)

Dominion Railway Subsidies.—Under the terms of the act granting aid to certain railways the Dominion Government has entered into the following contracts: For the building by the Atlantic, Quebec and Western Ry., of a line from Paspebiac to Gaspe, as near the shore as practicable, 102 miles. For the building by the Manitoulin and North Shore Ry., of a line from Little Current to Sudbury, Ont, 88 miles.

The annual meeting of the Vancouver branch of the Canadian Society of Civil Engineers was held Nov. 7, and the following elected for the current year: Chairman, G. H. Webster; Secretary and Treasurer, H. K. Dutcher: Executive Committee, C. E. Cartwright, J. C. Kennedy and H. Bayfield.

H. W. Brodie, Assistant General Passenger Agent C.P.R., Vancouver, B.C., writes:—"Will you kindly change my address on your mailing list from Winnipeg to Vancouver, so that I will continue to receive a copy of the Railway and Marine World, which I am always glad to have on my table."

Too Late for Classification.

Atlantic, Quebec and Western Ry.—A contract has been entered into between the Dominion Government and the company under the act granting aid to certain railways for the building of a line from Paspebiac to Gaspe, Que., as near the shore as possible, 102 miles. (Nov., pg. 909.)

British Columbia and Alaska Ry.—We are advised under date of Nov. 21, that the present officers and directors of the B.C. Ry. and Development Co., which owns the charter of the B.C. and A. Ry., are: President, J. Wolkenstein, New York; Vice President and General Manager, E. C. Harris; Second Vice President, C. G. Young; Secretary, Wm. C. Pratt; Treasurer, A. T. Sullivan; other directors, B. Brooks, J. C. Clifford, J. W. Kendrick, and S. D. Townsend.

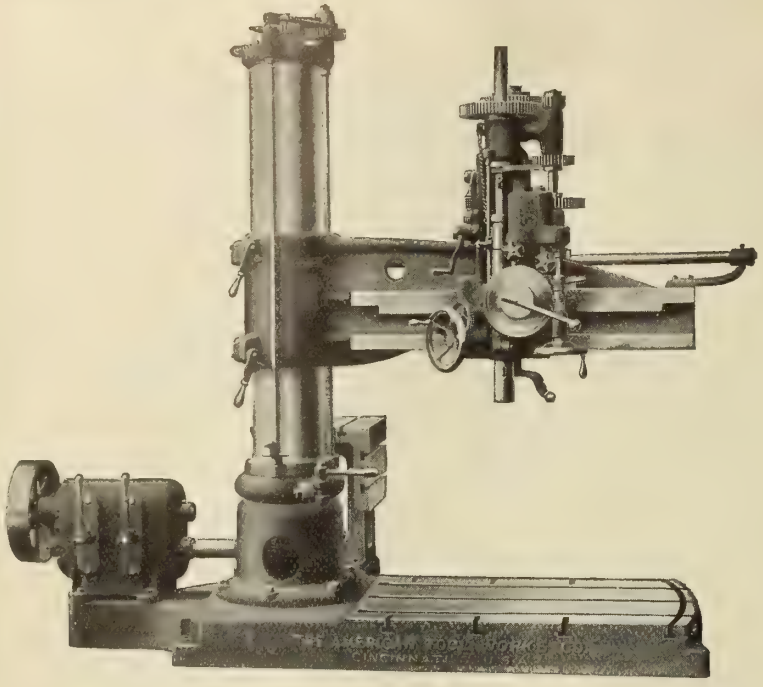
Reconnaissance surveys are said to have been completed for the whole line, and location surveys for the greater part of the distance between Lytton and Fort George have been completed. The route is from Vancouver through Lytton and Lillooet to Fort George, thence following the valley of the Stuart River. Stuart Lake and Tacla Lake and Middle River to North Tacla Lake by way of Fort Connelly thence following the Skeena and Stikine Rivers to Telegraph Creek, and northerly to Teslin Lake to the northern boundary of British Columbia, or in the alternative by the most feasible route between Lytton and Teslin Lake. The surveys have been done under the direction of L. M. Rice and Co., Vancouver, B.C., and Seattle, Wash. (Nov., pg. 909.)

Manitoulin and North Shore Ry.—The Dominion Government has entered into a contract with the company, under the act granting aid to certain railways for building a line from Little Current, thence crossing the C.P.R. near Nairn, to Sudbury, Ont., 88 miles. (Nov., pg. 911.)

Southern Central Pacific Ry.—The Dominion Parliament is being asked to authorize the building of the following additional lines: from where the projected main line crosses the North Saskatchewan River in Alberta, northwesterly, crossing the Athabasca River, to Dunvegan on the Peace River; thence to Parsnip River, southerly to Nechaco River, southwesterly to Dean's Channel, or to Gardener's Channel, B.C.; from the Elk River, B.C., easterly to the Waterton River and on to the International boundary, near Coutts, Alta. An extension of time is also asked for the building of its projected railway from Vancouver, northerly and easterly by way of the Kootenay Pass to the Old Man River, and thence north easterly through Saskatchewan, to Hudson Bay, at least 100 miles north of Fort Churchill. A. T. Thompson, Ottawa, is solicitor for the applicants.

In an interview at Winnipeg, Nov. 17, Jas. Conmee, M.P., said the line is projected to run north and south from Bermis on the C.P.R. Crow's Nest Pass line, the northern line to run to Calgary and Edmonton, and on to the Peace or Pine River pass, thence to the Pacific Coast on Gardner Canal; and the southern line to run to the International boundary. A subsidy in aid of construction was voted to the company last session of the Dominion Parliament. Mr. Conmee who is interested in the company, says the line will be built with all possible speed, and he expects that about 250 miles will be under construction within the next 18 months. (July 1909, pg. 481.)

J. R. Cowans, General Manager Cumberland Ry., and Coal Co. has been removed to Montreal, where he will have charge of the office work, a local manager taking over the work at the collieries at Springhill, N.S.



ALL RECORDS

for rapid and accurate drilling and tapping on Standard Radials are held by the

"AMERICAN"

The 4-ft. "American" Radial Drill will pull a 6-in. pipe tap, and the 6-ft. will pull an 8-in. pipe tap.

The secret of this enormous power rlies in the tapping attachment frictions. No matter how much power is put into a radial drill, no more will be delivered to the spindle than can be transmitted by the tapping attachment frictions. Therefore the efficiency of these frictions is a very important point in radial drill construction.

In the tapping attachment of "American" Radial Drills we use our "Patented" Double Band Frictions. These frictions consist of an inner expanding ring and an outer contracting ring, all in one. Our frictions afford a far greater area of frictional contact than any other friction of similar dimensions.

If you want a powerful Drill to do accurate work, you want an "AMERICAN."

Canadian Northern Ry. Construction, Etc

James Bay and Eastern Ry.—The Board of Railway Commissioners has approved location plans for this projected railway between mileage 14.39 and mileage 14.93, in Ashuapauchouan tp., Lake St. John county, Que. A company with this title was incorporated last session of the Dominion Parliament to build a line from James Bay, easterly to a junction with the Quebec and Lake St. John Ry. near Roberval, Que. The provisional directors are associated with the Mackenzie, Mann & Co., Ltd.

Canadian Northern Quebec Ry.—The mayor of Quebec was reported Oct. 28, as having given instructions to the city solicitors to push the action against the company for the return of $200,000 granted to the Great Northern Ry., one of the companies amalgamated in the C.N.Q. Ry., on condition that its shops be located in the city.

We are officially advised that the company has purchased the property at the corner of St. James St. and Dollard Lane, Montreal. It is intended to make some alterations in the existing buildings in the near future, with a view to having all the company's offices in Montreal located there. This will include the general freight and passenger department, the steamship department and the express department. The price paid for the property is said to have been $175,000.

In an interview at Ottawa, Nov. 10, W. Mackenzie, President, said work was progressing favorably on the new section of the line between Hawkesbury, Ont., and Montreal, which it is expected will be opened for traffic next fall.

The Dominion Parliament is being asked to authorize the company to build a line from Rawdon northerly to a junction with the National Transcontinental Ry., and from St. Jerome to St. Eustache, Que.

Bay of Quinte Ry.—Application is being made to the Dominion Parliament to authorize the company to enter into agreements with the C.N. Ontario Ry. and the Ontario and Ottawa Ry., for any of the purposes specified in sec. 361 of the Railway Act.

Brockville, Westport and North Western Ry.—Application is being made to the Dominion Parliament to authorize the company to enter into agreements with the C.N. Ontario Ry. and the Ontario and Ottawa Ry. for any of the purposes specified in sec. 361 of the Railway Act.

Canadian Northern Ontario Ry.—In an interview at Ottawa, Nov. 10, W. Mackenzie, President, is reported to have said that the construction of the Toronto-Ottawa line was now within 90 miles of Ottawa, and he expected the whole would be completed by next fall.

The matter of the entrance of the line into Ottawa was before the Board of Railway Commissioners, Nov. 3, when the company's application for a temporary crossing of the Hurdman road was considered. The application, it was stated, was made for the purpose of establishing a connection for freight purposes with the Ottawa and New York Ry., which could be used during certain hours only. The mayor had expressed approval, but the city solicitor was present to oppose the application. The matter was adjourned in order to permit a formal assent to be obtained from the city council. The arrangement which the company proposes, which is now under consideration, is that the permission to use the crossing be restricted to two years.

In the course of a recent interview, D. D. Mann, Vice President C.N. Ry., is quoted as stating that the Toronto-Trenton section of the line from Toronto to Ottawa will be opened for traffic about June 1, 1911. The section is about 100 miles long and the grading is completed, with the exception of some rather heavy cuttings between the Don and Cobourg, but this is not likely to delay the work very seriously, as the bridge work has been progressing rather slowly owing to the non-delivery of the steel work. There are a large number of these bridges along the route, the most important being:—At the point of junction with the Sudbury line; west fork of Rouge River, 500 ft. steel viaduct; east fork Rouge River, 180 ft. bridge; crossing of Bowman's Creek; Dixie Creek, 850 ft. steel viaduct; Greenwood Creek, 545 ft.; Oshawa Creek, 430 ft.; Stephen's Mill pond, 650 ft. steel viaduct; Port Hope, 840 ft. steel bridge. The last three bridges are not yet built. Track has been laid on various portions of the line between the Don Valley and Cobourg, and between Cobourg and Trenton tracklaying has been completed, and a good deal of the ballasting done. At Trenton a steel viaduct is being erected, and when this is completed a connection will be made with the Central Ontario Ry., which has come under the control of Mackenzie, Mann & Co. There will be 15 stations on the line, the most important being at Oshawa, Bowmanville, Port Hope and Cobourg. Jex & Co., Cobourg, have the contract for the erection of the stations at Port Hope and Cobourg.

There has been a change in the location of the line to Trenton from that originally laid out. The route originally surveyed crossed the Central Ontario Ry. just south of Frankford, and then proceeded in a direct line easterly, crossing the Bay of Quinte Ry. at Mud Lake, the Kingston and Pembroke Ry., at Vernon, and the Brockville, Westport and Northwestern Ry., at Newboro, thence working northerly to Ottawa. By an amended plan the route was changed, and starting at the boundary of Haldimand and Cramahe tps., the location now being followed is more southerly, crossing the G.T.R. near Brighton, and keeping along the lake shore, crosses the G.T.R. again at Shannonville, and works north and east to Mud Lake. With the taking over of the Bay of Quinte Ry. a further change in the route has been made. The route now approved leaves the location last mentioned near Shannonville, and proceeds south and east to Deseronto, joining up with the Bay of Quinte Ry., which line will be utilized as far as Harrowsmith, and a new route has been located from that point, joining up with the original survey at Portland. Some part of the present line from Harrowsmith to Sydenham is to be used. The Board of Railway Commissioners has authorized the building of a bridge across the Moira River at Belleville, on five instead of seven piers, as originally planned, and has authorized the Bay of Quinte Ry. to move its tracks from its yard at Napanee.

Press reports state that the company's agents are purchasing land for a right of way from Ottawa to Smiths Falls, Ont., and that the projected line from Ottawa to Key Harbor will branch off from the Toronto line, about four miles southwest of the capital.

At a meeting of the board of trade of North Bay, Ont., Nov. 8, the question of the building of a line from Key Harbor to North Bay, 88 miles, by the C.N.R., was under consideration. The president of the board and the mayor reported having had an interview with W. Mackenzie, President C.N.R., Nov. 3, when he expressed a willingness to undertake the building of such a line. A committee was appointed to see what steps could be taken locally to further the project.

The Dominion Parliament is being asked to pass an act authorizing the company to build the following branch lines:—From Washago to Kincardine; from Arnprior to Gananoque, from Pembroke to Port Hope or Cobourg; from Pickering tp. to Owen Sound; from about 10 miles east of Toronto to Hamilton, London and Windsor, with a branch from London to St. Thomas and Sarnia, and a loop north of Toronto in Scarboro and York tps.; from the International bridge near Fort Erie northwesterly to Goderich; from between Dunnville and Port Dover to Owen Sound or Meaford; from Washago to Midland; from Hawkesbury to an unnamed point in Leeds or Lanark county, and from Parry Sound to North Bay.

A route map has been filed at the Brantford registry office showing a line through Brant county east and west, passing through Brantford.

The plan of the proposed entrance of the C.N.O. Ry.'s Toronto-Ottawa line into Toronto shows that it will cross the Don River from the east and approach the Toronto-Sudbury line, north of St. Clair Ave., and west of Woodbine Ave. From there it will parallel the C.N.O.R. existing line, crossing the river five times, to the road from Deer Park, where it will bear away easterly, and run almost due south, crossing the Don again, and then keeping along the eastern bank to south of Queen St., thence turning westerly to the land acquired for yards, etc., along Cherry St. When the matter came before the Minister of Railways, Nov. 2, the company's solicitor was informed that an arrangement should be reached with the C.P.R. as to the location of the tracks. The question was again before the Minister of Railways, Nov. 21; the general route plan was approved and the settlement of the details was left to the Board of Railway Commissioners.

Canadian Northern Ry.—The cut off which gives the C.N.R. a straight line from Slate River to Kakabeka, Ont., was used for the operation of trains Oct. 26. The new route not only cuts out a heavy gradient, but also effects a saving of two miles in distance.

Grading on the Greenway-Wakopa, Man., branch is almost completed, and the bridges and culverts are all in. Rails and ties were being delivered at Adelpha, the present end of track, Nov. 10, and it was expected that 12 miles of track will be laid this season.

Grading was resumed Nov. 1 on the line which will enter Moose Jaw, Sask., and the gangs are now working near New Warren, and will enter Moose Jaw from the south. The Cowan Construction Co. has the contract, and was reported to have 300 teams at work Nov. 1.

Grading on the line from Prince Albert to North Battleford, Sask., has reached a point 30 miles from the latter place, but no more grading will be done this season. Track is expected to be laid to the end of grading this season.

The Board of Railway Commissioners has approved the revised location of the Vegreville - Calgary branch, mileage 224.49 to 238.82 from the junction with the main line at Vegreville, Alta.

A press report states that the company is making surveys for a new line from near Lac Ste. Anne, Alta., to the crossing of the Athabasca River, at Fort Assiniboine. This is one of the lines for which the Alberta Government has guaranteed the company's bonds.

Canadian Northern Branch Lines.—The Dominion Parliament is being asked to incorporate a company with this title to build the following lines:—From Grosse Isle northerly to Grand Rapids, with a branch to Sturgeon Bay, Man.; from Wassewa westerly and northerly to Ethelbert, Man.; from Yorkton northerly to Hudson Bay Jct., Sask.;

from Craven northeasterly to Hudson Bay Jct., Sask.; from Craven easterly to the C.N.R. Rossburn Branch, east of Yorkton, Sask.; from Craven northerly through Humboldt, to Prince Albert, Sask.; from the Craven-Hudson Bay Jct. to between Davidson and Aylesbury; from between Brancepath and Kinishno northeasterly to Pas Mission, Sask.; from the Craven-Hudson Bay line in tp. 40, range 7, west of the second meridian, to Jack Fish Lake, northwest of North Battleford, Sask.; from near Moose Jaw northwesterly to the Vegreville-Calgary line between Camrose and Stettler, Alta.; from the International boundary near range 7, west of the 4th meridian, northerly and easterly to west of Battleford, Sask.; from Macleod northeasterly to the Saskatoon-Calgary line of the C.N. Ry., near ranges 1 to 4, west of the 4th meridian; from the Maryfield-Lethbridge line of the C.N. Ry., ranges 1 to 4, west of the 4th meridian, westerly via Cardston to Pincher, Alta.; from the Maryfield-Lethbridge line, ranges 1 to 4, west of the 4th meridian, northwesterly via Taber to a junction with the proposed Moose Jaw-Camrose-Stettler line; from the Maryfield-Lethbridge line, ranges 1 to 10, west 4th meridian, to tps. 20 to 23, range 6, west 5th meridian; from Lloydminster northwesterly and westerly to Bruderheim, Alta.; from the Edmonton and Slave Lake Ry. north of Morinville, to tp. 26, range 8, west 5th meridian; from near Fort Pitt northwesterly to Athabasca River, Alta.

The Canadian Northern Alberta Ry. runs westerly from St. Albert, north of Edmonton. The location plans for the first 70 miles were approved some months ago, and construction is now being proceeded with. The route map for the section from the termination of the first 70 miles, as far as the Yellowhead Pass, was approved by the Minister of Railways Nov. 2, with the stipulation that the line must not be built through any Grand Trunk Pacific Ry. townsites.

Press reports from Edmonton, Alta., state that a new company has been formed to take over the whole of the construction work for the C.N.R. lines between Edmonton and the Rocky Mountains, and that Jos. Mackenzie and C. J. Merry are at the head of the new company.

Press reports from Edmonton, Nov. 21, state that a proposition is before the Alberta Legislature which will assure the building of a railway into the Peace River country, and to the Yukon boundary within the next two years. The building of the line is expected to be started in the spring, the Northern Construction Co. being mentioned as having the contract. One of the dispatches stated that the assent of the Lieut.-Governor to the act, which had been rushed through the Legislature, was expected to be given Nov. 22.

Canadian Northern Western Ry.—Application is being made to the Alberta Legislature to incorporate a company with this title to build a line from Edmonton or Strathcona to the boundary between Alberta and British Columbia, near the Pine or Peace River Pass; from some point on the line between Edmonton and Calgary to Rocky Mountain House, thence to the Brazeau and Macleod Rivers, and on to a junction with the C.N.R. west of Edmonton, with power to build branch lines.

Canadian Northern Pacific Ry.—Grading is reported to be making satisfactory progress on the mileage under contract in the Fraser River Valley. It is expected to have the grading completed from New Westminster to Hope early in the summer of 1911, when tracklaying will be started. Survey parties are in the field near Lytton for the purpose of securing an alternative route through Fraser Canyon. The route originally surveyed was objected to by the C.P.R., and the present party was sent out under the charge of C. Hoard, with C. E. Cartwright as Consulting Engineer, at the instance of the two companies, to endeavor to secure another location. A contract was reported let Nov. 5, for the clearing of 1,000 acres of the Port Mann townsite. The clearing is to be completed by Mar. 15, and the brush burned by June 15, 1911. The construction of a wharf at Bon Accord is being proceeded with.

Vancouver Island.—The Premier of British Columbia, in a recent interview, gave details of the route selected for the first section of the line on Vancouver Island, which will ultimately be extended from end to end of the line, and form part of the C.N.R. transcontinental system. The plans provide for 153 miles instead of the 100 miles contemplated and provided for in the programme of the session of 1910. Victoria is the southern terminus, and the line will cross the Esquimalt and Nanaimo Ry. at the southeastern corner of Langford Lake, and passing the head of Pedder bay, run on to Sooke Inlet, via Matheison Lake. Sooke Inlet will be crossed at its mouth, and the river followed on its west bank to Sooke Lake, where the line will swing easterly to Shawinigan Lake, thence north, crossing Koksilah River, about eight miles from its mouth, thence the line reaches Cowichan River, about four miles above Duncan, reaches the lake near the mouth of Mud Creek, thence northerly to the Nitinat River, Coleman Creek, and along the Alberni canal to Alberni. Engineers are in the field along the greater part of the route, and it is said tenders will be asked for as soon as the necessary data is available. A press report states that a contract has been let to the Hub Construction Co. for the building of this line. (Nov., pg. 939.)

Locomotive Engineers' Requests.

The Board of Railway Commissioners has made the following order, 12287, Nov. 3, re the resolutions passed by the Dominion Legislative Board of the Brotherhood of Locomotive Engineers at a sitting held in Ottawa, March 29-April 2 (as published in full in the Railway and Marine World for October). Upon the reading of the resolutions and the reports and recommendation of its operating officers, and upon the hearing of the matter in the presence of counsel for the Grand Trunk, Canadian Pacific, Michigan Central, and Canadian Northern Railway Companies, the International Brotherhood of Locomotive Engineers being represented at the hearing, the evidence offered, and what was alleged, it is ordered that the requests contained in the said resolutions be refused, with the exceptions following, viz.:—That railway companies subject to the Board's jurisdiction be required to equip their locomotives with air bell ringers; such equipment to be installed within six months from the date of this order; that the consideration of the question of the removal of snow-cleaning devices from locomotives stand pending the receipt by the Board of additional information upon the subject, such information to be furnished by and on behalf of the applicants.

The International Society of Railway Financial Officers held its third annual convention at Old Point Comfort, Va., early in Nov., when Frank Scott, Treasurer G.T.R. and G.T.P.R., the retiring President, spoke on some features of railway finances. He was elected to the executive committee for a two year period.

National Transcontinental Railway.

The speech from the throne at the opening of the Dominion Parliament, Nov. 7, contained the following paragraph: "Marked progress is being made in the construction of the N. T. Ry., and a large quantity of grain is this season finding an outlet from the West to the Great Lakes over this new highway. It is hoped that ere long a satisfactory arrangement can be made for the operation of the finished portions of the line, pending the completion of the road from Moncton to Winnipeg."

The Department of Railways and Canals in its report for the year ended Mar. 31, gives considerable information as to the progress of construction the National Transcontinental Ry., from facts supplied by the Commission, the report of which has been prepared for submission to Parliament. The line to be built under the Commission's control extends from Moncton, N.B., to Winnipeg, Man., 1,804.84 miles. The entire line is under contract, and grading has been completed for 1,106 miles, 698.7 miles of track have been laid on the main line, together with 114.5 miles of siding. The work is covered by 21 contracts, and 60.1% of the whole has been done. The construction work has been divided into six districts, and the report shows progress, as follows:—

DISTRICT A.—Moncton to Quebec boundary, 256.51 miles. Grading completed 246 miles; track laid, 155.91 miles; 81.07% of the work completed. Expenditure during the year, $4,996,543.26.

DISTRICT B.—Quebec boundary to Weymontachi, 507.22 miles. Grading completed 358.25 miles; track laid 216.4 miles; 64.87% of work completed. Expenditure on construction, $5,313,240.10; on transport, $14,169.14.

DISTRICT C.—Weymontachi to east of Abitibi Lake, 192.91 miles. Grading completed 13 miles; 5.31% of work done. Expenditure on construction, $360,264.18; on transport, $26,691.28; on location, $6,948.04.

DISTRICT D.—East of Abitibi Lake to near Missinaibi River, 216.11 miles. Grading completed, 127.5 miles; track laid, 57.9 miles; 36.89% of work done. Expenditure on construction, $3,479,414.94; on transport, $27,286.12.

DISTRICT E.—Near Missinaibi River to west of Lake Nipigon, 255.19 miles. Grading completed, 41.5 miles; 20.58% of work done. Expenditure on construction, $857,325.09; on transport, $10,249.70.

DISTRICT F.—West of Lake Nipigon to Winnipeg, 376.80 miles. Track laid as far as Lake Superior Junction, and work in progress easterly. The work on this division embraces the laying out of yards, and the building of locomotive and other shops at Springfield, about six miles east of Winnipeg. The track connecting the line with the Canadian Northern Ry.'s Dundee branch was laid in Oct., 1909, and 46.7% of the work of constructing the station buildings, etc., over this distance has been completed. The substructure of a double track bridge over the Red River at Winnipeg is under contract, and six of the piers have been completed. The foundations of all the terminal shop buildings are completed, and about 2,500 tons of the general steel work erected; 82.21% of the whole work has been done. Expenditure during the year on construction, $4,648,295.23; on transport, $11,982.58.

The amount expended upon the six districts during the year was $19,968,126.86, bringing the total expenditure to Mar. 31 up to $71,918,843.88.

C. M. Hays President G.T.R., and G.T.P. Ry., accompanied by a number of officials met the Dominion Minister of Public Works at St. John, N.B., recently and went over the site selected for ter-

FLANNERY BOLT COMPANY, Frick Building, Pittsburgh Pa.

minals at Courtenay Bay.. At a dinner subsequently at the Union Club, St. John, Mr. Hays said by its agreement with the Government the Company was compelled to build an all-Canadian line, and to do all its business through Canadian ports. The only Canadian ports on the east were Montreal, Quebec, St. John and Halifax. If the proper scheme of development was carried out at these ports there would be no other port necessary. The company was coming to St. John, and he hoped that it would not be more than a year hence. The plans for the development of the port had been prepared by L. Costo, of the Department of Public Works, and with the co-operation of the Dominion Government, St. John and the G.T.P. Ry., these plans would be carried through. The Minister of Public Works in a speech, stated that he had gone very fully into the question of the development of Courtenay Bay, and had made substantial progress in an agrement that would justify the Government in making large expenditures for the purpose of starting the work. It would be necessary for St. John to convey to the Government its rights on the Courtenay Bay foreshore in order to enable the work to be progressed with. The work proposed to be done was for the general good of Canada and in the fulfilment of the national idea of Canadian trade over Canadian railways and through Canadin ports.

Before returning to Montreal the party went over the section of the N.T.R., in New Brunswick, and in interviews Mr. Hays is reported to have stated it was probable that for some time the company would use the I.C.R. tracks from Moncton to St. John. The matter of securing the N. B. Central Ry. from Chipman to Norton had been discussed, but it was felt that the gradients were too heavy, and that it would probably be cheaper to build a new line. The N.T.R. Commissioners completed an inspection of the line in New Brunswick, Oct. 30. The estimates for the payments required for work done on the six contracts in the province during Oct. were $224,578.13.

The speech from the throne at the opening of the Dominion Parliament, Nov. 17, contained the following paragraph: "The construction of the bridge across the St. Lawrence river at Quebec, the largest work of its kind ever undertaken, has been receiving the careful attention of my Government, and the utmost care is being observed so that success may be assured. The sub-structure is now under contract. Tenders for the erection of the substructure have been received from four responsible companies, and are now being considered. It is expected that the contract will shortly be awarded and the work pushed forward to completion."

Referring to the Quebec Bridge the report of the Department of Railways for the year ended Mar. 30, says: The expenditure for the preparation of plans salaries, etc., was $111,788.02; to which is added $355,279.07, paid for acquiring the Quebec Bridge and Ry. Co.'s stock and $31,765.44, attending the commission of inquiry into the causes of the collapse of the old structure, making the total expenditure since the collapse $498,832.53. There is, however, a credit of $100,000, the amount paid to the Government by the contractors for the collapsed bridge, under an agreement of Mar. 12, in settlement of all claims for damages, arising out of the collapse of the bridge, together with the value of the material in the old bridge and the manufactured material at the bridge site. The Government on its part, relinquished its lien on the plant at the bridge site, and on all steel and manufacturing material for the bridge at the contractors' work at Phoenixville, Pa.

The members of the board of engineers for the bridge visited the site Nov. 4, and inspected the damaged caisson in the dry dock at Levis. It was arranged to hold another meeting Nov. 23, when it was expected to reach a decision as to whether the caisson can be repairer or a new one will have to be built. In an interview H. E. Vantelet stated that the damage to the caisson would not retard the building of the bridge. The caissons required for the substructure work on the south shore would be built in the spring. It was expected that the putting up of the substructure would be started next fall. The work of clearing away the fallen steel had been nearly completed. The Minister of Railways stated Nov. 8, that no decision had been reached with regard to the contract for the superstructure. "It must be understood," he added, "that in a work of such magnitude it is not so much a question of price as the scientific character of the designs. These are being carefully gone over."

Respecting the terminals in Quebec, S. N. Parent, Chairman N.T.R. Commission, in an interview Nov. 12, said the Commissioners obtained possession of the Champlain market site Nov. 1, and all tenancies of stall, etc., would be terminated by Feb. 1, 1911. The buildings on the site would be demolished as speedily as possible. Meanwhile the clearing of the right of way for the line from the market to the bridge site was being gone on with, and plans for laying out the terminals were being prepared.

We are advised that freight only is being handled on the N.T.Ry. between Graham, Ont., and Winnipeg, and that no time table has been issued. The G.T. Pacific Ry. started operating its passenger trains from Fort William to Graham, Oct. 21, instead of to the actual terminal of the Lake Superior branch as formerly. The commissioners have under consideration tenders for the erection of icehouses at Graham, Ont., and Redditt and Springfield, Man., to be completed Feb. 1911.

GRAND TRUNK PACIFIC RAILWAY.

The report of C. Schreiber, Chief Engineer for the Government for the building of the Western Division of the line, extending from Winnipeg, Man., to Prince Rupert, B.C., 1,751 miles, upon the work done during the year ended Mar. 31, says the Prairie section, extending from Winnipeg to Wolfe Creek, 915 miles, is graded; track has been laid, and the structures built. Sidings aggregating 140.5 miles have been laid at 138 stations. Of the main line 474 miles have been fully ballasted, 350 have received a first lift of about five inches of ballast, and there remained only about 35 miles of skeleton track between Entwistle and Wolfe Creek. There have been erected 732 miles of double fence, 793 miles of a four-wire, and 122 miles of a two-wire telegraph line; 11 interlocking plants have been installed at the crossings of other railways; and water services have been introduced at 47 points. Round houses have been built as follows:—Rivers, 18 stalls, with machine shop; Melville, 12 stalls, with machine shop; Watrous, Biggar, Wainwright, 12 stalls each; Edmonton, 18 stalls, with machine shop; two stall engine houses have been built at Portage la Prairie and South Saskatoon. The other buildings erected include four divisional station houses, 26 way station houses, 54 section houses, 66 tool houses, 79 bunk houses, five coaling plants, 80 permanent and 22 temporary loading platforms, 18 stock yards. There have also been built 115 grain elevators at stations on the line.

On the Mountain section extending from Wolfe Creek to Prince Rupert, 836 miles, location plans and profiles have been approved by the Minister of Railways and the Board of Railway Commissioners from Wolfe Creek westward for 289 miles, and from Prince Rupert eastward for 409 miles, leaving a gap of 138 miles for which location plans have not yet been approved. Of the 289 miles westerly from Wolfe Creek, only 179 miles have been put under contract, and of this the first mile involved some very heavy work, a cutting of over 130,000 cubic yards having to be taken out. The crossing of Wolfe Creek is by a bridge 622 ft. long and 130 ft. above highwater mark, and a mile distant is the crossing of McLeod River, which necessitates a bridge 1,052 ft. long and 125 ft. high. Of the 409 miles westerly from Prince Rupert, 240 are under contract. On this mileage grading, etc., had been well advanced on the first 100 miles when the inspection was made, but very little had been done on the next 140 miles, which carries the line to Aldermere. A wharf and warehouse had been built at Prince Rupert.

In a recent interview at Montreal, E. J. Chamberlain, Vice-President and General Manager, is reported to have said the company was anxious to get the business from its western lines over its eastern lines as quickly as possible. As to the entrance into Montreal he said the shortest route would be by building from the N.T.R. to about 25 miles west of Ottawa, and then reaching Montreal over the old Canada Atlantic Ry. In a subsequent interview, Nov. 2, Mr. Chamberlain said he had been somewhat misquoted. One way in which the Montreal connection would be affected was by building a line from about 200 east of Abitibi to the Canada Atlantic Ry. between Ottawa and Arnprior. The G.T.P.R. owns a charter for building such a line. Press despatches dealing with the original report says that the suggested line would leave the N.T.R. about 150 miles east of Cochrane, the junction with the Temiskaming and Northern Ontario Ry., keep to the west of Queen Victoria Lake, and come down between the Gatineau and Conlonge rivers, effecting a junction with the Canada Atlantic Ry. near Carp, Ont. The Montreal Chambre de Commerce has passed a resolution condemning this proposal and asking the Quebec Government to undertake the construction of a direct line from Montreal to the N.T.R. as a government work.

A resolution was passed by the Port Arthur, Ont., city council, Nov. 8, for the purpose of endeavoring to bring the negotiations with the G.T.P.R. for a line to the city to an immediate conclusion.

The first span of the superstructure of the bridge across the Red River at the foot of Lombard St., Winnipeg, was completed, Nov. 10.

The question of the entrance of the branch line, which is to reach the International boundary, was before the Regina city council, Nov. 9, but no decision was reached. Track laying is being proceeded with on the sections of the line under construction, and the Board of Railway Commissioners has approved the amended location plans from mileage 0 to 10.47 of the extension southerly from Regina to the International boundary.

The Minister of Railways Nov. 2, approved of the plans for the entrance of one of the company's branch lines into Prince Albert, Sask.

With respect to the work west of Edmonton, it is expected to have track laid to Prairie Creek by the end of the year, on the main line, and to have made considerable progress with the branch line to the Brazeau River country. The coal fields are situated about 50 miles from Edson, and the revised location plans for the section from mileage 37 to 56.04 have just been passed by the

Montreal Toronto Winnipeg Regina Calgary Vancouver

Board of Railway Commissioners. The Dominion Government has had a geological survey at work on the Rocky Mountain country during the summer and D. B. Dowling, who returned to Ottawa, Nov. 14, reported that there were considerable deposits of coal along the route of the railway 200 miles west of Edmonton, one at Jasper Park, and another near Brule Lake. The question of the route of the line in the vicinity of Fort George is not yet settled, as the reserve has not been given up by the Indians. From this point the branch to Vancouver will probably start and it is expected that this will traverse the Lillooet district to Agassiz, and parallel the C.P.R. to Vancouver. In the Prince Rupert district considerable damage was done to the line by storms, Oct. 23, one big trestle bridge being blown down; and two miles of track washed out. We were officially advised Nov. 12, that the first 100 miles of the main line from Prince Rupert easterly was being ballasted, and that if the weather continued favorable it was expected to have this finished by Dec. 31.

The G.T. Pacific Branch Lines Co. is applying to the Dominion Parliament for authority to build the following additional lines: From between range 21 and range 28 west of the second meridian, westerly to between tp. 29, and tp. 37, joining up with another branch line; from near Moose Jaw, in a generally westerly direction to Calgary, or near there, joining up with one or other of already authorized branch lines from the G.T.P. Ry. between ranges 9 and 13 west of the fourth meridian south westerly and westerly to a junction with a line passing through tps. 39, 40, or 41; from the line passing through range 24 west third meridian, and range 2, west fourth meridian, northwesterly and westerly to the G.T.P. Ry. in ranges 21, 22, 23, 24, or 25; from the G.T.P.Ry., between range 21 and range 25, west of the fourth meridian, southerly and southeasterly to a connection with the line passing through tps. 46, 47 or 48; from the G.T.P. Ry. between range 27 and range 23 west of first meridian, westerly to the branch line passing through tps. 18, 19, 20, or 21; from between range 12 and range 16 west of sixth meridian, southerly to the International boundary between range 10 and range 18, west of the second meridian. (Nov., pg. 919.)

Machine Drawing is the title of a book dealing with the principles of graphic expression as illustrated by machine drawing, together with the technique of drafting, dimensioning, and sketching, by G. C. Anthony, D.Sc., Dean of the School of Engineering, Tufts College. This is a re-issue of Dr. Anthony's former book, revised in the light of the experience of those who used it in teaching and with the illustrations redrawn, and others added. The book is practical, consequently it is largely used for teaching purposes. The price is $1.50, and the publishers are D. C. Heath & Co., Boston, Mass. It can be obtained through the Railway and Marine World's book department.

At a meeting of the Canadian Accountants' Association in Montreal, Nov. 14, there was an interesting discussion on the questions of claims against railways. The discussion was opened by Mr. Finlayson, who dealt with the subject from the claimant's point of view, and Jas. Cherry, C.P.R., and Copeland G.T.R., protected the railways' side of the question. It was stated that the C.P.R. deals with about 55,000 claims a year, and the G.T.R. with an average of 160 claims a day. Claims for damage against railways have increased largely during the last few years.

G. T. R. Betterments, Construction, etc.

Shops at Richmond, Que.—The roundhouse which the company is building at Richmond, Que., will be of concrete, with wooden frame roof, with stalls for 18 locomotives. Each stall is 90 ft long, and is provided with a pit 66 ft. long. A wheel shed 100 ft. long and a machine shop 48 by 125 ft, with boiler room 27½ by 26 ft. to accommodate two return flue boilers, are attached. An elevated track conveys coal to bins 25 by 12 ft. The distance between the centre of the doorposts is 14 ft. The house and shop are heated with hot air throughout, generated in the machine shop and forced through overhead piping by a large fan situated in the machine shop. The size of piping runs from 5 ft. to 3½ ft. Down spouts 2 by 3 ft. between every second pit conveys the hot air to pits. The machine shop equipment consists of one engine and one air compressor; two lathes, one planer, one drill, one heater, one fan, and one engine to operate the same; and the necessary pumps. The lay-out provides for four cinder pits, two being 100 ft. long, one 120 ft. and one 150 ft.—with G.T.R. cinder hoists, and an 80 ft. turntable. The roundhouse is also equipped with two drop pits, one for driving wheels and one for small wheels.

Lachine, Jacques Cartier and Maisonneuve Ry. Co.—Application is being made to the Dominion Parliament to declare the line, which the Quebec Legislature incorporated a company with this title to build, to be a work for the general advantage of Canada, and extending the time within which it may be built.

Bonaventure Station.—Press reports Nov. 1, stated that the G.T.R. had acquired all the land necessary for the purpose of "providing Montreal with big passenger terminals to replace the present inadequate Bonaventure station," and that the first steps in the actual work had been taken that day when the dismantling of the buildings on a portion of the land had been begun. We were officially advised Nov. 12, that while the company may replace Bonaventure station at an early date, no definite move has been made in that connection.

Chateau Laurier Hotel, Ottawa.—It was reported Nov. 12, that the walls of the building were completed, the roof on, and practicaly the whole of the exterior work completed. The heating apparatus, etc., is being installed, and other interior work is being progressed with. It is expected that the building will be completed and furnished ready for opening by the fall of 1911.

Ottawa Station Annex.—In connection with the annex which is being built at the Central Station, as part of the new union station, a coniform concrete chimney, which we are informed is the first to be built in Canada, is under construction. The shaft is 169 ft. high, with diameter at base of 12½ ft., and at top of 7 ft. The shaft is being re-inforced by vertical bars and horizontal rings. The vertical bars are of sufficient strength to take up all the tensile stresses caused by wind pressure and reach partly down into the structure of the foundation, thus forming a perfect anchorage for the chimney. J. G. Siegfried, C.E., is the structural engineer, with M. M. Campbell, C.E., inspector in charge of construction.

Ottawa, Rideau Valley and Brockville Ry.—An Ottawa press dispatch states that it is proposed to start work at once on its proposed line from Ottawa to Brockville, via the Rideau River valley.

Belleville Roundhouse and Yards.—The new roundhouse which is under construction, will have a capacity of 42 stalls, each 90 ft. deep, with a wheel shed and machine shop annex. The roundhouse is expected to be completed this year. In connection with this work the yards have been extended and re-arranged. The highway at the back of the station which crosses the Northern Division main line, is to be closed from west of the roundhouse to lot 12, where the yard ends, and a new highway is to be opened up from that point, running northwesterly until it reaches the northern boundary of the yard, thence to a connection with a projected street west of the northern division lines.

Toronto Belt Line.—Considerable progress is reported to have been made with the reconstruction of the section of the old Belt Line, from Fairview to Yonge St., which the G.T.R. proposes to bring into use once more. Ties have been put in where necessary, and a lot of ballast put down. The bridge across Yonge St. has been reconstructed and a start has been made on the reconstruction of the Dufferin St. bridge.

Holmedale Industrial Spur, Brantford.—In conference with the mayor of Brantford, Ont., Nov. 4, C. M. Hays, President, made an arrangement to build a spur line to the Holmedale district by a route in the rear of the Institution for the Blind. An agreement to this effect is to be submitted to the city council, and the work will be gone on with as soon as it is approved of. One of the points arranged at the conference was that when built this Holmedale spur will form part of a new route for the G.T.R. Tillsonburg branch line.

Guelph Freight Sheds.—The G.T.R. is applying for authority to build freight sheds on its Cardigan street property, from the C.P.R. to Norwich St., 340 ft.

Goderich Station.—The comparatively new station built at Goderich, Ont., was destroyed by fire, Nov. 6. The station agent stated Nov. 11, that he expected that a new station would be ready by the end of the year. The foundations and walls of the burned building will be used so far as possible. The ruins are being cleared away and material is being received from the London, Ont., shops for the new building.

The Imperial Privy Council heard arguments in London, Eng., Nov. 22, in the appeal of the provinces of Saskatchewan and Alberta from the decisions of the Canadian courts in the C.P.R. lands taxation case. The case has been before the courts for years.

The Montreal city council has issued a permit to Transportation Limited Company, for the erection of a $1,000,000 building on St. Francois Xavier St., between Notre Dame and St. James St., Montreal. Ross and McFarlane, Montreal, are the architects, and P. Lyall and Sons are the contractors. The building is to be completed by May, 1911.

An Ottawa dispatch states that the question of regulating the tariff of tolls upon international freight traffic between Canada and the United States is one that cannot be decided by concurrent legislation, but must be regulated by treaty. The question has been under discussion by J. P. Mabee, Chief Commissioner, Board of Railway Commissioners, and the Chairman of the Interstate Commerce Commission.

The Board of Control, according to a Winnipeg despatch of Nov. 15, alleges that the C.P.R. is neglecting to perform its part of the agreement under which the city granted exemption from taxation, and is considering what action should be taken in order to abrocate the agreement. Alleged inadequate accommodation at the stockyard is the special ground for complaint. The agreement provides that in case any dispute arises between the city and the company an arbitration board is to be appointed.

MAINLY ABOUT PEOPLE.

Lord Strathcona has subscribed $25,000 to the Vancouver Y.M.C.A. building fund.

D'Arcy Tate, Solicitor G.T.P.R., Winnipeg, has been appointed a K.C. by the Ontario Government.

F. C. Salter, European Traffic Manager G.T.R., has been elected a Fellow of the Royal Colonial Institute.

J. R. Shaw, of C.P.R. passenger staff at Yokohama, Japan, arrived in Montreal on furlough, Oct. 24.

W. Mackenzie, President Canadian Northern Ry., has given $10,000 to the Winnipeg Y.M.C.A. building fund.

J. H. Plummer, President Dominion Steel Corporation, has been elected Vice President Canada Life Assurance Co.

Jas. Oborne, General Superintendent Ontario Division, C.P.R., left Toronto, Nov. 8, for a two months trip to Europe.

C. Stackhouse, B. Sc., a travelling inspector of locomotives for the C.P.R., was married Oct. 25 at Riverfield, Que.

Miss Margaret Angus, sister of R. B. Angus, of the C.P.R. directorate, Montreal, died in Victoria, B.C., Nov. 17, aged 82.

G. J. Bury, General Manager C.P.R. Western Lines, Winnipeg, was in Montreal and Toronto, early in Nov., on a business trip.

T. Skinner, director C.P.R. and Deputy Governor Hudson's Bay Co., sailed from Quebec Nov. 4, on the Empress of Ireland for Great Britain.

Hugh Sutherland, Executive Agent Canadian Northern Ry., Winnipeg, was among the exhibitors at the Chicago Horse Show, Nov. 22 to 26.

J. P. Quilty, at one time a station agent on the Intercolonial Ry., has been appointed chief of the rate bureau, Boston and Maine Rd., Boston, Mass.

Miss R. Burpee, daughter of T. C. Burpee, Engineer of Maintenance of Way Intercolonial Ry., was married recently at Sheffield, N.B.

W. F. Bleecker, C.P.R. outside ticket agent at Marmora, Ont., died there recently. He was a member of the Canadian Ticket Agents' Association.

G. G. Foster, K.C., Vice President, of the Orford Mountain Ry., a C.P.R. controlled railway, has been elected a director of the Montreal Street Ry.

G. Wright, a subcontractor on the Canadian Northern Ry., near Deloraine, Man., was shot and seriously injured by a discharged laborer, Nov. 9.

Lord Strathcona has given $200,000, making $500,000 in all, to the Strathcona Trust, for the encouragement of physical training in Canadian public schools.

P. H. McFadden, who recently resigned the position of Superintendent Prairie Division, G.T.P.R., at Melville, Sask, has we are advised, entered Great Northern Ry. service.

W. E. Mullins, General Manager of the Northern Ry. of Costa Rica, South America, and formerly in the G.T.R. service, arrived in London, Ont., for a holiday, Oct. 24.

W. W. Jones, a superannuated employe of the Intercolonial Ry., who died at Halifax, N.S., Nov. 1, aged 81, is said to have sold the first passenger ticket issued at Richmond station.

Jas. Black, for a number of years G.T.R. boiler inspector, died in Montreal, Oct. 27, aged 82. W. D. Robb, Superintendent of Motive Power, G.T.R. married one of his daughters.

G. I. Evans, Mechanical Engineer, C.P.R. Angus Shops, Montreal, was presented with a cabinet of silver by the officials of the mechanical department recently on the occasion of his marriage to Miss A. Peel.

J. Barnet, accountant in the General Superintendent's office, Canadian Northern Ry., Winnipeg, was presented with a travelling bag, by the office staff on the occasion of his recent retirement from the service.

R. Muirhead was presented with $100 and a cut glass water set by the employes at the G.T.R. Simcoe St. freight sheds Nov. 24, on his promotion to the position of passenger yardmaster at Union Station, Toronto.

Judson Harmon, who was Receiver of the Pere Marquette Rd. prior to its recent reorganization, has been re-elected Governor of Ohio, an office which he has already held for one term.

Miss N. Davis, daughter of J. T. Davis, of M. P. and J. T. Davis, contractors for the substructure of the Quebec Bridge, was married at St. Colombe de Sillery, Que., Nov. 8, to C. M. Hart, of Montreal.

J. C. Whitchelo, C.P.R. outside ticket agent at Parry Harbor, Ont., died there, Nov. 9, aged 76. He was a member of the Canadian Ticket Agents' Association, and both he and his wife attended the annual meetings for years.

D. Thomas, who died at Point St. Charles, Que., Oct. 23, was engaged in bridge and other construction work on the G.T.R., from the time of his arrival in Canada in 1853, until his retirement from the service in 1899.

H. L. Loughlin, Chief Engineer of the Twin City and Lake Superior Rd., who died recently at Minneapolis, Minn., was for a number of years engineer of maintenance of way of the Minneapolis, St. Paul and Sault Ste. Marie Ry.

T. Howell, the recently appointed Immigration Agent of the Canadian Northern Ry., left Toronto, Nov. 8, for Great Britain to organize the work of the company's agents there for next season.

R. S. Richardson was presented with a purse of money by the staff of the Superintendent's office of the Canadian Northern Quebec Ry. Joliette, Que. Nov. 8, on his leaving the company's service.

J. J. Warren, President of the Kettle Valley Lines, and of the Okanagan Land Co., has joined with his fellow directors of the latter company in presenting a site for the Anglican Church of All Saints at Okanagan Centre, B.C.

A. Hawkes, Superintendent Canadian Northern Ry. Publicity Department, who had charge of the delegation of merchants from Bristol, Eng., during their tour through Canada, was presented with a silver rose bowl, by the delegates on their return to Bristol.

F. W. Brunskill, who died at Forward, Sask., recently, was engaged for some time with G. H. Strevel, and the Cowan Construction Co., and latterly had been taking contracts on his own account along the Canadian Northern Ry. in Saskatchewan.

F. H. McGuigan, jr., engineer in local charge of the grade separation works on the G.T.R., between Bathurst St. and Mimico, Toronto, was thrown off a handcar near the Sunnyside crossing, Nov. 16, and received injuries to one of his knees.

J. E. Muhlfeld, formerly in the G.T.R. and Intercolonial Ry. service, and for some years Mechanical Superintendent Baltimore and Ohio Rd., has been appointed Vice President and General Manager Kansas City Southern Ry., Kansas, Mo.

H. G. Elliott, Assistant General Passenger Agent G.T.R., was presented with a gold fob and a set of furs for Mrs. Elliott by transportation and other friends at a dinner, Oct. 27, in connection with his transfer from Montreal to Chicago, Ill.

W. A. Cooper, General Superintendent C.P.R. Dining and Sleeping Cars, was elected for a third term as President of the American Association of Dining Car Superintendents at the annual convention recently held at Minneapolis, Minn.

A. Whittaker, who died at Windsor, Ont., Oct. 24, aged 77, was at one time locomotive foreman on the old Great Western Ry., at Windsor, and was continued in the same position when that line was taken over by the G.T.R. He had retired from railway work for some years.

Jas. McLaughlin, who has been on the Trent Valley Canal engineering staff at Campbellford, Ont., for some time, was entertained at dinner there Nov. 22, and presented with a travelling bag, etc., on leaving to take a position with the Department of Railways and Canals, at Ottawa.

Lord Strathcona has been re-elected President, and Sir H. Montagu Allan, R. B. Angus, E. B. Greenshields, C. M. Hays, C. R. Hosmer, Sir Thos. G. Shaughnessy, Sir Wm. C. Van Horne, Jas. Ross, and Hon. R. Mackay have been re-elected directors of the Royal Trust Co.

J. T. Thompson, a locomotive driver of over 50 years experience, died at Toronto, Nov. 8, aged 77. He was in G.T.R. service during the Fenian raid, and later ran one of the first trains from Toronto to Orangeville for the Credit Valley Ry., now part of the C.P.R. He was on the C.P.R. superannuation list for some years.

T. Hoben, Assistant Superintendent Canada Eastern Division Intercolonial Ry., was recently presented with a purse of gold by the station agents and telegraph operators on the line; with an address and travelling bag by the conductors, and with a gold-headed cane by the employes at Gibson, N.B., station in connection with his approaching retirement after 40 years active railway service.

H. G. McMicken, European Traffic Agent in London for the Great Northern Ry., U.S.A., is one of the advisory board of the Canadian Mills and Timber, Limited, which issued a prospectus in London recently offering 500,000 shares at four shillings a share. The company is incorporated in British Columbia, its properties being inside Quatsino Sound, on the northwest coast of B.C.

The directorate of the Royal Trust Co., Montreal, as recently elected, includes Sir Thos. G. Shaughnessy, President C.P.R.; Sir Wm. C. Van Horne, R. B. Angus, C. R. Hosmer, and Lord Strathcona (President of the company), directors of the C.P.R.; C. M. Hays, President G.T.R. and G.T. Pacific Ry., and Sir H. Montagu Allan, of the Allan Line Steamships.

H. W. Brodie, whose promotion from the position of Assistant General Passenger Agent, Winnipeg, to that of General Passenger Agent Western Lines west of Revelstoke, Vancouver, B.C., was announced in our last issue, was entertained to dinner by railway officials in Winnipeg, Nov. 8, and presented with a case of pipes, and Mrs. Brodie with a silver set. The clerks in the station and down town ticket offices presented him with a cut glass punch set.

The engagement is announced of Miss Grace Mackenzie, youngest daughter of Wm. Mackenzie, President Canadian Northern Ry., to Count Jacques de Lesseps, the aviator, and son of the late Count Ferdinand de Lesseps, who projected and superintended the construction of the Suez Canal, and who after-

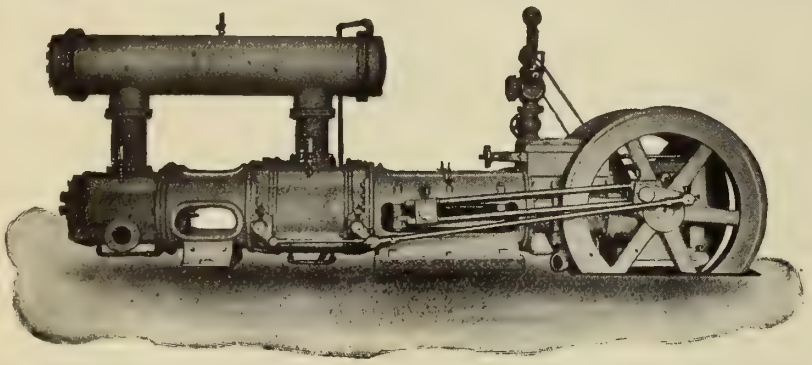
HEAD OFFICES AND WORKS **SYDNEY, CAPE BRETON, CANADA**

RAND CLASS "C-2" Straight Line Steam Driven Compound Air COMPRESSORS



Two paramount features of this type are ECONOMICAL CONSUMPTION combined with high EFFICIENCY.

A rigid self-contained design requiring the least possible floor space.

GOOD STEAM ECONOMY effected by Automatic Long Range Cut-off, consisting of special internal ports, combining convenience in starting with better steam economy by giving a quick, short, running cut-off.

CORLISS AIR INLET VALVES insuring large, free, quick opening and closing ports giving high volumetric efficiency.

THE HOLDEN CO., Limited, Agents, 354 St. James St., MONTREAL

wards formed a company for the construction of the Panama Canal, which, however, was unsuccessful, the work subsequently being taken over by the U.S. Government.

Capt. H. W. Shepherd, who died at Montreal, Oct. 31, aged 86, was connected with marine interests at Montreal and Ottawa for over 60 years. He first commanded the Lady Simpson, one of the first steamboats on the inland waters, and at one time or another had command of nearly all the steamboats plying between Montreal and Carillon, until about four years ago, when he retired. He was for many years President of the Ottwa River Navigation Co., which owns the Carillon and Grenville Ry.

A. B. Calder, General Agent Passenger Department C.P.R., Seattle, Wash., was entertained to dinner, Nov. 8, by a number of friends on the occasion of his leaving for Chicago, Ill., where he has been transferred in a similar capacity.

James Leitch, K.C., Chairman Ontario Railway and Municipal Board, was compelled to return to Toronto from Niagara Falls, where he was hearing an expropriation application by the Victoria Park Commission, Nov. 16, on account of a sudden illness..

J. E. Robitaille, whose appointment as Accountant and Auditor Ha Ha Bay Ry., Chicoutimi, Que., was announced in our last issue, was born at Quebec, Que., Feb. 17, 1870, and entered railway service Jan. 1890, since when he has been, to Oct., 1897, freight cashier and accountant G.T.R., Quebec; Oct. 1907 to May 1902, Freight and Passenger Agent Quebec Southern Ry., St. Hyacinthe, Que.; May 1902 to Aug. 1910 Assistant Auditor and Car Accountant, Bay of Quinte Ry., Thousand Islands Ry., Oshawa Electric Ry., and Deseronto Navigation Co., Deseronto Ont. He is Acting Adjutant of the Ninth Brigade Canadian Field Artillery.

J. W. Herrold, who has been appointed General Agent Algoma Central and Hudson Bay Ry., at Sault Ste. Marie, Ont., was born at Hibbardsville, Ohio, Apr. 12, 1875, and entered railway service in July 1892, since when he has been, to 1894 clerk in freight office Kanawha and Michigan Ry., Athens, O.; 1894 to 1895, ticket agent same road, Athens, O.; 1895 to 1898, cashier and chief clerk K. and M.R., and Hocking Valley Ry., Athens, O.; 1898 to 1904, Freight and Passenger Agent same companies, Athens, O.; 1904 to Oct. 5, 1910, Agent K., and M. Ry., in charge of freight and passenger traffic and yards at Charleston, W. Va.

Canada has now several Grand Old Men, and T. C. Keefer, the eminent engineer, who has rendered great service to the country through the practice of his profession, is one of them. He has now reached his ninetieth year. Of U. E. Loyalist stock, he is a thorough Canadian. He early took an interest in the transportation question, and was concerned in the building of our canal system. He also took part in railway construction, and helped to survey for the Grand Trunk and for the Victoria Bridge. An active life in the service of Canada brought Mr. Keefer the title of C.M.G., which he had well earned.—Mail and Empire.

H. W. Brodie, whose appointment as General Pasenger Agent Western Lines, C.P.R. west of Revelstoke with office at Vancouver, B.C., was announced in our last issue, was born at Fredericton, N.B., June 8, 1874, and entered railway service, Jan. 1, 1895, since when he has been, to July 1895, junior clerk and stenographer C.P.R. Passenger Department, St. John, N.B.; July to Aug. 1895, in a similar capacity at Boston, Mass.; Aug. to Feb. 1898, stenographer to Assistant General Passenger Agent, C.P.R., Toronto; Feb. 1898 to Oct. 1899, chief clerk in same office; Oct. 1899 to Feb. 1903, chief clerk to General Passenger Agent Western Lines, C.P.R., Winnipeg; Feb., 1903, to Oct., 26, 1910, Assistant General Passenger Agent, Western Lines C.P.R., Winnipeg.

C. E. McPherson, whose appointment as Assistant Passenger Traffic Manager Western Lines. C.P.R., Winnipeg, was announced in our last issue, was born at Chatham, Ont., June 7, 1861, and entered railway service in 1876, since when he has been, to 1882, ticket clerk G.T.R., Toronto, and subsequently, Travelling Passenger Agent same road; 1882 to 1886, Asistant General Agent, Chicago, Rock Island and Pacific Ry., in Canada; 1886 to 1887, General Travelling Agent C.P.R.; 1887 to 1889, District Passenger Agent, C.P.R., Boston, Mass.; 1891 to June, 1895, Assistant General Passenger Agent, C.P.R., St. John, N.B.; June 1895 to June 1899, Assistant General Passenger Agent, C.P.R., Toronto; June, 1899 to Oct. 26, 1910, General Passenger Agent, Western Lines, C.P.R., Winnipeg.

M. B. Dube, who was recently appointed locomotive foreman G.T.P.R. at Graham, Ont., was born in Quebec, Que., Sept. 6, 1877, and entered railway service Sept., 1891, since when he has been. to 1893, messenger G.T.R., Gorham, N. H.; 1893 to 1902, in G.T.R. shops, Gorham, N.H.; 1902 to Jan. 31, 1904, in charge motive power and car department, Gorham shops; Jan. 31 to Apr., 1904, night foreman G.T.R. shops, Belleville. Ont..; Apr., 1904, to Jan. 1, 1907, in G.T.R. shops, Gorham, N.H.; Jan. 1 to Mar. 1, 1907, locomotive foreman G.T.R., Madawaska, Ont.; Mar. 1, 1907, to Apr. 20, 1908, locomotive foreman G.T.R., Coteau Jct., Que.; Apr. 20, 1908, to Dec. 22, 1909, locomotive foreman G.T.R., Island Pond, Vt.; Jan. 1 to Oct. 1, 1910, locomotive foreman G.T.P.R.

D. Crombie, who has been appointed Assistant to the First Vice President G.T.R., at Montreal, was born at Hamilton, Ont., May 13, 1864, and entered railway service in 1883, since when he has been, to 1887, telegraph operator G.T.R.; 1887 to 1889, ticket clerk same road, Chatham, Ont.; 1889 to 1890, train dispatcher same road, London, Ont.; 1890 to 1892, train dispatcher, Flint and Pere Marquette Rd., Saginaw, Mich.; 1892 to 1894, car distributor same road; 1894 to Jan. 1, 1900, Car Service Agent same road; Jan. 1, to July 1900, Superintendent Car Service Pere Marquette Rd.; July 1900 to Apr. 1906, Superintendent of Transportation same road, Detroit, Mich.; Apr. 1906 to Oct. 1907, Master of Transportation G.T.R. Middle Division, London, Ont.; Oct. 1907 to Nov. 22, 1910, Assistant to General Transportation Manager, G.T.R., Montreal.

Frank Grundy, Vice President Quebec Central Ry., died at Sherbrooke, Que., Nov. 15. Born at Bury, Lancashire, Eng., in 1836, he entered railway service in 1850 as clerk in the Manchester, Sheffield & Lincolnshire Ry. (now the Great Central Ry.), and subsequently was with the Oxford, Worcester and Wolverhampton Ry. (now a part of the Great Western Ry.), and from 1863 to 1889 he was Manager of the Mid-Wales Ry., Brecon, and of some other small railway and dock works. In 1889 he was appointed General Manager of the Quebec Central Ry. by the bondholders, retiring in 1905, when he became Vice President. He was also President of the Temiscouata Ry., and director of the Eastern Townships Bank. Three of his sons are engaged in railway service, the eldest with the Egyptian Government; G. G., as General Manager of the Temiscouata Ry., and E. O., as General Passenger Agent, Quebec Central Ry.

F. W. Morse, formerly Vice President and General Manager Grand Trunk Pacific Ry., has been appointed General Manager Toledo, St. Louis and Western Rd., and Chicago and Alton Rd., with office in Railway Exchange Building, Chicago. The circular announcing his appointment is signed by G. H. Ross, Vice President, and approved by T. P. Shonts, President. The Toledo, St. Louis & Western and Chicago & Alton lines form a part of what is known as the Hawley group, the other lines in the group being the Minneapolis and St. Louis Rd., and the Iowa Central Rd. The Toledo, St. Louis and Western Rd. has a mileage of 450.7, extending from Toledo to St. Louis, with a number of branch lines; and the Chicago and Alton Rd. has a mileage of 1,004.67, extending from Chicago to St. Louis, with lines through Peoria and Roadhouse into St. Louis, from Roadhouse through Mexico to Jefferson City, and from Mexico to Kansas City.

C. B. Foster, whose appointment as General Passenger Agent C.P.R. Western Lines, Revelstoke and east, with office at Winnipeg, was announced in our last issue, was born at Kingston, Kings county, N.B., Sept. 30, 1871, and entered C.P.R. service in April, 1891, since when he has been, to Oct., 1892, stenographer in Passenger Department, St. John, N.B.; Oct., 1892, to Sept., 1893, senior clerk Passenger Department, St. John, N.B.; Sept., 1893 to July, 1899, Travelling Passenger Agent, St. John, N.B.; July, 1899, to Feb. 8, 1902, chief clerk Passenger Department, St. John, N.B.; Feb. 8, 1902, to Nov. 22, 1904, District Passenger Agent, St. John, N.B.; Nov. 22, 1904, to Sept. 8, 1908, District Passenger Agent, Toronto; Sept. 8, 1908, to Oct. 31, 1910, Assistant General Passenger Agent, Vancouver, B.C.

W. G. Brownlee, whose portrait appears on the first page of this issue, was born at Lawrenceville, Ill., Sept. 9, 1858, and entered railway service in 1877, since when he has been, to 1879, operator Ohio, Mississippi Ry.; 1879 to 1881, operator and train dispatcher Union Pacific Ry.; 1881 to 1884, train dispatcher and Trainmaster Denver and Rio Grande Rd.; 1884 to 1887, train dispatcher Union Pacific Rd., Laramie, Wyo.; 1887 to 1889, train dispatcher same road, St. Louis, Mo.; 1892 to Feb., 1900, Division Superintendent same road, St. Louis, Mo.; Feb., 1900, to May, 1901, Assistant Superintendent Eastern Division G.T.R., Belleville, Ont.; June, 1901, to Mar., 1902, Superintendent Eastern Division, same road, Montreal; Mar., 1902, to Dec., 1904, Superintendent Western Division same road, Detroit, Mich.; Jan., 1905, to April, 1907, Superintendent Middle Division same road, Toronto; April, 1907, appointed General Transportation Manager, same road, with office at Montreal.

Railroad Administration.—In a 300-page volume with a number of charts and diagrams, Ray Morris, brings together a large mass of information covering the executive work involved in building and operating railroads. The problems discussed are largely those of organization, and in this volume the author endeavors to show how the railway executive so organizes its forces as to apply them to the best advantage. The non-technical reader is given the manager's viewpoint towards the problems of actual railway administration in the United States, with some idea of certain comparative conditions in other countries. Divisional versus departmental organization is discussed, also British railway organization. In the appendices the unit system of railway organization, and the railway organization in France are reviewed. The volume is published by D. Appleton & Co., New York, at $2 net and may be obtained from the Railway and Marine World's book department.

Railway Rolling Stock Notes.

The G.T.P.R. has ordered one rotary snow plow with 12ft. cut, scoop wheel type, from the Montreal Locomotive Works.

Henri Menier, Anticosti Island, has received one four-coupled locomotive from the Montreal Locomotive Works, for use on the railway on the island.

The Michigan Central Rd. has received six Pacific type and five six-coupled locomotives from the Montreal Locomotive Works.

The Canadian Northern Ry. has ordered six sleeping cars from the Canadian Car and Foundry Co., Montreal, and 10 second class coaches from the Crossen Car Manufacturing Co., Cobourg, Ont.

The Intercolonial Ry. has received one second class sleeping car from the Silliker Car Co., Halifax, N.S., and two baggage cars from the Canadian Car and Foundry Co., Montreal, and has ordered 15 tank cars from the Canadian Car and Foundry Co., Montreal.

The Canadian Northern Ry., between Oct. 15 and Nov. 15, received the following additions to rolling stock:—One baggage car, 95 box cars, from the Canadian Car and Foundry Co., Montreal; 20 refrigerator cars, 10 box cars, from the Crossen Car Manufacturing Co., Cobourg, Ont., and one combination second class and baggage coach and 25 box cars from the Silliker Car Co., Halifax, N.S.

The C.P.R., between Oct. 13 and Nov. 15 received the following additions to rolling stock:—175 box cars, six flat cars, two vans, two first class cars, six flangers, seven horse cars, four D10 and two switching locomotives from its Angus shops, Montreal; 184 steel coal cars from the Canadian Car and Foundry Co., Montreal, and one wrecking crane from the U.S.

The G.T.P.R. has received the final lot of its order for 1,000 box cars, nos. 311325 to 312234; 87 refrigerator cars, nos. 340149 to 340236, and 76 flat cars, nos. 361300 to 361375, from the Canadian Car and Foundry Co., Montreal, and four ten-wheeled locomotives, nos. 620 to 623, from the Montreal Locomotive Works, being part lot of an order for ten.

The C.P.R. between Oct. 13 and Nov. 15, ordered the following rolling stock:—One baggage and smoking car, one pile driver, 89 box cars, one refrigerator (passenger) car, eight stock cars, four flat cars, six steel coal cars, three vans and one ballast car, from its Angus shops, Montreal; 12 G1 and G2 locomotives from the Montreal Locomotive Works; 10 D10 locomotives from the Canadian Locomotive Co., Kingston, Ont., and 50 steel tank cars in the U.S.

Following are the chief details of the five all steel snow plows, which the C.P.R. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our Oct. issue:—

Weight, complete with trucks, estimated	43,500 lbs.
Height from rail to top of cupola	14 ft. 10½ in.
Height from rail to top of roof	11 ft. 6⅜ in.
Length over all	32 ft. 1 in.
Centre to centre of trucks	18 ft.
Width, extreme	9 ft. 2½ in.

The International Ry. of New Brunswick has ordered one ten-wheeled locomotive from the Montreal Locomotive Works, of which the following are the chief details:—

Weight in working order	110,500 lbs.
Weight on drivers	84,500 lbs.
Weight on engine tank	26,000 lbs.
Wheel base, engine and tender	47 ft. 6¾ in.
Wheel base, driving	10 ft. 6 in.
Wheel base, engine	20 ft. 8 in.
Cylinders	18 in. by 24 in.
Boiler, type	Extended wagon top
Boiler pressure	160 lbs.
Tubes, no. and diar.	198 2 in.
Tubes, length	12 ft. 3 in.
Brake	Westinghouse American
Tank capacity	3,500 imp. gals.

The Toronto, Hamilton and Buffalo Ry. has ordered one ten-wheeled locomotive from the Montreal Locomotive Works, of which the following are the chief details:—

Weight in working order	188,000 lbs.
Weight on drivers	142,000 lbs.
Weight on engine tank	46,000 lbs.
Wheel base, driving	15 ft. 10 in.
Wheel base, engine	26 ft. 10 in.
Wheel base, engine and tender	55 ft. 6 in.
Valve gear	Walschaert
Cylinders	23 in. by 26 in.
Boiler pressure	170 lbs.
Boiler, type	Extended wagon top
Tubes, no. and diar.	188 2 in.
Tubes, length	14 ft. 9 in.
Superheater	Vaughan-Horsey
Brake	Westinghouse American
Tank capacity	5,500 U.S. gals.

Following are the chief details of the 12 Pacific type locomotives, which the C.P.R. has ordered from the Montreal Locomotive Works:—

Weight in working order (5)	218,000 lbs.
(7)	220,000 lbs.
Weight on drivers (5)	136,000 lbs.
(7)	138,000 lbs.
Weight on trailer	34,500 lbs.
Weight on engine tank	47,500 lbs.
Wheel base, driving	13 ft. 0 in.
Wheel base, engine	33 ft. 7 in.
Wheel base, engine and tender	60 ft. 0 in.
Valve gear	Walschaert
Cylinders	21 in. by 28 in.
Boiler, type	Extended wagon top
Boiler pressure	200 lbs.
Tubes, no. and diar.	193 2¼ in. 22 5 in.
Tubes, length	19 ft. 6 in.
Superheater	Vaughan-Horsey
Brake	Westinghouse American
Tank capacity	5,000 imp. gals.

Following are chief details of the six sleeping cars which the Canadian Northern Ry. is having built by the Canadian Car and Foundry Co., Montreal:

Length over end sills	72 ft. 6 in.
Width over side sills	9 ft. 10½ in.
Height, top of sill to bottom of plate	6 ft. 9 in.
Width of deck opening	5 ft. 6 in.
Vestibule	Pullman wide type
Vestibule diaphragms	Ajax
Inside finish	Smoke room, Blanchet wood, remainder mahogany
Trimmings	Statuary bronze
Lighting	Commercial Acetylene Co.
Steam heating	Gold system
Platform	Standard steel
Body bolsters	Cast steel
Brakes	Westinghouse P1612
Trucks	C.N.R. Standard six wheel
Wheel base	10 ft. 6 in.
Wheels	36 in. steel tired
Axles	Steel.
Brake beams	Simplex standard
Journal boxes	McCord m.i.
Side bearings	Susemihl frictionless

Following are the chief details of the four all steel hopper cars which the Canada Cement Co. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our Oct. issue:—

Capacity	100,000 lbs.
Length inside	36 ft. ¼ in.
Length over end sills	31 ft. 6 in.
Centre to centre of trucks	21 ft. 9 in.
Width over side stakes	10 ft. 1½ in.
Width inside	9 ft. 6 in.
Height, top of rail to top of brake mast	10 ft. 6 11-16 in.
Height, top of rail to top of side	10 ft.
Height, top of rail to centre of drawbar	2 ft. 10½ in.
Airbrakes	Westinghouse KD 812
Couplers, type	R. E. Janney cast steel.
Couplers	Shank, 5 x 7 in.; end, 6½ in.
Draft gear	M.C.B. twin spring.
Truck wheel base	5 ft. 6 in.
Height from rail to bearing face of centre plate	2 ft. 3⅝ in.
Bolsters and brake beams	Simplex.
Side bearings	Susemihl telescoping lever.
Wheels	Cast iron, 33 in.
Journal bearings	Canadian Bronze Co.
Journal boxes	McCord m.i.
Truck type	Diamond arch bar.

Following are the chief details of the 18 D10 ten wheeled locomotives, which the C.P.R. has ordered from the Canadian Locomotive Co., Kingston, Ont.:—

Weight on drivers	141,000 lbs.
Weight, total	190,000 lbs.
Wheel base, rigid	14 ft. 10 in.
Wheel base, engine, total	26 ft. 1 in.
Wheel base, engine and tender	54 ft. 10¼ in.
Heating surface, firebox	180 sq. ft.
Heating surface, tubes	2,238 sq. ft.
Heating surface, superheater	408 sq. ft.
Heating surface, total	2,826 sq. ft.
Driving wheels, diar.	63 in.
Driving wheel centres	Cast steel
Driving journals	Main 9½ by 12 in.
Others	9 by 12 in.
Cylinders	21 in. by 28 in.
Boiler, type	Radial stayed
Boiler pressure	200 lbs.
Tubes, no. and diar.	240 2 in., 24 5 in.
Tubes, length	14 ft 5 in.
Brakes	Westinghouse ET.
Valve gear	Walschaert
Superheater	Vaughan-Horsey
Weight of tender, loaded	134,000 lbs.
Capacity, water	5,000 imp. gals.
Capacity, coal	10 tons
Truck, type	Outside equalized
Wheels, diar.	36 in.
Wheel, type	Steel tired, cast steel centre
Journals	5½ in. by 10 in.
Brake beams	Simplex high speed

Following are the chief details of the 60 steel ore cars, which the Canada Iron Corporation is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our Oct. issue:—

Capacity	100,000 lbs.
Length over end sills	26 ft. 7¾ in.
Length over striking plates	28 ft. 8 in.
Centre to centre of trucks	19 ft. 3 in.
Width over side sills	10 ft. ⅝ in.
Width over stakes	10 ft. ⅜ in.
Height from rail to top of floor	2 ft. 5⅝ in.
Height from rail to top of side	9 ft. ⅝ in.
Height from rail to top of brake mast	9 ft. 8⅜ in.
Height from rail to centre of drawbar	2 ft. 10½ in.
Length inside	26 ft. 7⅛ in.
Width inside	9 ft. 6 in.
Height inside	6 ft. 7 in.
Doors, type	Horizontal, side hung.
Door openings	5 ft. 11¼ in. by 3 ft. 2⅞ in.
Number of hopper doors	2.
Couplers, type	R. E. Janney
Couplers	shank, 5 x 7 in.; end, 8½ in.
Air brakes	Westinghouse HD 1012
Trucks, type	Diamond arch bar, rigid.
Wheel base	5 ft. 6 in.
Height from rail to top of centre plate	2 ft. 2⅞ in.
Brake beams	Simplex, inside hung.
Side bearings	Susemihl centreing lever.
Journal boxes	McCord m.i., M.C.B. 5½ x 10 in.
Journal bearings	Canadian Bronze Co.
Bolsters	Simplex.
Wheels	M.C.B. 33 in., 700 lbs. c. i.

Following are the chief details of the 50 all steel hopper cars and of the 12 steel Hart-Otis cars which the Dominion Coal Co. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our Oct. issue:—

Capacity	100,000 lbs.
Length inside	36 ft. ¼ in.
Length over end sills	31 ft. 6 in.
Centre to centre of trucks	21 ft. 9 in.
Width over side stakes	10 ft. 1½ in.
Height, top of rail to top of brake mast	10 ft. 6 11-16 in.
Height, top of rail to top of side	10 ft.
Height, top of rail to centre of drawbar	2 ft. 10½ in.
Air brakes	Westinghouse KD 812.
Couplers, type	R. E. Janney.
Couplers	Shank, 5 x 7 in.; butt, 6½ in.
Draft gear	M.C.B. twin spring.
Width inside	9 ft. 6 in.
Truck wheel base	5 ft. 6 in.
Height from rail to bearing face of centre plate	2 ft. 3⅝ in.
Bolsters	Simplex.
Brake beams	Simplex, inside hung.
Side bearings	Susemihl telescoping lever.
Wheels	Cast iron, 33 in.
Journal bearings, Canadian Bronze Co.	5½x10 in.
Journal boxes	McCord m.i.
Truck type	Diamond arch bar.

Following are the chief details of the 100 steel frame automobile cars, which the C.P.R. is having built by the Canadian Car and Foundry Co., Montreal:—

Capacity	80,000 lbs.
Length inside	36 ft.
Length over buffer blocks	38 ft. 1¼ in.
Centre to centre of trucks	26 ft. 10 in.
Width over eaves	9 ft. 9 in.
Height from floor to under side of carline	8 ft. 4½ in.
Side door, clear opening	7 ft. 11¾ in. by 10 ft.
End door clear opening	7 ft. 10½ in. by 7 ft. 6 in.
Width over side posts	9 ft. 3½ in.
Width clear inside	8 ft. 6½ in.
Height, top of rail to top of brake mast	13 ft. 10 in.
Height, top of rail to eaves	12 ft. 7 9-16 in.
Height, top of rail to centre of drawbar	2 ft. 10½ in.
Height, top of rail to bottom centre sill	2 ft. 4 in.
Under frame and side framing	Steel.
Lining of wood	sides 1½ in., ends and floor 1¾ in.
Air brakes	Westinghouse KC 812.
Couplers	Simplex side lift, with Farlow completely reinforced slot.
Truck	Specially designed, low.
Height from rail to bearing face of centre plate	2 ft. ⅝ in.

A HISTORY OF THE PAY-AS-YOU-ENTER CAR
AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., 100; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., 5; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 25; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co., Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Ry., Rockford, Ill.; Cairo Street Ry. & Lt. System, 6; Des Moines City Railway, Iowa, 12; Macon Ry. & Lt. Co., Macon, Ga.; Virginia Ry. & Power Co.; Columbia Elec. St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

(King Edward Hotel Block)

Wheel base	5 ft. 6 in.
Bolsters	Simplex.
Brake beams	Simplex, inside hung.
Side bearings	Susemihl.
Wheels	Cast iron, 33 in., 695 lbs.
Journal bearings	Canadian Bronze Co., 5 x 9 in.
Journal boxes	McCord m.i.
Truck type	Diamond arch bar.

Following are the chief details of the two experimental drop bottom box cars for grain, which the C.P.R. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our Oct. issue:—

Capacity	80,000 lbs.
Length over buffer blocks	38 ft. 5 in.
Length over end sills	37 ft. 5 in.
Length inside	36 ft.
Width inside	8 ft. 6½ in.
Width over eaves	9 ft. 9 in.
Height from rail to centre of drawbar	2 ft. 10½in.
Height from rail to top of running board	13 ft. 9¾ in.
Height from rail to top of brake mast	14 ft. ¼ in.
Centre to centre of trucks	25 ft. 10⅝ in.
Number of drop doors	14.
Number of convertible doors	6.
Couplers	Simplex cast steel, style A, knuckle p.
Air brakes	Westinghouse KC 1012.
Draft gear	M.C.B. twin spring.
Under frame	Steel.
Floor	Convertible drop bottom.
Trucks, wheel base	5 ft. 4 in.
Height from rail to bearing face of centre plate	2 ft. 5 in.
Bolsters	Simplex.
Brake beams	Simplex, inside hung.
Side bearings	Susemihl telescoping lever.
Wheels	Cast iron, 33 in., 695 lbs.
Journal boxes	McCord m.i.
Journal bearings	Canadian Bronze Co.
Truck type	Diamond arch bar.

The second car is of the following dimensions, with other particulars, as in the first:—

Length over buffer blocks	38 ft. 1¼ in.
Length back to back of end sills	36 ft. 11½ in.
Width overall	9 ft. 3½ in.
Height from rail to top of running board	13 ft. 4¾ in.
Height from rail to top of brake mast	13 ft. 10 in.
Centre to centre of trucks	26 ft. 10 in.
Number of drop doors	8.
Number of convertible doors	8.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for Sept., $26,900, against $39,020 for Sept., 1909. Cumulative net profits for three months ended Sept. 30, $72,781.

Alexander Gibson Ry. and Manufacturing Co.—The date of the sale of the property of this company in the counties of York, Carleton and Northumberland, N.B., under orders of the Master of the Supreme Court, is Feb. 22, 1911. The sale has been ordered upon the petition of the Royal Trust Co. and others under a trust mortgage deed of Nov. 1, 1909.

Algoma Central and Hudson Bay Ry.—The Dominion Parliament is being asked to confirm the conversion of 50,000 shares of the company's capital stock from common stock into 5% non-cumulative preferred stock.

Atlantic and Lake Superior Ry.—The holders of preference certificates, certificates of participation, deferred certificates and ordinary certificates of participation have been notified to meet at 21 Leadenhall St., London, Eng., Dec. 6, for the purpose of approving a partial distribution of assets among the four classes of certificate holders.

Canadian Pacific Ry.—At a meeting of directors, Nov. 14, a dividend of 2% was declared on the common stock for the quarter ended Sept. 30, being at the rate of 7% per annum from revenue, and 1% from land sales. The dividend is payable Dec. 31 to shareholders of record Nov. 30. This is the first quarterly dividend, payments heretofore having been half yearly. Application has been made to the London, Eng., Stock Exchange to list a further £2,678,227 of C.P.R. 4% stock.

Dominion Atlantic Ry.—Gross earnings for Sept. $165,200, against $173,465 for Sept. 1909. Aggregate gross earnings for three months ended Sept. 30, $473.400, against $475,202 for same period 1909.

Guelph Junction Ry.—Returns received by the Guelph, Ont., city council from the C.P.R. show that a profit of $9,355.37 was made for the three months ended Sept. 30, against $7,492.26 for the corresponding period of 1909.

Quebec and Lake St. John Ry.—Total earnings for Oct., $63,544.31, against $52,982.85 for Oct. 1909. Aggregate total earnings for 10 months ended Oct. 31, $505,329.50, against $497,733.06 for same period 1909. The average earnings per mile for Oct., were $222.65, and for the 10 months ended Oct. 31, $185.98, against $1,781.98 and $1,752.98 for similar periods, respectively, 1909.

Quebec and New Brunswick Ry.—Following are the officers and directors for the current year:—President, Hon. J. Costigan; other directors, J. A. Guy, L. A. Gagnon, A. Lawson and J. M. Stevens.

Quebec Central Ry.—Gross earnings for Aug., $131,806.55; expenses $80,125,20; net earnings $51,681.35, against $101,821.89 gross earnings; $64,399.42 expenses; $37,422.47 net earnings for Aug. 1909. Aggregate gross earnings for two months ended Aug. 31, $255,877.44; expenses $157,626.36; net earnings $98.251.08, against $209,233.25 gross earnings; $131,842.46 expenses; $77,390,79 net earnings for same period 1909.

St. Mary's and Western Ontario Ry.—A meeting of the holders of second mortgage bonds will be held in the offices of the trustee, J. Munro, Embro, Ont., Dec. 6, for the purpose of considering what steps shall be taken in view of the default of the company to pay interest on these bonds, and to take such action in connection with the matter as shall be deemed advisable. The company's line between St. Marys and Embro, Ont., is leased to the C.P.R. at a rental equal to 4½% interest on first mortgage bonds, together with the right to purchase the common stock at any time within 12 years from 1909 for the sum of $25,000.

Temiscouata Ry.—Profits for Aug., $4,558, and for eight months ended Aug. 31, $31,032.

The London Financial Times says:—"The Temiscouata Ry. was recently described by a well known member of the Stock Exchange as a concern whose prospects ranged between splendid possibilities and schemes for the protection of the debenture holders. Just at present the former of these two alternatives is being adopted by some of those who follow the affairs of the undertaking. That is to say, the prospects are regarded as having considerably improved. For 1909-10 a distribution of 7% was made on the consolidated mortgage income bond certificates, and there are rumors that for 1910-11, a more substantial rate of distribution will be announced, while in some quarters it is suggested that an interim payment will be made. There is nothing in recent traffics to support this view; nevertheless, purchases are being made of the income bond certificates at the current price of £32. The chief thing to remember in connection with this property is that its physical condition has undergone a very great improvement during recent years, and it is understood that the line is now in a generally more efficient state than for a long time past."

White Pass and Yukon Ry.—Gross earnings for Sept., $233,900, against $249,854 for Sept. 1909. Aggregate gross earnings for three months ended Sept. 30., $676.087, against $726,111 for same period 1909.

Protection of Railway Employes.

The Board of Railway Commissioners passed the following order, 12225, Nov. 9:—Re application of the Trainmen's Association of Canada, for a revision of order 5888, Dec. 16, 1908, making provision for the protection of railway employes. It is ordered as follows:—

1. Whereas subsec. 3 of sec. 264 of the Railway Act provides that "there shall also be such a number of cars in every train equipped with power or train brakes that the engineer of the locomotive drawing such train can control its speed, or bring the train to a stop in the quickest and best manner possible, without requiring brakemen to use the common hand brake for the purpose." Therefore, at least 85% of the number of cars in every train shall be equipped as above required.

2. When more than one engine is attached to a train, the engineer of the leading engine shall operate the brakes.

3. Every road locomotive engine shall be equipped with a step or steps and hand holds on both sides of and at or near the rear ends of tenders; foot-rests shall be provided on the pilot of every such engine, sufficiently wide for a man to stand on; every switching or yard engine shall be equipped with foot-boards and head-lights on the front and rear ends of the engine and tender, such foot-boards to be not less than 10 ins. wide; the back of such foot-boards shall be protected by a board not less than 4 ins., and if cut in the centre, the inner ends shall be protected in like manner.

4. No light engine shall be run against the current of traffic a greater distance than 25 miles in any one direction without a conductor in addition to the engineer and fireman.

5. No railway company shall permit any employe to engage in the operation of trains, or handle train orders, without first requiring such employe to pass an examination on train rules and undergo a satisfactory eye and ear test by a competent examiner.

6. (a) Locomotive engineers must be at least 21 years of age, undergo a satisfactory eye and ear test by a competent examiner, and pass an examination on train rules and regulations and the proper care and operation of locomotives and air brakes. (b) Conductors must be at least 21 years of age, undergo a satisfactory eye and ear test, and pass an examination on train rules and regulations and the operation of air brakes. (c) Telegraph or telephone operators engaging in the operation of trains or handling train orders must be at least 18 years of age; write a legible hand, and pass an examination on train rules and regulations. Telegraph operators must be able to send and receive messages at the rate of not less than 20 words a minute. (d) Train dispatchers must be at least 21 years of age, be familiar with the line over which they have charge, and pass an examination on train rules and regulations. (e) Railway companies shall, within 90 days from the date of this order, file with the Board a copy of each examination paper for the examinations herein required to be passed by the employes of such railway company.

7. All railway companies shall strictly conform to the rules and regulations from time to time approved by the Master Car Builders' Association, governing the loading of lumber, logs and stone upon open cars, and the loading and carrying of structural material, plates, rails and girders; and no material of any kind shall be carried upon the roofs of cars.

8. (a) All open drains crossing tracks in railway yards shall be safely covered for at least five feet from the gauge side of each rail, except in times of

Dearborn Water Treatment Prevents Scale and Leaks in Locomotive Boilers

Actual tests have demonstrated that 1-9 inch of scale formation results in 15.9 per cent. loss of boiler efficiency. Only 1-50 inch scale causes a loss of 9.4 per cent.

The coal wasted on American railroads, because proper attention is not given to the removal and prevention of scale formation, amounts to millions of tons annually.

In addition to the fuel wastage is the expense of boiler repairs made necessary by the same causes. On bad water districts the average mileage obtained per set of boiler flues is many times less than what can be accomplished with good water.

Dearborn Treatment prevents the scaling salts from forming, and stops leaks, corrosion, and pitting.

flood, when temporary open drains may be provided, if necessary. (b) No semaphores, signals, poles, high or intermediate switchstands, or piles of material, erected or placed in future, shall be nearer than 6 ft. from the gauge side of the nearest rail. (c) No structure over 4 ft. high shall hereafter be placed within 6 ft. from the gauge side of the nearest rail without first obtaining the approval of the Board. (d) Where semaphores, signals, poles, high or intermediate switchstands, or piles of material are nearer than 6 ft. from the gauge side of the nearest rail, the same shall be dealt with as follows:—(1) Semaphores, signals, poles, or high or intermediate switchstands shall, within two years from this date, be either removed or changes made so that the same shall not be nearer than the said 6 ft.; or high and intermediate switchstands shall be changed to low or dwarf signals or switchstands. (2) Piles of material shall, within six months, be removed to a greater distance than the said 6 ft. (e) Water stand-pipes shall not be nearer than 2½ ft. from the widest engine cab, and the spout of the stand-pipe shall, when not in use, be fastened parallel with main track, and enginemen are required to see that this is done after using any such pipe.

9. Order 5888 is repealed.

10. Every person or company offending against any of the foregoing provisions shall forfeit and pay $50 for every such offence.

Great Northern Ry. Lines in Canada.

In the company's annual report for the year ended June 30, reference is made to its Canadian lines, as follows:—

The Manitoba Great Northern Ry. is the title of a company authorized by the Manitoba Legislature to take over the lines and charter rights of the Midland Ry. of Manitoba. To pay for these two lines—one from the International boundary to Portage la Prairie, and the other from the International boundary to Morden—the company issued $2,040,000 of stock, which was subscribed and paid for in cash at par by the G.N. Ry. This sale left the M. Ry. of Man., which is controlled jointly and equally by the G.N. Ry. and the Northern Pacific Ry., divested of all its railways, but owning valuable properties in Winnipeg, which have not been developed, for terminal purposes. The G.N. Ry. investment in these properties is $1,253,043.06.

The Winnipeg city council has the question of the terminals under consideration, and is desirous of ascertaining when it is proposed to proceed with the work. The company was granted an exemption from taxation on the understanding that the terminals were to be built immediately.

Brandon, Saskatchewan and Hudson Bay Ry.—An additional $20,000 of the company's capital stock was issued to and paid for at par by the G.N. Ry., the proceeds being used to pay for additions and improvements completed to the line during the year.

It has been reported frequently recently that there was a likelihood of the line being sold to the Grand Trunk Pacific Ry., but this is denied by officers of both companies.

Crow's Nest Southern Ry.—There was issued $30,000 of additional capital stock during the year, which was subsidized and paid for in cash by the G.N. Ry. The proceeds of the issue were used in repaying advances of $19,393.32 made for betterments during 1908-09 by the G.N. Ry., and the balance used for additions and improvements to the property during 1909-10.

Nelson and Fort Sheppard Ry.—During the year there was expended on additions and improvements on the line $2,094.64, advanced by the G.N. Ry.

Red Mountain Ry.—Repairs, etc., on this line during the year were done to the value of $767.84, which was supplied by the G.N. Ry.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—During the year the G.N. Ry., advanced to the V.V. and E. Ry. and Nav. Co., $1,742,355.21 for construction purposes and to pay for property acquired. In partial repayment of advances previously made them has been issued to the G.N. Ry. the fully paid capital stock at par to the amount of $10,000,000. It is proposed to apply to the Dominion Parliament for authority to issue additional common stock, to be issued to the G.N. Ry. in liquidation of its account.

The President's report showed that 40.91 miles of an extension from Keremeos to Princeton had been opened for traffic on Dec. 23, 1909. A branch line was under construction from Oroville, Wash., southerly to Pateros, 78 miles, which was expected to be opened in the spring of 1911. Grading was being carried on from Princeton westerly to Tulameen, and from Abbotsford, near Sumas, easterly to Chilliwack, B.C.

The Board of Railway Commissioners, Oct. 28, directed the construction of a subway at Montrose Ave., Abbotsford, the cost to be met by a grant of 20% from the Dominion Railway Grade Crossing fund, but not to exceed $5,000; the British Columbia Government consenting to pay 48% of the cost, the balance of 32% to be paid by the railway.

The question of acquiring foreshore rights at False Creek, Vancouver, by the city corporation is being brought before the Provincial and Dominon Governments, in order that the terms of the agreement between the city and the G.N. Ry. may be carried out. The terminals which it is proposed to erect on the site will be used not only by the G.N. Ry., but by the Canadian Northern Ry. and the Grand Trunk Pacific Ry.

New Westminster Southern Ry.—Additions and betterments completed on the line during the year cost $10,304.70, which was paid by the G.N. Ry. (Nov., pg. 927.)

Thomas Tait's Resignation.

Australian papers received since our last issue went to press give further information as to Mr. Tait's resignation of the chairmanship of the Victorian Railway Commission. In his letter to the Minister of Railways he stated that he had advised the Premier confidentially in June last that it was his intention to continue in office until the completion of his second term of appointment, in April, 1911, but that private and family affairs might render it necessary for him to leave Australia before the end of 1910. The necessity had arisen, and as he desired to visit India before returning to Canada, he had arranged to sail from Melbourne on Nov. 30. His resignation had been withheld pending the completion of the enquiry into the accident at Richmond. In announcing the resignation the Premier said, amid cheers, that whatever difference of opinion there might be about Mr. Tait, they all recognized that he was a man of really great ability, who thoroughly understood railway matters, and who in many ways rendered the State of Victoria excellent service, which would be remembered long after he left. He was a strong and fearless man, who never desired to do an injustice to anyone. It would be a long time before Victoria could get a stronger man, and they would have to go far before they could get as competent and able a man to fill his place.

That recent accidents on the Victorian railways had anything to do with Mr. Tait's resignation is emphatically contradicted. The investigation board found that the Richmond accident, the most serious one, was due to contraventions of regulations by employes, and no fault was found with the administration.

In an interview at Melbourne, just after his resignation was announced, Mr. Tait said:—I have been working since I was 15 years old, and since I was 21, when I was Assistant Superintendent of a prairie section of the C.P.R., I have had the burden of more or less serious responsibility. I am not an old man yet by any means—I am only 46 years of age—but I have had, I think, my share of responsible and strenuous work, and I now propose to take it easy, which, fortunately, I am in a position to do. I am looking forward with keen anticipation and pleasure to spending the next summer season in Canada, at a summer residence which I own on an island in the Muskoka Lakes, in the highlands of Ontario—a place I am very fond of. It is not likely that I will resume active railway work again. I shall be occupied to some extent with my personal affairs in Canada, but should I find time hanging heavily on my hands it is possible I may take on some work of an advisory or expert character, and I hope from time to time to do a good deal of travelling.

The Melbourne Argus says:—"Mr. Tait's resignation will excite feelings of surprise and regret in the minds of all who are capable of appreciating the value of the work he has done during his seven years service. The tributes of admiration paid to his administration by leading members of the House were remarkable for their sincerity. The commanding personality of the Chief Commissioner seemed to be before their eyes as they spoke, and the generous warmth of their language showed they were conscious that Victoria is about to lose the services of a public official of high merit. On such an occasion responsible members could not but recollect the condition of the railways when Mr. Tait assumed control of them, in 1903, and contrast it with the state in which he is leaving them. During the preceding six years there was an average daily loss of about £730. For the six years ending June 30, 1909, they returned the Treasury an average profit of over £350 a day. Against facts like these it should be impossible to argue. They speak for themselves. Mr. Tait was told that the appalling drift must be stopped, and the task was not a promising one. He could not reduce wages; he could not increase hours; it was equally impossible to raise fares and freights. Expenditure on lines and rolling stock had, moreover, been kept down to the lowest possible point, so nothing could be saved in maintenance. Everything depended on the skill of the management. Mr. Tait certainly had the help of a succession of excellent seasons, but even allowing for that factor in his favor he must be admitted to have done splendidly. Not only has a ruinous annual deficit been transformed into a handsome annual profit, but the lines have been built up, and the rolling stock has been immensely improved and increased."

A demonstration in Mr. Tait's honor was held in Melbourne, Nov. 3, at which he made an important speech. On Nov. 24 the Premier and other members of the Government entertained him at a farewell parliamentary dinner, when the Premier said the resignation was entirely voluntary and greatly regretted by the Government.

We are advised that Mr. Tait may arrive in Canada in March or April, but not later than July.

Atlantic Quebec and Western Railway.

The financial prospects of the Atlantic, Quebec and Western Ry., operating and building a line in the Gaspe Peninsula of Quebec, are involved in the failure of A. W. Carpenter, carrying on business in London, and elsewhere in the United Kingdom and the Isle of Man, as the Charing Cross Bank. A receiving order was made Oct. 17 in the London Bankruptcy Court, upon the debtor's own petition, and the order of adjudication was made the same day. The debtor denies insolvency and says he filed his petition in consequence of threats of criminal proceedings against him in relation to the investment of the bank's funds in a Canadian railway. A statement of affairs, prepared by the debtor, was filed Oct. 24, showing liabilities of about £2,500,000, almost entirely due to about 25,000 depositors, with assets of £133,000 in cash, £60,000 in book debts, and properties valued at £156,000. The latter include shares in various properties; 40,000 acres of timber lands and other properties in the Gaspe Peninsula; but does not include shares in the New Canadian Co., which is constructing the Atlantic, Quebec and Western Ry., £300,000 of mortgage debentures, and all the common stock of the railway company. It is estimated that the bank has provided altogether about £1,250,000 for the building of the line, and the other railways owned by it. The bank has also large interests in South Africa, which are not included in the statement of affairs. A meeting of depositors was held in London Nov. 2, when it was stated that the official receiver disclaimed any responsibility for the figures in the statement of affairs, and that the value of the bulk of the Canadian assets, and of the whole of the South African assets was doubtful. Sir Clifton Robinson, who died suddenly in New York, Nov. 6, had consented, on the invitation of the creditors, to make an inspection and report of the railway properties in Canada, but had not been able to do anything at the time of his death. While nothing was done, an opinion was expressed by certain of the creditors, that it might be necessary to raise money to complete the railway, in order that the money already expended might not be entirely lost. A meeting of creditors, called by the Official Receiver, was held in London, Nov. 21, and the public examination of the debtor was fixed for Jan. 26, 1911.

The history of railway building and operation in the Gaspe peninsula has been a chequered one. The first line to be built was the Baie Des Chaleurs Ry., which in 1897 was taken over by the Atlantic and Lake Superior Ry., an ambitious scheme promoted by C. N. Armstrong, who had been engaged in railway promotion and construction works in various parts of Ontario and Quebec. The A. and L.S. Ry. proposed to take over the Baie des Chaleurs Ry., extending from Metapedia, on the Intercolonial Ry., to New Carlisle; the Great Eastern Ry. and some other short lines in different parts of Quebec, connect them up and to extend the line to some point on Lake Superior. A steamship was put on to run between New Carlisle and Liverpool, Eng., which was unsuccessful, and the whole concern was taken over, July, 1900, by the bondholders, C. R. Scoles being appointed Manager. The Baie des Chaleurs Ry. was the only line taken over by the A. and L.S. Ry., and the bondholders, with Dominion Government aid, made improvements on the line to New Carlisle, and extended it to Paspebiac, completing this work in 1902-03. The Carpenters, who had been for years interested in oil and timber lands in the Gaspe Peninsula, subsequently became interested in the railway projects, and when the Atlantic, Quebec and Western Ry. was given a charter by the Dominion Parliament in 1905, the New Canadian Co. was formed, with C. B. K. Carpenter, son of the proprietor of the Charing Cross Bank, as Managing Director, and entered into a contract for building the lines authorized. The capital of the New Canadian Co. was fixed at £100,000, in shares of £1 each, and of these 49,493 are fully paid up, the remaining 50,507 having 5s. each paid. Under this contract the line has been completed as far as Port Daniel, and construction is well advanced to Gaspe Harbor. Meanwhile the affairs of the Baie des Chaleurs Ry. and of the Atlantic and Lake Superior Ry. were before the courts, not only in Canada, but in England, and several suits had to be fought out before a settlement was effected in 1907, when what is known as the A. and L.S. Ry. Trust Fund was formed. In Sept., 1909, the holders of the trust fund certificates authorized the sale of the line, and an order-in-council was passed July 10, 1910, confirming the transfer to the Quebec Oriental Ry., a company chartered by the Quebec Legislature, and controlled by the A.Q. and W. Ry. The line, which is involved in the liquidation of the bank, includes therefor the following:—The original Baie des Chaleurs Ry., Metapedia to New Carlisle, 98 miles; section from New Carlisle to Paspebiac, built by the Atlantic and Lake Superior Ry., two miles, and the section from Paspebiac to Gaspe Harbor, under construction by the A.Q. and W. Ry., of which 37 miles are completed and in operation.

The A., Q. and W. Ry. is authorized to issue $5,000,000 of common stock, and of this $1,500,000 was to be allotted to the contractor—the New Canadian Co.—as the work progressed. The company is authorized to build a line from Gaspe Bay through the centre of the peninsula to Amqui, on the Intercolonial Ry., thence southerly to Edmundston, to a connection with the C.P.R. and the National Transcontinental Ry., and a line from Gaspe Harbor, skirting the coast to Paspebiac, on the A. and L.S. Ry., with power to take over that line. The Dominion Government has voted a subsidy, on the usual conditions, not to exceed $6,400 a mile, and because of the unusual number of bridges on the coast route, an additional $250,000 for bridges, while the Quebec Legislature has voted 4,000 acres of land for 150 miles of the coast line.

At a general meeting of shareholders in London, Oct. 28, the Earl of Ranfurly, President, said he hoped that at their next meeting he would be able to report the successful opening of the railway, thus placing in direct rail communication with the interior Gaspe Harbor, destined, as they believed, to become in the near future one of the great ports of the Dominion of Canada. The engineers-in-chief, Sir Douglas Fox and Partners, had certified that 78% of the work on the coast line had been completed, leaving 22% to complete at the end of Sept., since which time considerable progress had been made. Possession had been obtained of the whole of the land, and construction was being carried out in the most substantial and efficient manner. The line was in operation up to mile 37, and would be open for traffic as far as mile 61 in November, and through to Gaspe before this time next year. At Gaspe Harbor the Government were constructing a large wharf at which there would be sufficient depth of water to accommodate ocean steamers. The company had already received $365,568 on account of cash subsidies, and was now in a position to claim a considerable further amount. It had also received official notification that it was entitled to 188,197 acres of land, and in November, when a further 24 miles of line were open, they would have earned under the terms of the subsidy agreement a further large acreage.

A Railway to Hudson Bay.

The speech from the Throne at the opening of the Dominion Parliament, Nov. 17, contained the following paragraph: "The construction of a railway to Hudson Bay, which has occupied the attention of the people for many years, has assumed practical shape. Already a contract has been awarded for the construction of a bridge forming part of this railway, across the Saskatchewan River at Pas Mission, and the work is in progress. During the present session, a measure will be laid before you providing for the prosecution and completion of this work with all possible speed. The connection of the great west with the eastern portions of Canada and also with the overseas markets by this new rail and ocean route, will not only open up a new section of Canada, but will greatly assist in the development of trade, and thus benefit both producers and consumers."

In dealing with the surveys for the proposed railway from Le Pas Mission, on the Saskatchewan River, to Hudson Bay, the report of the Department of Railways for the year ended March 31, refers to the engineers' reports and estimates presented to Parliament last session, a summary of which was given in our Jan. issue, pg. 17, and Feb. issue, pg. 97, at the close of the year, Mar. 31. It was reported that location plans and profiles of the proposed line for about 75 miles from Le Pas were prepared, and that further location work was in progress to Split Lake, 150 miles from Le Pas. Split Lake is the point to which the line can be built independently of any question as to whether the terminus on the Bay be at Port Nelson or Fort Churchill.

J. L. Armstrong, Chief Engineer in charge of surveys, was in Ottawa, Nov. 15, conferring with Minister of Railways. He is reported to have stated that the surveys for the first 200 miles have been completed, and active work on the construction of this mileage could be gone on with at once. Surveys for the route from Split Lake to Fort Churchill or Port Nelson, had not been completed. The location of the terminus on Hudson Bay will largely be determined by the hydrographic surveys now being made.

The Winnipeg Board of Trade passed a resolution recently asking the Dominion Government to undertake the building of the line as a national work, and to provide for its operation under a commission, and to make it available for the use of all Canadian lines. (Nov., pg. 917.)

Canadian Ticket Agents' Association.—Three errors occurred in the report of this Association's meeting at Quebec in our last issue. The number of members present was stated at 113, instead of 118; Alderman Cannon, pro-Mayor, was reported as having spoken in French, instead of in English, and F. W. Churchill, C.P.R. Ticket Agent, Collingwood, was omitted from the list of those elected as members of the executive committee.

A Victoria, B.C., dispatch of Nov. 25, said D. D. Mann, Vice President Canadian Northern Ry. was there arranging for construction of a line from Victoria, via Sooke to Alberni and that tenders for clearing the right of way would be invited immediately. It also stated that the C.P.R. would proceed at once with the Esquimalt and Nanaimo Ry., Cowichan Lake branch.

TATE BIFUNCTIONAL ACCUMULATORS

Are ideal for train lighting. They are 30 per cent. lighter than any other Storage Battery of same rated capacity.

They can be charged more rapidly, and show much higher Watt-hour efficiency on slow or rapid discharge.

They do not require to be washed out for the removal of sediment from the cells, because there is no sediment deposited.

This battery solves the problem of efficient lighting of trains by electricity.

It is important to railway managers that they should investigate the Tate Bi-functional Accumulator.

We also manufacture storage batteries for Automobile engine ignition and lamp lighting, and for all other purposes for which a storage battery can be used.

TATE ACCUMULATOR CO. OF CANADA, LTD.

TORONTO, CANADA

——TOOLS FOR ALL PURPOSES——

We carry the Largest and Best Assorted Stock of Tools in Canada, and Mechanics will find every new idea in the tool trade shown in our stock. We name below a few of our lines:

Wiley & Russel, Stocks, Dies, Taps, Etc.

Butterfield, Stocks, Dies, Taps, Etc.

Oster, Stocks and Dies

Starret's Fine Tools

Brown and Sharp's Fine Tools

Western Tool Co.'s Lathe, Planer, and Shaper Tools

We cordially invite all interested in Tools to come in and view our stock. We will gladly demonstrate any of our lines.

Orders by Railway Commissioners.

(Continued from pg. 1023)

12277. Oct. 12.—Ordering C.P.R. to remove switch off Bridge St. Port Burwell Ont.

12278, 12279. Nov. 14.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.T.R. at Springford station grounds and across C.P.R. Mimico spur, Etobicoke tp.

12280. Nov. 15.—Authorizing Trenton Electric and Water Co. to erect wires across G.T.R. between Trenton and Belleville, Ont.

12281. Nov. 14.—Authorizing Hinton Electric Co. to erect wires across C.P.R. Westminster branch at Coquitlam station, Mount Cook, B.C.

12282. Nov. 14.—Authorizing Seymour Power and Electric Co. to erect wires across Bell Telephone Co.'s wires in Seymour tp., Ont.

12283. Nov. 14.—Authorizing Nipissing Power Co. to erect wires across G.T.R. at Callendar, Ont.

12284. Nov. 15.—Authorizing city of Toronto to lay sewer under G.T.R. on Front St.

12285. Nov. 14.—Authorizing city of Hamilton Ont., to lay a sewer under G.T.R. at Sherman Ave.

12286. Nov. 14.—Authorizing N. St. C & T. Ry. to build temporary siding at Niagara Falls, Ont., from Victoria Ave. to southwest corner of South and Victoria St.

12287. Nov. 3.—Dismissing application with exceptions of Dominion Legislative of Engineers' Brotherhoods. This order is given in full an another page.

12288. Nov. 15.—Authorizing C.P.R. to build additional track across Westminster Ave., Montreal, West. Que.

12289. Oct. 10.—Dismissing application of city of Fort William, Ont., for authority to cross C.P.R. Copp industrial spur, with its street railway.

12290. Sept. 8.—Ordering G.N.R. to adopt, not later than Jan. 1, 1911, rates and minimum weights of C.P.R. Special Mileage Tariff, C. R. C. 1112, effective Feb. 20, 1909, to apply on lumber, etc., on New Westminster Southern Ry., and also on other railways operated by it in British Columbia.

12291. Nov. 15.—Authorizing Simcoe Ry. and Power Co. to erect wires across G.T.R. in Tay tp., Ont.

12292. Sept. 22.—Ordering C.N.R. and G.T.P.R. to build connection between their respective tracks at Tuxedo Park Co., and Canada Cement Co.'s properties, St. Boniface, Man.

12293 to 12295. Nov. 16.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at three points in Hamilton.

12296 to 12297. Nov. 15. — Authorizing Mount McKay and Kakabeka Falls Ry. to operate its cars over crossing of C.P.R. and C.N.R. at Yonge St. Fort William, Ont., without first being brought to a stop.

12298. Oct. 12.—Dismissing application of Hamilton & Toronto Sewer Pipe Co., for order directing G.T.R. to provide switch from its main line between Hamilton and Dundas to applicant's premises.

12299. Nov. 16.—Rescinding order 12127, Oct. 28, re G.T.R. crossing ¾ mile east of Tillsonburg, Ont.

12300. Nov. 16. — Authorizing C.N.O.R. temporarily to cross G.T.R. at Cobourg, Ont.

12301. Sept. 20.—Ordering C.P.R., G.T.R., and C.N.Q.R. to publish and file tariffs, to be effective not later than Jan. 1, 1911, reducing export rates to Montreal on lumber from points in Quebec, north and east of Montreal, so that same difference shall exist between present domestic rates on lumber to Montreal and said rates for export, as existed between old domestic rates and old rates for export.

12302. Nov. 16.—Ordering C.P.R., within 90 days to install improved type of electric bell at William St. crossing, Carleton Place, Ont.

12303. Nov. 17.—Ordering G.T.R., within 90 days to install electric bell at St. Clair Ave. crossing, Toronto.

12304. Nov. 15.—Authorizing G.T.R. to take for additional facilities certain lands in Richmond Que.

12305. Nov. 17.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires near Jane St., Swansea.

12306. 12307. Nov. 17.—Authorizing city of Toronto to lay sewer under C.P.R. and C.N.O.R. on Eastern Ave., and under G.T.R., G.T.R Belt Line and C.P.R. at Don Esplanade.

12308. Nov. 15.—Removing discrimination complained of by residents of Kingsville, Cottam, and Essex, Ont., by advancing one-way fare between Cottam and Essex from 10 to 15c. and reducing one-way fare between Cottam and Kingsville from 20 to 15c.

12309. Oct. 13.—Dismissing application of Palgrave village, Ont., for order directing G.T.R. to provide a subway at County Road crossing.

12310. Nov. 13.—Extending for such time as G.T.R. may desire to raise its tracks at Hog Bay, near lots 13 and 14, con. 5, Tay tp., Ont., time within which Georgian Bay and Seaboard Ry. may use trestle at that point.

12311. Nov. 12.—Ordering C.P.R. to place inner guard on inner side of inner rail of curve and limit speed of trains to 20 miles an hour on Horseshoe Curve at Caledon Mountain, Ont.

12312. Sept. 8.—Ordering G.N.R. to operate its morning train between Point Guichon and Cloverdale, B.C., as before July 2, and to build not later than Nov. 15, a road to its Hazelmere station across its right of way.

12313. Nov. 17. Ordering C.P.R. to install improved electric bell at Lake Ave. crossing, Carelton Place, Ont.

12314. Nov. 2.—Approving location of C.P.R. proposed station in Woodstock, N.B.

12315 to 12319. Nov. 18.—Authorizing Stratford Light and Heat Commission to erect wires across G.T.R. at five points in Stratford, Ont.

12320. Nov. 18.—Ordering that C.N.R. shall require its employes to precede and flag all movements of cars or engines over McDonald spur crossing, Peace Ave., Edmonton, Alta.

12321. Nov. 18.—Ordering C.P.R., within 90 days to install improved electric bell at Cote des Neiges road crossing about 500 ft. east of mileage 48, Hochelaga Co., Que.

12322. Nov. 18.—Rescinding order 10427, Apr. 29.

12323. Nov. 12.—Authorizing C.P.R. to build bridge 50.37 on its North Bay Section, Lake Superior Division, Ont.

12324. Nov. 18.—Rescinding order 9873, Mar. 14, respecting G.T.R. crossing one mile north of Mount Forest, Ont., and ordering G.T.R. within 90 days to install improved signal electric bell there.

12325. Nov. 19.—Approving location of C.P.R. second track, grade revision, and highway crossings from mileage 74 to 124, Smith's Falls Section, Ont.

12326. Nov. 19.—Authorizing C.P.R. to build bridge 85.17, on district 2, Schreiber section, Lake Superior Division, Ont.

12327. Nov. 19.—Approving location of C.N.R. through tps. 54-53, r. 3-7, w. 5, m. mileage 31.34 to 62.47, Alta.

12328. Nov. 19.—Approving location of C.P.R. Weyburn-Lethbridge branch from sec. 8, tp. 9, r. 14, w. 3 m., Sask., at mileage 200, to sec. 25, tp. 3, r. 1, w. 4 m., Alta. at mileage 316.78.

12329. Nov. 19.—Authorizing C.N.O.R. to build between lots 403 and 417, East North River range, St Andrew's parish.

12330. Nov. 19.—Amending order 10891, June 13, which approved revised location of C.P.R. (Ontario and Quebec Ry.), from mileage 19 in Quebec to mileage 74 Ontario.

12331. Nov. 18.—Authorizing C.N.Q.R. to open for traffic, its lines between Lorette and Quebec Bridge.

12332. Nov. 18.—Authorizing C.N.O.R. to build between lots 208 and 211, con. 1, Chatham, tp., at station 431.46.

12333. May 12, 13.—Ordering C.N.R. to keep station at La Broquerie Man., open, and properly heated for passengers; and dismissing application for appointment of permanent agent.

12334. Nov. 19.—Approving revised location of C.N.O.R. from mileage 58.42 to 62.00 from Sudbury Jct., at Kalace Lake.

12335. Nov. 19.—Authorizing G.T.R. to cross with its deviated line, Kingston road, Brighton tp., Ont.

12336. Nov. 19.—Relieving G.T.R. from providing further protection at second highway crossing south of Tottenham, Ont.

12337, 12338. Nov. 19. — Authorizing town of Maisonneuve, Que., and Montreal Water and Power Co., to lay pipes under Montreal Terminal Ry. on Aird Ave.

12339 to 12341. Nov. 19.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires in Brantford and North Oxford and across G.T.R. in Hamilton.

12342. Nov. 21.—Approving location of G.T.R. Regina-Moose Jaw branch from east line of sec. 26, tp. 17, r. 20, to east line of sec. 28, tp. 17, r. 23, w. 2 m., Assiniboia District, Sask., mileage 0 to 20.3.

12343. Nov. 21.—Authorizing C.N.R. to open for traffic deviation of its main line from mileage 12.2 Slate River to Kakabeka Falls, on Port Arthur subdivision, Ont., 9.76 miles.

12344. Nov. 21.—Recommending for approval of Governor in Council, rules and regulations governing G.T.R. Transportation Department.

12345. Nov. 21.—Approving C.N.R. location through tps. 29 to 32, r. 9, w. p. m., Man., mileage 127.92 to 151.10, from abandoned junction with C.P.R. main line, Winnipeg.

12346. Nov. 21.—Authorizing C.N.O.R. to erect telegraph wires across North River Electric Co.'s wires at station 534-98.5, St. Andrews parish.

12347. Nov. 21.—Approving plan of Sept. 23 showing C.N.O.R. standard crossing over highways and rescinding order 10096, April 7.

12348. Nov. 21.—Authorizing C. E. Dewey, General Freight Agent, and J. W. Hanley, General Passenger Agent Central Vermont Ry., to prepare and issue tariffs of tolls for all traffic carried on its railways or vessels.

12349. Nov. 21.—Authorizing C.P.R. to use bridges 4.9 and 12.2 on its Eganville section, Ont.

12350. Nov. 21.—Authorizing C.N.R. to build spur between Ninth and Tenth Sts. from McTavish Ave. to Princess St., Brandon, Man.

12351. Nov. 21.—Approving plan of Sept. 21, showing C.N.O.R. standard crossing over highways and rescinding order 10091, April 7.

12352. Nov. 22.—Authorizing Trenton Electric and Water Co. to erect wires across G.T.R. at lot 36, con. 2, Sidney tp., Ont., and rescinding order 12280, Nov. 15.

12353. Nov. 22.—Approving location of C.N.R. through tps. 30-27, rs. 8-9, w. 3 m., Sask., mileage 25.81 to 45.54.

12354. Nov. 22.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at lot 9, con. 2, Dorchester tp.

12355. Nov. 24.—Authorizing C.P.R. to build a spur for Lumber Manufacturers' Yards, Moose Jaw, Sask.

12356. Nov. 23.—Authorizing C.N.O.R. to build bridge over Trent River, in Trenton.

12357 to 12359. Nov. 23.—Authorizing Niagara, St. Catharines & Toronto Ry. to erect wires across Bell Telephone Co.'s wires at three points in Thorold tp., Ont.

12360, 12361. Nov. 23.—Authorizing Seymour Power and Electric Co. to erect wires across G.T.R. between Stirling and Campbellford, and near Belleville, Ont.

12362 to 12372. Nov. 23.—Authorizing town of Maisonneuve to lay pipes under C.N.Q.R. at Second Ave., and under Montreal Terminal Ry. at Fifth, Third, Fourth, Second, and First Aves.

12373. Nov. 23.—Authorizing city of Montreal to lay sewer under C.N.Q.R. and Montreal Terminal Ry. at St. Antoine Boulevard, Tetreaultville.

12374. Nov. 23.—Authorizing Niagara, St. Catharines & Toronto Ry. to erect wires across Bell Telephone Co.'s wires at Ormonde St., Thorold, Ont.

12375, 12376. Nov. 23.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across M.C.R. at lot 28, con. X.S., Norwich, and across Bell Telephone Co.'s wires at Sherman Ave., Hamilton.

12377. Nov. 24.—Approving alteration of small portion of Western Canada Power Co.'s line, from Ruskin to Stave Falls, B.C., being an extra width of 25 ft. on each side of its right of way, required from J. MacDonald, between stations 67 and 71.

12378. Nov. 24.—Authorizing C.P.R. to build spur for Continental Oil Co., Bengal, Alta.

12379. Sept. 13.—Authorizing C.N.Q.R. to temporarily connect with National Transcontinental Ry. at Cap Rouge, mileage 2.4 from Quebec Bridge; the temporary connection to be protected by semaphore to be installed by C.N.Q.R.

12380 to 12382. Nov. 24.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across Bell Telephone Co.'s wires at three points.

The London Stock Exchange has listed £2,678,227 Canadian Pacific fours; Duluth, Winnipeg and Pacific, £950,000 fours; Mexican Light & Power, $1,500,000 sevens, and Minneapolis, St. Paul and Sault Ste. Marie, $3,600,000 bonds.

Sir Thos. Shaughnessy has issued his annual circular to C.P.R. employes offering two free scholarships in McGill University to employes under 21 years of age and to minor sons of employes. These scholarships cover four years' tuition in the faculty of applied science, and are subject to competitive examination.

An Edmonton, Alta., press dispatch of Nov. 25, said that a caucus of Government supporters in the Legislature had endorsed Premier Sifton's proposal to abandon the Alberta and Great Waterways Ry. project and to use the $7,400,000 obtained by the sale of bonds in liquidation of the provincial debt and for other purposes of general benefit to the whole province.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry.—J. W. Herrold heretofore agent Kanawha and Michigan Ry. Charleston, West Virginia, has been appointed General Agent, A.C. and H.B.R., with office at Sault Ste. Marie, Ont.

W. M. Hugill has been appointed Chief Dispatcher at Sault Ste. Marie, Ont., vice F. Robinson, Trainmaster and Chief Dispatcher, appointed Superintendent Manitoulin and North Shore Ry., at Sudbury, Ont.

Canadian Northern Ry.—J. H. McKinnon, heretofore in Assistant General Passenger Agent's office, Winnipeg, has been appointed Travelling Passenger Agent Toronto, vice Osborne Scott, transferred to Winnipeg.

Osborne Scott, heretofore Travelling Passenger Agent, Toronto, has been appointed chief clerk to Assistant General Passenger Agent, Winnipeg.

Canadian Pacific Ry.—G. C. Wells, heretofore Assistant General Passenger Agent, Eastern Lines, has been appointed Assistant to Passenger Traffic Manager, and in addition to other duties will have charge of the Passenger Rate Bureau. Office, Montreal.

M. A. Fullington, formerly Resident Engineer, District 1, has been appointed Resident Engineer, District 4, Ontario Division. Office, Toronto. This is a new position on District 4.

P. Coakley, heretofore Roadmaster Guelph and Goderich subdivision, Guelph, Ont., has been appointed Roadmaster Windsor subdivision, Ontario Division, vice A. Cameron, transferred. Office, London, Ont.

J. Garstang was on Oct. 29, appointed acting Roadmaster Guelph and Goderich subdivision, Ontario Division, Guelph, vice A. Coakley transferred, and, on Nov. 9, A. Cameron, heretofore Roadmaster Windsor subdivision, was appointed Roadmaster, Guelph and Goderich and Listowel subdivisions, Ontario Division, vice J. Garstang. Office, Guelph, Ont.

A. C. Bleecker has been appointed outside ticket agent at Marmora, Ont., vice W. F. Bleecker, deceased.

The outside office at Parry Harbor, Ont. has been closed and no appointment made to fill the position occupied by the late J. C. Whitchelo.

O. Bibby has been appointed Superintendent's Accountant at North Bay, Ont., vice W. K. P. Kennedy, transferred.

A. C. Shaw, heretofore General Passenger Department, Chicago, Ill., has been appointed Assistant General Passenger Agent Winnipeg.

J. A. McLean has been appointed Chief Train Dispatcher District 1, Saskatchewan Division, vice N. S. Fraser, resigned. Office, Moose Jaw.

G. Sandstrom has been appointed Roadmaster Last Mountain subdivision and the portion of the Lanigan subdivision between Strassburg and Lanigan, District 2, Saskatchewan Division, vice G. Vanalstyne, resigned.

J. D. Muir, heretofore acting Locomotive foreman at Red Deer, Alta. has been appointed locomotive foreman there, vice J. G. Norquay, assigned to other duties.

W. North has been appointed foreman blacksmith, Revelstoke shops, vice J. Ryecroft, transferred.

A. B. Calder, heretofore General Agent Passenger Department, Seattle, Wash., has been appointed General Agent Passenger Department, Chicago, Ill., vice A. C. Shaw, promoted.

E. E. Penn, heretofore General Agent Passenger Department, San Francisco, Cal., has been appointed General Agent Passenger Department, Seattle, Wash., vice A. B. Calder, transferred.

G. M. Jackson has been appointed General Agent Passenger Department, at San Francisco, Cal., vice E. E. Penn, transferred.

Dominion Atlantic Ry.—O. F. Walford has been appointed Secretary, vice R. L. Campbell, transferred.

Grand Trunk Pacific Ry.—P. Harrity has been appointed General Roadmaster in charge of Road and Bridge and Building Departments. Office, Fort William, Ont.

H. McCormick, heretofore general foreman, Fort William, Ont., has been appointed Roadmaster between Fort William and Pelican, including Fort William and Graham terminals. Office, West Fort William, Ont.

J. Abbott, Chief Dispatcher, Lake Superior Division, has been transferred from Fort William to Graham, Ont.

D. W. Steeper heretofore Trainmaster, Lake Superior Division, at Fort William, Ont., has been appointed Trainmaster, with jurisdiction between Westfort, Ont., and Springfield, Man. Headquarters, Graham, Ont.

M. B. Dube has been appointed locomotive foreman at Graham, Ont.

J. R. Morton has been appointed acting locomotive foreman at Redditt, Ont.

J. Ness has been appointed car foreman at Portage la Prairie, Man., vice A. Possnett, transferred.

A. Possnett, heretofore car foreman at Portage la Prairie, Man., has been appointed car foreman at Springfield, Winnipeg.

A. C. Loudon, heretofore construction foreman at Gainford, Alta., has been appointed locomotive foreman at Springfield shops, Winnipeg.

W. W. Yeager, heretofore locomotive foreman at Wainwright, Alta., has been appointed locomotive foreman at Edmonton, Alta., vice A. Bell, transferred.

A. Bell, heretofore locomotive foreman at Edmonton, Alta., has been appointed locomotive foreman at Wainwright, Alta., vice W. W. Yeager, transferred.

W. J. Marchen, Roadmaster from west end of Edmonton yard to end of steel, has had his headquarters changed from Edmonton to Edson, Alta.

The following agents have been appointed: St. James, Man., E. W. Dewey; Atwater, Sask., A. Kurtz; Melville, Sask., A. Donnelly; Uno, Man., R. Marshall; Raymore, Sask., W. P. Kenefick; Clavet, Sask., R. E. Patterson; Young, Sask., A. B. Dowling; Tofield, Alta., C. H. Cress; Lake Superior Jct., Ont., V. D. Sibbard; W. O. Junct,, Ont., N. A. Phillips; Yorkton, Sask., A. E. Hoffered; Springfield, Man., J. S. Agnew; Redditt, Ont., W. Gotro; Graham, Ont., G. H. W. McCullough.

Grand Trunk Ry.—D. Crombie, heretofore Assistant to General Transportation Manager, has been appointed Assistant to First Vice President. . Office, Montreal.

F. W. Bergman has been appointed Manager of the Chateau Laurier, Ottawa.

As the installation of the new terminal facilities at Belleville, Ont., will necessitate several changes, no one has been appointed as locomotive foreman to succeed J. Gibson, who was recently appointed Assistant Master Mechanic at Deering, Portland, Me. W. Cahill is acting as locomotive foreman at Belleville in the meantime.

R. Muirhead, heretofore freight foreman of Simcoe St. sheds Toronto has been appointed Passenger Yard Master, G.T.R., Union Station, Toronto.

R. M. Nielson has been appointed Soliciting Freight Agent, Kansas City, Mo., vice F. L. Norman, now Commercial Agent Seattle, Wash.

The following agents have been appointed; St. Agapit, Que., J. L. A. Couture; Sutton Ont., J. Hutchings; Callander, Ont., A. S. Quinlan; London East, Ont., W. J. Moore; Hyde Park, Ont., C. Sampson; Bell River, Ont., J. W. Millen; Shallow Lake, Ont., H. Rose; Wiarton Ont., G. Mann. The outside agency at Port Carling, Ont., has been closed.

Intercolonial Ry.—As stated in our last issue, we were officially advised that G. R. Joughins, Superintendent of Motive Power, has resigned, and that the resignation would be considered at the regular meeting of the Government Railway Managing Board during the second week of November. Although the meeting was held, it has not been possible to secure any official information as to what action, if any, was taken in regard to the resignation. The daily press in Moncton and elsewhere in the Maritime Provinces has had a good deal to say about the matter, much of it no doubt being for political effect. It is stated that the resignation has not been accepted and that Mr. Joughins is to be given leave of absence for a change and rest.

T. Hoben, Assistant Superintendent at Gibson, N.B., will be placed on the superannuation list Jan. 1, 1911. We are officially advised that, on account of this change, there will be no change in titles nor location of headquarters, and there is no present intention of filling the position.

New York Central and Hudson River Rd.—E. J. Wright heretofore Assistant Superintendent Western Division, Syracuse, N.Y., has been appointed Superintendent Hudson Division, Albany, N.Y., vice F. T. Slack.

H. E. Brown has been appointed Assistant Superintendent Western Division, Syracuse, N.Y., vice E. J. Wright, promoted.

D. Fleming has been appointed Assistant Superintendent Hudson Division, New York City, vice H. E. Brown, transferred.

Wabash Rd.—A. F. Helm, heretofore Trainmaster at Decatur, Ill., has been appointed Superintendent Detroit and Buffalo Divisions, vice W. C. Heth, acting Superintendent, assigned to other duties. Office Detroit, Mich.

The G.T.P. Telegraph Co., has opened offices, at Change, Clearwater, Dona, East Lake, Graham, Lake Superior Jct., Lost Lake, Mack, Malachy, Oscar, Quorn, Raith, Redditt, Willett, Walsh Lake, Westfort, West Ontario Jct., Ont.; Dott, Elma, Springfield, Vivian, Man., all of which are stations on the National Transcontinental Ry. east of Winnipeg.

C. H. Mackay, President Commercial Cable Co., recently stated that the company had been at work for some time, formulating a plan by which the rates for cablegrams sent by the general public, as distinguished from code messages, would be reduced by about one half. This would involve a proportionate decrease in the land charges in Europe, and thus the co-operation of those countries would have to be obtained.

Notice is hereby given that the Lachine, Jacques Cartier & Maisonneuve Railway Company will apply to the Parliament of Canada, at the next session thereof, for an Act declaring the railway which the Company is by its Act of incorporation, chapter 99 of the Statutes, passed by the Legislature of the Province of Quebec in the year 1909, authorized to construct a work for the general advantage of Canada, and providing that the said railway may be commenced and completed within two years and five years respectively from the passing of the Act hereby applied for.

Dated at Montreal this 19th day of October, 1910.

W. H. BIGGAR,
Solicitor for Applicant.

Old Northern Railway Rolling Stock.

J. M. Williams, wrote the Buffalo Express recently as follows:—

"It is not generally known that when King Edward VII. visited Canada and the United States, in 1860, as Prince of Wales, the special train, consisting of two coaches, the Prince's observation car and the finest locomotive in Canada at that time, the Cumberland, named after the General Manager of the Northern Railway of Canada, was in charge of and run by two former Buffalonians. They were James Tillinghast, then superintendent of motive power of the Northern Ry. of Canada, who planned and supervised the construction of the observation car and had charge of the special train, and L. S. Williams, (the writer's father), who was the engineer chosen to handle the Cumberland.

Messrs. Tillinghast and Williams, with J. L. Grant, superintendent of the Northern Ry. of Canada, helped to build the Rome, Watertown & Ogdensburg Rd., and held the same positions relatively, on this road as were afterwards tendered to them on the Northern Ry. of Canada. At the beginning of the Civil War J. L. Grant returned to the U.S. and was made superintendent of the Buffalo & Erie Rd., now part of the Eastern division of the Lake Shore & Michigan Southern Ry. Messrs. Tillinghast and Williams returned with him, and Mr. Tillinghast received the appointment of Division Superintendent of the New York Central, and Mr. Williams that of Master Mechanic of the Buffalo & Erie at Erie, Pa.

The special time-table of Sept. 10, 1860, for the train of the Prince of Wales, with the photographs of the observation car and the engine Cumberland, which are herewith reproduced, the writer believes are the only ones in existence. The time-table shows that the Prince travelled at the rate of 21 miles an hour, or from Toronto, Ont., to Collingwood, Ont., on Georgian Bay, 94½ miles, in 4½ hours. After the train had covered 18½ miles, in 45 minutes, which was pretty fast for those days, it had to stop for water at Richmond Hill, then again at Aurora, Ont., 30.2 miles from Toronto, for wood for fuel arriving at Collingwood at 1 p.m. The Prince, in returning, left Collingwood at 3 p.m., and arrived at Toronto at 7 p.m., the return trip being made in just four hours, or at the average rate of 23.625 miles per hour."

We are indebted to the Buffalo Express for the use of the accompanying illustrations.

OTTAWA - - CANADA

CANADIAN NORTHERN BRANCH LINES COMPANY.

NOTICE is hereby given that application will be made to the Parliament of Canada at its next session, for an Act incorporating a company under the name of the Canadian Northern Branch Lines Company, with power to construct the following lines of railway:—

(a) From Grosse Isle, Manitoba, northerly to Grand Rapids, with a branch to Sturgeon Bay;

(b) From Wassewa, westerly and northerly to or near Ethelbert;

(c) From Yorkton, northerly to or near Hudson Bay Junction;

(d) From Craven, north-easterly to or near Hudson Bay Junction;

(e) From Craven, easterly to the Rossburn Branch of the Canadian Northern Railway east of Yorkton.

(f) From Craven, northerly through or near Humboldt to or near Prince Albert.

(g) From the line (d) westerly to a point between Davidson and Aylesbury.

(h) From a point between Brancepeth and Kinistino, north-easterly to or near Pas Mission;

(i) From line (d) in or near Tp. 40, Rge. 7, w. 2 m., westerly to or near Jack Fish Lake, north-west of North Battleford.

(j) From or near Moose Jaw, northwesterly to join the Vegreville-Calgary line of the Canadian Northern Railway between Camrose and Settler.

(k) From the International Boundary near Range 7, W. 4 M., northerly and easterly to a point near or west of Battleford;

(l) From or near Macleod, northeasterly to the Saskatoon-Calgary line of the Canadian Northern Railway in or near Ranges 1 to 4, W. 4 M.;

(m) From the Maryfield-Lethbridge line of the Canadian Northern Railway at or near Ranges 1 to 4 W. 4 M., westerly via Cardston to or near Pincher;

(n) From the Maryfield-Lethbridge line of the Canadian Northern Railway in or near Ranges 1 to 4, W. 4 M., northwesterly via Taber to a junction with line (l);

(o) From the Maryfield-Lethbridge line of the Canadian Northern Railway between ranges 1 and 10, w. 4 m., northwesterly to a point at or near Tps. 20 to 23, Rge. 6, W. 5 M.;

(p) From Lloydminster northwesterly and westerly to Bruderheim;

(p) From the Edmonton and Slave Lake Railway north or Morinville to a point in or near Tp. 56, Rge. 8, W. 5 M.;

(r) From or near Fort Pitt, northwesterly to the Athabasca River.

With power to acquire and navigate vessels, wharves, elevators and other facilities, to generate and use electrical and other energy, and to dispose of the surplus thereof, to construct and operate telegraph and telephone lines and to charge tolls for the use thereof; also fixing the amount and nature of securities to be issued with respect to the lines authorized and the manner of securing the same; also authorizing amalgamation with other companies and the guarantee and holding of securities and shares of any company; with power to construct, acquire and manage hotels, restaurants, and parks, and to authorize the issue of securities on properties of the company other than its railways; with other usual and customary powers.

GERARD RUEL,
Solicitor for the applicants.

Dated at Toronto, this 10th day of November, 1910.

Chatham, Wallaceburg and Lake Erie Ry.—The Board of Railway Commissioners has authorized the opening of this line from opposite the blind lane of con. 4, Dover East tp., to Pain Court, but limiting the speed of trains over it to 18 miles an hour. (Nov., pg. 963.)

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Canada Rolling Stock Co. has passed a resolution changing the location of its head offices from Amherst, N.S., to Montreal.

The McConway and Torley Co., Pittsburg, Pa., has issued an illustrated booklet, "The McConway Wheel," especially dealing with its steel tired wheels for steam and electric railway service.

The Dearborn Drug and Chemical Co., McCormack Building, Chicago, has issued a booklet on the treatment of boiler feed waters, which is of interest to all boiler users, and especially to steam and electric railway mechanical officials.

The Duckworth-Boyer Engineering & Inspection Co., Ltd., Montreal, are the inspecting engineers for the steel work entering into the construction of the C.P.R. Windsor St. station extensions, the Place Viger station extension, the Dominion Express Co.'s new building in Montreal and Bank of Montreal's new building in Winnipeg.

Jas. W. Pyke & Co., Limited, has been incorporated under the Dominion Companies Act, with a capital stock of $300,000, and head office in Montreal, to acquire the business heretofore carried on by J. W. Pyke & Co. as general merchants, importers, etc., and with other extensive powers, including manufacturing, railway and other contracting.

The Thermit Process of Rail Welding is the title of an illustrated booklet issued by the Goldschmidt Thermit Co., 103 Richmond St. west, Toronto, in which the method of welding rails by the Thermit process is fully described and illustrated. The application of the same process to repairing motor cars and truck frames is also dealt with.

The Canadian Car and Foundry Co., Ltd., held its annual meeting in Montreal Nov. 15. Press reports state that the reports showed the past year's business amounted to $8,500,000, that orders are booked for $7,000,000 worth of work, and that it is expected the output for the current year will amount to $11,000,000. The old board was re-elected, and the same officers. N. Curry is President, and W. W. Butler Vice President.

The Ajax Manufacturing Co., Cleveland, Ohio, has issued a beautifully printed and well bound reference book and catalogue of about 100 pages, describing its hot metal working machinery, including rivet and bolt headers, axle upsetting machines, bolt headings, upsetting and forging machines, standard and new high speed bulldozers, hot sawing and burring machines, universal forging machines, hot pressed nut machines, taper forging rolls, and reclaiming rolls.

Aurelien Boyer, Vice President of the Duckworth-Boyer Engineering & Inspection Company, Ltd., Montreal has been elected a director of l'Ecole Polytechnique, the applied science branch of Laval University. Mr. Boyer, whose grandfather was the first Superintendent of Education for Lower Canada, has always taken a good deal of interest in the cause of education. He will represent on the board the graduates of the above named school.

C. E. Cartwright, C.E., of Vancouver, B.C., who a short time ago resigned his position as Division Engineer C.P.R. to practice as a consulting engineer, has entered into partnership with A. J. Matheson, C.E., formerly of Ottawa, who has had 18 years experience in civil engineering, specializing in hydraulics. The new firm, Cartwright, Matheson & Co., will undertake reports, surveys, plans, superintendence of construction for railways, wharves, bridges, townsites, power plants, irrigation, water supply, etc.

The Baldwin Locomotive Works, Philadelphia, Pa., has issued its record no. 67, describing 14 locomotives built recently for passenger service. The extent to which superheated steam is used in locomotive practice is indicated by the fact, that seven of the 14 locomotives shown are equipped with superheaters. Improvements in design have rendered the maintenance of the superheater a comparatively simple matter. Furthermore, a locomotive using superheated steam can, with an increased economy and without decreasing its efficiency, be worked at a lower boiler pressure than one using saturated steam. Consequently the expense of boiler maintenance is reduced and this, in consideration of the high ratio which boiler repairs bear to total repairs, is a distinct advantage. The use of superheated steam undoubtedly increases the capacity of a locomotive. This is an important feature, especially in express passenger service, where the margin of reserve power is frequently small.

Among the Express Companies.

The Canadian Northern Ex. Co. has closed its office at Lavenham, Man.

The Canadian Northern Ex. Co., has opened an office at Kakabeka Falls, Ont., and has closed its office at Rounthwaite, Man.

F. W. Forster, C.P.R. agent, 14 Redcross St., Liverpool, Eng., has been appointed agent there for the Dominion Ex. Co., vice M. Beck and Co.

A. E. Seeley, Dominion Ex. Co.'s agent at Perth, Ont., has retired, after many years service. He acted as an express agent at Perth for 50 years.

The Dominion Ex. Co., has instructed its agents that under no circumstances, are they to receive or hold any money on deposit, pending the arrival of goods by express.

J. D. Fraser, C.P.R. station agent, and who also acted for the Dominion Ex. Co., at Rutter, Ont., was arrested recently on charges of stealing several sums of money from the C.P.R. and the Dominion Ex. Co.

The Dominion Ex. Co. is notifying its agents, that shipments of millinery, which for any reason, remain on hand for 24 hours, must be reported to the superintendent and to the agent at the shipping point.

The Trunk Line Association has issued a notice that aeroplanes will not be transported as baggage, and all applications concerning such transportation will be referred to the freight departments or express companies.

The Dominion Ex. Co., has opened offices at Amisk, Cairns, Cadogan, Alta.; Walhacin, B.C.; and has closed its offices at Beaumaris, Minet, Port Carling, Port Cockburn, Port Sandfield, Rosseau, Royal Muskoka, Waldemar and Windermere, Ont.

The Canadian Ex. Co. has opened offices at Vancouver, B.C., agent W. H. Nattress; Stewart, B.C., agent, P. A. Godenrath; Prince Rupert, B.C., agent, A. E. McMaster; Victoria, B.C., agent, W. E. Duperow; Seattle, Wash., agent, J. H. Burgess.

The Dominion Ex. Co., has advised its agents that they will be held responsible for any money advanced to individuals on shipments to be forwarded by express, unless previous authority has been obtained from the agent at point of destination.

The Dominion Ex. Co. has notified its agents east and south of Sudbury, Ont., that after Nov. 26, the date of the last sailing from Owen Sound for Georgian Bay local ports, shipments for Manitoulin Island, must be forwarded according to instructions in the express guide.

Shipments of goods consigned to a person or firm to the order of a bank, or some other person or firm, or to instructions accompanying them, which would require the agent to notify such bank, firm or person, must not be accepted by agents, but shipments addressed to a person or firm, in care of another person, or firm, may be.

The attention of agents is called to the necessity of seeing that the name and address of the shipper are attached to all goods returned to departmental stores, and to parts of vehicles and machinery returned to manufacturers, as such shipments are apt to accumulate at destination stations owing to consignees refusing to accept them, owing to the omission.

Express packages of valuables, exceeding in size, 8 by 11 by 16 ins., must not be accepted by agents, unless specially advised by the superintendent, as they cannot be placed in the car safes. Packages or vehicles, exceeding 4 ft. 7 ins. wide, by 5ft. 10 ins. high, should not be accepted unless advised by superintendent, as the dimensions given are the average of express car doors.

The Dominion Ex. Co. gives notice that the Alaska Pacific Ex. Co., having withdrawn from the White Pass and Yukon Ry., shipments should only be accepted at tariff rates to Skagway, and subject to the rates of the White Pass and Yukon Route, beyond; also that shipments for Skeena River points, including Hazelton and McIntosh, B.C., should not be accepted until the reopening of navigation.

The Canadian Ex. Co. was fined $30 and costs at Toronto, Nov. 11, for shipping two dogs from a rabies infected district at Blair to Shawanagan, Ont. in contravention of the Animal Contagious Diseases Act. For the defence it was urged that the shipping bill contained nothing to show the contents of the box, which was done up in such a way as not to show the contents, and that the agent at Blair was given to understand that the dogs were billed for an infected district.

On account of rabies known to exist in parts of Western Ontario, the area situated west of the eastern boundaries of York and Simcoe counties, is declared to be infected, and express agents are advised that no dogs must be moved out of that section, until Dec. 7, or until further advised. This does not affect dogs passing through Canada in bond, nor such dogs as may be passing through the infected area. No dogs must be accepted for transportation to Montreal, until further notice.

The Dominion Ex. Co., is cautioning its agents against persons representing themselves to be route agents or other officers of the company, and who may try to obtain possession of money or money orders, and instructs that such persons must not be permitted to have access to any books, etc., unless identified by letter or other satisfactory evidence of the superintendent of that particular division, and even then the agent must satisfy himself that such superintendent's signature is genuine.

The Dominion Ex. Co. has issued special instructions to its agents regarding Christmas traffic to England. In order to avoid serious delay at the Liverpool customs office duplicate invoices, with description and value of each article,

TALK ABOUT YOUR INVESTMENTS

Here is what one Railroad has done with Booth Water Softeners

Increased the life of fireboxes—stay bolts and radial stays, 75%

Reduced boiler repairs 40%
Reduced fuel consumption 20%

Increased hauling capacity—due to absence of leaky flues and stay bolts

Locomotives make from 400 to 500 miles between washing boilers

CAN YOU BEAT IT?

That's only half the story, too. Haven't room to tell it all here. Write us for the rest

2 GRAND PRIZES AND 5 GOLD MEDALS

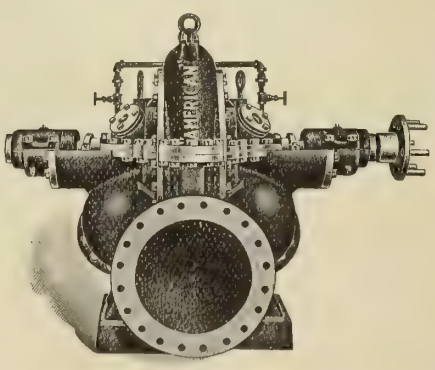
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

THE AMERICAN WELL WORKS
General Office and Works: Aurora, Ill., U.S.A.
R. H. BUCHANAN & CO., Montreal, Canadian Representatives

with outward entries, must accompany shipments. Invoices simply describing goods as Christmas presents are useless, and should not be accepted, and charges if not prepaid, should be covered by guarantee or deposit. Marine insurance is only affected if specially requested, and shipments should be specially marked for marine insurance.

Express companies have notified their agents that owing to the provisions of the Canada Temperance Act, they must refuse to accept shipments of intoxicating liquors, when destined to points in Albert, Carleton, Charlotte, York, Kings, Northumberland, Queens, Sunbury and Westmoreland counties, N.B., and Annapolis, Cape Breton, Cumberland, Digby, Guysboro, Hants, Inverness, Kings, Pictou, Queens, Shelburne and Yarmouth counties, N.S., unless it is represented that they are for the consignee's personal or family use, which must be endorsed on the shipping bill by the shipper. All shipments of intoxicating liquors for these counties, sent c.o.d., must be refused, whether for consignee's personal use or not.

Judgment was recently delivered in the Ontario courts, on a claim of the Ontario Wheel Co., against the Canadian Ex. Co., in favor of the defendants. The claim was for damages for delay, owing to the Ex. Co. having delivered goods to a place for which they were not intended. It appeared in the evidence, that the goods were delivered to the Ex. Co. for shipment to a point in Quebec, there being several places of the same name in that province, but only one reached by the Canadian Ex. Co., and the goods were forwarded to that point. In giving his decision, Judge Reynolds said: "I hold that it is the duty of the consignors to furnish clear and unambiguous addresses to the express companies, and, if in consequence of the address being ambiguous, delay or expense occurs, they must bear the loss. I therefore find that neither the plaintiffs, nor the consignee can recover in this action."

Telegraph and Cable Matters.

The Canadian Northern Telegraph Co. has closed its office at Lavenham, Man.

Press reports state that the C.P.R. is to erect a telegraph wire connecting Merritt with Vancouver, early in the coming year.

The Canadian Northern Telegraph Co. has opened an office at Kakabeka Falls, Ont., and has closed its office at Rounthwaite, Man.

The Western Union Telegraph Co., has filed with the Board of Railway Commissioners, its tariff of maximum telegraph tolls, between points in Nova Scotia, New Brunswick and Quebec.

The Board of Railway Commissioners recently extended the time for the approval of the G.T.P. Telegraph Co.'s tariff of tolls between points in Canada, with the exception of the tolls between its local offices on its Ottawa Division, and Quebec, and between them and Swanton, Vt., to Dec. 1.

The Department of Public Works has completed the laying of a cable between Gannett Rock and Seal Cove, Grand Manan, which will materially lessen the danger to ocean steamships at that point. It was near Gannett Rock that the s.s. Hestia, with a number of lives, was lost about a year ago.

The Board of Railway Commissioners recently extended the time for the approval of the C.P.R. tariff of telegraph tolls between points in Canada west of and including Sudbury, Ont., to and from points west of Sudbury from and to points east thereof and east of and including Windsor, Ont., to Dec. 1.

The Maritime Telegraph and Telephone Co.'s cable across the Northumberland Strait, between Pictou, N.S., and Prince Edward Island, has been satisfactorily laid and connected. The line has been leased for private telegraph work, but it is stated that there is a possibility of arranging for its use for a public telephone service.

During the year ended Mar. 31 the Dominion Government built 31 miles of new line in Cape Breton, from Enon to Gabarus, and 63½ miles from Strathlorne to Whycocomagh. In Quebec, two short lines were built, totalling 27 miles, while in the Northwest 70 miles of line were erected from Athabasca Landing towards Peace River Landing, and the remaining distance of 220 miles was being proceeded with. This line skirts the western shore of Lesser Slave Lake for 80 miles. and from thence runs northwesterly for 90 miles. The Dominion Government, at that date, had 7,748½ miles of pole line.

The Board of Railway Commissioners reserved its decision, Nov. 15, in connection with the application of several telegraph companies for approval of their message forms, on the question of the companies' liability for the proper delivery of messages. On the present tariffs the companies only hold themselves responsible to the amount of the tolls for the proper transmission of ordinary messages and for 50 times the tolls for repeated messages. The Board suggested a maximum liability of $500, and the companies suggested a maximum liability of $200 for ordinary messages and $400 for repeated messages.

In the course of the hearing of the Marconi Wireless Telegraph Co.'s application for approval of its tariff of tolls, Nov. 15, the question arose as to the Board's jurisdiction over the rates for wireless messages to and from foreign registered vessels in Canadian waters. The company claimed that the Board had no jurisdiction. J. P. Mabee, Chief Commissioner, in reserving judgment, said. "It seems to me that British or foreign ships come under the Canadian Law the moment they enter the waters of the Gulf of St. Lawrence. The waters of the St. Lawrence Gulf are territorial waters, just as the Canadian part of Lake Superior."

Grain Elevator Notes.

The Western Terminal Elevator Co., Ltd., has been licensed to carry on its business in Manitoba.

The Western Canada Flour Mills Co.'s elevator at Goderich, Ont., will, it is expected, be opened for business Dec. 15.

A bill respecting terminal elevators at the head of Lake Superior will be introduced at the Dominion Parliament's current session.

The name of the Caron Farmers' Elevator Co., Ltd., has been changed to the Caron Farmers' Elevator and Trading Co., Ltd., Caron, Sask.

The Homewood Farmers Elevator Co. Ltd., has resolved to voluntarily wind up its affairs, and to apportion its assets among the contributories.

D. Horn Chief Grain Inspector, Winnipeg, was presented with a cabinet of silver by the western grain inspection staff Nov. 2, on his retirement from that position, which he held for 11 years.

The G.T.P. Elevator Co.'s elevator at Tiffin, Ont., during the past 20 months handled 13,804,000 bush. of grain, the largest amount for one day being 527,000 bush. in 22 hours, the record for one hour being 40,000 bush.

A. McD. Allan, who is connected with a U.S. firm. was in negotiation, recently, with the Goderich board of trade regarding the proposal to erect a large elevator there. A site has been located, and estimates are in course of preparation. It is stated to be the intention to utilize the elevator in connection with the shipment of grain to Buffalo.

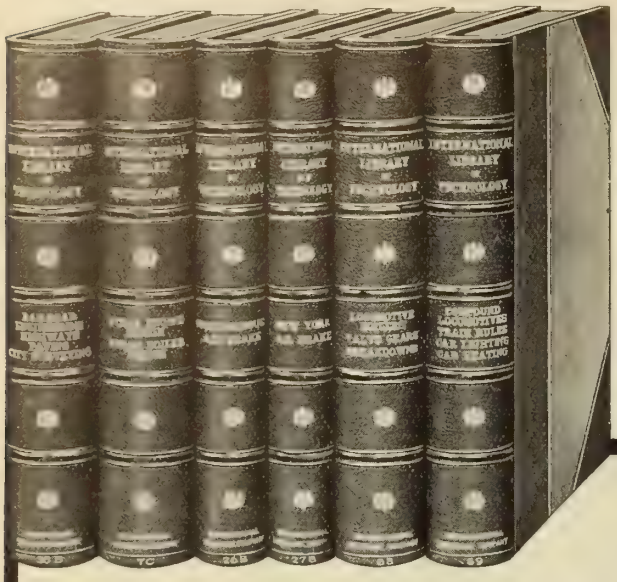
A special general meeting of the Reston Farmers' Elevator Co., Ltd., was held at Reston, Man., Nov. 17, to approve and confirm a bylaw passed by the board, providing for the transfer of all the undertakings, property and interests of the company to the Manitoba Government, and providing for the discharge of any mortgage or encumbrance affecting the company's assets.

A Winnipeg report states that 33,557,460 bush. of the 1910 crop has passed inspection there, or about 750,000 bush, less than for the same period 1909. Of this total, there are, 18,000,000 bush. required for seed; 6,000,000 bush. required for interior mills, and 6,000,000 bush. in interior elevators. The stock in the terminal elevators at the end of Oct. was ,721,203 bush. wheat; 5,479,271 bush. oats, 648,017 bush. barley; and 548,040 bush. flax.

The Western Grain Standards Board of Canada, at a recent meeting, passed a resolution drawing the attention of the Dominion Government to the advisability of acquiring and operating the terminal elevators at Fort William and Port Arthur, and elsewhere in Canada, including the eastern transfer elevators, with a view to assuring and maintaining the admitted high standard of Canadian grain in all markets, and as inspected at Winnipeg.

Saskatchewan Elevator Commission.

The Commission, which was appointed in Feb. to enquire into the various schemes submitted for the Government control of elevators has submitted its report, which does not favor any of the schemes placed before it, entirely, but has evolved a scheme embodying the best points of each. State aided farmers' elevators, and modifications of similar ideas have been discarded, and a plan submitted by the Commission, on the basis of a co-operative joint stock company, owned entirely by the agriculturalists of the province, without Government representation on the executive. It is suggested that a minimum of 15% shall be paid up by the farmers, upon as many of the $50 shares as are subscribed for, that the maximum number of shares allotted to any one person shall be 10, and that 25 elevators shall be the minimum proposed to be operated before the central body shall be organized and Government asistance called for. The proposed assistance shall take the form of a loan for each elevator, secured by mortgage, repayable in 20 annual instalments, principal and interest. The Saskatchewan Grain Growers' Association executive is named as suitable provisional directors to carry out the first details of the plan. To secure the maximum amount of local control, consistent with ownership by the whole body of shareholders and management through the central board of directors, it is recommended that each elevator be a separate unit, with a local board elected by the local shareholders. Each local board shall have one representative for the organization and subsequent annual meetings at which the whole board shall be elected, and it is suggested that the stock subscribed for each unit should be equal to the cost of the elevator, and the annual aggregate crop acreage of the shareholders should not be less than 2,000 acres for each 10,000 bush. of capacity of the elevator, or one acre for every dollar of the proposed expenditure at each unit. The Commission consisted of Prof. R. Magill, Dalhousie University, N.S.; G. Langley, M.L.A., Redberry, Sask., and F. W. Green, Secretary-Treasurer Saskatchewan Grain Growers' Association, Moose Jaw.



YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. THE CANADIAN NORTHERN ONTARIO RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Northern Ontario Railway Company, will apply to the Parliament of Canada, at its next Sesion, for an Act extending the time within which it may construct the following lines of railway:—

(a) From Washago to Kincardine;
(b) From Arnprior to Gananoque;
(c) From Pembroke to Cobourg or Port Hope;
(d) From the Township of Pickering to Owen Sound;
(e) From within ten miles east of Toronto to Hamilton, London and Windsor, with a branch from London to St. Thomas and Sarnia; and a loop line in the Townships of York and Scarborough, north of Toronto;
(f) From the International bridge, northwesterly to Goderich;
(g) From between Dunnville and Port Dover to Owen Sound or Meaford;
(h) From Washago to Midland;
(j) From Hawkesbury to a point in the County of Leeds or Lanark;
(j) From Parry Sound to North Bay; and to increase the limits to the amount of the securities which the company may issue in respect of its authorized lines.

GERARD RUEL,
Chief Solicitor.

Dated at Toronto, this 16th day of November, 1910.

ELECTRIC RAILWAYS.

Canadian Street Railway Association.

PRESIDENT, D. McDonald, General Manager Montreal St. Ry.; VICE PRESIDENT, J. Anderson, Manager Sandwich, Windsor and Amherstburg Ry.; SECRETARY-TREASURER, Acton Burrows, Managing Director Railway and Marine World.

ASSOCIATION'S OFFICE, 70 Bond St., Toronto.

EXECUTIVE COMMITTEE.—C. E. A. Carr, General Manager Quebec Ry. Light, Heat and Power Co.; P. Dubee, Secretary Montreal St. Ry.; H. M. Hopper, Secretary-Treasurer, St. John Ry.; J. E. Hutcheson, Superintendent and Purchasing Agent Ottawa Electric Ry.; C. B. King, Manager London St. Ry.; W. R. McRae, Superintendent Motor and Truck Department Toronto Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

Montreal Street Ry. Company.

The annual meeting, held Nov. 2, excited much more than the usual interest, as it was considered almost certain that a change in control would occur, a majority of the stock having been secured by persons interested in the Canadian Light, Heat and Power Co. The President, Hon. L. J. Forget, who is not in good health, did not attend, and the chair was taken by the Vice President, K. W. Blackwell. Only one ticket was suggested for the directorate, the following being unanimously elected:—E. A. Roberts, J. W. McConnell, G. C. Foster, K.C., F. H. Wilson, W. C. Finlay, J. M. Wilson, D. L. McGibbon The old directors were Hon. L. J. Forget, President; K. W. Blackwell, Vice President; W. G. Ross, Managing Director; Sir H. Montagu Allan, J. Caverhill. The new board met immediately after the annual meeting and elected E. A. Roberts President and J. W. McConnell Vice President. P. Dubee was reappointed Secretary; D. McDonald, heretofore Manager, was appointed General Manager, and H. A. Lovett was appointed General Counsel.

REPORT FOR YEAR ENDED SEPT. 30, 1910.

Your directors beg to submit their 50th annual report, accompanied by the financial statements, which show the following results:—

Gross earnings		$ 4,352,551.18
Operating expenses		2,455,301.06
Net earnings		1,897,250.12
Interest from M.P. & I. Ry. Co.		85,878.04
Total income		$ 1,983,128.16
From which deduct:—		
City percentage on earnings	278,084.93	
Interest	175,421.57	
Rental leased lines	6,472.06	
Taxes	48,000.00	
		507,973.05
Net income		$ 1,475,150.11
Dividend 10%		1,000,000.00
Surplus		$ 475,150.11
From which has been appropriated for:—		
Contingent account	$250,000.00	
Fire insurance fund	25,000.00	
		275,000.00
Transferred to general surplus		$ 200,150.11

The gross earnings increased during the year $477,712.67, or 12.33%, the operating expenses $200,281.86, or 8.88%, the net earnings $277,430.81, or 17.13%. The gross earnings continue to show very satisfactory increases. The per cent. of expenses to gross earnings is 56.41%, against 58.20% for the previous year.

Your directors appropriated $25,000 from surplus earnings as a credit to the fire insurance fund. The interest on the investments for the year was $26,766.66. The amount now at the credit of the fund is $521,560.24.

During the year the Company secured an amendment to its charter authorizing the construction and operation of underground railways. Preliminary plans for the construction of the same have been prepared by Jacobs & Davies, of New York, and the question will be taken up with the city during the coming year. Owing to the continued rapid growth and congestion of the city, your directors again took up the question of securing additional routes which would relieve the present congestion, but regret that no definite action has been taken as yet by the city. It is hoped, however, that the matter will receive early attention. The delay has added to the difficulties of operation in, at best, a difficult and dangerous city to operate in.

The Supreme Court of Canada rendered judgment in favor of this company's appeal from the decision of the Board of Railway Commissioners, relative to the rates of fares from Cote des Neiges to the city. The city of Montreal has appealed from this decision to the Privy Council.

During the past year negotiations were entered into between your directors and the directors of the Montreal Light, Heat & Power Co., with a view to bringing about closer relations between the two companies. The scheme submitted did not, however, receive the support of the shareholders of either company to the extent anticipated, and has been abandoned; and your directors have been notified by the Montreal

Duncan McDonald,

General Manager Montreal Street Ry. and President Canadian Street Ry. Association.

Light, Heat & Power Co. of its withdrawal from any further negotiations in this connection.

The property has been maintained in a high state of efficiency, and a considerable sum has been spent in the upkeep of the tracks and rolling stock; the power plants and buildings are in excellent condition, it being the policy of your directors to spare no efforts or expense in this direction; yet notwithstanding this the surplus earnings of the company are the largest in its history. There has also in addition been carried over to the credit of the snow account a substantial balance towards this year's expenses. Notwithstanding the above the operating expenses percentage of earnings have decreased.

The company has continued its liberal policy towards its employes in respect to their wages, having increased them during the year, and to the Men's Benefit Association, which is now in a flourishing condition.

The large expansion of the company's business necessitated the erection of new shops for the construction and repair of cars, etc., and work in connection therewith has been commenced. These shops are to be completed during the coming year, and will be most complete and up to date in every respect.

The Company has paid to the city of Montreal taxes and percentages on earnings amounting to $387,264.25, on account of snow removal $50,919.30, a total of $438,183.55, being an increase over the previous year of $51,998.39.

The Company has recently received a proposition from the Montreal Light, Heat & Power Co., offering to make a contract to furnish additional power to this company, but owing to the annual meeting of shareholders being so near at hand, your directors decided to leave the matter to the incoming board to deal with.

The Montreal Park and Island Ry.'s gross earnings show a gross increase of $57,270.80, the operating expenses an increase of $28,450.32, the net results being $85,878.04, against $57,057.56 for the previous year.

The Montreal Terminal Ry.'s gross earnings increased $23,697.66, the operating expenses increased $5,933.09, and the net surplus for the year was $23,-159.71, against $5,477.08 for the previous year.

STATISTICAL STATEMENT.

	1910.	1909.

Toronto Railway By-Laws.

The Toronto Ry. Co. has passed two bylaws relating to traffic. One prohibits smoking and spitting on any part of closed and open motor and trailer cars.

The other has the following provisions: All passengers shall enter closed motor and trailer cars by the rear door and shall leave by the front door. No person riding on any closed motor or trailer car shall stand or remain on the platform or step in such a position or for such time as to obstruct free entrance or exit of any passenger. No person shall ride on the step, bumper, draw bar, railing, cross chain, nor on any fixture on the outside of dash of any motor or trailer car.

All persons entering the body of the car after the seating space is occupied shall immediately pass up to the front end, if there be any available standing room there, and shall not occupy any standing space at the rear end while there is room forward in the car, nor under any circumstances in such a manner as to block the free entrance of passengers. Whenever the number of persons on the platform of any motor car or trailer shall be such as to block the entrance, or whenever it shall appear to the conductor that the entrance is not unobstructed, any person riding on the platform shall on being requested to do so by the conductor or motorman, enter the body of the car, or, if inside, shall move up to the front end. Any person riding on any platform of, or inside any car who shall refuse or fail to forthwith comply with the request of the conductor or motorman to enter the body of the car or pass up to the front end, shall on request of the conductor or motorman of the car forthwith leave the car and upon failure or refusal, the conductor or motorman shall eject said person from the car, using for that purpose no unnecessary force.

No passengers shall ride on any platform of any closed motor car, or in the vestibule occupied by the motorman, nor shall any passenger remain on front platform of a closed motor car or in the vestibule occupied by the motorman or on the steps of the car for a longer time than is necessary to enable such passenger to alight. Motormen and conductors shall require passengers to conform to this bylaw, and shall see that the free entrance or exit of passengers is not prevented, hindered, or delayed by any persons standing on any of the platforms or steps or in the aisle at rear of car directly in the way of entrance door and for this purpose every conductor or motorman may and whenever necessary shall require any passenger to occupy such place or places on or in the cars as will prevent any obstruction of the entrance to or exit from the same.

Every person committing any violation of this bylaw shall forfeit a penalty not exceeding $20 in addition to all other penalties by law provided.

Application has been made to the Ontario Railway and Municipal Board to approve the bylaws.

Toronto Railway Cars.

The Toronto Railway has put into service recently a number of its latest type of standard convertible cars, which are the invention of its Master Car Builder, M. Powers. They are 30 ft. long over body and 44¾ ft. long over all. The bottom framework is of semi-steel construction. The side sill-plates are placed on the extreme outside of body, reinforced by an angle on the inside allowing the wheels to curve under it. This angle carries all the cross floor supports which are reinforced by truss-rods in order to take care of the floor load. The posts on the inner side are tapered. The heavy steel construction usually used in supporting large platforms, in this case, is dispensed with. The only steel used is the two outside platform supports made of light steel on the cantilever principle, reinforced on the bottom side by a light angle. The platform centres are supported by adjustable trusses having their bearing on the bottom of the cantilever under the car-body sill. In this position the weight is taken care of by the ordinary platform suspension bolts.

The vestibule is surrounded by the usual angle bumper, placed on the centre of which and curved to suit, is a piece of the same material bolted securely about 2½ ft. long to protect a higher car should they collide. Both vestibules are of the same size. The front is fitted with a wide sliding door, operated by the motorman, locking each time it closes. Two switch-irons are inserted in the floor over the tracks, alongside of which is placed a metallic frame containing plate glass. This frame is so constructed as to open in order to be cleaned. The object of this device is to enable the motorman to see the switch, and at the same time to prevent the cold from entering the car. This system assures the motorman of his switch-iron every time, and saves the company the cost of replacing lost ones. There is a rail behind the motorman, which performs the double purpose in separating the motorman from the passengers, and providing a location for the sand-box, the lid of which, when open, conforms to a comfortable seat for the motorman. The placing of the sand box in such a position is certain to prevent dampness, and being in full view of the operator he may see the condition of the sand. Over this rail a blind is suspended from the roof, which can be drawn down to prevent the light of the car from interfering with the motorman's view. The vestibule is also provided with an outside mirror, giving the motorman a clear view of the whole car side. There is only one hand-rail placed on the front of the vestibule, for the use of persons alighting, making it almost impossible to get off backwards. The steps are very wide and spacious, having a ribbed lead covering to prevent slipping.

The back vestibule is large, the inside being sheeted upright, having a base well scalloped up from the floor to prevent dampness at the post bottoms. The entrance to the car is large on the inside of vestibule, making it very convenient for the pay-as-you-enter system, as all passengers have to pass over the entire platform in order to enter. The practice in Toronto is to leave by the front door. In order to make this more convenient and comfortable, the General Manager, R. J. Fleming, it is said,

Gen. Man. Western Canada, Toronto.

conceived the idea of dispensing with the front door, or bulkhead, leaving almost all the end open. This gives excellent operating results as well as extra capacity both winter and summer. Both seasons are mentioned as the foregoing description is of a convertible car in its closed form.

The car interior is finished in quarter-cut white oak relieved by cherry. The trimmings are of bronze. The upholstering is of the finest red plush. The exterior is of cherry sheeting 1½ ins. wide, which can easily be replaced in the event of damage from collisions. The cross seats used in summer are placed longitudinally for winter use, and covered by a cushion, a leg being required only at the extreme end of each length of cross seat. They are supported in the centre by truss-rods underneath the seat. There are very few legs required, thus leaving the space under the seat open, and giving the interior of the car a very sanitary appearance. There is a space left at each door in order to give a clear passage in and out. The seatbacks are very light to handle, each side having two sections. They rest on the seats, being securely held by means of clips which they engage. The top of this seat is secured by gate hooks, making the removal of the backs an easy task.

The cars are brilliantly lighted, the bulbs being situated on each side of roof, directly above the seats, giving a very fine illuminating effect, and providing the passengers with plenty of light to read by in any part of car. By the aid of a special switch, controlling an extra number of bulbs, additional light can be provided during the rush hours, thus giving the conductor an excellent opportunity to collect fares and examine transfers.

For summer use, the side sections of the car are removed, and cross-seats placed in position and supported by lugs on the panels and car wall, and held in place by buttons. Wooden backs are dropped into slotted castings, making a cool and comfortable seat. The bottom step is attached by means of suitable suspending castings and connected to both platform steps. The second step is contained in the wall of the car, making a support for the sections in winter, and also a guard to prevent the car side from damage by wagons. All the hand-rails remain in position; the removable parts are all secured by bolts which remain in place. The seating capacity of this car in closed form is 38; in open form 70.

Following are some particulars of the equipment:—Double trucks, all steel frame swinging bolster; axles, 4½ inch open hearth cold rolled steel; wheels, 33 ins. diameter. 2¼ ins. tread, chilled iron; brakes, storage air, with power brakes as an auxiliary; automatic fenders.

Following are some particulars of the electrical equipment:—Four motors, rated at 40 h.p. each; two on each truck, single reduction gear drive, open hearth, cut steel, gears and pinions; new type pressed steel gear housings, replacing old type heavy malleable iron cases; Toronto standard rheostat, removable grid type; K. 6 series parallel controller and M.R. type automatic circuit breaker; standard car lightning arresters; Toronto Ry. roller bearing trolley stands, steel trolley pole.

A special feature of these new cars is the buzzer system for passengers signalling motorman. The electric current operating these buzzers is supplied from the trolley wire and not from batteries, as heretofore. This system of operating buzzers is one of recent developments in the electric field. The principal reason why electric bells or buzzers were not used more extensively by electric railways was on account of the batteries being so unreliable, the energy contained in cells giving out unexpectedly and the signal device refusing to respond to contact at the push buttons. Hence the reliable pull bell has always been adhered to in car construction, and the pull bell will continue to be used for conductor's signals and for emergency use, in conjunction with any other system which may be used.

Toronto Ry. Standard Convertible Car, closed for Winter.

Toronto Ry. Standard Convertible Car, open for Summer.

Projects, Construction, Betterments, Etc.

Alberta Electric Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build the following lines:—From Calgary to Banff, Alta.; from Calgary south to Bow River through or near Thigh Hills to Medicine Hat, crossing the Bow River between Rolling Hills and Grand Forks; from the last mentioned line near Long Coulee to Lethbridge; from near Expense Coulee, on the Calgary-Medicine Hat line, to Taber and Lethbridge, and back to the Calgary-Medicine Hat line, at Long Coulee; from the Calgary-Medicine Hat line, near Thigh Hills to Macleod; from Calgary to Carbon, and on to the point of junction of the Knee Hill Creek and Red Deer River; from Lethbridge to the International boundary at the Milk River; from Medicine Hat to Wood Mountain; also power to build lines in Calgary, Medicine Hat, Lethbridge, Banff, Taber, Macleod and Carbon. The company also asks power to acquire and operate coal mines, and to dispose of any surplus electric power or energy over and above that required for the operation of its railways, for power and lighting purposes in towns along its lines. Stewart and Lathwell, solicitors, Calgary, Alta., are solicitors for the applicants.

Brandon, Man.—The city council has under consideration a plan for granting a franchise for an electric railway in the city to a Vancouver syndicate. A petition, signed by over 2,000 citizens, was sent to the council, Nov. 15, protesting against the granting of the franchise. (Jan., pg. 57.)

British Columbia Electric Ry.—The contract for the erection of a passenger station for the company's interurban traffic at New Westminster was, Nov. 15, reported let to Martin and Broley. The building is estimated to cost about $80,000.

The Vancouver, Fraser Valley and Southern Ry., a subsidiary line of the B.C.E. Ry., is under construction from the Hastings townsite, Vancouver, via Burnaby to Sapperton, where it will connect with the present interurban line between Vancouver and New Westminster. Grading is expected to be completed Dec. 31. M. P. Cotton & Co., Vancouver, the contractors, are represented by J. A. Mallory, as engineer.

The company has notified the Point Grey town council of its readiness to start tracklaying as soon as the grading of the streets has been completed by the council. An application has been made to the courts on behalf of residents in Point Grey, to quash the by-law under which the work is proposed to be done. (Nov., pg. 963.)

Buffalo, Niagara Falls and Toronto Ry.—The Dominion Parliament is being asked to extend the time for the construction of the lines authorized to be built by the act passed in 1907; to authorize the branch line mentioned in sec. 8, to be built from Niagara-on-the-Lake and St. Davids to St. Catharines, and to authorize the use of any motive power except steam. The notice is signed by H. H. Collier, St. Catharines, Ont., solicitor for the company. (July, 1909, pg. 522.)

Edmonton Radial Ry.—The Board of Railway Commissioners has authorized the Edmonton city council to cross at rail level with its street railway the tracks of the Edmonton, Yukon and Pacific Ry. (Canadian Northern Ry.) at several points within the city. (Nov., pg. 963.)

Electric Railways Construction Co.—A proposition has been laid before the Stanley Park board of Vancouver, B.C., by the E. Ry. Construction Co. for building a double track, foreshore, scenic railway encircling the park. The company asks for a lease of the necessary right of way between high and low water for 21 years, the city to have the right of way over the line at cost of construction, plus a bonus of varying percentages at the end of six, 11 or 16 years, or at the end of the franchise period. If the city does not then take the line over the franchise to be renew-

ed for a further period of 21 years on an equal division of the profits. During the first 21 years the net profits to be divided, 25% to the board and 75% to the company. The Park Board does not favor the proposition, and several members have expressed themselves against granting a franchise to any company.

Grand Valley Ry.—Application has been made to the Brantford, Ont., city council for permission to build a line along the river bank from Church St., under Lorne bridge, along Wharf St. to Market St. (Oct., pg. 875.)

Monarch Radial Ry.—The agreement which is under consideration by the Barrie, Ont., town council, provides for an exclusive franchise; that the service on the line from Toronto to Barrie and from Barrie to Orillia shall be such as the Ontario Railway and Municipal Board shall direct; that the service may be extended on the streets in the town by agreement, and that the tracks may be used by other companies for running through Barrie. The town council offers a 25 year franchise without special privileges. At a recent committee meeting the company's representatives agreed to submit modified proposals. The Barrie board of trade has considered the whole matter and has passed a resolution advising the council not to approve of any agreement containing a provision for an exclusive franchise. (Nov., pg. 965.)

Montreal Street Ry.—The Metropolitan Parks Commission has been giving some consideration to the question of improved means of communications in the city, which it is authorized to do by its act. One of the plans suggested with a view of relieving the congestion of traffic is to construct a triple-tunnel from Sherbrooke and Guy St. to Belvedere and Cote des Neiges Road, the centre section of which would be utilized for laying a double track electric railway. The Commission expects to be able to report on the question at its December meeting. D. McDonald, General Manager M.S.R., was present at the meeting, and explained that the proposed tunnel would be 5,500 ft. long. The company had also under consideration plans for a subway along St. James St., from near Gosford St. west to near Bonaventure St. (Oct., pg. 875.)

Morrisburg and Ottawa Electric Ry.—The provisional officers and directors are: Chairman, J. McFarlane, Ottawa; Vice Chairman, W. H. Fetterly, Morrisburg, Ont.; other directors: E. J. Laverdure, R. A. Bishop, H. McDonald, Ottawa; J. W. Bogart, J. H. Longbridge, Morewood, Ont.; W. C. Strader, Williamsburg, Ont.; C. Munro, Chesterville, Ont. The company's stock is being put on the market, and it is reported that it is being well taken up by residents in the townships through which the line will pass. The chairman is quoted as having stated in an interview, Nov. 11, that while it was proposed not to sell more than 10 shares to any single subscriber, already half of the amount required to start work on a permanent basis had been subscribed, that the length of the proposed line was 43 miles, that the cost of construction was estimated at $750,000, and that the farmers were offering land for right of way at a very low price and to do a considerable amount of team work free. (April, pg. 311.)

Nanaimo, B.C.—The agreement granting a franchise for building an electric railway in the city is to be submitted to the ratepayers for approval at an early date. (Oct., pg. 875.)

Ontario West Shore Electric Ry.—The draft of an agreement for a franchise in Goderich, Ont., was approved by the town council, Nov. 5, and has been submitted to the company for approval. There are a few points upon which the company's engineer and secretary expressed dissent at the meeting, but it is thought they will be arranged by the company. It is hoped to be able to have a by-law approving the agreement submitted to a vote at an early date.

The section of the line under construction extends from the Goderich town boundary to Prince Albert. Track has been laid to Prince Albert and ballasting has been done as far as Sheppardton. Beyond Prince Albert grading work is in progress but no more track laying will be done until the bridge has been built across the river. This will be of steel on stone piers with trestle approaches. Reports from Kincardine state that right of way is being secured through Huron tp. and that grading will shortly be started. There are 26 cars of rails lying at Kincardine station for the line. The project for the extension of the line from Kincardine to Tiverton, Port Elgin and Owen Sound, it is said, will shortly be taken up by J. W. Moyes. (Nov. pg. 965.)

Ottawa and Kingston Electric Ry.—A letter signed by G. L. Dickinson, Manotick, Ont., has been received by the Kingston, Ont., city council inviting consideration to a project for building an electric railway from Kingston to Ottawa. It is proposed to apply for a provincial charter with the above title, the route suggested being from Ottawa via Perth to Lanark, thence along the west bank of the Rideau river to Kingston. A meeting in support of the proposal was held at Ottawa, Nov. 2, at which the following were appointed provisional directors for the purpose of securing a charter, etc. R. McElroy, M.L.A., Carp, Ont.; G. L. Dickinson, D. Clark, Manotick, Ont.; T. Kidd, Burritte's Rapids, Ont.; F. A. Heney, Westboro, Ont.; G. Boyce, Merival, Ont.; J. C. Graham, A. E. Baker, Merrickville, Ont.; J. E. Caldwell, City View, Ont.; Rev. D. A. Clayton, Kars, Ont.; E. P. McGrath, Ottawa; J. S. McCann, Kingston.

Ottawa Electric Ry...A press report states that the company has agreed to build extensions through Ottawa South as soon as a high level bridge is constructed over the Rideau Canal at Bank St. (Nov., pg. 965.)

Pigeon Lake and Ferintosh Ry.—R. M. Angus, a member of the Wetaskiwin, Alta., town council is engaged in the formation of a company with this title to build an electric railway from Wetaskiwin, westerly to Pigeon Lake, and easterly to Ferintosh, Alta. The suggestion is that as soon as the plans are completed the company will endeavor to secure assistance from the municipalities through which the line will run. A plan showing the proposed route of the line has been prepared. The total length of the proposed line from Pigeon Lake to Ferintosh is 60 miles. Pigeon Lake is about 35 miles due west of Wetaskiwin; while the line towards Ferintosh will run south easterly for about 12 miles to Lewisville, passing through Swenson Corners and Angus Ridge, and then for about 13 miles due east, passing through Beaver Lake and Highland Park to Ferintosh.

Quebec Ry., Light and Power Co.—In a recent interview, C. E. A. Carr, General Manager, is quoted as having said that just as soon as an opportune time arrived and the company could do away with locomotives, the present system of using steam and electric motive power would be abandoned, and electric power only used. Plans were being prepared for the complete electrification of the Montmorency division, on which steam locomotives were used to haul part of the traffic. "We have now the control of the Quebec County Ry." added Mr. Carr, "which runs to St. Patrick's Seminary, or close to the Quebec Bridge, and this line is paying well. We have applications from three suburban municipalities to have the company's lines extend into these places.". There have been deposited in the registry office for the county by the Quebec County Ry. a plan, profile and book of reference of the proposed line from Victoria Park Bridge, to the Charlesbourg Road. The plans have also been submitted to the Quebec Minister of Public Works for approval. (Nov., pg. 965.)

Hamilton Street Ry.—A committee has been appointed by the Hamilton, Ont., city council to discuss with the H.S.R. management a plan for the carrying out of improvements next year. The city is desirous of laying permanent pavement on sections of King and Main Streets, and wants to arrange with the company to lay new tracks thereon at the same time. (Nov., pg. 963.)

Huron and Ontario Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build its projected railway from Georgian Bay, via Port Perry to Lake Ontario. (Oct., 1907, pg. 761.)

Lacombe and Blindman Valley Electric Ry.—The Alberta Legislature is being asked to extend the time within which this projected line may be built. (Aug., 1909, pg. 609.)

Lacombe, Bullocksville and Alix Electric Ry.—An extension of time for the construction of this projected electric railway is being asked from the Alberta Legislature. (Aug., 1909, pg. 609.)

Levis County Ry.—It was reported at the annual meeting recently held that the entire track had been reballasted, and was now in excellent condition. (April, 1909, pg. 281.)

The London and North Western Ry. Co. was reported, Nov. 16, to be preparing the necessary documents asking for the submission of a bylaw to the ratepayers of a number of municipalities at the forthcoming elections. The places interested are London, Sarnia, and the townships of Plympton, Lobo, Lucan, Arkona, Parkhill and Strathroy. These bylaws are to provide for a guarantee of bonds, $150,000 being asked from London, $100,000 from Sarnia, and about $50,000 from each of the townships. A press report states that the charter is controlled in the interests of the C.P.R.

The company is making application to the Dominion Parliament to extend the time for building their projected railway from London to Sarnia. (Nov., pg. 963.)

London Street Ry.—It is said that no further work will be done in the way of improving the electric railway tracks on Richmond and Dundas streets, London, Ont., this season. C. B. King, Manager, stated Nov. 3, that the tracks had been undermined in several places, and it would be necessary for the filling to become properly settled before any further work could be done. The directors are reported to have decided that "it would be impossible to accept the offer of hydro-electric power at $31 per horse power on the peak load basis."

Montreal Park and Island Ry.—The Dominion Parliament is being asked to extend the time for the construction and completion of the authorized lines; to change the date of the annual meeting and for other powers. (Dec., 1908, pg. 891.)

Niagara, St. Catharines and Toronto Ry.—Press reports state that the company is planning to extend its lines from Fonthill to Fernwick, and to construct a second track between Port Dalhousie and Niagara Falls, Ont. (Nov., pg. 965.)

Peoples Ry.—The work of grading on the line between Guelph and New Hamburg, Ont., it is announced, will be commenced at once, the right of way having been acquired. At the municipal elections in Jan. bylaws will be submitted in six townships subscribing for stock in the company, as follows:—Proton, $36,000; Luther, $30,000; Garafraxa, $25,000; Arthur, $20,000; Fergus, $20,000; Elora, $15,000.

W. A. Bugg and F. J. Todd, of Berlin, have completed a trip northerly to Collingwood, Thornbury and Meaford, looking into the prospects of these places as possible points to which the Peoples Ry. may be extended. (Nov., pg. 965.)

The Peterborough Radial Ry., is now part of the system operated by the Electric Power Co., Ltd. The officers of the P.R.R. Co., now are: President, J. G. Kerry; Secretary, E. A. MacNutt; Assistant Secretary, A. B. Colville; General Manager, J. H. Larmonth; Local Manager, W. H. Munroe. We are advised that the company expects to make several extensions next year, including about three miles of track. A new car barn will probably be built and several cars are likely to be added to the equipment.

Rural Ry. of Manitoba.—Jos. Bernier has withdrawn his application to the St. Vital, Man., township council. The council adjourned the question at a previous meeting until Nov. 5, in order to compare the terms of the franchise asked for with an offer from the Winnipeg Electric Ry., and as a result Mr. Bernier withdraws. (Nov., pg. 965.)

St. Thomas Street Ry.—The rebonding of the line on Talbot St., from the car barn to Manitoba St. has been completed, and the defective bonds on the rest of the line replaced. (June, pg. 497.)

Saskatoon, Sask.—W. S. Weeks, Edmonton, Alta., is negotiating with the Saskatoon city council for a franchise for an electric railway in the city. (Nov., pg. 965.)

Toronto, Niagara and Western Ry.—In connection with recent press reports that the building of this line will soon be started, it may be recalled that when the question of the approval of the route plans was before the Board of Railway Commissioners the company's representative stated that there was no intention to go on with construction for some time. One of the questions in connection with the route plans is the entrance into Hamilton. The Board of Railway Commissioners' Chief Engineer recently made an inspection of the various routes suggested, and has the whole matter under consideration. Until he has reported nothing can be done in the way of approving plans. (Nov., pg. 965.)

Toronto and York Radial Ry.—The question of providing a better service on the Metropolitan Division came before the Ontario Railway and Municipal Board recently. It was suggested that the only solution of the difficulty was to lay a second track, but the various municipalities object to this, and propose that the company should buy a private right of way. Further consideration of the matter was adjourned until Feb. 1, 1911.

The Toronto city council, Nov. 21, passed a resolution authorizing the taking of the necessary steps for acquiring the section of the Mimico Division from Sunnyside to the Humber River, the franchise for which is about to expire. The townships of York and Etobicoke are interested in the line between the Humber and Long Branch, the franchise for which is also about to expire, and have been considering what steps to take in regard thereto. (Nov., pg. 965.)

Western Central Ry.—Application is being made to the Dominion Parliament by the company incorporated by the Ontario Legislature under this title for an act declaring the company's undertaking to be one for the general advantage of Canada, and extending the time for the building of the authorized lines. It is also desired to have power to guarantee the securities of other companies, to lease and operate municipally owned lines, and to extend its powers to lines acquired by it. Mowat, Langton and Maclennan, Toronto, are solicitors for the company. (April, 1908, pg. 232.)

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Sept., $311,803; working expenses, $174,237; net operating earnings $137,566; renewal funds, $22,417; net earnings $115,149; approximate income from investments, $20,000; net income $135,149, against $240,185 gross earnings; $130,426 working expenses; $109,759 net operating earnings; $16,394 renewal funds; $93,365 net earnings, $16,500 approximate income from investments; $109,865 net income for Sept. 1909. Aggregate gross earnings for three months ended Sept. 30, $897,458; net earnings $377.856, against $702,866 gross and $321,563 net for same period 1909.

Calgary Street Ry.—Total earnings for Sept., $19,293.76; operating expenses, $10,104.37; net revenue, $9,189.39; passengers carried, 464,543; car mileage, 60,666; hours operated, 7,219; car earnings, $31.32 per mile, and $2.63 an hour per car.

Cape Breton Electric Co.—Dividends of 1½% on the common stock and 3% on the preferred stock have been declared. The company does the lighting and operates the street railway in Sydney, N.S., also the ferry service between Sydney and North Sydney, and owns half of the Sydney and Glace Bay Ry., between Sydney and Glace Bay.

Halifax Electric Tramway.—Railway receipts for Oct., $19,455.30, and for three weeks ended Nov. 21, $10,926.19, against $17,803.09 and $9,934.75 for same periods 1909.

Levis County Ry.—The retiring directors were re-elected at the annual meeting recently. S. H. Ewing was re-elected President, and Hon. R. Turner, Vice President. It is said that the gross earnings for the year ended June 30 showed an increase of 7%, and the net earnings a larger percentage of increase over the figures of 1908-09.

London St. Ry.—Gross earnings for Oct., $21,021.06; expenses, $14,866.12; net earnings, $6.154.94; deductions, $2,441.75; net income, $3,713.19, against $19,339.01 gross earnings; $13,811.54 expenses; $5,527.47 net earnings; $2,453.63 deductions; $3,063.84 net income for Oct., 1909. Aggregate for 10 months ended Oct. 31:—Gross earnings, $211,745; expenses, $149,723.10; net earnings, $62,022.69; deductions, $23,945.20; net income, $38.077.49, against $202,721.11 gross earnings; $140,149.87 expenses; $62,571.24 net earnings; $24,082.76 deductions; $38,488.48 net income for same period 1909.

Montreal St. Ry.—Passenger earnings for Oct., $372.487.35; miscellaneous earnings, $14.200.31; total earnings, $386,687.66; operating expenses, $205,750.06; net earnings, $180,937.60; city percentage on earnings, $12,392.74; interest on bonds and loans, $15,052.37; rent leased lines, $552.90; taxes, $4,000; total charges, $31,998.01; surplus, $148,939.59; expenses per cent. of earnings, 53.21, against $336,765.13 passenger earnings; $17.241.82 miscellaneous earnings; $354,006.95 total earnings; $174,734.97 operating expenses, $179,271.98 net earnings; $12,251.20 city percentage on earnings; $14,329.61 interest on bonds and loans; $498.67 rent leased lines; $4,000 taxes; $31,079.48 total charges; $148,192.50 surplus; 49.36 expenses per cent. of earnings for Oct., 1909.

Port Arthur & Fort William Street Ry.—Total earnings for Sept., $14,091.76; operating expenses, $7,592.60; net earnings, $6,499.16. General statistics:—Car mileage, 55,890; gross earnings per mile, 25.213 cents; operating expenses per car mile, 13.585 cents; net earnings per car mile, 11.628 cents.

Quebec Ry., Light, Heat and Power Co.—Steps are being taken to have the company's stock listed on the London Stock Exchange, and on the Geneva Bourse.

St. Thomas Street Ry.—Car receipts for Sept., $369.91, against $352.63 for Sept., 1909; pay roll, $1,457.10, against $1,263.45 in Sept., 1909. The committee in charge of operations has overdrawn $829.61. and the city council voted $1,000 to enable it to meet current expenditure.

Toronto Ry.—Gross earnings for Oct., $379,720.88; expenses, $188,567.67; net earnings, $191,153.21, against $332,976.40 gross earnings; $168,657.64 expenses; $164,318.76 net earnings for Oct., 1909. Aggregate gross earnings for 10 months ended Oct. 31, $3,575,658.89; expenses, $1,841,334.61; net earnings, $1,734,-324.28, against $3,190,267.70 aggregate gross earnings; $1,618,379.06 expenses; $1,571,888.64 net earnings for same period 1909.

Winnipeg Electric Ry.—Gross earnings for Sept., $267,127; expenses $131,-969; net earnings $135,158, against $218,088 gross earnings; $109,005 expenses; $109,083 net earnings for Sept. 1909. Aggregate gross earnings for nine months ended Sept. 30, $2,298,384; net earnings $1,144,626, against $1,840,-897 gross and $921,627 net for same period 1909.

Electric Railway Notes.

The British Columbia Electric Ry. has received four cars from the Preston Car and Coach Co., Preston, Ont.

The Quebec Public Utilities Commission has been provided with accommodation in the Court house at Quebec.

The Brantford St. Ry. (Grand Valley Ry.) put in operation a new time table for its main line service in Brantford, Ont., Nov. 4.

The British Columbia Electric Ry. has ordered one heavy double broom electric sweeper from the Ottawa Car Co., Ottawa.

The St. Thomas city council has granted an increase of pay to the older motor men and conductors from 18 to 19 cents an hour.

A press report states that J. P. Fitzpatrick, President, has sold his interest in the Nipissing Central Ry., and will shortly sever his relations with the line.

The Quebec Ry. Light and Power Co. has received six 18 ft. pay-as-you-enter cars, 30 ft. long over all, from the Ottawa Car Co., Ottawa.

The Toronto city council decided Oct. 24, by 12 votes to nine, against proceeding any further with the proposition to acquire the Toronto Ry.

The Hamilton St. Ry. has received four 31 ft. car bodies, 44 ft. long over all, mounted on 27 G1 trucks, from the Ottawa Car Co.. Ottawa.

The Nelson St. Ry. has received two 30½ ft. semi-convertible car bodies, 41½ ft. long over all, mounted on 27 G1 trucks, from the Ottawa Car Co., Ottawa.

The Calgary St. Ry. has received one 33½ ft. semi-convertible pay-as-you-enter car body, 46½ ft. long over all, mounted on 27 G1 truck, from the Ottawa Car Co.. Ottawa.

The Sherbrooke St. Ry. has ordered one heavy double broom electric sweeper, and two 18 ft. single truck pay-as-you-enter car bodies, 30 ft. over all, from the Ottawa Car Co., Ottawa.

Proceedings are to be taken against the London and Lake Erie Ry. and Transportation Co. under the Lord's Day Act, for operating a car service over its line between London and Port Stanley, Ont.

The Board of Railway Commissioners has approved of standard passenger tariff at two cents a mile, and standard maximum freight rates to be applied where no separate tariff is given, for the Hamilton Radial Electric Ry.

The Hamilton Radial Ry. has ordered three suburban car bodies, 55 ft. long over all, mounted on Baldwin trucks, with steel wheels and equipped with Westinghouse 101B motors, from the Preston Car and Coach Co., Preston, Ont.

The Queen Victoria Niagara Falls Park Commission gave consideration, Nov. 25, to the fares charged on the electric lines of the International Ry. and the Niagara Falls Park and River Ry. Tourists are charged a higher rate than residents.

W. G. Ross was presented with a diamond stick pin by the officers of the Montreal Street Ry., on retiring from the position of Managing Director, Nov. 10. Accompanied by Mrs. Ross, he left Montreal, Nov. 11, to spend the winter in Great Britain.

The Dominion Power and Transmission Co. has granted increases of pay to the motormen and conductors employed on all its electric railway lines in and radiating from Hamilton, Ont. The new schedule goes into effect Dec. 1, and means an extra outlay of about $13,000 a year.

A new schedule of pay has been approved for the employes of the Port Arthur and Fort William Street Ry., as follows:—First six months service, 21c. an hour; second six months service, 23c. an hour; second year, 25c. an hour; third year, 27c. an hour; fourth year, 29c. an hour; time and a quarter to be allowed as overtime on Sundays.

L. L. Pelletier, mayor of Fort William, Ont., has been nominated by the employes of the Winnipeg Electric Ry., and Capt. Wm. Robinson, Winnipeg, has been nominated by the company as members of the arbitration board to investigate the differences between the employes and the company. W. J. Christie has been appointed third arbitrator.

The Toronto Ry. Co. has decided to adopt the pay-as-you-enter car system. Application will be made to the Ontario Railway and Municipal Board for an order limiting the number of passengers who may stand on rear platforms. The General Manager stated recently that smoking on these platforms will be prohibited in the near future.

The Ontario Division Court has given judgment for $1,000 in favor of J. McR. Selkirk and W. Simpson against the Windsor, Essex and Lake Shore Rapid Ry. The action was brought under the agreement under which they were to support the company in its application for a franchise and to abandon their efforts on behalf of the Essex and Kent Ry., a rival project.

A Montreal dispatch says:—"It is stated here that the financial plans of the syndicate which controls the Montreal St. Ry. stock are gradually maturing, and that in the course of the next few months a large block of stock will be retired and debentures sold against it in London. At present nearly $9,000,-000 is tied up in M.S.R. stock. It is believed that interests identified with Vickers Sons & Maxim, who took a large interest in the syndicate which purchased the control of the M.S.R., will be prominently identified with the debenture issue across the water."

C. B. Vorce, until recently with Sanderson and Porter, Consulting Engineers, New York, has been appointed Chief Engineer British Columbia Electric Ry., with full charge of construction work, excepting hydro-electric work, and including railway location, civil engineering, surveying, laying out of property and drafting room.

The Montreal St. Ry. has communicated with the Montreal board of control in connection with the removal of snow, offering, if the city will supply 500 teams and deliver the snow at specified landing places, to transport it in cars to outside dumps, for 40c. a cubic yard. The board of control estimate the amount to be moved at 1,000,000 cubic yards, thus costing $400,000 for removal, half of which is paid by the city and half by the Montreal St. Ry.

The Hamilton city council fire and police committee on Nov. 7 discussed the question of the free use of the Hamilton St. Ry. cars by firemen, and the company's refusal to grant the privilege. It was stated that the company would be willing to carry the firemen to and from their homes three times a day for about $4,000 a year. The company also stated that on the termination of its present contract with the Government. for carrying postmen on its cars for $4,000 a year, it had decided not to renew, but to charge the Government on a mileage basis. The committee took no action in the matter.

The Quebec Public Utilities Commission, which has been investigating street car accidents in Montreal, has given its decision, the principal feature of which is as follows:—"That no further cars of the single truck pattern be placed in use upon any of the routes without the special permission of the commission; that the number of such cars be reduced each year by 50. Upon application and for reasons shown and satisfactory to the commission, the use of such cars on certain routes will be permitted, and sufficient cars may be retained for the purpose. That all cars 30 ft. or more in length and weighing 25,000 lbs. or over be equipped with air brakes in addition to hand brakes; that cars on routes with severe grades be equipped in addition with emergency brakes. The speed limit of eight miles per hour must be adhered to."

Duncan A. L. McDonald, who has been appointed General Manager Montreal St. Ry., and whose portrait appears on another page in this issue, was born at St. Thomas de Montmagny, Que., June 17, 1859, and removed to Montreal in 1875. He entered Montreal St. Ry. service in 1881, as a driver, in order to acquire a thorough knowledge of street railway work from its very commencement. He was soon changed to conductor, and, after about twelve months service in that capacity, was appointed roadmaster. In 1886 he severed his connection with the company, and engaged in other business. Anticipating the progress that the trolley system would make. he went to St. Paul and Minneapolis, Minn., in 1889, and secured a practical knowledge of the operation of electric tramways. He returned to Montreal in 1892, and re-entered Montreal St. Ry. service as inspector, and in 1894 was appointed Superintendent of Transportation, which position he held until 1898, when he resigned to become General Manager Parisian Tramway Co., with headquarters in Paris, France, in which position he organized the Parisian system to a high degree of efficiency. In 1903 he returned to Montreal, having been offered the position of Manager Montreal St. Ry., which position he held up to his present appointment. He is a director of the Montreal Park and Island Ry., President of the Pay-As-You-Enter Car Co., director of the Automobile Club of Canada, a member of the Civil Engineers' Society of France, and is interested in several other corporations.

The Water Carriage of Goods Act.

A memorandum prepared by Peers Davidson, K.C., of the Quebec Bar, upon the Water Carriage of Goods Act, passed last session of the Dominion Parliament has been published by the Canada Law Book Co., Toronto. The act is dealt with under the following heads: Introductory; application and scope of the new act; contracting out of negligence prohibited; exemptions of liability in favor of shipowner; obligation to issue bill of lading; delivery in case of wood goods; notice of arrival of ship; offences; dangerous goods; onus of proof; priority of lien; effect of act in respect to general average construction. The concluding section of the memorandum is a summary covering the several heads as follows:

1. Application and scope of act: The act applies to all articles capable of carriage except live stock, and to all ships carrying goods from a Canadian port. The Merchant Shipping Act must be applied to British ships not registered in Canada in respect of liability for loss or damage to goods, when it conflicts with the new act. The conflict is slight.

It is probable that the act would be held to be intra vires of the Canadian Parliament, and that it could be recognized by courts without Canada, as forming part of the contract of carriage. The foreign law would possibly be applied only in so far as it was consistent with the terms of the act.

2. Contracting out of negligence.—Contracting out of negligence is no longer lawful in Canada, in respect to the water-carriage of goods, and to do so involves a penalty.

3. Exemptions of liability in favor of the shipowner.—The act materially improves the position of the shipowner in giving statutory approval of exemptions of liability, which it has heretofore been necessary to ensure by elaborate bill of lading clauses. The more important among these statutory exemptions are as to "faults or errors in navigation or in the management of the ship, or from latent defect," and generally as to all "loss arising without their (shipowners) actual fault or privity or without the fault or neglect of their agents, servants or employees."

Probably, but not with certainty, the shipowner will not be allowed to rely upon the exemptions contained in section 7, notwithstanding its absolute terms, where his own negligence or the negligence of his servants has brought the excepted cause of loss (e.g., fire) into operation, unless the negligence of the servants consist of faults or errors in navigation or relate to the management of the ship.

4. Onus of proof.—The onus of proof would, by law, be upon the ship to prove that the loss fell within one of the exemptions in its favor; but a clause whereby the onus was placed on the cargo owner would, apparently, be valid. This, however, remains to be settled.

5. Priority of lien.—It has yet to be settled whether the cargo owner would have a prior lien over the shipowner on a fund insufficient for both, when the loss has resulted from the negligence of the shipowner's servants, for which he is not responsible under the act.

6. General average.—Several questions arise as to the respective rights and obligations of shipowner and cargo owner of a more or less complicated character, which also await decision.

7. Conclusion.—On the whole, it would appear that the new legislation will be beneficial to Canadian trade; and, while opposed and severely criticized by shipowners, it may prove ultimately of benefit to them.

Trent Valley Canal Constuction.

The section of the Trent Valley Canal, known as the Ontario Rice Lake Division under construction, is dealt with in the report of the Superintending Engineer for the year ended Mar. 31. The division is 56½ miles long, and extends from Trenton on Lake Ontario to Rice Lake. This mileage has been divided into 7 sections, and of these five are under construction. The route chosen follows the Trent River and comprises 9½ miles of canal, 13 miles of subaqueous channel, and 34 miles of deep river. The total rise between low water level on Lake Ontario and normal navigation level at Rice Lake is 369 ft., which is to be overcome by 18 locks. The river level will be controlled by 14 concrete dams and the completed waterway will be crossed by 16 bridges of which six will be for the accommodation of railways. With one exception, the bridges will be swing or bascule spans. The locks will be of concrete, 175 ft. in length, 33 ft. in width, and having 8 ft. 4 in. of water on the sills. They will be capable of accommodating barges 150 ft. long, 30 ft. wide, drawing 8 ft. of water and having a capacity of 1000 tons. The work involved requires the removal of about 1,500,000 cubic yards of earth, 1,250,000 cubic yards of loose and solid rock, and the building of about 400,000 cubic yards of concrete. The estimated cost of the entire section is $6,750,000 and there has been expended to Mar. 31, $1,285.092.40. The work done to that date included the building of the following locks: No. 2, at 2.4 miles from Trenton; lift, 20 ft., no. 3, at Glen Miller, 3.9 miles from Trenton, lift, 27 ft.; no. 6, at Frankford, 7.3 miles from Trenton, lift, 16 ft.; no. 7, at Glen Ross, 13.9 miles from Trenton, lift, 9 ft.; no. 14, at Middle Falls, 33.6 miles from Trenton, lift, 25 ft. Dams, 2, 3, 6, 7, 11 and 12 are also built. The contractors are: Sec. 1, Trenton to Glen Miller, 4½ miles, Larkin and Sangster; sec. 2, Glen Miller to Frankfort, 4½ miles, Dennon and Rogers; sec. 3, Frankfort to three miles beyond Glen Ross, 7½ miles, Canadian General Development Co.; sec. 4, Adams Landing to Campbellford, 14 miles, contract let since the report was issued; sec. 5, Campbellford to Crow Bay, about three miles, Brown and Aylmer; sec. 6, Crow Bay to Heely Falls bridge, about three miles, Haney, Quinlan and Robertson; sec. 7, Heely Falls to Rice Lake, about 19¾ miles, Randolph Macdonald Co., Ltd. When this work is finished there will be a complete navigable channel from Lake Ontario to Orillia on Lake Simcoe, about 180 miles, with a branch from near Sturgeon Point, through Lindsay to Port Perry via Scugog River and Lake, 144 miles. A branch canal from Lake Simcoe, via Holland Landing, to Newmarket, is also under construction.

A hydrographic survey of the chain of lakes which forms part of this system of connected waterways is being made. The field work for the surveys of Rice, Lovesick, Sturgeon, Cameron and Balsam lakes and Otonabee river have been completed, and during the winter of 1910-11 the surveys of Katchewannoe, Clear, Stoney, Deer, Buckhorn, and Pigeon lakes will be proceeded with. Very little office work in connection with the charts has been done.

Survey Steamboat of British Columbia.

Tenders are under consideration by the Dominion Department of Public Works, for the building of a steel tug, to be used as a survey boat on the Pacific Coast. The specifications call for the delivery of the vesel complete with full equipment at New Westminster, B.C., under steam and ready for service, and to guarantee the same for three months after delivery. The vessel is to be built of steel, and is to class 100 A in Lloyds' Register, and to be of the following general dimensions: Length, over all, 91½ ft.; length between perpendiculars, 78½ ft.; moulded beam 20 ft.; moulded depth, 12¾ ft.; draught, aft, about 10½ ft. The hull is divided into six watertight compartments by five bulkheads, extending from floor plates to the deck. The forward compartment contains the chain locker, etc., the next one a fresh water tank on the floor plates, and above this berth accommodation for eight of a crew; the two next compartments contain the furnace, boiler and engines, while that to the rear contains fresh water tank, on the floor plates, a section of the shaft tunnel, and over this berth accommodation for four officers; the stern compartment contains the continuation of the shaft tunnel. The deck house contains forward, a pilot house, with lamproom and lavatory accommodation to the rear, and aft of the engine room space is the messroom, galley and pantry. There will be two pole masts; two boats, each 17 ft. long, provided with proper davits, etc., fogbell and search light on top of pilot house. The propeller is to be supplied by the Department, and the specifications provide for a shaft 7¾ in. in diameter. The driving machinery will consist of an inverted fore and aft compound surface condensing engine, cylinders, 15 and 34 in. diameter, having a stroke of 24 in., to which steam will be supplied by a single ended Scotch marine type boiler, 12 ft. internal diameter at largest course, by 11 ft. long inside, at a working pressure of 150 lbs. a square inch. There are to be three furnaces, each 36 in. mean diameter, and 216 tubes, 3 in. diameter, 72 to each furnace.

Vessels Removed from the Register.—The following vesels were removed from the register during October, for the reasons assigned:—Steam, Osso, Kingston, Ont., 4 tons, destroyed by fire; Pilot, Victoria, B.C., 5 tons, destroyed by fire; Tokolo, Kingston, Ont., 8 tons, destroyed by fire. Sailing, Alika, Chatham, N.B., 12 tons broken up; Havana, Lunenburg, N.S., 100 tons, sold to foreigners.

The Kenora Boat Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $50,000 and office at Kenora, to build, own, operate and dispose of steamboats and other vessels; to carry on a general transportation, boat building and livery business. The provisional directors are R. J. Parrott, N. C. Parrott, G. Brunsel, J. Burns, and J. M. MacFarlane, Kenora.

Notices to Mariners.

The Department of Marine has issued the following:

107. Oct. 28. 285. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Cap Levrard channel, buoys established, change in position of Grondines upper range lights.

108. Oct. 29. 286. Nova Scotia, south coast, Port Bickerton, hand fog horn at lightstation. 287. Newfoundland, south coast, Cape Freels, fog alarm established. 288. United States of America, Maine, St. Croix River mouth, Clark ledge, beacon established.

109. Nov. 2. 289. Ontario, Lake Ontario, Cobourg harbor, gas beacon established on west pier. 290. Ontario, Georgian Bay, east side, approach to Waubaushene, off Long point, beacons.

110. Nov. 4. 291. Quebec, Gulf of St. Lawrence, Anticosti island, Ellis bay, hydrographic information. 292. Quebec, north shore of Gulf of St. Lawrence, corrections to charts and sailing directions, hydrographic information.

111. Nov. 7. 293. Nova Scotia, south coast, Lunenburg bay, Halifax harbor and approach, gas buoys to be placed for testing purposes. 294. United States of America, Maine, Portland harbor, Diamond island road, House island, light established. 295. England, west coast, Bristol channel, Monkstone beacon light, alteration in character.

112. Nov. 9. 296. British Columbia, Vancouver island, southeast coast, Victoria harbor, buoy established. 297. British Columbia, Strait of Georgia, Sandheads at entrance to Fraser River, old disused lighthouse removed. 298. British Columbia, Strait of Georgia, Cortes island, off Reef point, gas buoy replaced by gas and bell buoy. 299. United States of America, Washington, Bellingham bay, Post point bell buoy to be moved and renumbered.

113. Nov. 10.—300. Ontario, St. Joseph channel, depths in channel at Bamford island. 301. Ontario, Lake Superior, Thunder bay, Port Arthur, intended change in character of light. 302. United States of America, River St. Mary, Vidal shoals, channel range lights moved, provisional lights, gas buoy moved.

114. Nov. 12.—303. Ontario, Lake Huron, chart of Goderich harbor issued. 304. Ontario, Lake Huron, off Great Duck island, Jennie Graham shoal, bell buoy not in position.

115. Nov. 14.—305. Nova Scotia, Bay of Fundy, Lurcher shoal, light replaced on her station. 306. Newfoundland, east coast, Trinity bay, Trinity harbor, Fort point, fog alarm established.

116. Nov. 16. 307. Ontario, Bay of Quinte, shoal spot east of Baker island. 308. Ontario, Lake Erie, Port Burwell, bell buoy not in position. 309. United States of America, Michigan, River St. Mary, Sault Ste. Marie, Branch Hydrographic Office and time ball moved.

117. Nov. 17. 310. Nova Scotia, Cape Breton island, west coast, entrance to Cheticamp harbor, Caveau shoals, bell buoy to be established. 311. United States of America, Massachusetts, Boston harbor, Castle rocks bell buoy to be replaced by gas buoy.

118. Nov. 18. 312. Quebec River St. Lawrence ship channel between Quebec and Montreal Pointe aux Trembles gas buoy established.

Traffic on Canadian Canals.

The total traffic through the several canals of the Dominion for the season of navigation of 1909, was 33,720,748 tons, an increase of 16,217,928 over 1908. There were 272,222 passengers carried, an increase of 8,608 over 1908. Following are the principal statistics:

SAULT STE. MARIE.—Tons carried, 27,881,245; increase over previous year, 15,102,029 tons; no. of passages of vessels, 6331.

WELLAND.—Tons carried. 2,025,951; increase over previous year, 322,498 tons. Carried in Canadian vessels, 1,247,694 tons; in U.S. vessels, 728,346 tons; freight through the canal to U.S. ports, 445,419 tons.

ST. LAWRENCE CANALS.—Tons carried, 1,564,584 eastbound, and 846,045 westbound; total 2,410,629 tons, an increase of 123,652 tons over the previous year.

OTTAWA RIVER CANALS.—Tons carried, 336,939; an increase of 78,412 over 1908.

CHAMBLY.—Tons carried, 752,117, an increase of 248,841 over 1908.

RIDEAU.—Tons carried, 91,774, an increase of 2,134 over 1908.

ST. PETER'S.—Tons carried, 79,850, an increase of 7,835 over 1908.

MURRAY.—Tons carried, 102,291, an increase of 76,390 over 1908.

TRENT.—Tons carried, 59,952.

Atlantic and Pacific Ocean Marine.

The Canadian Northern Steamships' s.s. Royal Edward, in arriving at Quebec, Nov. 2, beat her own previous record by four hours.

The captain of the Thomson Line s.s. Cairnrona was recently fined $20 in each of 14 cases, with costs, 15 other similar cases being withdrawn, for not reporting sickness on board his vessel at Quebec.

The Canada Line's s.s. Prinz Adalbert collided with a barge near Sorel, Nov. 6, and returned to Montreal for examination. The damage, which was confined to the rudder, was repaired without the vessel going into dock.

The s.s. Regulus, owned by Harvey and Co., St. John's, Nfld., which became a total loss, with her crew, while homeward bound from New York, as mentioned in our last issue, was valued at £7,000 and insured in London, Eng.

An Australian dispatch of Nov. 15 states that the Government will not accept the Canadian Government's proposal to renew the Canada-Australia mail service subsidy contract, with calls at Auckland and Sydney only.

Capt. F. D. Lugg, Marine Superintend-

HERMANN BOKER & CO., 332 St. James St., MONTREAL

ent Elder-Dempster Co., London, Eng., and for seven years, subsequent to the taking over of the Beaver Line, by the C.P.R., also Marine Superintendent for the C.P.R. there, has retired from active service.

Reports from England state that the results of the service between Montreal and Manchester for the past two years have been so satisfactory that the service to Canada will be continued throughout the winter, Manchester Liners, Ltd., running a vessel each week.

The Department of Public Works is reported to have circularized the shipping companies asking them to appoint a representative to meet the Superintendent of Immigration to discuss the requirements and possible site of additional immigration sheds at Quebec.

The Montreal pilots have entered a complaint against the use of the ship channel by tugs and their tows. They claim that the deep water way was made for the use of ocean going vessels, and there is no necessity for tugs and tows using it, as there is ample water on either side.

An Ottawa press dispatch, Nov. 3, stated that the Union Steamship Co. was the only firm to tender for the service between Vancouver, New Zealand and Australia. The company at present holds the contract for the service, and it is probable that it will be renewed on its expiry in Aug., 1911.

The schooner F. W. Pickels, owned in Quebec, Que., which was abandoned in a waterlogged condition, in the Gulf of Mexico in October, has been set on fire and destroyed. She was built at Bridgetown, N.S., in 1902, and was of the following dimensions:—Length, 146 ft.; breadth, 33 ft.; depth, 12.5 ft.; 386 tons register.

A Montreal dispatch of Nov. 21 says: G. M. Bosworth, Vice President C.P.R., stated to-day that the company had no information to give out re the report that two new lines would be added to its fleet, to run from St. John, N.B., to South American and West Indian ports. It can be definitely stated, however, that negotiations are proceeding with the C.P.R. whereby the introduction of vessels to run on these routes is contemplated.

The President of the Montreal Chamber of Commerce, at a recent meeting, in speaking of the recent inspection trip of the St. Lawrence channel, which he undertook with the Minister of Marine, said that the channel had been considerably straightened and widened. At St. Thomas de Montmagny, where there were considerable difficulties encountered, there is now a channel 500 ft. wide and 30 ft. deep, and from Quebec to the sea, the depth is nowhere less than 30 ft.

J. B. Ismay, President International Mercantile Marine Co., while in Montreal, Nov. 8, is reported to have said that the experiment of placing the White Star-Dominion Line steamships Laurentic and Megantic on the St. Lawrence routes had been so successful that a proposal was being considered to replace the steamships Canada and Dominion with vessels of equal, or larger capacity, than the two first mentioned. Much, however, would depend on the question of mail contracts, tenders for which had been submitted to the Government.

R. W. Brock, Director of the Geological Survey, in speaking before the Canadian Club at Hamilton, Ont., recently, referred to his trip through Hudson Bay with the Governor-General. He is reported to have said that many Hudson Bay ports were farther south than some important European ports. The railway would open up an immense territory. With light-houses, ice-breakers, wireless telegraphy, etc., the Hudson Bay route would be navigable seven months in the year. He predicted that Hudson Bay would become as important in future to Canada as it had been historically.

A Montreal press dispatch of Nov. 4 stated that it had been officially announced that the C.P.R. had decided to build four new steamships for a fast direct service between Nova Scotia ports and Boston and New York, this being one of the important developments that would follow on the absorption of the Dominion Atlantic Ry. next spring. The vessels, it was stated, would be of the ocean liner type, about 450 ft. long, with a carrying capacity of 5,000 tons and a speed of 20 knots an hour. We were officially advised, Nov. 8, that the press report was incorrect.

The St. Lawrence season of navigation was officially closed for passenger steamers, by the sailing of the C.P.R. s.s. Lake Champlain, Nov. 24. The last vessel of the Allan Line to leave Montreal, was the Corsican, Nov. 18. Halifax and St. John will be the winter ports of these lines. The last Canadian Northern Steamships' sailing from Montreal was the Royal George Nov. 19, and the service will be continued throughout the winter to Bristol, from Halifax. The White Star-Dominion Line will call at Portland, Me., through the winter, and at Halifax, inward only; the s.s. Laurentic will be taken off the route after Dec. 3, and the service continued with the Megantic, Canada and Dominion.

Canadian Northern Steamships Ltd. has transferred its two turbine steamships Royal Edward and Royal George from the British to the Canadian register, the port of registry being Toronto. These vessels were built at Govan, Scotland, in 1907, and overhauled, partially reconstructed and renamed last year, being formerly known as the Cairo and Heliopolis, and being run in the Mediterranean service. The Royal Edward is of the following dimensions:—Length, 526.1 ft.; breadth, 60.2 ft.; depth, 18.8 ft.; tonnage, 11,117 gross, 5,669 register, and are equipped with steam turbine engines of 14,500 n.h.p. driving screws. The dimensions of the Royal George are as follows:—Length, 525.8 ft..; breadth, 60.2 ft.; depth, 19 ft.; tonnage, 11,146 gross, 5,685 register, with steam turbine engines of 14,500 n.h.p. driving screws. These are the largest vessels on the Canadian register.

Maritime Provinces and Newfoundland.

J. G. Peters, lightkeeper at Low Point, N.S., has been awarded the Imperial service medal for long and meritorious service.

Boring operations were undertaken recently, at the mouth of St. Andrew's harbor, to determine the possibilities of dredging there.

Capt. W. Dixon, a well known New Brunswick pilot, was drowned while launching his boat at Hopewell Cape recently.

The Grand Manan Steamship Co.'s s.s. Aurora is being re-timbered, etc., at Liverpool, N.S. The repairs and overhauling will, it is expected, be completed by the end of the year.

Work has been commenced on the site of the proposed new piers to be constructed in Courtenay Bay, St. John, N.B. These will be built on the western side, and will accommodate four vessels.

The Newfoundland members of the crew of the vessel Roosevelt, utilized in the Polar expedition of 1908-9, have been awarded bonuses varying between $125 and $250 each, for their services.

A press dispatch from St. John, N.B., Nov. 9, states that if private companies do not undertake the construction of dry docks at St. John and Levis, it is probable that the work will be undertaken by the Government.

C. T. White and Sons, have under construction, at Shelburne, N.S., a steamboat to take the place of the steamboat Mikado. She will be about 90 ft. long, and will be equipped with the most modern machinery and electric lighting arrangements.

Bowring Bros., St. John's, Nfld., recently received a cablegram from Great Britain, to the effect that owing to a serious fire at the shipbuilding yards, the completion of their steamship, which it was hoped to have ready for next spring, would be delayed.

The Marine Department has erected a Marconi wireless telegraph station, and also a life-saving station on the Magdalen Islands. The latter is placed at Entry Island, and both were expected to be fully equipped before the St. Lawrence season closed.

The Department of Public Works has awarded contracts for construction, as follows: wharf at Barrington's Cove, N.S., $29,900, to J. W. Dobson, Sydney; breakwater at New Edinburgh, N.S., $11,900, to J. E. and H. Bigelow, Canning, N.S., and breakwater at Great Salmon River, N.B., $10,740, to C. A. Huntley, Parrsboro, N.S.

C.P.R. officials, in conjunction with others representing the Government, were reported to have examined the shipping facilities at Digby, N.S., recently, with a view to the extension of buildings on the wharf there, to accommodate C.P.R. freight traffic through Digby, between Ontario, Montreal, St. John and Halifax.

The Department of Marine has issued the Tidal and Current Survey reports, covering the eastern coast, including the River and Gulf of St. Lawrence, the Bay of Fundy, and Northumberland and Cabot Straits, for 1911. The present is the fifteenth annual issue, and is compiled by W. Bell Dawson, D.Sc., M.I.C.E., F.R.S.C., Superintendent of Tidal Surveys.

The survey ship Ellinor, which will winter at Halifax, N.S., has accomplished considerable work in the neighborhood of Newfoundland, during the past season. A complete survey was made of St. John's Bay, and about 20 banks, dangerous to navigation were located and charted. Other similar work was undertaken at Hare Bay, Grauis Islands, White Bay and near the Great and Little Meccatina Islands.

Press reports from Halifax state that a company is in course of formation to establish a ferry between Halifax and Dartmouth, in opposition to the service operated by the Dartmouth Ferry Commission. There are two boats run on this service, both being in by no means first class condition. The Chebucto is, at present, undergoing repair, and, it is stated, that the Dartmouth's machinery will not stand steady running.

Newfoundland press reports state that the largest steamer yet built on the Isherwood system of longitudinal framing has recently been launched at Wallsend-on-Tyne, Eng., for the iron ore trade between Wabana, Nfld., and Sydney, N.S. Her dimensions are given as:—Length overall, 425 ft.; breadth, extreme, 58 ft.; total dead weight capacity, 10,650 tons on a moderate draught. She has been built to the British Corporation Survey and Norske Veritas, and is equipped with 10 powerful steam winches and 10 derricks. The engines are of the triple expansion type, with cylinders 28½, 47 and 78 ins. diar. by 54 ins. stroke, supplied with steam by three boilers, 15 ft. diar. by 12 ft. long, at 180 lbs. pressure.

GERARD RUEL,
Solicitor for the applicants.

Dated at Toronto, this 16th day of November, 1910.

Province of Quebec Marine.

The Montreal Harbor Commission held its annual inspection of the works in the harbor, Nov. 15.

A deputation from Quebec visited Ottawa, Nov. 8, to urge on the Premier that the appropriations to be voted at the ensuing session should include an amount for the construction of locks on the River St. Charles.

The Montreal harbor revenue for Oct. was $51,984.54 and for the period from the opening of navigation to Oct. 31, $336,149.65, against $50,766.59, and $288,982.09 for the same periods 1909. The number of steamship arrivals to Oct. 31, was 674, with a total tonnage of 2,010,924, against 601 with a total tonnage of 1,705,570, for 1909.

The Richelieu and Ontario Navigation Co., has declared a dividend of 1½% for the quarter recently ended, payable Dec. 1 to shareholders of record on Nov. 18. This is the first time since 1903 that the company has paid a dividend at the rate of 6%. The earnings for the year are said to have been equivalent to about 12% on the common stock.

The Department of Public Works has awarded contracts for the following constructions: Wharf at Bic, $33,810, to T. Beaumont, St. Thomas de Montmagny; wharf at Aylmer, $8,974, to T. and J. Moran, Arnprior, Ont.; piers at Riviere des Prairies, $8,520, to Morrow and Beatty, Peterboro, Ont., and wharf at St. Andrews, $3.245 to the Bridge and Wharf Builder Co., Montreal.

Eastern Canada Fisheries, Ltd., has been incorporated under the Dominion Companies Act. with a capital of $1,500,000, and office at Montreal, to take over the Magadlen Islands Development Co., Ltd., to carry on a general fishing business, etc., and to build, own and operate steam and other vessels, wharves, docks, warehouses, railway sidings, and other transportation facilities.

The Levis Ferry Ltd., is reported to have decided to order two additional ferry steamers for the summer service between Levis and Quebec. These, it is stated, will be built during the winter, and will be strictly in accordance with the terms of the contract, relating to the ferry service between these points. The vessels which were running last summer, were claimed to have been not in accordance with the contract, and as a result a number of suits have been entered against the company.

The British Board of Trade is reported to have entered an objection to the naming of the steamboat for which the Dominion Government is asking tenders, and which is to be utilized for the St. Lawrence buoy and lighthouse service. The name which it is proposed to use, is Dollard, and the objection is on the ground that there is already a vessel of that name on the register. It is stated that an effort will be made to have the vessel, which already bears that name, change it, so that it may be adopted by the Canadian vessel, and so perpetuate the name of one of Canada's heroes.

The Montreal board of control, in discussing the question of building a landing pier at St. Helen's Island, adopted the plans which had been approved by the old parks and ferries committee, and recommended to the council that the Harbor Commissioners should build the landing and fix a tariff of charges for the ferry company landing passengers there. It is stated that the Harbor Commissioners are opposed to this course, and consider their offer to erect the pier, the city paying 6% per annum on the cost of about $25,000, reasonable. The city council is considering the question of asking the Government to make a grant to the Harbor Commissioners to enable them to erect the pier without cost to the city.

The Montreal Harbor Commissioners recently announced that the negotiations for the construction of a dry dock at Montreal have been suspended, pending the decision of the Government as to the nature of the subsidy to be granted. It is stated that the Government favors the granting of a second class subsidy, and that the company with which negotiations have been proceeding has declined to go on unless a first class subsidy is assured. In this connection the Minister of Public Works is reported to have said recently that the Government is quite prepared to give Montreal the kind of dock which the Harbor Commissioners decide, namely, one for commercial purposes, and carrying with it a subsidy on an outlay of $2,500,000. While the Government expected the promoters to submit plans for a dock of the second class, they had put in an application for a subsidy on $4,000,000, which is of the first class. Regarding the Quebec dock, the application, as filed, exceeded in financial demands, the statutory limitations, and the company had been asked to modify them.

Ontario and the Great Lakes.

The last steamboat of the season for Georgian Bay local ports sailed from Owen Sound Nov. 26.

The International Waterways Commission, at a recent sitting at Toronto, discussed the question of the demarcation of the International boundary through the St. Lawrence.

The Reid Wrecking Co., Sarnia, has been awarded the contract for the raising of the steamboat W. C. Moreland, which was recently wrecked at Eagle River, Lake Superior.

Capt. Lepine, of the Montreal Transportation Co.'s tug Emerson, suffered a compound fracture of his right leg at Kingston, Nov. 13, while assisting in raising the anchor.

The steamboat Roberval, which struck a rock and sank in the Ottawa River, below the Grenville canal, in October, has been raised and taken to Montreal for examination and repairs.

W. C. Barr, who retired from the position of Superintendent Algoma Central Steamship Line at Sault Ste. Marie, about a year ago, on account of ill health, died at Detroit, Mich., Nov. 2, aged 55.

J. B. Foote, formerly Superintendent Canadian Lake and Ocean Navigation Co., has been appointed surveyor to the British Corporation for the Survey and Registry of Shipping at Toronto.

The Lake Champlain and Ship Canal Co. is applying to the Dominion Parliament to revive its corporate powers and to extend the time for the construction of the works authorized by chap. 107, Vic. 61.

The Board of Railway Commissioners, Nov. 4, dismissed the application of the Mutual Transit Co. for permission to unload and tranship freight from its vessels to C.P.R. trains on the Lord's Day.

The Montreal River Transportation Co. has assigned to N. L. Martin and Co., Toronto, with liabilities estimated at $50,000. The cause of the failure is given as keen competition and the fact that trade at Gowganda and Elk Lake was lighter than expected.

At a recent meeting of the Montreal board of trade and chamber of commerce, the Mayor of Ottawa supported the immediate construction of the proposed Georgian Bay canal, and opposed the proposal for deepening the Welland canal.

A number of men have been charged, at Sault Ste. Marie, with the theft of cargo from the steamboat Wissahickon, which was wrecked on the Outer Duck island, south of Manitoulin Island, last winter. It is claimed that cargo valued at $20,000 has disappeared.

E. Bassett, contractor for the handling of Northern Navigation Co.'s freight at Point Edward, was found not guilty, there recently on a charge of violating the immigration laws by bringing alien laborers into Canada without their having passed inspection.

The dredge Russell which has been at work in the Welland River and Chippewa Creek for some time, has been moved to Toronto for the winter, and it is stated that dredging will be continued early in the spring, with a view to making the creek navigable and giving Chippewa Wharf Builder Co., Montreal.

Revillion Bros'. steamboat Ombabika was reported to be fast aground at Jackfish Island in Lake Nipigon, at the end of Oct. She was built at Lake Nipigon

SAULT STE. MARIE CANALS TRAFFIC.

The following commerce passed through the Sault Ste. Marie Canals in October :

in 1906, and is a screw driven vessel, with engine of 11 n.h.p. Her dimensions are:—Length, 70 ft.; breadth, 15 ft..; depth, 6 ft.; tonnage, 76 gross, 51 register.

The Minister of Public Works, in reply to a deputation from London regarding proposed improvements at Port Stanley, said recently that the suggested works would be well considered by the Department. He pointed out that it would be necessary to spend about $640,000 to carry out the suggestions, the breakwater costing about $400,000, the balance being for general improvements.

The new lock which the U.S. Government is constructing in the Sault Ste. Marie canals, will be 1,350 ft. long by 80 ft. wide, with a depth of 24½ ft. at extreme low water. It will connect with an independent canal about 8,000 ft. long by 300 ft. wide. The drawing showing the various details of construction are about completed, and bids for the work will shortly be invited.

The Department of Public Works has awarded contracts for the following constructions: wharf at Pelee Island, $13,000, to D. McDermid, Toronto; wharf and retaining walls at Hamilton, $60,844, to J. Battle, Thorold; reconstruction of wharf at Lakeport, $16,430, to S. Gowan, Brockville, and breakwater at Goderich, $140,417, to M. Connolly, Montreal.

The Government scow Pioneer, which is built entirely of reinforced concrete, was launched at Port Dalhousie, Nov. 9. Her dimensions are:—Length, 80 ft.; breadth, 24 ft.; depth, 7 ft., with deck, sides and bottom 2½ ins. thick. She is built with two bulkheads running crossways and one lengthways, the work having been conducted under the supervision of Superintendent Weller of the Welland canal.

A Kingston press dispatch states that the U.S. Consul there has been instructed to locate and report on naturalized U. S. citizens, who reside in and about Kingston, and who go across the line and obtain positions as steamboat captains and engineers. The U.S. law relating to citizenship will not allow such to reside outside the country for more than two years, without forfeiting all rights as U.S. citizens, and thus losing their steamboat licenses.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for Oct., as follows:—Superior, 601.89; Michigan and Huron, 580.12; Erie, 571.77; Ontario, 245.38. Compared with the average October levels for the past 10 years, Superior was 1.14 ft. below; Michigan and Huron, 0.68 ft. below; Erie, 0.37 ft. below, and Ontario, 0.42 ft. below. It was anticipated that during November, there would be a fall of 0.1 ft. in Superior and 0.3 ft. in each of the other lakes.

The Collingwood Shipping Co.'s steamboat Wasaga, operated by the Merchants' Mutual Line, was burned to the water's edge at Copper Harbor, Nov. 6. She was built at Buffalo, N.Y., in 1875, and was on the U.S. register under the name of Wissahickon. She was a screw driven vessel, with engine of 120 n.h.p., and of the following dimensions:—Length, 244.4 ft.; breadth, 36.6 ft.; depth, 14.8 ft.; tonnage, 1,745 gross, 1,108 register.

The Board of Railway Commissioners, by order 12162, Nov. 4, granted permission to the C.P.R., in order to prevent any undue delay to its passenger steamers running between Owen Sound and Fort William, Ont., to do on the Lord's Day any work necessarily incidental to the loading or unloading of freight and merchandise upon or from the said steamers, or transhipping of freight and merchandise between the said steamers and its cars at Owen Sound and Fort William, and the coaling of the said steamers at Owen Sound.

The Manager of the Niagara, St. Catharines and Toronto Navigation Co. has received tenders for a steamboat to replace the Lakeside and run between Toronto and Port Dalhousie. It is said that the new boat, which must be ready by June 15, 1911, will be 200 ft. long and carry 1,000 passengers. She will have triple expansion engines with a single screw and will be capable of making 16 knots. A wireless telegraph system will be installed. The Garden City, a sister boat, will undergo extensive repairs and remodelling this winter. The order was reported to have been placed in Collingwood, Nov. 28.

The Department of Marine has issued notice that all Canadian lights and fog alarms on Lake Superior will be kept in operation until Dec. 10, with the exception of those on Caribou Island, which may not be kept in operation later than Dec. 5, subject to weather conditions or early closing of navigation. The Canadian lights and signals on the other lakes will be kept in operation until Dec. 15, and mariners must not rely upon finding any of these lights in operation later than the dates specified.

The Peterborough and Lake Simcoe Navigation Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $250,000 and office at Peterboro to carry on the business of a navigation company and common carriers of passengers and freight on Ontario navigable waters, and in connection therewith to build, own and operate steam, electric and other railways on the company's property. The provisional directors are, W. J. Thomson, W. H. Smith, A. Eyer, W. J. Taylor and E. Barber, Toronto.

We are advised that press reports to the effect that the Northern Navigation Co. has placed, or is about to place a contract for the construction of an additional vessel for its fleet, are incorrect. The company does not propose to build a vessel this year, but, in connection with its contract with the G.T.R., it may have to do so by next winter. With reference to the report that new cabins are to be placed on the Huronic and other large alterations to the fleet, we are advised that it is improbable that any such work will be undertaken this winter.

The preliminary survey work on the proposed enlarged Welland canal is nearing completion. The route surveyed is generally north and south from Jordan harbor on Lake Ontario to Morgan's point, on Lake Erie, 27 miles. Leaving Jordan harbor it follows Twenty Mile Creek past Jordan station and village, due south, touching Pelham Union and passing Rosedene, then south past Boyle to the Welland river, which would be utilized for about three miles to Forks Creek, where the survey runs southward past Cranberry marsh to Morgan's point. The cost of the proposed works is estimated at $30,000,000. No definite decision has been reached as to the outcome of the work undertaken, and it is stated that nothing will be done in the way of any cutting or construction until the whole matter has been considered from every standpoint. The object of the survey is chiefly for the purpose of gathering information on behalf of the Department of Railways and Canals.

Manitoba, Saskatchewan and Alberta.

In the early part of Nov. reports were received at Winnipeg that the Northern Fish Co.'s steamboat Wolverine, with a number of other vessels, were held in mid-lake, owing to a sudden freeze-up. It was also rumored that the Wolverine was considerably damaged, and in danger. Relief parties were dispatched by dog train, and by Nov. 24 it was reported that passengers and crew had been landed safely. The vessel has sustained damages to

The Victoria Rolling Stock & Realty Co., of Ontario, Limited

Notice is hereby given that a dividend of three per cent. on the paid-up capital stock of the Company for the half-year ended Nov. 30th, 1910, has been declared payable Dec. 1st, 1910, to the shareholders on record as of the 30th of Nov., 1910.

By order of the Board.

G. T. CHISHOLM, Secretary.

Toronto, Nov. 15th, 1909.

NOTICE is hereby given that the Grand Trunk Pacific Branch Lines Company will apply to the Parliament of Canada, at the next session thereof, for an Act further amending the Act incorporating the company, chapter 99 of the Statutes of 1906, as amended by chapter 86 of the Statutes of 1909, and by chapter 103 of the Statutes of 1910, by authorizing the construction of the following additional lines of railway:—

28. From a point on the Western division of the Grand Trunk Pacific Railway between the east limit of Range 21 and the west limit of Range 28, west of the Second Meridian, thence in a westerly direction to a junction with the line mentioned in paragraph 23 between the north line of Township 29 and the south line of Township 37.

29. From Moose Jaw or a point on the line mentioned in paragraph 24 between the east limit of Range 24 west of the Second Meridian, and the west limit of Range 5, west of the Third Meridian, thence in a generally westerly direction to Calgary, or to a junction with the line mentioned in paragraph 23 or the line mentioned in paragraph 14 between the north line of Township 23, and the south line of Township 30.

30. From a point on the Western division of the Grand Trunk Pacific Railway between the east limit of Range 9 and the west limit of Range 13, west of the Fourth Meridian, thence in a southwesterly and westerly direction to a junction with the line mentioned in paragraph 14 within or near Townships 39, 40 or 41.

31. From a point on the line mentioned in paragraph 25 between the East limit of Range 24, west of the Third Meridian, and the West limit of Range 2, west of the Fourth Meridian, thence in a northwesterly and westerly direction to a point on the Western division of the Grand Trunk Pacific Railway within or near Ranges 21, 22, 23, 24 or 25.

32. From a point on the Western division of the Grand Trunk Pacific Railway between the east limit of Range 21 and west limit of Range 25, west of the Fourth Meridian, thence in a southerly and southeasterly direction to a connection with the line mentioned in paragraph 14 within or near Townships 46, 47 or 48.

33. From a point on the Western division of the Grand Trunk Pacific Railway between the east limit of Range 27, and west limit of Range 33, west of the First Meridian, thence in a generally westerly direction to a point on the line mentioned in paragraph 11, within or near Townships 18, 19, 20 or 21.

34. From a point on the line mentioned in paragraph 11 between the East limit of Range 12, and the West limit of Range 16, west of the Second Meridian, thence in a southerly direction to the International Boundary between the East limit of Range 10 and the West limit of Range 18, west of the Second Meridian;

And for authority to issue bonds in respect of each of the said lines of railway to the extent of $30,000.00 per mile.

W. H. BIGGAR,
Solicitor for applicants.

Dated at Montreal, this 3rd day of November, A.D. 1910.

her wheel and other equipment, and is partly submerged.

It is reported, from Winnipeg, that the Department of Marine is undertaking the survey of the water front there, on which it may base plans for the construction of docks and other shipping facilities. The steamboat Victoria is stated to be engaged on the work, after having carried out considerable survey work during the summer, along both shores of Lake Winnipeg. The mouth of the Berens, Black and Icelandic Rivers have been surveyed and charted, and extensive hydrographic notes taken regarding shoals, currents, etc. It is also stated that a larger and more up to date vessel may be provided for the service by next year.

The report of the Public Works Department for the last fiscal year, in referring to the surveys which have been undertaken, with a view to the establishment of a navigable waterway from Winnipeg to Edmonton, by way of the North Saskatchewan River, states that such development would make Canada unique in the matter of inland water transportation. The total distance from the sea, on the inland waters would be 3,300 miles, with only one break, between Fort William and Winnipeg, about 400 miles. The work has been suspended for the winter, and while the interim reports are said to show that the route is practicable, no details have been worked out.

B.C. and Pacific Coast Marine.

The C.P.R. has placed an order for the construction, at Wallsend-on-Tyne, Eng., of another steamship, similar to its s.s. Princess Adelaide, for its Pacific Coast service.

The C.P.R. Pacific Coast s.s. Princess Adelaide is expected to arrive at Vancouver, from Great Britain, about Dec. 24, after which she will be placed on the Vancouver, Victoria and Seattle route.

The ferry boat Vedder, which has been operating between Chilliwack and Harrison, for several years, is reported to have been taken off the service, owing to lack of business occasioned by the opening of the British Columbia Electric Ry. Fraser Valley branch.

The G.T.P. Steamship Co. is reported to have arranged with Capt. S. F. Mackenzie, who is now in Great Britain, to purchase a suitable steamer, of about 500 tons register, for service between Prince Rupert, Queen Charlotte Islands and Stewart.

Press reports from New Westminster state that the C.P.R. has commenced construction of a new pier at shed 2.

The new pier, it is stated, will be about 800 ft. long, and at the same angle as pier A. Plans are said to be under consideration for an overhead bridge across the tracks to the docks.

W. Erwin, lightkeeper at Point Atkinson, has been awarded the Imperial service medal for long and meritorious service.

The Department of Marine will receive tenders to Jan. 3, 1911, for the construction of a buoy depot at Prince Rupert, B.C., including the erection of a re-inforced concrete wharf timber approach trestle, power house with chimney, buoy shed, stores, offices and dwellings, with installations of drainage and water systems.

The Yukon Transportation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000, and offices at Windsor, Ont., to carry on a general transportation business. The provisional directors are: F. H. Asam, Dawson, Yukon; J. G. Prance, Detroit, Mich.; A. R., and N. A. Bartlet, W. W. LaMarsh, Windsor, Ont.

The Department of Marine has issued a report on the tide tables of the Pacific Coast, including the Fuca Strait, the Strait of Georgia, and the Northern Coast, with data for slack water in the navigable passes and narrows, and information on currents, for 1911. This is the eleventh annual issue, and is compiled by Dr. W. Bell Dawson, Superintendent of Tidal Surveys.

The Pacific Towing and Contracting Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $10,000 and office at Vancouver, to carry on the general business of sand merchants, and that of towing, wharfingers and warehousemen, shipping and general agents, and in connection therewith to own and operate steam and other vessels.

The G.T.P. Steamship Co.'s s.s. Prince George has been taken off her route for a short time, and has been taken to Victoria for overhauling. When this is completed she will take the place of the s.s. Prince Rupert, which, in turn, will be overhauled, in readiness for her trip to the Hawaiian Islands in Feb., 1911. A weekly service only will be operated to the north during the winter.

The Imperial Fisheries, Ltd., has been incorporated under the B.C. Companies Act, with a capital of $150,000, to take over certain businesses in Vancouver and Nanaimo; to carry on a general fisheries business, and in connection therewith to own and operate steam and other vessels, wharves, docks, warehouses, etc., and to act as general carriers by land and water.

The Evans Coleman Wharf Co., Ltd., has been incorporated under the B. C. Companies Act, with a capital of $10,000, to carry on the business of wharfingers, warehousemen, stevedores and shipping agents, and in connection therewith to own and operate steam and other vessels of every description, and to make traffic arrangements with other steamboat, railway or other transportation companies.

The Sechelt Steamship Co. commenced a weekly service between Victoria and New Westminster, Nov. 9, with the steamboat B.C.P., leaving New Westminster every Thursday. The B.C.P. was built at Vancouver in 1908, for the Packers' Steamship Co., and is a screw driven vessel, with engine of 22 n.h.p. Her dimensions are:—Length, 80.5 ft.; breadth, 18 ft.; depth, 7.8 ft.; tonnage, 121 gross, 83 register.

In connection with the proposed dry deck, which the G.T.P.R. may build at Prince Rupert, C. M. Hays, President, in a letter to the Prince Rupert board of trade, Nov. 3, said that it was subject to agreement with the Government, and as soon as arrangements could be made work could be started and prosecuted to completion. The city would be asked to grant exemption from taxation for this property on the same basis as other G.T.P.R. property.

The Kingcome Navigation Co. Ltd., has been incorporated under the B.C. Companies Act, with a capital of $10,000, to take over the steamboat Teign, registered at Vancouver; to own and operate steam and other vessels, and to carry on a general carrying and navigation business. The Teign was built at Vancouver in 1909, and is screw driven, with engine of 3 n.h.p. Her dimensions are, length, 35.1 ft., breadth 9.4 ft., depth 3.3 ft., tonnage, 13 gross, 9 register.

Foley, Welch and Stewart's fleet of steamboats have been withdrawn from the Skeena River for the winter, and have been hauled out on the company's ways at Digby Island, where they will remain until the spring. The five boats, Distributor, Omineca, Operator, Conveyor and Skeena, have been operated throughout the season without serious accident, and have chiefly been engaged in conveying material and supplies to points on the Skeena River for G.T.P.R. construction.

The Hamlin Tug Boat Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $20,000, to purchase the steamboat Hamlin, to carry on the business of wharfingers, warehousemen, and general shipping agents, and to own and operate steam and other vessels. The steamboat Hamlin is a paddle wheel steamer, built in Vancouver in 1898, and is equipped with engine of 17 h.p. Her dimensions are, length, 146.2 ft.; breadth, 30.8 ft.; depth 4.6 ft.; tonnage, 515 gross, 323 register.

The appeal of the defendant in the case of the North Vancouver Ferry Co. v. Braim, against the decision of the lower court, granting an injunction to restrain defendant from engaging in a competitive business, came before the Court of Appeal, Nov. 3. The defendant claimed that the company did not have a valid franchise over the waters of Burrard Inlet from Vancouver to North Vancouver, on the ground that the license was granted for 15 years, instead of five only, and that it should have been voted on by the taxpayers.

Press reports from Victoria, recently stated that the acquirement of the Pacific Whaling Co., by interests connected with the Canadian Northern Ry., would be completed by Dec. 1, the amount involved approximating $1,000,000. It is also stated that whaling operations will be extended northerly, and that a station will built at the mouth of the Mackenzie River, which will be the base of two whaling steamers. The name of the recently incorporated Canadian Northern Fisheries, Ltd., has been changed by supplementary letters patent, to Canadian North Pacific Fisheries Ltd.

H. A. Bayfield, dredge superintendent for British Columbia, on his return to New Westminster from Ottawa recently, announced that the Dominion Government had ordered a steel elevator dredge for use in widening the Second Narrows, a steel tug boat for use in dredging work in Victoria harbor, and a pair of rockbreakers for submarine rock excavation in Victoria harbor. The dredge will have a capacity of 1,000 cubic yards an hour, and is being built in Scotland, as stated in our last issue. A contract is reported to have been awarded to Macdougall and Jenkins, North Vancouver, for building the steel tug boat, which, it is stated, will be 90 ft. long by 20 ft. beam, equipped with engines of 500 i.h.p. The rockbreakers are reported to be now en route to Vancouver from Scotland.

THE CANADIAN NORTHERN QUEBEC RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Northern Quebec Railway Company will apply to the Parliament of Canada, at its next session, for an Act, authorizing it to construct the following lines of railway:—

(a) From Rawdon, northerly to a junction with the National Transcontinental Railway;

(b) From St. Jerome to St. Eustache.

GERARD RUEL,
Chief Solicitor.

Dated at Toronto, this 16th day of November, 1910.

NOTICE is hereby given that an application will be made on behalf of the New Brunswick Southern Railway Company to the Board of Railway Commissioners for Canada at the expiration of four weeks from the date of this notice or as soon thereafter as the application can be heard, for a recommendation to the Governor in Council for the sanction of a lease of the railway of the New Brunswick Southern Railway Company to the Canadian Pacific Railway Company for a term of nine hundred and ninety-nine years from the first day of January, nineteen hundred and eleven upon the terms and conditions therein mentioned.

This notice is given pursuant to the provisions of section 361 of The Railway Act.

OSCAR RING,
Secretary, New Brunswick Southern Ry. Co.

Dated at St. John, N.B., the 16th day of November, 1910.

NOTICE is hereby given that an application will be made an behalf of the Kootenay Central Railway Company to the Board of Railway Commissioners for Canada at the expiration of four weeks from the date of this notice or as soon thereafter as the application can be heard, for a recommendation to the Governor in Council for the sanction of a lease of the railway of the Kootenay Central Railway Company to the Canadian Pacific Railway Company for a term of nine hundred and ninety-nine years from the first day of January, nineteen hundred and eleven, upon the terms and conditions therein mentioned.

This notice is given pursuant to the provisions of section 361 of The Railway Act.

H. C. OSWALD,
Secretary, Kootenay Central Ry. Co.

Dated at Montreal the 16th day No- of November, 1910.

NOTICE is hereby given that an application will be made an behalf of the St. Maurice Valley Railway Company to the Board of Railway Commissioners for Canada at the expiration of four weeks from the date of this notice or as soon thereafter as the application can be heard, for a recommendation to the Governor in Council for the sanction of a lease of the railway of the St. Maurice Valley Railway Company to the Canadian Pacific Railway Company for a term of nine hundred and ninety-nine years from the first day of January, nineteen hundred and eleven, upon the terms, and conditions therein mentioned.

This notice is given pursuant to the provisions of Section 361 of The Railway Act.

C. C. PANGMAN,
Secretary, St. Maurice Valley Ry. Co.

Dated at Montreal, the 16th day of November.

Capt. S. F. Mackenzie, of the Mackenzie Steamship Co., was entertained to dinner by a number of business men at Vancouver recently, and presented with a gold locket, on his leaving the Pacific coast for a prolonged holiday in Scotland.
